PREFACE.

IN presenting this—the fourth—issue of HAZELL'S ANNUAL to public notice, the Editor, while noting with satisfaction its growing popularity, and the marks of keen appreciation which the book has hitherto received, assures his readers that his efforts to render the work **thoroughly reliable** and of **daily utility** have not been diminished.

An explanation is required with respect to the **change of title**. Having found that the word "Cyclopædia" conveyed to many minds an incorrect impression of the **yearly** character of the work, it has been deemed desirable to accentuate its annual nature by the name now adopted. In all essential respects, the book presents the same leading features.

Not only have all the articles **been**, as far as practicable, brought up to the **latest possible date**, but every effort has been put forth to secure the **most recent details**, with the result that **nearly one-half** of the "ANNUAL" is **entirely new matter**, presenting a *résumé* of almost every subject of importance which has recently engaged or is attracting the intelligent attention of the general reader. It has been sought—it is hoped with success—to meet the requirements of every class.

Numerous useful suggestions—which in the majority of instances have been acted upon—have been received from correspondents in all parts of the world, and are cordially acknowledged by the Editor, who also expresses his indebtedness for much official and other information courteously furnished him.

The Editor again invites communications from all classes of his readers, and will be obliged if any error which may have escaped his notice is pointed out to him. Suggestions made with the view to increase the utility and accuracy of the ANNUAL will also be appreciated.

E. D. PRICE.

[Abb

Abbott, Rev. Lyman, D.D., was b. at Roxbury, Mass., 1835. Educated at New York University, where he graduated in '53. Commenced life as a lawyer in partnership with his brothers, but in '59 severed his connection with the firm, and entered the Congregational ministry in '60, when he was appointed minister of the Congregational Church, Terre Haute, Indiana. In '65 Dr. A. became Secretary to the American Union Commission, and, in '67, minister of the New England Congregational Church, New York, which appointment he resigned in '69, in order to devote himself exclusively to literature. Dr. A. has published, amongst other works, "Jesus of Nazareth, His Life and Teachings," "Old Testament Shadows of New Testament Truths," "Laicus; or the Experience of a Layman in a Country Parish," and a "Commentary on the New Testament." He has also edited *The Freedman, The Illustrated Christian Weekly*, and *The Christian Union*. In '87 Dr. Abbott succeeded the late Henry Ward Beecher as pastor of the Plymouth Congregational Church, Brooklyn, New York. In a recent number of *The Century* ('88) Dr. A. wrote on the subject of the "New Theology."

Abbreviations, List of. May be classified into—initial prefixes of royal personages—affixes of rank in orders of knighthood—indications of military, naval, or civil service—university degrees—diplomas of medical and other licensing bodies—membership of learned institutions—and miscellaneous. Those here given occur more or less frequently, and are all of recognised status. A few of them are very rarely used. Degrees conferred by some one or all of British, Irish, or Colonial Universities, are indicated by "Univ." Degrees granted only in America, or only so expressed there, are shown by "U.S.A." Here it is not unusual to add "Oxon.," "Camb.," "Lond.," to indicate the source of the degree. Similarly, medical and scientific *alumni* add an L. for London, E. for Edinburgh, and I. for Ireland, the relative value of diplomas from bodies of similar name and profession not being always the same. Letter-affixes are employed by Freemasons and similar bodies among themselves, but are only intelligible to the initiated.

A.A. . . . Associate of Arts.
A.B. . . . Bachelor of Arts (Univ.). Also describes "able-bodied" seamen.
A.C.A. . . . Associate of Chartered Accountants, England and Wales.
A.C.E. . . . Associate of the College of Engineering.
A.I.C.E. . . . Associate of the Institution of Civil Engineers.
A.K.C. . . . Associate King's Coll., Lond.
A.L.S. . . . Associate of the Linnean Society.

A.M. . . . Master of Arts (Univ.).
A.M.I.C.E. . . . Associate Member of the Institute of Civil Engineers.
A.R.A. . . . Associate of the Royal Academy.
A.R.S.A. . . . Associate of the Royal Scottish Academy.
B.A. . . . Bachelor of Arts (Univ.).
B.C.L. . . . Bachelor of Civil Law (Univ.).
B.D. . . . Bachelor of Divinity (Univ.).
B.E., or B.Eng. . . . Bachelor of Engineering (Univ.).
B.ès L. . . . Bachelier ès (contr. en les) Lettres (French Univ.).
B.L., or B.L.L. . . . Bachelor of Laws (Univ.).
B.M. . . . Bachelor of Medicine (Univ.).
B.S. . . . Bachelor of Surgery (Univ.).
B.Sc. . . . Bachelor of Science (Univ.).
Bt., or Bart. . . . Baronet.
C.B. . . . Companion of the Order of the Bath.
C.E. . . . Civil Engineer.
C.I.E. . . . Companion of the Order of the Indian Empire.
C.M. . . . Master of Surgery (Univ.).
C.M.G. . . . Companion of the Order of St. Michael and St. George.
C.M.Z.S., or C.M.Z.S.L. . . . Corresponding Member of the Zoological Society of London.
C.P. . . . Clerk of the Peace.
C.S. . . . Clerk to the Signet.
C.S.I. . . . Companion of the Order of the Star of India.
D.C.L. . . . Doctor of Civil Law (Univ.).
D.D. . . . Doctor of Divinity (Univ.).
D.D.S. . . . Doctor of Dental Surgery (Univ.).
D.G. . . . *Dei Gratia*, By the grace of God (Royal).
D.L. . . . Deputy Lieutenant.
D.Lit. . . . Doctor of Literature (Univ.).
D.M. . . . Doctor of Music (Univ. U.S.A.).
D.P. . . . Doctor of Philosophy (Univ. U.S.A.).
D.Sc. . . . Doctor of Science (Univ.).
D.T. . . . Doctor of Theology (Univ. U.S.A.).
E.I.C. or E.I.O.S. . . . East India Company's Service. *Still used by a few old veterans.* See H.E.I.C.
F.A.S. . . . Fellow of the Society of Antiquaries.
F.A.S.E. . . . Fellow of the Antiquarian Society of Edinburgh.
F.B.S.E. . . . Fellow of the Botanic Society of Edinburgh.
F.O.A. . . . Fellow of Chartered Accountants, England and Wales.
F.O.S. . . . Fellow of the Chemical Society.
F.O.P.S. . . . Fellow of the Cambridge Philosophical Society.
F.D. . . . *Fidei Defensor*, Defender of the Faith (Royal).

F.E.S. . . .	Fellow of the Entomological Society.	K.C.S.I. . . .	Knight Commander of the Order of the Star of India.
F.G.S. . . .	Fellow of the Geological Society.	K.G. . . .	Knight of the Order of the Garter.
F.K.Q.C.P. . . .	Fellow of the King and Queen's College of Physicians, Ireland.	K.M.G. . . .	Knight of the Order of St. Michael and St. George.
F.L.S. . . .	Fellow of the Linnæan Society.	K.P. . . .	Knight of the Order of St. Patrick.
F.M. . . .	Field-Marshal.	K.T. . . .	Knight of the Order of the Thistle.
F.M.E.S. . . .	Foreign Member of the Royal Society.	Kt. . . .	Knight.
F.P.S. . . .	Fellow of the Philological Society.	L.A.O. . . .	Licentiate of the Society of Apothecaries (old style).
F.R.A.S. . . .	Fellow of the Royal Astronomical Society.	L.D.S. . . .	Licentiate of Dental Surgery.
F.R.O.I. . . .	Fellow of the Royal Colonial Institute.	L.F.P.S. . . .	Licentiate of the Faculty of Physicians and Surgeons (Glasgow).
F.R.O.P. . . .	Fellow of the Royal College of Physicians.—(Note. The customary etiquette in indicating the source of medical diplomas is to add L. for London, E. or Ed. for Edinburgh, I. for Ireland. In the case of no such terminal London is understood.)	Litt.D. . . .	Doctor of Literature (Univ.).
F.R.C.S. . . .	Fellow of the Royal College of Surgeons.	L.K.Q.C.P. . . .	Licentiate of the King and Queen's College of Physicians (Ireland).
F.R.C.V.S. . . .	Fellow of the Royal College of Veterinary Surgeons.	LL.B. . . .	Bachelor of Laws (Univ.).
F.R.G.S. . . .	Fellow of the Royal Geographical Society.	LL.D. . . .	Doctor of Laws (Univ.).
F.R.H.S. . . .	Fellow of the Royal Horticultural Society.	LL.M. . . .	Master of Laws (Univ.).
F.R.I.B.A. . . .	Fellow of the Royal Institute of British Architects.	L.M. . . .	Licentiate of Midwifery.
F.R.M.C.S. . . .	Fellow of the Royal Medical and Chirurgical Society.	L.R.O.P. . . .	Licentiate of the Royal College of Physicians (E. Edinburgh).
F.R.M.S. . . .	Fellow of the Royal Meteorological Society.	L.R.C.S. . . .	Licentiate of the Royal College of Surgeons (I. Ireland).
F.R.S. . . .	Fellow of the Royal Society.	L.S.A. . . .	Licentiate of the Society of Apothecaries.
F.R.S.C. . . .	Fellow of the Royal Society of Canada.	L.Th. . . .	Licentiate of Theology (Univ.).
F.R.S.E. . . .	Fellow of the Royal Society of Edinburgh.	M.A. . . .	Master of Arts (Univ.).
F.R.S.L. . . .	Fellow of the Royal Society of Literature.	M.A.I. . . .	Member of the Anthropological Institute.
F.R.S.L. and E. . . .	Fellow of the Royal Societies of London and Edinburgh.	M.B. . . .	Bachelor of Medicine (Univ.).
F.S.A. . . .	Fellow of the Society of Arts, or Fellow of the Society of Apothecaries, or Fellow of the Society of Antiquaries. (See F.A.S.)	M.O. . . .	Master of Surgery (Univ.). Also Master of Ceremonies.
F.S.S. . . .	Fellow of the Statistical Society.	M.Ch. . . .	Master of Surgery (Univ.).
F.Z.S. . . .	Fellow of the Zoological Society.	M.C.S. . . .	Madras Civil Service.
G.C.B. . . .	Grand Cross of the Order of the Bath.	M.C.P. . . .	Member of the College of Preceptors.
G.O.M.G. . . .	Grand Cross of the Order of St. Michael and St. George.	M.C.P.S. . . .	Member of the Cambridge Philosophical Society.
G.O.S.I. . . .	Grand Commander of the Order of the Star of India.	M.D. . . .	Doctor of Medicine (Univ.).
H.B.M. . . .	Her British Majesty's— <i>Consul, etc.</i>	M.E. . . .	Master of Engineering (Univ.).
H.E. . . .	His Excellency— <i>Viceroy or Governor.</i>	M.E.S. . . .	Member of the Entomological Society.
H.E.I.C. . . .	Honourable East India Company. (See E.I.C.)	M. ès A. . . .	Maitre ès (contr. en les) Arts (French Univ.).
H.H. . . .	His or Her Highness.	M.F.H. . . .	Master of the Fox-hounds.
H.I.H. . . .	His or Her Imperial Highness.	M.H.R. . . .	Member of the House of Representatives (Colonial).
H.M. . . .	His or Her Majesty.	M.I.C.E. . . .	Member of the Institution of Civil Engineers.
H.R.H. . . .	His or Her Royal Highness.	M.L.A.U.K. . . .	Member of the Library Association, United Kingdom.
H.S.H. . . .	His or Her Serene Highness.	M.L.C. . . .	Member of the Legislative Council (Colonial).
J.D. . . .	Doctor of Laws (Univ. U.S.A.).	M.L.S.B. . . .	Member of the London School Board.
J.P. . . .	Justice of the Peace.	M.N.S. . . .	Member of the Numismatical Society.
J.V.D. . . .	Doctor of both Laws, <i>i.e.</i> Canon and Civil (Univ.).	M.P. . . .	Member of Parliament.
K.B. . . .	Knight of the Order of the Bath.	M.P.C. . . .	Member of Parliament (Canada).
K.C.B. . . .	Knight Commander of the Order of the Bath.	M.P.P. . . .	Member of Provincial Parliament, Canada.
K.O.M.G. . . .	Knight Commander of the Order of St. Michael and St. George.	M.P.S. . . .	Member of the Pharmaceutical Society.
		M.R.A.C. . . .	Member of the Royal Agricultural College (Cirencester).
		M.R.A.S. . . .	Member of the Royal Asiatic Society. (Also Member of the Royal Astronomical Society.)
		M.R.C.P. . . .	Member of the Royal College of Physicians.
		M.R.C.S. . . .	Member of the Royal College of Surgeons.
		M.R.C.V.S. . . .	Member of the Royal College of Veterinary Surgeons.

- M.E.H.S.** . . . Member of the Royal Historical Society.
M.R.I.A. . . . Member of the Royal Irish Academy.
M.R.I.B.A. Member of the Royal Institute of British Architects.
M.S. . . . Master of Surgery (Univ.).
Mus. B. . . . Bachelor of Music (Univ.).
Mus. D. . . . Doctor of Music (Univ.).
O.S.B. . . . Order of St. Benedict (Roman Catholic).
P.B. . . . Bachelor of Philosophy (Univ. U.S.A.), or Ph.B.
P.C. . . . Privy Councillor. Also Police Constable.
P.D. . . . Doctor of Philosophy (Univ. U.S.A.).
Ph.D. . . . Doctor of Philosophy (Univ.).
Ph.G. . . . Graduate of Pharmacy (U.S.A.).
Ph.M. . . . Master of Pharmacy (U.S.A.).
P.P. . . . Parish Priest (Roman Catholic).
Q.C. . . . Queen's Counsel.
R. . . . *Rex* or *Regina*. [lery.
R.A. . . . Royal Academician. Royal Artillery.
R.A.O. . . . Royal Academician of Canada.
R.A.M. . . . Royal Academy of Music.
R.C. . . . Roman Catholic.
R.E. . . . Royal Engineers.
R.H.A. . . . Royal Horse Artillery.
R.M. . . . Royal Marines. Resident Magistrate (Colonial).
R.M.A. . . . Royal Military Academy (Woolwich).
R.N. . . . Royal Navy.
R.S.M. . . . Royal School of Mines.
Sc.D. . . . Doctor of Science (Univ.).
S.J. . . . Society of Jesus (Roman Catholic).
S.T.P. . . . Doctor of Divinity (Univ.).
V.C. . . . Victoria Cross.
V.G. . . . Vicar-General (Roman Catholic).
V.P. . . . Vice-President.
W.S. . . . Writer to the Signet.

A. B. C. Sewage Process. So called from the fact that Alum, Blood, and Clay are used as the purifying ingredients: see Sewage, ed. '86.

Abduction. See ed. '87, also CRIMINAL LAW AMENDMENT ACT, and consult Sir J. Stephen's "Digest of the Criminal Law," Articles 261 and 262.

Abd-ul-Hamid II. Sultan of Turkey. Is the fourth son of Abd-ul-Medjid; b. August 6th, 1842. He was proclaimed Sultan in succession to his brother Murad V., who was deposed in consequence of his mental incapacity (August 31st, 1876). Under the rule of Abd-ul-Hamid the Ottoman Empire has experienced reverses through her last war with Russia. The results of that conflict led to the *Berlin Treaty*, 1878 (q.v.). Since then the Sultan has been alternately under the influence of one or other of the Great Powers. Being *Suzerain of Egypt* he naturally opposed the English occupation, and was believed to have secretly encouraged the rebellion of Arabi. His empire, however, being practically in a state of bankruptcy and decay, he is powerless to act independently of the advice of the power or powers whose influence happens to be uppermost at his court. With regard to *Bulgaria*, of which he was deprived by the *Berlin Treaty*, he has endeavoured to abide by that Treaty's stipulations, but complaints have been made from time to time that he has not carried out the provisions of the Treaty affecting other portions of his dominions, notably in *Armenia*, where his Christian subjects are still the victims of oppression. In

March '88 it was announced that the Sultan had presented the *National Gallery* (q.v.) with a copy of the well-known portrait of Lord Nelson. On the occasion of the *Duke of Edinburgh's* visit to Constantinople, in August last, the Sultan received him with flattering attentions.

Abdurrahman Khan, Ameer of Afghanistan. is a nephew of the late Ameer, Shere Ali, and was b. 1830. He took sides against his uncle in the civil war of '64 and won the battles of Shaikhabad and Khelat-i-Ghilzai. In '68 he was defeated by Yakoub Khan, son of Shere Ali, and fled for protection to Russian territory. The Russians provided him with a residence at Samarcand, and a pension. In '79 he made his way to the Cabul frontier and, having gained the allegiance of the leading men of that city was acknowledged *Ameer of Afghanistan* by the *British Government*, who allow him a pension of £160,000 a year. Has since been loyal to his patrons. He has recently been engaged in suppressing a *revolt* against his authority, headed by Ishak Khan, whose forces he totally defeated. (See *AFGHANISTAN*.)

Abecedarians, a sixteenth-century German anabaptist sect, who, claiming direct inspiration from God, denied the value of all human learning. See ed. '87.

Abel, Sir Frederick Augustus, C.B., D.C.L., F.R.S., b. 1827, is chemist to the War Department, chemical referee to the Government, a member of the Royal Engineers' Committee, associate member of the Ordnance Committee, Past President of the Institute of Chemistry, of the Society of Chemical Industry, of the Chemical Society, and Society of Telegraph Engineers and Electricians; Royal Medalist for researches in explosives, member of the Royal Commission on accidents in mines, and hon. member of the Institutes of Civil and Mechanical Engineers. He was commissioner to the Electrical Exhibition at Vienna in 1883, and was knighted in that year. He is a vice-president of the Society of Arts, and the *secretary of the Imperial Institute* (q.v.). Appointed *Rede Lecturer* (q.v.) for '88. In July it was announced that Sir F. A. had been appointed President of a Special Committee on Explosives.

Aberdeen University was founded in 1494 by Bishop Elphinstoun, with only one college—viz. *King's*. In 1593 George Keith founded *Marshall College*, which was also a university distinct from the former foundation. In '60 these two universities were united into one institution, and now form the University of Aberdeen. The arts and divinity classes meet in the old college, while the law and medical meet in the new. *Lord Rector* ('88), Rt. Hon. G. J. Goschen, M.P. (q.v.). *Principal*, W. D. Geddes, LL.D.; there are 23 professors and 900 students. In conjunction with Glasgow it sends one *representative* to Parliament (present member, J. A. Campbell, LL.D.). It grants *certificates of proficiency to women*, and has instituted *local examinations* throughout the northern counties of Scotland. Its *degrees* are: *M.A.* (hood black silk, lined with white silk); *B.D.* (h. black silk, lined with red silk); *D.D.* (h. purple cloth, lined with white silk); *LL.D.* (h. purple cloth, lined with pale blue silk); *M.B.* (h. black silk, lined with crimson silk); *M.D.* (h. purple cloth, lined with crimson silk). Among her alumni are Alexander Bain; Sir Robert Hamilton, Governor of Tasmania; Mr. Justice Sterling; Professor Robertson Smith; Professor Blackie; and Archibald Forbes.

Abou Hubba. See ASSYRIOLOGY.

Absentees. Landlords who draw their rents from estates on which they do not reside. Ireland has especially suffered from these. See more fully ed. '87.

Abyssinia. Called *Habesh* by foreigners, *Mekdash* and *Ethiopia* by its inhabitants. A country of North Africa, occupying a highland region S.W. of the Red Sea. Estimated area 350,000 square miles; pop. 3,000,000. Ancient cap., **Gondar**. Country made up of many semi-independent small states, belonging to three great divisions: **Tigré** in the north, **Amhara** central, **Shoa** in the south. The capital of Shoa is **Ankobar**, and its outlet the Gulf of **Tajurah**. Abyssinian trade passes through **Adowa**, the present capital, to the port of **Massowah**, now Italian. Contains the sources of the Blue Nile, **Atbara**, and **Mareb** rivers, the first of which flows out of great lake **Dembea**, or **Tsana**, 60 miles by 25. Surface tablelands, 6,000 to 9,000 feet, broken by deep ravines, summits rising to 15,200 feet. Three distinct zones of elevation, roughly to be described as tropical, temperate, and highland. Temperate zone chief scene of industry and habitation. Government monarchical, and a sort of feudal military system obtains. Religion a form of the Armenian and Coptic Christian Church, called **Monophysite**. Manufactures limited to coarse cotton and woollen cloths, leather, pottery, and some iron, steel, and other metal articles. Exports are ivory, gold dust, musk, coffee, and some other productions. Imports are arms, Persian carpets and silks, French velvet and broadcloth, Venetian beads, etc. The language of court and commerce is **Amharic**. The kings of Abyssinia claim descent direct from **King Solomon**. People a mixed race: Semitic or Arabic type most prevalent; colour yellow-brown to black. There are **Mohammedans**, and **Jews** called **Falashas**. They are exclusive, more moral than the rest of the population, number about 250,000, and are the principal agriculturists and manufacturers of Abyssinia. There is a despised aboriginal race called **Waito** dwelling round **Dembea**. The country has possessed some civilisation from ancient times, but has retrograded. The families of **Mohammed** and his partisans took refuge here after the **Hegira**, and were hospitably received. In the sixteenth century Portuguese colonists obtained a footing, introducing some arts, but were expelled in 1633. The fine castellated palace of **Gondar**, now a ruin, was built by them. In 1866 the tyrant **Lij Kasa**, or **Theodorus**, gained power over the entire country. He imprisoned Englishmen, and a force under **Lord Napier** was sent to chastise him. It reached the fortress of **Magdala**, where a decisive battle was fought (1868), resulting in **Theodore's** defeat and suicide. Prince **Kasa**, of **Tigré**, then obtained British assistance, and now, as **Johannes II.**, rules over **Tigré** and **Amhara**. **Shoa**, till lately virtually independent, under **King Menelek**, is now under the suzerainty of **Negus Johannes**. During the Sudan campaign **Admiral Hewitt** and others visited **Johannes**, and an understanding between him and the British Government was arrived at. He sent an army under **General Ras Aloula** to the relief of **Kassala**. A battle was fought at **Kufelt**, Sept. 23rd, 1885, when **Oman Digma's** army was broken up by the Abyssinian forces. During 1887-88 various conflicts took place between Abyssinian forces and those of Italy at

Massowah. (See ITALY.) During '88, **Ras Arca Selassie**, son of the **Negus**, died, it is supposed, from poison (June). Various conflicts took place during the year with the dervishes. Consult **De Cosson's** "*Abyssinia*."

Academy, The. See ROYAL ACADEMY.

"Academy." A weekly review of literature, science, and art (3d.); estab. 1866. Its chief characteristic is that the articles are signed by the writers, and it has always devoted a large proportion of its space to branches of unremunerative learning, especially philology and oriental studies. Its founder and first editor was **Dr. C. E. Appleton** (d. 1879). Its present editor is **Mr. J. S. Cotton** (v.v.).

Acadia. The name of **Nova Scotia** while it remained a French colony.

Accumulators. See ELECTRICITY, ed. '87.

Act of Union with Ireland. See IRELAND.

Actors' Salaries, Law on, in '88. The case of **Coffin v. Leslie**, heard in the Westminster County Court (June), raised a question whether a theatrical manager could make a deduction from the agreed weekly salary of an actor when there is no performance on a particular day (Good Friday). It was proved that it is the custom of the profession to make no payment for non-performances, and the point was therefore decided in the defendant's favour.

Acts of Parliament. All public Acts affecting the United Kingdom, and all local Acts affecting only limited areas, as well as private Acts of Parliament, are published, and can be obtained (if in print) at various prices, from **Messrs. Eyre & Spottiswoode**, East Harding Street, London, E.C., who also publish at the close of each Session a cheap edition of the public Acts in covers.

Acts of Parliament passed Feb. 9th—Aug. 13th, '88. See SESSION '88, sect. 6.

Address, Forms of—alphabetically arranged. (See also COURTESY, TITLES OF.) **Archbishop**—commence *My Lord Archbishop*; refer to personally as *Your Grace*; and address letter to "His Grace the Archbishop of —." **An Archbishop's wife and the other members of his family** enjoy no title as such. **Archdeacon**—commence *Venerable Sir*; refer to as *Sir*; address to "The Venerable the Archdeacon of —." **Baron**—commence *My Lord*; refer to personally as *Your Lordship* or *My Lord*; and address letter to "The Rt. Hon. Lord —." **Baroness or Baron's wife**—commence *Madam*; refer to personally as *Your Ladyship* or *My Lady*; and address to "The Lady —" or more strictly "The Rt. Hon. the Baroness —." **Baron's son**—commence *Sir*; refer to as *Sir*; and address to "The Hon. John —." **Baron's daughter**—commence *Madam*; refer to as *Madam*; and address, if unmarried, to the "The Hon. Jane —," if married to an esquire to "The Hon. Mrs. —." **Baronet**—commence *Sir*; refer to as *Sir*; address to "Sir William —, Bart." **Baronet's wife**—commence *Madam*; refer to as *Your Ladyship*; address to "Lady —" (without Christian name, unless she be the daughter of a duke, marquis, or earl). **Bishop**—commence *My Lord*; refer to as *Your Lordship*; address to "The Right Rev. the Lord Bishop of —." **Retired Bishops**—commence *Right Rev. Sir*; address to the "Right Rev. Bishop" [then the surname]. **Bishops Suffragan**—commence in the same way, and address to "The Bishop Suffragan of —." **A Bishop's wife and children** enjoy no title whatsoever as such. **Canon**—commence *Rev. Sir*;

refer to as *Sir*; address to the "Rev. Canon —" *Clerk in Holy Orders*—the same, but address to "The Rev. Thomas Jones," or, if the Christian name be not known, to "The Rev. — Jones." *Countess* (see *Earl*). *Dean*—commence *Very Rev. Sir*; refer to personally as *Sir*; address to "Very Rev. the Dean of —" *Dowager*—the widow of a peer or baronet should be addressed as "The Dowager Duchess of —" or "The Dowager Lady —" when her son or grandson succeeds to the title and is married. *Duke*—commence *My Lord Duke*; refer to as *Your Grace*; and address to "His Grace the Duke of —" *Duchess*—commence *Madam*; refer to as *Your Grace*; and address to "Her Grace the Duchess of —" *Duke's eldest son* as if he held legally the second title of his father. *Duke's younger son*—commence *My Lord*; refer to as *Your Lordship*; and address to "The Lord Henry —" *Duke's daughter*—commence *Madam*; refer to as *Your Ladyship*; and address to "The Lady Ellen —" *Earl*—commence *My Lord*; refer to as *Your Lordship*; and address to "The Rt. Hon. the Earl of —" *Earl's eldest son* as if he held legally the second title of his father. *Earl's younger son*, same as the younger son of a baron. *Earl's daughter*, same as the daughter of a duke. *Countess*—commence *Madam*; refer to as *Your Ladyship*; address to "The Rt. Hon. the Countess of —" *Judge of the High Court of Justice*—commence *Sir*; refer to in letter only as *Sir*, but on the bench as *My Lord*; address to "The Hon. Sir John —" *Knight*—commence and refer to as *Sir*; and address to "Sir Thomas —" If a *Knight Bachelor* (Kt.), the form of knighthood usually conferred upon a judge, and the law officers amongst others) it is not customary to add "Knight," except in formal documents; but if the person addressed be a K.G. or K.T. or K.P. or G.C.B., etc., etc. it is usual to add the initials after the name. When the person addressed is a knight of several orders give at least the initials of the most illustrious. *Knight's wife*, same as wife of a baronet. *Lord-Lieutenant of Ireland*—commence *My Lord Marquis* or *My Lord*, according to rank; address to "His Excellency the Lord-Lieutenant," or, if a duke, to "His Grace the Lord-Lieutenant." *Lord Mayor*—commence *My Lord*; refer to as *My Lord* or *Your Lordship*; and address to "The Right Hon. the Lord Mayor of London, or York, or Dublin," as the case may be. *Lady Mayoress*, same as baroness, addressing to "The Rt. Hon. the Lady Mayoress." *Marquis*—commence *My Lord Marquis*; and refer to as *My Lord* or *Your Lordship*; and address "The Most Hon. the Marquis of —" *Marchioness*—commence *Madam*; refer to as *Your Ladyship*; and address to "The Most Hon. the Marchioness of —" *Eldest son* as if he legally held the second title of his father. *Younger son*, same as younger son of a duke. *Marquis's daughter*, same as daughter of a duke. *Mayor*—commence and refer to as *Sir*; and address to "The Mayor of —" or in any formal documents to "The Right Worshipful the Mayor of —" *Prince*—commence *Sir*; refer to as *Your Royal Highness*; and address, if a prince, "His Royal Highness Prince —" or, if a duke also "His Royal Highness the Duke of —" *Princess*—commence *Madam*; refer to personally as *Your Royal Highness*; and address to "Her Royal Highness the Princess —" or, if a duchess, to "Her Royal Highness the

Duchess of —" *Privy Councillor*—commence and refer to according to rank, but address to the "Right Honourable —" and if a commoner omit *Esq.* (e.g., "The Rt. Hon. E. T. Bouverie"). A *Privy Councillor's* wife and children take no title as such. M.P. should be added after the surname, or after *Bart.* or *Esq.* (e.g., the Right Hon. Lord Randolph Churchill, M.P.; Sir Joseph W. Pease, Bart., M.P.; Jesse Collings, Esq., M.P.). *Queen*—commence *Madam*; refer to personally as *Your Majesty*; and address "The Queen's Most Excellent Majesty." *Viscount*—commence *My Lord*; refer to as *Your Lordship* or *My Lord*; address to "The Rt. Hon. Lord Viscount," or "The Lord Viscount —" *Viscountess*—commence *Madam*; refer to as *Your Ladyship*; and address to "The Rt. Hon. the Viscountess —" or "The Viscountess —" *Viscount's son* or daughter, same as son or daughter of a baron. *NOTE*.—A marquis, or an earl, or a viscount by courtesy is addressed as if he were a peer and enjoyed one of those titles by right. In communications upon official business give the office held by the person addressed in a line beneath the name. In writing proper names the first part of a compound name must not be confused with a Christian name: e.g., J. Robinson-Browne must not be addressed as "Robinson-Browne, Esq."; and in the case of a knight, Sir William Jones-Smith must not be written to as Sir Jones-Smith, which would be as incorrect as Sir Campbell or Sir Jones.

Addresses to the Crown. See ed. '88.

Adelaide. Capital of S. Australia (*q.v.*); pop. (including suburbs) 128,377; on St. Vincent Gulf. **Aden,** a town and territory on the S. coast of Yemen, Arabia, 110 miles east of the Straits of Bab-el-Mandeb, and is a British dependency. Total area 70 sq. m.; pop. about 35,165. **Consists** of a rocky promontory not unlike Gibraltar, joined to the mainland by a low isthmus. The town is here, occupying an ancient crater, surrounded by rocks rising to 1,776 feet, and is strongly fortified. Thus, the original possession, has an area of 5 sq. m. The opposite peninsula of Little Aden, territory stretching 3 miles inland, and the village of Shaik Othman, now form part of the dependency. It is a hot and arid place, but the climate is not unhealthy. Rain falls about once in three years, and is stored in vast reservoirs. But there are copious wells at Shaik Othman, and water is now being conducted thence to the town.—**A Resident** acts as military and civil governor, subsidiary to the Government of Bombay. The fortifications, which are to be strengthened, are garrisoned by an adequate force. The harbour is a very fine one, and is touched at by 1,500 ships annually. It is a **coaling station** for our navy. Aden has a large commerce, being the entrepôt of trade for surrounding countries. The chief articles are coffee, spices, gums, perfumes, dyes, feathers, etc. Subject to Aden are the islands of **Perim**, **Kuria-Muria**, **Socotra**, and the port of **Berbera** with the adjacent Somali coast.—**Historically** Aden possesses some interest. For several centuries prior to the discovery of the Cape route to India it was the emporium of immense commerce. Its prosperity and fine climate then gained it the name it bears; but afterwards it fell into ruin and decay. In 1838 the East India Co. arranged to purchase it from the native ruler, but owing to his treachery

were obliged to capture it by force the following year. Little Aden and Shaik Othman were acquired in 1882. For statistics see **BRITISH EMPIRE**, etc. (table).

Adler, Hermann, M.A., Ph.D., Delegate Chief Rabbi, son of the Chief Rabbi, Dr. Nathan M. Adler, was b. in Hanover, 1839. Educated at University Coll., Lond., B.A. Lond. University '59, Ph.D. Leipsic '61. Was appointed Principal of the Jews' College in '63, and Minister of the Jewish Synagogue at Bayswater in '64. Dr. A. has contributed much to periodical literature, and is the author of several works of a controversial character, including a reply to Dr. Colenso's "Criticism of the Pentateuch," and "Sermons on Passages in the Bible on which Christian Theologians base their Faith." Dr. A.'s sermons on the *Sweating System*, delivered last year, attracted some attention.

Administrations and Ministers of Great Britain. See **MINISTRIES**.

Admiralty, The. See **NAVY**.

Admiralty and War Office Sites. For report of Select Committee on, see ed. '88.

Admiralty Courts. See **HIGH COURT OF JUSTICE**, and ed. '88.

Adowa. Capital of Tigré, in *Abyssinia* (*g.v.*).

Adullamites. A derisive comparison with the refugees who went to the cave of Adullam, first applied by Mr. John Bright to the forty Liberals who, in 1866, opposed the majority of their party on Earl Russell's new parliamentary reform proposal. See ed. '87.

Adulteration Acts '75, and Amending Act '79. See ed. '88.

Advocate, The Lord, alias King's or Queen's Advocate, is the chief legal officer of the Crown in Scotland. He corresponds to the Attorney-General in England. His earliest functions are obscure, but since the sixteenth century he has filled the post of public prosecutor in Scotland. The duties of Secretary of State for Scotland were transferred to him when the special office was abolished in the reign of George II. In the House of Commons in which he always—though not *ex officio*—sits, he replies to all Scotch questions and takes charge of all Scotch measures. He has a title of Right Honourable by courtesy, and sits within the bar (otherwise confined to peers of the realm and the Solicitor-General) in the Court of Session. The present Lord Advocate is **Mr. J. F. B. Robertson**, M.P.

Advowson (Latin *advocatio*, "calling to") is the right of presentation to an ecclesiastical benefice in England and Wales. For various kinds of A., see ed. '88.

Adye, Lieut.-Gen. Sir John M., G.C.B., b. at Sevenoaks, 1819. Entered the Royal Artillery '36. He served throughout the Crimean war, the Indian mutiny, the Sitana campaign, and was chief of the staff and second in command under Sir Garnet Wolseley, in the *Egyptian campaign* of '82. He received a C.B. for his services in the Crimea, and was created K.C.B. in '73 and G.C.B. at the conclusion of the Egyptian war. He became major-gen. in '75 and lieut.-gen. '79. He has held many important military offices, including the directorship of artillery, the governorship of the Royal Military Academy at Woolwich, the surveyor-generalship of Ordnance, and *Governorship of Gibraltar*, in succession to Lord Napier in '83. During the agitation on the subject of the supply of defective cutlasses and sword bayonets to the army and navy, an attempt was made to fasten

the responsibility upon Sir John Adye, but a *parliamentary committee* appointed to inquire into the matter exonerated him from blame. He has been a frequent contributor to military literature, and his works include the "Defence of Cawnpore," "A Review of the Crimean War," "An Account of the Sitana Campaign," and "The British Army in '75." Sir J. A. is one of the few high military authorities who are in favour of the construction of the Channel Tunnel.

Aeronautical Exhibition, Vienna, '88. See **BALLOONING**.

Affidavit. A written statement sworn to or affirmed before a person having authority to administer oaths. It must be drawn up in the first person, and divided into paragraphs numbered consecutively and dealing each with a distinct portion of the subject. It must be expressed in distinct and positive terms, so as to afford matter for a charge of perjury if false. When used as evidence in an action it must be confined to statements of fact. When used to support applications merely incidental to the conduct of a suit, it may state the deponent's belief as distinguished from his knowledge, but must give the grounds of such belief. It may be sworn (1) in England, in court or before any one of the judges, or before a commissioner appointed to take affidavits; (2) elsewhere in the Queen's dominions before any person authorised to administer an oath; (3) in foreign countries before a British consul or vice-consul. Evidence may be taken by affidavit in any action in which the parties consent to that course; but then leave to try the case with a jury will generally be refused. Consult Foulkes, "Action in the Supreme Court."

Affirmation. The law of England requires an oath to be taken by persons about to discharge various public functions—*e.g.*, a person about to give evidence in a court of justice takes an oath that he will speak the truth; a member of parliament before taking his seat takes the oath of allegiance. But by several statutes, beginning with the early part of the reign of William IV., and ending with the early part of the present reign, Quakers, Moravians, Separatists, and persons who had seceded from any of these bodies, but retained a conscientious objection to taking oaths, were permitted to make an affirmation upon every occasion on which they would otherwise have had to take an oath. By the Common Law Procedure Act 1854, § 20, every person called as a witness in a civil action who might refuse, on conscientious grounds, to take an oath, was enabled to make an affirmation instead. By an Act of 1861 persons called as witnesses in criminal trials were permitted, on declaring that the taking of an oath was according to their religious belief unlawful, to make an affirmation instead. By the Evidence Further Amendment Act 1869, explained by an amending Act of 1870, a person called as a witness in any proceeding, civil or criminal, might, if he objected to take an oath, and if the court were satisfied that it would have no binding effect upon his conscience, give his evidence upon affirmation simply. By the *Parliamentary Oaths Act 1906* it was enacted that every person for the time being by law permitted to make an affirmation instead of taking an oath, should be allowed, on making an affirmation in the form therein prescribed, to take his seat in either house. In the case of Clarke v. Bradlaugh (vol. 7, Law

Reports, Queen's Bench Division), it was held by Mr. Justice Mathew, and confirmed by the Court of Appeal, that this Act did not apply to any person enabled by the Acts of 1854, 1861, or 1869, to give his evidence on affirmation in a court of justice, but only to persons entitled upon every occasion on which an oath may lawfully be required to make an affirmation instead. Thus an atheist may give evidence upon affirmation in a court of justice; but he cannot by making an affirmation qualify himself to take his seat in either house. See also Session '88, sect. 87.

Afghanistan. A so-called barrier state separating Russia from India, and regarded by England as wholly within the sphere of her influence, although in Russia the contention is maintained that England would violate the existing understanding if she were to attempt to occupy Herat and Cabul. Its area is about 300,000 miles, and while in the vicinity of Cabul, its capital, it is extremely mountainous, the Herat and Candahar sections are so open to access that the Russians could march from Penjdeh to Candahar without having to force any passes, or specially prepare the road for wagons. There is no Afghan "nation," the population (four millions) consisting of discordant tribesmen constantly in revolt, and only kept in subjection by frequent military expeditions from Cabul. To enable the Ameer, Abdurrahman Khan (*q.v.*) to maintain his position the Indian Government grants a monthly subsidy of £10,000, together with occasional gifts of arms and ammunition. Abdurrahman, grandson of Dost Mahmoud, lived in exile at Samarcand during the final years of Shere Ali's reign. Placed on the throne by England after the Cavagnari massacre had been avenged, and Yakoub Khan deported to India, he expelled Ayoub Khan (the hero of Maiwand) from Teheran, suppressed a rising of the Ghilzai tribes, and co-operated with Viceroy Dufferin in promoting the delimitation of the Russo-Afghan frontier. In '88, against the wishes of the Viceroy, he involved himself in a conflict with the tribesmen north of the Khyber Pass, which he had to suspend in order to suppress a formidable rebellion by Ishaak Khan in Afghan Turkestan—the country lying between the Hindoo Koosh and the Oxus, and populated mainly by Uzbegs and other non-Afghan peoples. In April two fights took place on the new Afghan frontier: (1) Some Salor Turcomans, subject to Russia, crossed into Afghanistan, near Zulfiakar, and refusing to pay the pasture tax, were fired upon and expelled; (2) some Salor Turcomans, subject to the Ameer, resisted an attempt to prevent their migration from Maimene to Russian territory, and were interned by Alikhanoff, near Sarakh. The Ameer in '88 inaugurated a policy of employing Europeans, and has now at Cabul Capt. Griesbach, engaged in mineralogical surveys; Mr. Pyne, supervising his workshops, and several others. In October the Indian Government decided on despatching a Special Mission to Cabul. For Agent to Gov.-Gen. of India, see DIPLOMATIC, and consult *Encyclopædia Britannica*, article "Afghanistan"; "Northern Afghanistan," by Major C. E. Yate, C.S.I.; and Blue Book, Central Asia, No. 2 of '87.

Africa. Under various headings will be found items dealing with every country, district, or feature of current interest relating to the continent. This gradual partition of Africa

among certain European Powers will chiefly interest the political student, who is here referred to CONGO FREE STATE, COLONIES OF EUROPEAN POWERS, and each of the said colonies under its proper title, as well as other countries and regions under their respective names. Consult "Austral Africa, Losing it or Ruling it," by J. Mackenzie.

Africa, Central. A term applied in its widest sense to indicate all of the continent lying between the parallels of 15° N. and 20° S. lat., comprising an area of possibly 8,000,000 sq. miles, with a population roughly guessed as 100,000,000. The term is more closely connected with the regions lying between the Suaheli coast and Lower Guinea, comprising the Congo valley, the Great Lakes, Equatorial Africa proper, and the native states north of the Zambesi. See AFRICAN EXPLORATION, CONGO FREE STATE, ZANZIBAR, SOUDAN, AYEYSSINIA, SOMALI-LAND, MOZAMBIQUE, ZAMBESI, YASSA, BLANTYRE, KILIMA-NJARO, ANGOLA, COLONIES OF EUROPEAN POWERS, GERMAN COLONISATION, GERMAN EAST AFRICAN CO., &c.

African Exploration in '88. Very little has been added to our knowledge of the Dark Continent during the past year. The French are gradually filling in the maps of the interior between the coast of their colony of Senegal and the upper waters of the Niger, and also by degrees extending their knowledge of what is now called the French Congo. The chartered English company to which the future of the Niger is intrusted is pushing its operations farther afield, and thereby gaining more knowledge of the Benue and the surrounding country; but, jealous of competition, they do not make all this new knowledge public. The Germans have sent out exploring parties in their new colonies of Togoland and the Cameroons. In the former they do not seem to have gained any geographical knowledge of value, but only to have somewhat extended the area where they sell spirits to the natives, strong drink being the principal, and with the exception of a little tobacco the only article in which they here came to trade. In the Cameroons they have gone slightly farther into the interior than English explorers had reached some years ago, and have found that the Moslem Negroids of the greater Soudan are extending the area over which they hunt for slaves. Unfortunately these German explorers do not seem to have been gifted with tact, but to have aroused the distrust instead of eliciting the friendship of the new tribes with whom they came in contact. The Congo Free State (*q.v.*) is of course the centre of interest at the present moment, for it is thence that we hope to hear news of the adventurous expedition which Mr. Stanley led into the unknown country between the Congo and Albert Nyanza in June '87, since which time no certain news has been heard of him or his followers; though in June '88 rumours reached England that some of his followers had deserted and reached either Nyangwe or some other haunt of the Arab slave dealers, and from these tainted sources came a report that great difficulties had been encountered, not only from the difficult nature of the country, but also from the hostility of the native tribes, that many men had died of wounds and starvation, and that Mr. Stanley himself was wounded in the leg by an arrow. News from Emin Pasha (*q.v.*), whom Mr. Stanley's expedition was intended to relieve, up to Nov. 15th, '87, showed him to have heard no rumour or report of Mr. Stanley's

approach up to that date. Since then news from Wadelai, which formerly used to arrive with some degree of regularity, has ceased, and we have heard that Captain Cazati, Emin's trusted friend and assistant, who had been sent to the frontier of Unyoro for the purpose of facilitating communication, has been murdered, either with or without the complicity of Kabba Rega, the chief of that country. The fate of those whom Mr. Stanley left behind him at the camp at Yambuya, on the Aruwhimi, has been tragical. For a year they stuck to their posts, suffering from illness and privation, awaiting the arrival of the men promised by Tippoo Tib; and when at last the men did arrive and they started to follow up their chief, their progress was soon stopped by the unfortunate death of Major Barttelot, their leader, at the hands of a follower, and the consequent dispersion of the carriers. Mr. Jameson, the second in command, soon after died of fever, and with his decease all hope of relieving either Stanley or Emin from the Congo seems to have been abandoned. A Belgian officer was sent to explore the Mohangi, discovered by Mr. Grenfell; and though he turned back when he was within fifty or sixty miles of the farthest point reached by Dr. Junker on Schweinfurth's Uelle, there can be but little doubt that the two rivers are one and the same. Lieutenant Van Gele has, since the collapse of Major Barttelot's party, started with a small party, being personally conducted by Tippoo Tib, for the headquarters of that great slave dealer. This country, between Stanley Falls and Kasongo, has been twice traversed lately by Mr. Jameson, and Cameron's survey between Nyangwe and Kasongo. In Southern Africa Mr. Selous has been pursuing his travels to the south of the Zambesi, and adding much to our knowledge of the country. The last news of this indomitable traveller is that his followers have been dispersed or killed, but that he himself is safe on the south bank of the Zambesi. Near Lake Nyassa troubles have occurred between the Europeans who are pursuing their civilising mission there and the slave-dealers; but nevertheless Mr. Hetherington, a Scottish missionary, has been able to add considerably to our knowledge of the watersheds around Lake Shirwa. In connection with the Nyassa district attention must be drawn to Professor Drummond's work embodied in "*Tropical Africa*," for though not an explorer, he is a man of science and possessed of highly trained perceptive faculties. The Germans have done nothing of geographical importance on the east coast of Africa, though they have succeeded in getting into hot water with the people of the coast-line lately turned over to Herr Peters' Company. This Company intends to send an expedition under Lieutenant Wissmann to the relief of Emin; and the past exploits and known capabilities of the leader give promise of good results being attained. The British East African Company have already despatched an expedition under Lieutenant Swayne to proceed to the relief of Stanley and Emin; and it is reported that the explorer Joseph Thomson is also to be employed by them on this duty. Increase of geographical knowledge and other benefits will result from these expeditions if they are conducted with tact and judgment; but it is to be hoped that they will neither excite the suspicion of Mwanga, which would be the death sentence of the missionaries in Uganda; nor act with jealousy towards their German

competitors, for that would mean ruin to all concerned. We may also remark that Vice-Consul H. E. Johnson has examined the Cross River, on the west coast; and Sir Marshall Clarke has added to our knowledge of Basutoland. Reports from both these travellers are to be found in the Proceedings of the Royal Geographical Society.

African Lakes. The great equatorial chain consists of the following, as well as sundry lesser ones:—Albert Nyanza, lying under equator, 2,500 feet above sea-level, 150 by 40 miles, discovered by Baker, 1864, now the scene of Emin Pasha's labours; to east of it, Victoria Nyanza, 3,800 feet above sea-level, 300 by 200 miles, discovered by Speke, 1858, explored by Stanley; between this and the Congo is Muta-Nzige, now being explored; southward of Nyanza is Tanganyika, 2,700 feet above sea-level, 400 by 50 miles, discovered by Burton, 1858, explored by Livingstone, Stanley, and Cameron; south-east, Nyassa, 1,500 feet above sea-level, 358 by 38 miles, discovered by Livingstone, 1859; south-east, the small Shirwa; far to west, Moerokata, 65 by 60 miles, discovered by Livingstone, 1867; and south of it, Bangweolo, or Bamba, 3,600 feet above sea-level, 150 by 75 miles, discovered by Livingstone, 1868. North and west of Moero are other lakes, Lanji, Kassali, Lohemba, etc., not yet fully explored. The Nyassa lies in the basin of the Zambesi, and presents great facilities for penetrating the interior of Africa, facilities of which the African Lakes Trading Co., of Glasgow, have taken advantage. A steamer runs up the Zambesi and the Shirwa to Katunga, 300 miles; thence a road leads past the rapids to the head of Murchison Falls, 65 miles; thence another steamer sails to Karonga, near the northern extremity of Nyassa, 420 miles; and thence a carriage road runs to Tanganyika, 210 miles. See CONGO FREE STATE, NYASSA, etc.

Agnosticism. A term generally adopted to express the doctrines of a certain school of English thinkers of whom Professor Huxley and Mr. Herbert Spencer are the chief exponents. The term, "invented" by Professor Huxley, was first used and popularised by the *Spectator*, and now the Agnostics are "assuming the position of a recognised sect." According to Professor Huxley, Agnosticism "simply means that a man shall not say he knows" or believes that which he has no scientific ground for professing to know or believe. . . . Agnosticism simply says that we know nothing of what may be beyond phenomena." See ed. 87.

Agricultural Colleges. The only two purely agricultural colleges in England are those of Cirencester and Downton. Scotland has one, in Glasgow. The Albert Memorial College, Framlingham (founded 1864), devotes a portion of its curriculum to agriculture.—1. The Royal Agricultural College, Cirencester, incorporated by royal charter in 1845, has six residential professorial chairs, and grants certificates of proficiency and a diploma of membership and associateship. In 1870 a supplemental charter, with new powers, was obtained, and in March 1880 the College, by command of the Queen, was styled the "Royal Agricultural College." It is a handsome institution, admirably equipped, and offers valuable and practical advantages to students at a moderate cost: in-students pay £135, and out-students £75 per annum (with a few extras). The college course embraces a sound practical education for home

or colonial agriculture and estate management. Attached to it is a large farm for practical instruction, a model dairy, a chapel, library, museum, botanic garden, lecture theatre, laboratories, veterinary hospital, meteorological station, and workshops. Instruction is by means of lectures, outdoor classes on the farm, practical work, laboratory work, etc., and there are weekly examinations, and the course prepares for the examinations of the Royal Agricultural Society and of the Institution of Surveyors. The farm, which is of a mixed character, consists of about 500 acres, of which 450 are arable, so variable as to admit of experimental treatment. There are several scholarships and prizes open to the students. Secretary or Registrar, E. B. Haygarth, Esq. Prospectus on application to the Principal.—2. The **Downton College of Agriculture**, near Salisbury, was established in 1880, with the object of supplying sound and practical instruction in agricultural subjects, to qualify students to be land agents, farmers, or surveyors. The method of instruction consists of field classes, practical work, and catechetical lectures. Weekly examinations are conducted on the farm, in the laboratories, and by printed papers. Each student keeps a farm journal, which is inspected and reported upon at regular intervals. A complete two years' course prepares for examinations of the Royal Agricultural Society and of the Institution of Surveyors. There is a farm of 535 acres, and students are expected to take part in field operations and to assist with live stock when required. Young men over twenty-one years of age are received as out-students. The fee for in-students (including board, lodging, tuition, and laundry) is £120; for out-students, £60 per annum (with extras for private rooms, etc.). A scholarship of £10 is offered for competition among the students who have completed their first year, and prizes are awarded for proficiency. Instruction in agriculture is also part of the course at the **Royal School of Mines**. A new college has recently been established at **Hollesley Bay**, Suffolk; and there is also the **Aspatia Agricultural College**, Cumberland.

Agricultural and Dairy Schools. A Royal Commission was recently appointed by the Government to inquire into and report upon agricultural and dairy schools in Great Britain which may properly receive Government grants. The commissioners are: Sir Richard Paget, M.P., chairman; Professor Brown, C.B., Mr. J. A. Kempe, C.B., Col. Donnelly, C.B., R.E., Mr. R. Jasper More, M.P., Mr. C. W. Gray, M.P., and Mr. M. J. Stewart, M.P.; Mr. E. P. Eardley-Wilmot is the clerk to the Commission. The evidence taken by the C. is in favour of the proposal that dairy schools subsidised by the State should be established in various districts, that the children of the poor may be instructed in the operation of cheese and butter making.

Agricultural Holdings. This term is applied to farms occupied by tenant farmers, who pay rent to the owner for the privilege of cultivating the land and reaping the produce, under certain conditions. These are prescribed by lease, or recognised by custom; and their object is to insure the management of the holding according to the "rules of good husbandry." See AGRICULTURE, and ed. '87.

Agriculture. The United Kingdom must be regarded as a great agricultural as well as a trading country. The intelligence and skill of

its farmers, the average yield of its productions per acre, as compared with other countries, the early maturing, prime beef producing qualities of its live-stock, are universally admitted to be the distinguishing features of British agriculture. This country has only 22,250,000 acres of arable land, and 25,000,000 acres of permanent pasture; but it possesses a population of 35,000,000, and practises a system of free trade which invites the whole world to compete in its markets on the same terms as the home-producer. British agriculture, therefore, only constitutes a portion of the vegetable and animal food consumed by the people of the kingdom. Portugal, Holland, Spain, France, and Egypt contribute largely to the import supply; and nearly the whole of the vegetables and raw fruits imported (excluding apples), valued at £3,324,226, come from France and Spain. The vast pastoral territories and fine climate of Australia enable that island-continent to send nearly three-fourths of the foreign supply of wool to the British market, the aggregate value of which, in 1887, was £24,280,593. Cattle and sheep, too, are so cheaply fed in Australia and the United States, that thousands of carcasses are boiled down for the sake of the tallow and stearine, which is exported to this country; of the total value of these two articles imported, £1,074,028, in 1888, three-fourths came from the two countries just mentioned. From the beginning of this century up to the repeal of the corn laws, there had been several periods of depression in agriculture, which were supposed to be caused by over-production, high rents, low prices, and excessive local burdens. Parliamentary inquiries on the subject were held in 1804, 1815, 1822, 1833 and 1836, which resulted in the imposition of duty on foreign wheat when the price at home fell below a certain figure. For instance, in 1822 an Act was passed fixing the limit of price at which importation should be permitted at 70s. for wheat, 35s. for barley, 25s. for oats, per quarter; and also imposing a new sliding scale of duties on foreign wheat when prices were from 70s. to 85s. per quarter. But farmers and the public generally began to recognise that protective duties on grain did not remove depression, and that agitation commenced which led to the repeal of the corn laws. A long spell of prosperity for the British farmer ensued, due not so much to the repeal of the corn laws as to the outbreak and continuance of Continental wars, which threw out of cultivation large areas of wheat lands, and turned countries for the time being from being exporters to importers of grain. This condition of things led to increased demand and unusually high prices for grain in Britain; but the causes having passed away, the reaction came. Its effects, now felt for several years, have been aggravated, among other causes, by preferential tariffs given to foreigners by British railway companies, by the low prices obtained for agricultural produce, in consequence of the increasing competition, arising from importations from abroad, and by a succession of unfavourable seasons. A Royal Commission sat in 1885 to inquire into the causes, and suggest, if possible, remedies for the removal of the depression in agriculture, and various recommendations were made which met with the general approval of the agricultural community. But only one or two of these have had imparted to them the vitality

or force of legislation. The Agricultural Holdings Act was, in 1883, however, made compulsory; and now the landlord, or tenant, is prevented from contracting himself out of the Act which entitles the tenant, on quitting his farm, to compensation for unexhausted improvements. Apart from the numerous proposals made for the reform of the land laws, such as the abolition of the law of primogeniture, the curtailment of the system of entail and settlements, the adoption of a better system of land transfer, the more immediate remedies suggested for the removal of agricultural depression are "a general revision of existing rents, complete security for the tenant's capital, by granting him continuity of tenure, with free sale of his interest in his holding, the landlord having a right to pre-emption," together with freedom of cropping, reduction of local taxation, relief from excessive railway charges, the extension of fruit and vegetable, dairy and poultry farming. The British Fruit Growers' Association has recently been formed, for the purpose of promoting fruit culture on an extensive scale, and this industry has been further encouraged by the Royal Horticultural Society, who hold periodical Apple and Pear Conferences and Exhibitions. The last of these was held at the Society's Gardens at Chiswick in the third week of October last. In many cases a generous effort has been made on the part of landlords to assist the tenant by a reduction of rent from 10 to 20 per cent.; but an unusually large number of farms in the kingdom are, and have been for the past two or three years, empty, or are being cultivated by the landlords. The varied character of the climate in the kingdom has much to do with the particular system of agriculture pursued in any district. In the eastern counties, which comprise the comparatively dry and sunny districts of the country, the cultivation of wheat and barley largely prevails; while in the humid climate of the western counties, dairy farming, stock breeding and rearing, and root-growing, are the dominant features of agriculture pursued. The humid climate of Ireland lends itself very suitably to the rearing of cattle and to dairy farming (*q.v.*). In the uplands and hilly districts sheep farming with a little corn growing is generally carried on. In colonies where the area under cultivation is vast compared with the population, and where, too, the land is cheap, the payment of rent the exception, not the rule, and almost every owner the cultivator of his own land, one of their most important industries consists in the sending of their agricultural products to the British market. The general consumer is thus benefited, though the home farmer has to be satisfied with a smaller price than that obtained before for his produce. The United States, Russia, British India, and Australia, and other countries send to Britain annually over £40,000,000 sterling worth of wheat and wheaten flour, other grains and meals; £6,149,066 worth of live cattle, sheep and pigs, were imported in 1887, the larger number of which came from the United States, Canada, Denmark, Holland, and Germany; £14,350,234 worth of fresh-preserved and salted meat of all kinds were imported from Australia, Canada, the United States and other countries; £3,080,561 worth of eggs came principally from France, Belgium, and Germany; while nearly two-thirds of the foreign supply of butter, including butterine, amounting in value to £11,886,717, was sent

from Holland, Denmark, and France; four-fifths of the cheese imports, with a total value of £4,508,937, came from the United States, Canada and Holland; and Belgium and France exported to this country nearly the whole of the foreign supply of poultry and game, including rabbits, the value of which was £721,049; and a considerable portion of the shipment of potatoes, valued at £974,133, came from the Channel Islands and France. The extended use of machinery in the operations of agriculture is borne out by the fact that, according to the census of 1881, though the number of persons engaged in the cultivation of farm lands has since 1871 decreased 9·3 per cent., the number of attendants on agricultural machines has considerably increased. The area returned in '88 as under cultivation of all kinds of crops, bare fallow, and grass, exclusive of heath and mountain pasture land and of woods and plantations in GREAT BRITAIN, was 32,684,399 acres. These figures compared with the returns of '87 show an increase in land under cultivation of about 69,095 acres, the respective additions in each division being about 42,400 acres for England, 10,247 acres for Wales, and over 16,400 acres for Scotland. Notwithstanding the depression in agriculture so frequently noticed in the reports of collecting officers, there are in certain localities, such as parts of the counties of Cornwall, Devon, Durham, Lancaster, and the North Riding of Yorkshire in England, and others in Wales and Scotland, several instances of land newly reclaimed and brought under cultivation since '86. The total quantity of land returned under wheat last year was 2,564,237 acres, or 246,900 acres (equal to 10·6 per cent.) more than in '87. The area under barley in '88 was 2,085,561 acres, or only 405 over '87. Oats were sown on 2,882,200 acres, or a decrease of 205,700 acres, or 6·7 per cent.; but it is worthy of note that they covered a larger breadth last year than has ever been returned under this crop. The acreage under rye shows an increase of 20,000 acres. Beans, compared with '87, decreased by 31,600 acres, while peas increased by 11,000 acres. Altogether the total area under cereals in Great Britain in '88 is thus brought up to 8,187,700 acres, or 41,800 in excess of '87. Of the area under green crops in Great Britain in '88, potatoes were planted on 590,160 acres, an addition over the quantity of land so returned in '87 of 30,568 acres. Turnips and swedes declined. They were returned as grown on 1,044,178 acres, compared with 1,972,287 acres in '87, a decrease of 28,109 acres. Mangolds increased by 1,095 acres; and cabbage, kohlrabi, and rape increased by 5,741 acres; while vetches, and other green crops unenumerated, together decreased by 2,000 acres. The total area of green crops was thus 3,471,861 acres, an increase of nearly 8,200 acres from the figures of the preceding year. Flax was grown on 2,200 acres, a decrease of 1,500 acres. Hops decreased last year, as compared with '87, by 5,215 acres, nearly 3,600 acres of this quantity being in the county of Kent, where much of the land has not yet, it appears, been otherwise utilised. The collectors state that hop plants on important quantities of land both in Kent and Sussex hitherto so occupied have been grubbed up in consequence of the unremunerative character of this crop, from the prevailing low prices due to foreign competition. Bare fallow in Great Britain decreased in much greater measure than has been usual.

The diminution, which is chiefly in England, was from 498,992 acres to 478,116 acres—a smaller area by 82,000 acres than that of any year since the returns have been collected. **Oleifer and rotation grasses** show a considerable decrease in Great Britain, their extent being 4,724,299 acres, or 56,728 acres less than in '87. The movement in the direction of constant additions to permanent pasture continues, and the results were shown last year in an area of 15,746,197 acres, as compared with 15,671,395 acres in '87, an increase of 74,800 acres. The area of arable land, on the other hand, is less by 5,707 acres, about 16,938,200 being returned in '88 against 16,943,909 acres in the preceding year. **Orchards** in Great Britain show a decreased area, covering 199,178 acres, as compared with 200,234 in the previous year. The acreage under **market gardens** was last year 67,383 acres, as compared with 62,666 acres in '87. For land used by **nurserymen** for the growth of trees, shrubs, etc., the returns for '88 show a slight decrease from the acreage of '87.—Turning now to the various kinds of live stock in Great Britain, the record of last year cannot be looked upon as satisfactory. There was a decline of 9,295 in **agricultural horses**. So far as relates to the trade in horses between the United Kingdom and foreign countries, more horses have lately been imported than exported. It is remarkable that in spite of the increased acreage under permanent pasture and clover or artificial grasses, the stock of cattle fell off considerably in the past year, each of the several classes of this stock participating in the result, the total number being 6,129,375, or 3,111,893 (equal to 4.8 per cent.) less than in '87, and 519,308 (or 7.8 per cent.) less than in '86. The number of sheep of one year old and above was last year 15,726,947, as compared with 16,146,249 in '87, or a decrease of 419,302. **Sheep and lambs**, taken together, show a decrease of 701,619, as compared with '87, distributed in a reduction of 419,302 sheep and of 282,319 lambs, total number being 25,257,149. The mortality among sheep was owing to the severe winter and scarcity of keep through the failure of the root crops. The weak condition of the ewes from this cause told greatly on the number of lambs. **Pigs** numbered 2,404,300, as compared with 2,209,300 in '87, an increase of 4.6 per cent.

IRELAND. In the returns of the crops and live stock the following changes are to be noticed. There was a decrease in the cultivated area of 66,855 acres, the area being 15,062,252. The corn crops show altogether an increase acreage of 8,714 acres, that under wheat being more by 33,204 acres, and barley by 8,780 acres, while oats were less by 35,199 acres. **Rye** increased by 3,222 acres. The total area of green crops amounted to 1,234,069 acres, or an increase of 5,323 acres. There was an addition of 7,745 acres of potatoes, 4,059 acres of mangolds and beet-root, and vetches, carrots, and rape severally increased, but the breadth sown with turnips was 5,715 acres less. **Flax** was grown on 113,586 acres, a decrease of 16,698 acres from the acreage of '87. The land returned under bare fallow was more by 2,473 acres. The area occupied by clover, sainfoin, and rotation grasses last year in Ireland was 1,204,560 acres, of which nearly 627,900 acres were intended to be cut for hay. As regards live stock in Ireland, horses increased 7,871 to 507,201. Milking cows and heifers showed a decrease of 7,255. Young cattle decreased by 7,889, and other

cattle of two years of age and above diminished by 43,024, thus making the total number of cattle 4,099,241, or 58,168 less than in '87. **Sheep and lambs** taken together exhibited an increase of 248,363, the total number of sheep and lambs being 3,626,770. **Pigs** have fallen in number, and are fewer by 20,685 than in the preceding year, the total number being now 1,397,800.

Agricultural Society. See ROYAL AGRICULTURAL SOCIETY.

Agriculture, Department of, is a committee of the Privy Council, of which the vice-president is the Chancellor of the Duchy of Lancaster. Its principal powers are exercised under the Contagious Diseases (Animals) Acts (g.v.).

Ainos, The. A race in the northern island of Japan. As far as at present known, they are the only hairy race of men in existence. Their history is obscure, and but little is yet known of their language. See ed. '38. Consult "The Language, Mythology, and Geographical Nomenclature of Japan viewed in the light of Aino studies," by B. H. Chamberlain, including an Aino Grammar, by J. Batchelor (Pub. Imperial Univ., Tokio, '87).

Airy, Sir George Biddell, K.C.B., F.R.S., late Astronomer Royal, was b. at Alnwick, Northumberland, 1801. Educated at Hereford, Colchester Grammar School, and Trinity College, Camb., where he graduated B.A., senior wrangler '23, Lucasian Professor '26, and '28 Plumian Professor with the charge of the Cambridge Observatory. In '35 he was elected **Astronomer Royal**, and made many improvements in the Observatory at Greenwich, in the methods of taking observations, which greatly increased the value of the observatory and advanced astronomical science. Amongst the scientific developments and discoveries with which the name of this veteran scientist is associated are the illustration of the undulatory theory of light, the reduction of the Greenwich observations of the planets and of the moon from 1750 to the present time, the proof of the approximate weight of the earth by experiments on the relative vibrations of a pendulum at different altitudes in deep mines, the improvement of marine chronometers and time signals, the correction of the disturbance of the mariner's compass on iron ships, the introduction of the new standard of length and weight after the destruction of the old standard by the burning of the Houses of Parliament in '34, and the illustration of atmospheric chromatic dispersion affecting telescopic observation and the mode of correcting it. Sir G. B. Airy was a **Royal Commissioner on Railway Gauges**, who recommended the narrow in preference to the broad gauges. He also conducted the astronomical observations on the occasion of the demarcation of the boundary between Canada and the United States. He has contributed largely to the "Philosophical Transactions" in the last half-century. He is an Associate of the Institute of France, a member of numerous foreign academies, and an honorary graduate of Oxford, Cambridge, and Edinburgh. He has served with distinction on numerous royal commissions of a scientific character, and in '73 and '74 was **President of the Royal Society**. He was created a K.C.B. in '72, and on his retirement from the post of Astronomer Royal in '81 was granted a pension of £1,100 a year. His latest researches have been devoted to a new method of treating the lunar theory.

Ajuda. A Portuguese trade-port on the Slave Coast, Guinea.

Albani, Madame, the vocalist, whose name prior to her marriage with Mr. Ernest Gye was Emma la Jeunesse, was b. in Montreal. No *prima donna* has a more extensive *répertoire*, and her fame is as great on the oratorio platform as on the lyric stage. She studied under Duprez in Paris, and under Lamperti in Milan. She made a successful *début* at Messina in 1870, and subsequently sang in other Italian theatres, coming to the Covent Garden Opera House in 1872. Wagner's "*Lohengrin*" and "*Tannhäuser*" owe much of the favour they have received in this country to her intellectual and refined impersonation of the heroines. Madame Albani has been connected with all the more important cantatas and oratorios brought forward of late years. She has sung in Paris, in Berlin, and other Continental cities, and throughout the United States. In '88 she sang in the series of *Italian Operas* performed at Covent Garden, under the direction of Mr. Augustus Harris, and at the *Handel Festival*. Mde. A. is at present contemplating a tour in Canada.

Albania. A wild and mountainous province of Turkey, renowned for the warlike qualities of its inhabitants. It is in a semi-independent state. After the treaty of Berlin an Albanian League was formed, with the connivance of the Porte, to resist the cession of any part of the country, either to Austria or Montenegro, in 1878. In April 1880 the League revolted against Turkey, but was defeated, and reduced to nominal submission, in May 1881. Renewed revolts took place about June 1883, and in November an application was made to the Powers for annexation to Greece, which, however, came to nothing. During the year '88 much irritation was caused in Bulgaria and Austria-Hungary by the continued raids over the borders. Many outrages were committed by the *Miridites* against other tribes. The excited state of the Albanians with respect to Montenegro caused the Porte (Sept.) to send Dervish Pasha on a special mission to pacify the border hostilities, and take vigorous military measures to suppress brigandage.

Albany, Duchess of. Daughter of the Prince and Princess of Waldeck-Pyrmont; b. Feb. 17th, 1861. She married H.R.H. Prince Leopold of England, Duke of Albany, April 27th, '82, and became a widow by his sudden death ('84). In '88 the Princess lost her mother, the Princess of Waldeck-Pyrmont.

Alberta. Named after Princess Louise, Marchioness of Lorne. A district of the *North-West Territories*, and a future province of the Dominion of Canada. Lies north of the United States boundary, and extends from Assiniboia and Saskatchewan to the Rocky Mountains. Area 106,500 sq. m. Capital, *Calgary*.

Albert Edward, H.R.H. Prince of Wales. Prince of the United Kingdom of Great Britain and Ireland, Prince of Wales, Duke of Saxony, Prince of Saxe-Coburg and Gotha, Great Steward of Scotland, Duke of Cornwall and Rothesay, Earl of Chester, Carrick, and Dublin, Baron Renfrew, and Lord of the Isles, K.G., K.T., K.P., G.C.B., G.C.S.I., G.C.M.G., P.C. Personal A.D.C. to Her Majesty, a field-marshal of the forces, col.-in-chief of 1st Life Guards, and Life Guards, and Royal Horse Guards, col. 10th Hussars, capt.-genl. of the Hon. Artillery Company, hon. col. of the Oxford and of the

Cambridge University Corps, of the Middlesex Civil Service Corps of Rifle Volunteers, of the 3rd Batt. Gordon Highlanders, and of the Sutherland Highland Rifle Volunteers, hon. capt. of the Royal Naval Reserve, field-marshal in the German army, and col. of the Blücher Hussars ('83). Admitted to the Middle Temple, called to the bar and to the bench of that Society (October 31st, '61). Educated at Christ Church, Oxford (D.C.L. '68), and at Trin. Coll., Camb. (LL.D.), and Edinburgh Univ. (LL.D.); also LL.D., Dublin ('68), and Calcutta ('74). He subsequently travelled in the *Holy Land*. He also visited the *United States and Canada*. H.R.H. is an Elder Brother of Trinity House; also Grand Master of the United Grand Lodge of Freemasons of England ('74); President of the Society of Arts and of St. Bartholomew's Hospital; Fellow of the Linnean Society ('86). His Royal Highness was b. at Buckingham Palace, November 9th, 1841; created Prince of Wales and Earl of Chester, by patent under the Great Seal, December 4th, '41; baptised at St. George's Chapel, Windsor Castle, January 25th, '42; married there (March 10th, '63) H.R.H. the Princess Alexandra Caroline Mary Charlotte Louisa Julia, eldest dau. of Christian IX., King of Denmark, and celebrated his *silver wedding*, '88. In the winter of '71 he was attacked with typhoid fever, which it was feared would prove fatal, but after several weeks' prostration he recovered, and on Feb. 27th, '72, he attended a public *thanksgiving* in St. Paul's Cathedral. He visited *India* ('77), and in company with the Princess also made a tour through *Ireland* ('85), where he met with a cordial reception. His Royal Highness evinced an active interest in the promotion and success of the late series of Exhibitions held at South Kensington, and in the face of much opposition succeeded in establishing the *Imperial Institute* (*q.v.*), the foundation stone of which was laid by her Majesty in July '87. H.R.H., accompanied by the Princess, opened the Glasgow Exhibition on May 8th, '88, and during the year also paid several visits to the Continent, viz., to San Remo during the illness of the late Emperor Frederick; to Stolpe, in Pomerania, to see his regiment the Blücher Hussars; to Berlin on the occasion of the marriage of Prince Henry, and of the funerals of the Emperors William I. and Frederick III.; and subsequently visited *Vienna and Paris*.

Albert Medal. The, was instituted in 1866 and extended in '67 and '77, for the purpose of rewarding acts of heroism performed by civilians at sea or on land. The recipients of the decoration belong to one of two classes. The *first class* are awarded a decoration consisting of a gold oval-shaped badge bearing the words on a garter "For Gallantry in Saving Life at Sea," or "on Land," as the case may be. Members of the *second class* whose act of bravery, though meritorious, has not been so striking, receive a bronze badge with the same inscription.

Albert Victor, Prince, eldest son of the Prince and Princess of Wales, was b. Jan. 8th, 1864, and was educated at Trinity College, Camb., and Univ. of Heidelberg. Previous to his entering as an undergraduate, however, he had passed two years as a naval cadet on board the *Britannia*, and in '79 started with his brother Prince George of Wales on a voyage round the world in the *Bacchante*. He returned to England in '82. The *diary* of this voyage

kept by the young princes was edited by the Rev. J. N. Dalton, their governor, and published by Messrs. Macmillan and Co. ('85). On leaving the university Prince Albert Victor proceeded to Aldershot to prepare for the army. H.R.H. was invested with the Order of the Garter in '83. In company with his brother he visited Ireland '87. Created hon. LL.D. of Cambridge, '88. H.R.H. visited Manchester in the autumn of last year.

Alcester, Frederick Beauchamp Paget Seymour, 1st Baron (creat. 1882), son of the late Sir Horace Beauchamp Seymour, M.P., was b. 1821. He entered the Royal Navy (1834), promoted to Vice-Adm. (1876) and Adm. (1882); was private secretary to First Lord of the Admiralty (1868-75), and a Lord of the Admiralty (1872-4 and 1883-5); served in Burmese war (1852-3); commanded the *Meteor* floating battery in the Black Sea (1855-6), and the naval brigade landed for service in New Zealand (1860-61), where he was severely wounded; was Commander-in-chief in the Mediterranean (1880-83), commanded the naval forces in Egyptian campaign (1882), and was raised to the peerage for his services in the same year.

Alderney. One of the Channel Islands (*q.v.*).

Alexander III., Emperor and Autocrat of all the Russias, b. March 10th, 1845. On the death of his brother the Grand-Duke Nicholas, who died at Nice ('65), he became heir-apparent, and ascended the throne after the assassination of his father the Emperor Alexander II. in '81. He married ('66) Maria Dagmar, daughter of the King of Denmark, sister to the Princess of Wales and the King of Greece. Though the Tzar seldom appears in public in Russia, he has paid several visits to other parts of Europe since his accession. In November, '87, he made a public entrance into Berlin on the occasion of his visit to the Emperor William I. His Majesty received the Emperor William II. at Peterhof, in July, '88. In September he paid a visit to Southern Russia, and was present at the military manoeuvres, held on an extensive scale at Elizabethgrad. In October the Tzar with his family narrowly escaped death by a railway accident on the Transcaspian Railway (*q.v.*).

Alexander, Prince of Battenberg, and **ex-Prince of Bulgaria**, is the son of Prince Alexander of Hesse and Princess Julia of Battenberg, and was b. 1857. Being closely related to the Russian Imperial family through his aunt, the late Empress Marie, wife of the late Czar Alexander II., the young Prince of Battenberg entered the Russian army and served with it in the Russo-Turkish war (1877-78). After the war he joined the German army as an officer of the Prussian regiment of the Garde du Corps. Elected by the unanimous vote of the National Sobranje, he entered upon his new duties July 1879. The history of the Prince from that time until his abdication and departure from Sofia (Sept. 6th, 1886) is chiefly a history of Bulgaria. Prince A. received the investiture of K.C.B. by Her Majesty on his visit to this country. His proposed betrothal to the Princess Victoria, the eldest sister of the present German Emperor, though understood to have been personally favoured by the late Emperor Frederick and the Empress Victoria, was opposed by Prince Bismarck for political reasons, and consequently was not formally sanctioned. The reason for the aban-

donment of the match was, it is believed, the objection of the Czar.

Alfred Alexander William Ernest Albert, H.R.H., Prince, 1st Duke of Edinburgh, (creat. 1866), P.C., K.G., K.T., K.P., G.C.S.I., G.C.M.G., was b. 1844; second son of the Queen. Mar. (1874) the Grand Duchess Marie Alexandrovna, dau. of the late Alexander II. of Russia. Entered the Royal Navy (1858); Admiral in command of the Mediterranean Squadron (1886). 1. Master of the Trinity House, and heir presumptive to the Duchy of Saxe Coburg and Gotha. In '88 H.R.H., in command of the Mediterranean Squadron, visited some of the chief continental capitals. In June he was promoted to the honorary rank of a General of Infantry in the German army, and was invested with the Order of the Golden Fleece by the Queen-Regent of Spain on the occasion of his visit to Madrid.

Algae, Edible, and Inedible, including the edible caragene moss: see ed. '86.

Algeria. One of the Barbary States of North Africa, now a French province. Area 256,538 sq. m.; pop. 3,867,000 (1888). It is divided into the three civil divisions of **Oran**, **Constantine**, and **Algiers**—capital cities of same names,—and subdivided into twelve arrondissements, sending deputies to the National Assembly; also the Saharan borders, divided into three military territories. Like Morocco (*q.v.*), the country possesses three natural divisions—the coastal region, the steppes, and the Saharan tracts. In 1882 was annexed the district of **M'Zab**, estimated as containing 38,600 sq. miles, and pop. 50,000. Later came the invasion of **Tunis** (*q.v.*). Coast rocky, with coral and sponge fisheries. The only considerable river is the **Shellif**, 370 miles: it runs parallel to coast, and flows into the sea at **Mostaganem**. Climate agreeable and very salubrious. There is a gigantic and verdant vegetation in parts, forests, lofty mountains, broad plateaux, smiling valleys, sandy desert with fertile oases. Some years a plague of locusts. Brackish lakes and marshes abound. Some have been drained, and Australian blue-gums planted, thus rendering unhealthy tracts habitable. There are 1,282 miles of railway. Imports ('86), £9,690,970; exports £7,290,204, consisting of esparto and halia grass, barley, wine, oil, tobacco, wool, iron and zinc ore, etc. The French forces maintained in Algeria consist of an army corps numbering 53,306 men. In this are three regiments of Turcos and three of Spahis, which are recruited among the natives. There are also several French regiments of Chasseurs d'Afrique, and Zouaves Algériens, and a Foreign Legion. The cost of the colony to France has always been far greater than its revenues. In '87, revenue, £1,749,372; expenditure, civil and military, £4,813,610. Inhabitants are French and European settlers, about 250,000; a few Jews; about 500,000 Berbers or Kabyles; and the remainder Bedouin Arabs, of nomadic habits. Till 1830 it was a nest of slave-trading corsairs, ruled by deys, when their power was broken and French military occupation began. The French became actual masters of the whole country in 1847, after the defeat and surrender of the famous Arab chief, **Abd-el-Kader**, who died recently. In '71 French military rule gave place to civil government. Since then Algeria has been the most important of the French dependencies. It has great forest and mineral wealth, and

must ultimately attract abundance of capital. The woods are chiefly of oak, cedar, and pine. Iron of good quality is abundant; lead, copper, zinc, antimony, and mercury are widely distributed; but coal is wanting. The French have paid great attention to drainage, irrigation, and the sinking of artesian wells; the climate, which was formerly very deadly to Europeans, is now agreeable and salubrious; and everywhere agricultural and commercial companies are being formed. Esparto and halfa grass, used in making paper, are exported in great quantities to England; wheat and potatoes are largely grown; vineyards are rapidly extending; and the cultivation of tobacco is widespread. Cotton is also grown. The progress of Algeria under the French has done much to remove the reproach from that nation that they are not fitted for the work of colonisation. In '88 (June) a vast swarm of locusts completely devastated the valley of Guclma, in the province of Constantine, causing great destruction and suffering. It was stated (July) that a lottery loan of six million francs was to be raised in Paris to aid the sufferers. During the year (May) the King of Sweden paid an unofficial visit to Algiers. For Governor-General, etc., see **DIPLOMATIC CONSULT** Gaffarel's "L'Algérie," Playfair's "Handbook of Algeria and Tunis," Séguin's "Walks in Algeria," Tchatcheff's "L'Algérie et Tunis," Norman's "Colonial France," etc.

Aliens. According to English law every person born beyond the limits of the Queen's dominions, whose father or paternal grandfather was not a natural-born subject, is an alien. Such a person owes allegiance to the Queen so long as he resides within her dominions, but no longer. His status was formerly very different from that of a natural-born subject. He could neither inherit nor transmit real property; and if he purchased any the Crown thereupon became entitled to it. By the **Naturalisation Act '70** aliens were empowered to take, acquire and dispose of property of every kind in the same manner as if they were natural-born subjects. But this Act does not qualify an alien for any office or franchise, or for any privilege or right of a British subject not thereby expressly given to him. Thus, it does not enable him to become the owner of a British ship. An alien may cease to be such either by denisation or by naturalisation. Denisation is by royal letters-patent, but does not enable the denizen to sit in the privy council or in either house of parliament, or to hold any office of trust, or to receive any grant of lands from the Crown. Naturalisation is either by Act of Parliament or by certificate of a secretary of state. An alien who has resided in the United Kingdom or been in the service of the Crown for not less than five years, and intends when naturalised to continue his residence or service, may apply for a certificate to any secretary of state, who will grant it upon receiving proper evidence in support of the application. Naturalisation entitles an alien to all the rights and privileges of a British subject. A British subject not under any disability, and residing in any foreign state, who shall have voluntarily become naturalised in such a state, thereby becomes an alien as regards Great Britain. Any person born of a British father but out of the British dominions, or any person born within those dominions, but who at the time

of his birth became under the law of any foreign state its subject, may make a declaration of alienage and so cease to be a British subject.

Altkhanoff. A Russian officer who gained great notoriety in the spring of 1885 by assisting General Komaroff to annex territory on the Afghan frontier. See ed. '88.

Alison, Lieut.-General Sir Archibald, K.C.B., and Bart., was b. at Edinburgh (1826). Entered the army in 1846, served throughout the Crimean war, was present at the siege and fall of Sebastopol. Military Secretary to Lord Clyde during the Indian Mutiny (1857-58). Nominated second in command and Brigadier-General of the European Brigade on the Gold Coast in the Ashantee Expedition (1873-74). Deputy Adjutant-General in Ireland (1874-77); Deputy Quartermaster-General (Intelligence Department) at the Horse Guards (1878-82). Commanded the Highland Brigade of the expeditionary force to Egypt at the battle of Tel-el-Kebir (1882), and remained in command of the British army of occupation of 12,000 men until May 1883, in which year he was appointed to the command of the troops at Aldershot.

Alkali, etc., Works Regulation Act 1881. See ed. '88.

Allegiance is the tie which binds the citizen to his sovereign or country. The common law of this country demes the right of a subject to throw off his allegiance at will. It is unlikely, however, that in these days, under ordinary conditions, persons will ever be treated as criminal for having assumed allegiance to a new country or state, even if they should be taken in arms against their native country. By the process of **naturalisation** an alien (*q.v.*) may be admitted to citizenship. Prince Henry of Battenberg was so admitted, and the ex-Lord Mayor of London was formerly an alien.

Allen, Grant, author of "Physiological Aesthetics," "Colin Clout's Calendar," "Vignettes from Nature," "The Evolutionist at Large," "Charles Darwin," "Babylon," "For Mamie's Sake," and many articles in the leading magazines, was b. at Kingston, Canada, '48. Educated at Merton College, Oxford. He is considered one of the best scientific authors of the day, especially with regard to his works on the **Darwinian theory**. His latest works are a philosophical novel, "The Devil's Die," and "This Mortal Coil" ('88). Mr A. also contributed to the *Pall Mall Gazette* a characteristic story, entitled "Dr. Falliser's Patient."

Alliance Israelite. See **Jews**.

Alliance, The United Kingdom, for the "total and immediate legislative suppression of the traffic in intoxicating liquors as beverages," was formed in Manchester, June 1st, 1853. (For history of U. K. A. see ed. '87.) A body of agents is appointed, with centres of operation in all parts of the kingdom. Besides its efforts to secure its own object—prohibition of the liquor traffic by popular consent—it has vigorously supported the **Local Option** measures of Sir W. Lawson, and it has also given friendly assistance to kindred societies, and has circulated a large body of literature bearing on all branches of the temperance question. It has received the countenance of many distinguished men, including the late Lord Brougham, Bishop Temple, Cardinal Manning, Archdeacon Farrar, etc. **Annual receipts**, about £12,000. **President**, Sir Wilfred Lawson, M.P.; **Hon. Sec.**, Mr. S. Pope, Q.C.; **Gen. Sec.**, Mr. James

Whyte; Consulting Sec., Mr. T. H. Barker; Editor of *Organ, Alliance News*, Mr. H. S. Sutton. Offices: 44, John Dalton St., Manchester, and 15, Great George St., Westminster, S.W.

Allman, George James, M.D., LL.D., F.R.S., and member of various foreign societies, b. at Cork (1812). Educated at the Belfast Academy. Graduated in Arts and Medicine in the University of Dublin. Appointed to the Regius Professorship of Botany in Dublin University (1844-55), Regius Professorship of Natural History in the University of Edinburgh (1855-70). His chief scientific labours have been among the lower orders of the animal kingdom. For his researches in this department of Biology the Royal Society of Edinburgh awarded him (1872) the Brisbane prize; he received the **Royal medal** from the Royal Society of London (1873), and the Cunningham Gold medal from the Royal Irish Academy (1878). On the completion of the exploring voyage of the *Challenger*, the large collection of Hydroids made during that expedition was assigned to him for determination and description, he having performed a similar service in connection with the exploration of the Gulf Stream under the directions of the United States Government. He was **President** of the **British Association** for the Advancement of Science in 1879, in which year the Association met at Sheffield.

Allon, Rev. H., D.D., Congregational minister, was b. 1818, at Welton, Yorks. Educated at the Countess of Huntingdon's College at Cheshunt. Minister of Union Chapel, Islington (1843) as co-pastor with Rev. T. Lewis; sole charge 1852. **Chairman Congregational Union** 1864-65, 18-elect 1881; D.D. Yale (1871), St. Andrew's (1885). Dr. Allon is also an author, and has published amongst other works "Memoirs of the Rev. J. Sherman," "The Vision of God," and edited a posthumous volume of the sermons of the late Rev. Dr. Binney. Dr. Allon has been instrumental in greatly improving the psalmody of the Congregational Church, his work "**The Congregational Psalmist**" being used in many of the principal churches. Was also for many years editor of the *British Quarterly Review*.

Allotments Act '87. A lengthy and important measure, which enacts that, on a representation in writing by any six registered parliamentary electors or ratepayers, the sanitary authority, if they are of opinion that allotments for the labouring population cannot be obtained on reasonable rent and conditions by voluntary arrangement, shall, by purchase or hire, acquire sufficient suitable land and let it out in allotments; or if they are unable to obtain land by purchase or hire, they may petition the county authority, which may make a provisional order authorising the purchase compulsorily, such order to be laid before Parliament in a bill introduced by the Local Government Board. The sanitary authority may improve and adapt land acquired by them for allotments, and make regulations, and appoint allotment managers, or these may be elected. One person shall not hold an allotment exceeding one acre, an allotment shall not be sublet, and no building other than a tool-house, shed, greenhouse, fowl-house, or pigsty is to be erected thereupon. Power is given to make a scheme for provision of common pasture. Consult "**A Treatise with Suggestions for the Utilisation of the Allotments Act '87.**"

Allotments and Cottage Gardens, Compensation for Crops Act, '87, enacts that upon the determination of a tenancy the occupier of an allotment or cottage garden shall be entitled to obtain from the landlord compensation in money for crops, including fruit growing upon the holding in the ordinary course of cultivation, and for fruit trees and fruit bushes growing thereon, which have been planted by the tenant with the previous consent in writing of the landlord; for labour expended upon and for manure applied to the holding since the taking of the last crop therefrom in anticipation of a future crop; and for drains and for any outbuildings, pigsties, fowl-houses or other structural improvements made by the tenant with the written consent of his landlord. There is to be a deduction from compensation on account of rent or breach of contract; and compensation, if not agreed upon, is to be settled by an arbitrator, to be appointed, if the parties do not jointly appoint him, by the justices of the peace.

Alma-Tadema, Lawrence, R.A., was b. at Donrhy, in the Netherlands, 1836. Originally intended for one of the learned professions, he devoted himself very largely to the study of ancient classical writers; and in 1852 entered the Antwerp Academy as a student. Subsequently he assisted Baron Henry Leys in painting several of his large pictures, and finally came to London, where, in 1873, he obtained letters of denisation, having resolved to reside permanently in this country. Since then he has delighted the art-world with his productions, in regard to the majority of which he has put to excellent use his early classical training. Honours of all kinds have been showered upon Mr. Alma-Tadema. Literally overwhelmed with the knighthoods of various countries, he was elected R.A. (1879), and London correspondent in the painting section of the French Academy of Fine Arts. Mr. Alma-Tadema married in 1871 Miss Laura Epps, herself an accomplished artist, who has exhibited at the Royal Academy and elsewhere. His contribution to last year's Academy exhibition consisted of an important work, "**The Roses of Helio-gabalus**," while to the New Gallery he sent a portrait of Lady Thompson, and "**Venus and Mars**."

Aitkatholiken. See OLD CATHOLICS.

Aluminium. The manufacture of this metal and its alloys has during the past year entered upon a phase of great commercial importance. It is now an industry which is likely to considerably influence certain of the trades of this country. We propose to briefly describe two valuable systems recently introduced for the manufacture of pure aluminium and alloys of aluminium—viz., the **Castner process** and the **Cowles process**. The first-named is the outcome of experiments begun some years ago by Mr. H. V. Castner, in New York. He is now the managing director of the Aluminium Company, Limited, which has erected new works at Oldbury, near Birmingham, to carry out Mr. Castner's processes on a commercial scale. By adopting his invention the manufacture is now conducted with such increased economy that aluminium can be used for a great many industrial purposes hitherto impracticable. The processes employed at Oldbury are the manufacture of sodium, of a double chloride of sodium and aluminium, and the manufacture of aluminium. There are three stages in the

production of the metal: (1) the manufacture of sodium or potassium; (2) the preparation of the double chloride of sodium and aluminium, which is completed in fire-clay retorts, a stream of chlorine being passed through in the last stage from a gas holder capable of holding 4,000 cubic feet; (3) the manufacture of aluminium, which consists in the fusion together of metallic sodium or potassium and the double chloride of aluminium and sodium just spoken of. An interesting fact is that hydrochloric acid, for the production of the double chloride, is got directly from neighbouring glass-works, and the carbonate of soda resulting from the operation producing sodium is conveyed similarly to the glass works for use there. To manufacture aluminium has hitherto cost between 30s. and 40s. per lb. The company at Birmingham state their ability to produce it at 15s. The **Cowles aluminium process** is also a new and specially successful one. It is for the manufacture of aluminium alloys, and is carried out by the Cowles Syndicate Company, at Milton, near Stoke-on-Trent. The inventors are Messrs. Eugene H. and Alfred H. Cowles, who developed the process as a result of certain investigations, not, however, designed originally for the manufacture of the alloys in question. The story of their efforts furnishes an interesting illustration of how new fields of commercial activity are opened out. There are **three stages** here too: (1) the reduction of the **aluminous ore**; (2) the preliminary refining of the alloy; (3) preparing the materials for the electric furnace, and removing certain waste products. Of these the process for reducing the ore in the electric furnace is the most important. The Cowles electric process claims for itself the production of aluminium alloys at a cheaper rate than by any other system.

Amadeus, Prince, Duke of Aosta, ex-King of Spain, brother of King Humbert of Italy, b. '45. Elected King of Spain by the Cortes in '70 by 191 votes to 120. He landed at Carthage on Dec. 30th, the same day that Marshal Prim, who had formerly offered him the crown after the Revolution of '68, died from the wounds received at the hands of an assassin. King A.'s position soon became one of great difficulty, and on Feb. 11th, '73, he announced to the Cortes his intention to abdicate. He married in '67 **Princess Mary**, daughter of Prince Charles Emmanuel del Pozzo della Cisterna, who d. Nov. 7th, '76, and in September, '88 the **Princess Letitia**, daughter of Prince Napoleon and Princess Clothilde, and sister of Prince Victor Napoleon, the head of the Buonapartist Party.

Amatongaland. An independent native state of South Africa. Area about 4,000 sq. m. Lies N. of Zululand, and extends to Delagoa Bay; has on W. Swaziland and Transvaal, on E. the sea. The Amatonga people are of Zulu race, and are governed by a Queen, under whom are 17 chiefs of districts. The Portuguese on the north and the Boers on the west have lately threatened aggressions on this country, the latter especially desiring to obtain a road through it to the sea. The Queen despatched, at the end of '87, a deputation to England, praying for such British protection as might insure the integrity of Amatongaland against both Portuguese and Boers. In '88 an official despatch (Lisbon, March 5th) announced that the Queen of A. had recognised the sovereignty of Portugal over that part of

her territory comprised within the southern boundaries assigned to Portugal by the MacMahon award.

Ambassadors are diplomatic agents resident in foreign states, and representing by virtue of their **Letters of Credence** their own states. They are of three kinds, varying with the nature of their commissions: **Ambassadors proper**, **Envoys** and **Plenipotentiaries**, and **Chargés d'Affaires**. They, together with their servants, enjoy certain **privileges**—viz., exemption from process and arrest, and from taxation—which attach to ordinary foreign residents. An ambassador has also the right of audience of the sovereign power to which he is accredited. On the death of either of the sovereigns between whom he negotiates, his commission lapses, but may be renewed. For list of Ambassadors see DIPLOMATIC.

Ambulance Association, St. John's. President. H.R.H. Prince of Wales, K.G. Established in 1877, by the Duke of Manchester, and the Chapter of the Order of St. John of Jerusalem, for the purpose of disseminating general information as to the preliminary treatment of the sick and injured among all classes of society. A **course of instruction** is given to students. Those who pass the examination receive a certificate of proficiency. Women who have passed the first examination are allowed to attend a second course on home nursing and hygiene. Upwards of 132,000 certificates have been awarded to persons of both sexes. An **Invalid Transport Corps** has also been formed. The work has been extended to the East and West Indies, Canada, China, Australia, New Zealand, and different parts of Europe and Africa. **Chief Secretary**, Major Sir Herbert C. Perrott, Bart. **Office**, St. John's Gate, Clerkenwell, London, E.C.

Amelineau, Prof. E. See EGYPTOLOGY.

American Political Parties. The two chief political divisions in the U.S. are the Democratic and Republican parties. The **Democratic party**, by the election of President Cleveland in July '84, came into national power for the first time since '60, and numbers between 160 and 170 in the outgoing House of Representatives, which consists of 325 members. Its long exclusion from control was chiefly due to the survival of war prejudices in the North, which was as solidly Republican as the South was Democratic. When the Democrats attained power in '84, it was on the question of **administrative reform**. Never entirely cohesive, the Democrats were most nearly united on the question of reducing the tariff, although they studiously avoided making this an issue, and would probably have continued to do so had President Cleveland not forced the hand of his party on this question in his message to Congress in December '87. As a result the **presidential election**, which took place on November 6th, '88, was fought chiefly on the **tariff question**, although many minor issues were mixed up with it. President Cleveland was re-nominated by his party at the Convention held at St. Louis in June, '88, as the Democratic candidate, with Mr. Allen G. Thurman as **vice-president**; the **Republican candidate** for the presidency, selected at the Chicago Convention held in the same month, being **General Benjamin Harrison (q.v.)**, and for the **vice-presidency** Mr. Levi P. Morton. Mr. James G. Blaine, who opposed President Cleveland in '84, refused to allow himself

to be nominated. The result of the election was a severe defeat for the Democratic party, General Harrison being elected by 233 votes, against 169 given to President Cleveland. As had been anticipated, the struggle was greatest in New York State, which, after a keen contest, the Republicans succeeded in wresting from the Democrats by a majority of some 9,000 out of a poll of considerably over a million. The only two Northern states in which the Democrats were successful were Connecticut and New Jersey.

The following shows the vote by states, and the polling strength of each State:—**Republicans:** California 8, Colorado 3, Illinois 22, Indiana 15, Iowa 11, Kansas 9, Maine 6, Massachusetts 14, Michigan 13, Minnesota 6, Nebraska 5, Nevada 3, New Hampshire 4, New York 36, Ohio 23, Oregon 3, Pennsylvania 30, Rhode Island 1, Vermont 4, Wisconsin 17; total 237.

Democrats: Arkansas 7, Alabama 10, Connecticut 6, Delaware 3, Florida 4, Georgia 14, Kentucky 13, Louisiana 8, Maryland 8, Mississippi 9, Missouri 16, New Jersey 9, North Carolina 13, South Carolina 12, Tennessee 12, Texas 17, Virginia 12, West Virginia 6; total 168.

The Republican party, therefore, reassumes power in March of the present year, when President Cleveland's term of office expires. The party is committed to the maintenance of the existing protective tariff, which is its chief rallying-point. It has a strength in the present House of Representatives of some 150, which will probably be increased in that which is about to succeed it, to 165, or a majority of 5 on a division. In addition to the difference between the two parties on the tariff question, there are certain historic lines of divergence between them growing out of their attitude during the Civil War. Thus the Republicans tend towards a centralisation of power at Washington, while the Democrats are committed, in theory, to keeping as much power as possible in the hands of individual States. This dividing line, however, becomes fainter with each succeeding year. There are also two minor parties, the **Prohibitionists** and the **Labour Party**. The former is chiefly recruited from the Republican side, and has scarcely any adherents in the South, its stronghold being in New York State. The **Labour Party**, although tolerably numerous, has little homogeneity, and is in a continual state of restlessness through internal differences. It numbers within its ranks the followers of **Mr. Henry George** (*q.v.*), an advocate of "land nationalisation"; and the **Knights of Labour** (*q.v.*), an industrial organisation which aspires at uniting in one immense federation all the diverse groups of workmen throughout the United States. Mention must also be made of the "**Mugwumps**," or Independents, who definitely seceded from the Republican party in 1884, in consequence of the heinous charges brought against Mr. Blaine of public corruption and of collusion with political speculators. In the November '88 election, however, there is some reason to believe that a not inconsiderable number of the Mugwumps, who, for the most part, comprise the professional and learned classes, returned to their old allegiance, and voted for the Republican candidate.

Amirante Islands. A group of low, small coral islands, in the Indian Ocean. They are geographically and politically an extension of the **Seychelles Islands**, forming a part of that dependency of the British colony of Mauritius.

Amsterdam and Zuyder Zee Canal. In March '88, it was reported that the **Zuyder Zee Union**, which was formed in '87, had raised a further loan of 90,000 gulden in order to examine the plans of a Dutch engineer, who proposed to connect with two dams the province of North Holland with the North Coast of the provinces of Friesland and Groningen, pumping out the sea, refilling the space with earth, but leaving a small lake which will receive its water from the river Yssel, and be connected to the town of Amsterdam by a deep and wide canal, and to the North Sea by sluices. It is interesting to add that if successful the project would increase the Dutch provinces to twelve in number.

Amyl Nitrite, an anæsthetic produced by acting upon purified amylic alcohol with nitric acid. See ed. '86.

Anarchism. A Socialist heresy which claims a descent, though somewhat remote, from Proudhon, but whose earliest and most prominent exponent in its present form was the late Dr. Bakounin. The Anarchist takes his stand upon the abstract idea of "freedom." See ed. '88. **Chief organs:** *La Révolte*, 140, Rue Mouffetard, Paris; *Die Freiheit* (Job. Most), New York; *The Anarchist*, London; *Freedom*, London, etc.

Ancient Lights. See ed. '88, and consult "Gale on Easements."

Ancient Monuments Protection Act 1882. See ed. '88.

Anderson, Mary Antoinette, actress, b. 1859 at Sacramento, Cal. Brought up at Louisville, Ken., where she made her *début* as Juliet Nov. 25th, '75. Played there and in southern cities some months, then at San Francisco as Parthena. Came east again in '77-8, and appeared at New York, playing there and in all leading towns of U.S. for several years. Her chief parts were those named, and Julia, Bianca, Pauline, Evadne, Ion, Meg, Merrilene, Lady Macbeth, the Courtess, Duchess of Torrenueva, Berthe, and Galatea. She gained great success on the American stage. In '83 she appeared in England, first at Lyceum, London, Sept. '83, as Parthena, Pauline, Galatea, and Clarice, and achieved much popularity. She opened the new **Memorial Theatre** at Stratford-on-Avon, Aug. 30th, '85, as Rosalind. Returning to America, she made a most successful tour with an English company. She revisited England in '86, and in '87 appeared in the "Winter's Tale" as **Hermione and Perdita**. After successful performances in the provinces, she left for America in October last, to fulfil an engagement at **Wallack's Theatre**, New York.

Andrassy, Count Julius, b. at Zemplin, Hungary, 1823, the son of Count Charles, of an illustrious family of Hungary. He received the highest education, improved by his travels in Europe. Took an active part in the Hungarian revolution (1848). When the defeat of Austria at Sadowa led the Emperor to concede to Hungarian aspirations, Count Andrassy was made President of the Council and Minister of National Defence in the new Hungarian Parliament. Elected deputy for Pesth (1869), he became Minister for Foreign Affairs of the Austrian empire, and Comptroller of the Household, in succession to Count von Beust (1871), and Chancellor of Austro-Hungary. When the insurrection broke out in Bosnia and Herzegovina, in 1875, he addressed the well-known "**Andrassy note**" to

the Porte, pointing out the reforms necessary to the safety of the Ottoman empire and the welfare of its Christian subjects. At the European Congress at Berlin, Count Andrassy was chief plenipotentiary of Austria-Hungary, and retired from office in 1879. He has not since taken an active part in public life. The Emperor bestowed on him the Order of the Golden Fleece in 1878. Count A. has recently recovered from a severe illness.

Anegada. A British West Indian island. Area 14 sq. m. Belongs to the presidency of the Virgin Islands, under the federal government of the Leeward Islands (*q.v.*).

Anemometer. See METEOROLOGY.

Anglican Church, The. By the Anglican Church is meant that group of **autonomous Churches** which have sprung from the mother Church of England, and have acquired jurisdiction wherever the English language is spoken. Allegiance to the Primacy of Canterbury is not a condition of the union which subsists between these Churches, nor does the Archbishop of Canterbury have any jurisdiction save in his own Province, but the conditions of intercommunion as was recommended by the Lambeth Conference (*q.v.*) in July, are largely determined by the quasi-patriarchal chair of St. Augustine. The Church of Ireland, the Episcopal Church of Scotland, the Protestant Episcopal Church of the United States of America, the Church of Canada, the Indian Church, and the Church of South Africa are all autonomous bodies under the jurisdiction of their own metropolitans, and not amenable to the Ecclesiastical Courts of the Church of England. On the other hand, the Archbishop of Canterbury may claim to act as spiritual arbiter in the last resort in ecclesiastical causes connected with the daughter Churches. Since the death of Dr. Colenso (Bishop of Natal) various attempts have been made to re-establish Royal authority over the **South African Church**, which had hitherto been legally part of the Established Church of England; but the Crown refused to nominate, and the Archbishop of Canterbury declined to consecrate another Bishop of Natal, whose see is now merged in that of Maritzburg, under the Bishop of Capetown, Metropolitan of South Africa. In addition to these autonomous Churches in connection with the Anglican Communion there are twelve **missionary bishops** representing the English Church in various remote regions of Asia, Africa, and America; and three or four representing the Protestant Episcopal Church of America. The **American Church** possesses 72 bishops in 50 dioceses and 15 missionary jurisdictions, and 3,689 other clergy. It has 422,649 communicants, and upwards of 1,250,000 baptised members. The average offerings for Church purposes amount to over 10,000,000 dollars a year. The **English Episcopate** numbers 34 diocesan prelates and 10 suffragans (see *CIT. OF E.*). There are seven bishops in the **Scottish Episcopal Church**, the Bishop of Brechin (*Rev. Dr. Jermyn*) being **Primus** (*i.e.* Archbishop). The Church of Ireland has two Archbishops and 11 Bishops. India and the various Colonies of the British Empire own 63 bishops of the Anglican Church.—**Doctrine and Discipline.** In all essential respects the doctrine and discipline of the Churches in connection with the Anglican communion is the same, differentiations being rather in detail of development than in form or character. (See **CHURCH OF ENGLAND**.) One important difference is the

restoration of Diocesan Synods and general Synodical action which marks the un-Established branches of the Church. The tendency of the American, South African, and Scotch Churches is towards High Churchmanship, and the same may be said in a less degree of the Indian Church; while Broad Evangelicalism is the rule in the Colonies. As in England, however, the extremes of all three parties (see "**Church Parties**")—**CHURCH OF ENGLAND** are to be found co-existing in every Church, even in the Church of Ireland, which, more than any other, is bound down by its recent constitution and rubrics to a definite "Low" standard of doctrine and ritual. The **largest diocese** in the Anglican Communion is that of the Bishop of Mid-China, covering as it does 350,000 square miles, and comprising a population of over 100,000,000 souls. The **total number of adherents** of the Anglican Communion is **estimated** (approximately) at 40,000,000.

Angling '88. The past season has been one of general disappointment to anglers. The spring fishing for salmon was distinctly below the average, and during the months of September and October, when the autumnal run of fish usually affords some of the best sport, the rivers, which had been steadily falling since the cessation of the persistent downpour that marked the summer months, at length reached a very low level, at which fishing was impossible, and the fish, lying in the pools awaiting the next fresh, became hardly worth catching. Trout and grayling fishing suffered somewhat similarly on the rivers of both north and south, sport being below the average in all the months of the year, with the exception, perhaps, of April. The weather was exceptionally dry until the end of June, when rain set in, accompanied by wind chiefly from the north, and continued almost without intermission until the end of August. The various **streams** of the country were, consequently, more or less in a state of constant flood, the effect of this being to put fish completely off the feed and make them indifferent even to the most attractive lure. The end of the season was marked by singularly low rivers for the time of the year, and on all hands complaints were heard of the general lack of sport. Among the **curiosities** of the season was a remarkably fine trout of 16 lb. 2 oz., taken in the Test, at Winchester. This patriarchal fish, which had long been known and angled for by all the experts on the river, fell a victim to a minnow spun over his head by a working man of the locality. The fish was 32 in. long, and 21 in. in girth. The most important event of the year was a **Conference of North-country Anglers**, held at Leeds on November 17th, under the auspices of the Manchester Anglers' Association and others interested in angling in the north, of certain resolutions passed by the joint associations named, at a preliminary meeting held at Settle on August 6th last. It has long been felt that **existing fishery laws** require amendment in various particulars, and with a view to induce Parliament to give the requisite attention to the matter, the following **resolutions** were unanimously adopted: (1) "That the close season for trout in the six northern counties of England should begin on October 2nd, and end on March 15th, and that it should be illegal to have fresh-water trout in possession within

that area between and inclusive of those dates except for purposes of artificial cultivation." (2) "That it is desirable that the provisions of the Poaching Prevention Act (25 and 26 Vict. cap. 114) should be extended so as to include trout." These resolutions are now being urged on the Government in the hope that they may shortly become law. The number of angling clubs throughout the country continues steadily to increase; operations on a most extensive scale are carried out for breeding and stocking purposes at the expense of individuals, and everywhere there is a growing feeling that the assistance rendered by the law to the preservation of the inland fisheries is, at present, quite inadequate. It is also pleasing to note that in the majority of the actions regarding the rights of anglers which have occupied the law courts during the year judgments have been in their favour. •In the **International Angling Tournament**, at Twickenham, on June 9th, leading honours in the amateur classes were awarded to **H. W. Little** (heavy spinning bait, record throw of 197 ft. 7 in.), and **E. V. Powell** (spinning bait cast, Thames style). In the professional competitions, **E. J. Bayes** (fly casting, trout, with single-rod) and **E. Andrews** (spinning bait cast) were most successful. See also **FISH CULTURE**, and **MARINE BIOLOGICAL LABORATORY**.

Anglo-American Commercial Scheme. See ed. '88.

Anglo-Danish Exhibition '88. This Exhibition was opened on May 14th by H.R.H. the Princess of Wales, and was organised chiefly for the benefit of the **British Home for Incurables** at Clapham. It received considerable public support, but its chief claim to patronage was not in the exhibition itself so much as in the fact that it was meant to assist a deserving charity. The industrial exhibits were mainly English. Many attractions in the way of amusements were offered, chief among them being a series of **tableaux vivants** representing familiar scenes in **Hans Christian Andersen's** matchless fairy tales, a tobogganing slide, and a switch-back railway. The Exhibition was held on the site of the series of shows which concluded in the "Colinderes," and as the attractive grounds were given a Danish scenic character and were brilliantly lighted, it held its own with the other exhibitions as a popular resort. It commemorated the silver wedding of the Prince and Princess of Wales, who gave the venture much support for the sake of the institution with which it was associated.

Anglo-Israelism. A theory which attempts to prove the ethnological identity of the English nation with the lost Ten Tribes, and thereby to claim for England the Biblical promises in favour of "Israel" (see ed. '86). This movement is quite distinct from that entitled "**The New and Latter House of Israel**." See **JEZREELITES**.

Anglo-Jewish Association. See **J.E.W.S.**

Angola. Portuguese West Africa, or Lower Guinea. Stated area, 312,500 sq. m.; pop. 2,000,000. Capital **St. Paul de Loanda**. Divided into the four governments of Angola or Loanda, Ambriz, Benguela, and Mossamedes; portions of same names. Climate hot and enervating. Coast-land low and tame, for 30 to 60 miles inland grassy; then country rises, and rich vegetation and forest begin. Products are ground-nuts, baobab-fibre, coffee, cotton, orchilla, caoutchouc, copal, palm-kernels, man-dioc, ivory; minerals, iron and copper. In-

dustry very stagnant. Ruled by a Governor-General, governors of provinces, "chefs" of districts, and much corruption exists. Slave-trade nominally abolished, but actually still existing. In spite of 400 years of possession Portuguese influence not felt far from coast, and no roads or civilisation much beyond towns. The Portuguese claim to Ambriz, across the mouth of the Congo, from 8° to 5° 12' S., has been the subject of debate between the British and Portuguese governments at various times since '45. Consult Monteiro's "Angola and River Congo," Keith Johnston's "Africa," etc.

Angra Pequena. A port, now called "Luderitz Bight," 120 miles north of Orange River mouth, South-west Africa, capital of German Luderitzland (*q.v.*). Luderitz German Trading Station established '83. German flag hoisted, 1st January, '84.

Anguilla. A British West Indian island. Area 35 sq. m., pop. 3,219. Belongs to the presidency of **St. Christopher**, in the federal government of the **Leeward Islands**. Is low and flat, deficient in wood and water. Produces salt from a lake, and phosphate of lime; cattle, ponies, and garden stock.

Angus, Joseph, D.D.; b. 1816, at Bolam, Northumberland. Educated at King's College, Stepney College, and Edinburgh University, where he graduated '36. Secretary of the Baptist Missionary Society '40-49, when he was appointed **President** of Stepney College (now **Regent's Park College**), for the training of Baptist Ministers. For some years he held the office of **English Examiner to the London University** and to the **Indian Civil Service**. His principal works are the "Handbook to the Bible," "English Literature," and the "Handbook of the English Tongue." He also edited Butler's "Analogy and Sermons." Regent's Park College has lately made preparations, in which Dr. A. has largely participated, for increasing its work, and through his influence the sum of £30,000 has been subscribed for this purpose. Dr. A. was formerly a member of the **London School Board**, and one of the revisers of the **New Testament**.

Animism. The term applied by Dr. E. B. Tylor, author of "Primitive Culture," to express the general theory of spiritual beings. It consists, in brief, in the explanation of all natural phenomena by the medium of spiritual agency. **Ancestor worship** is based upon and grows naturally out of the doctrine of animism. Cf. the lares and penates of the Romans, and the ancestor worship of the Hindus and Chinese. Consult Sir J. Lubbock's "Prehistoric Times," Dr. E. B. Tylor's "Anthropology" and "Primitive Culture," and Lang's "Myth, Ritual, and Religion." See ed. '87.

Annam. An empire in S.E. Asia, now a French protectorate. It formerly included **Tonquin**, **French** (or **Lower**) **Cochin-China**, and **Cambodia**. Area of Annam (or Cochin-China proper), 26,923 sq. m., pop. 6,000,000. Capital **Hue**, near the coast, garrisoned by French troops. Annam (or Cochin-China proper) stretches northward along the coast from French Cochin-China to Tonquin. It is enclosed on the west by bare hills, beyond which is the domain of the Moi, or hill tribes, and the land of the Laos, subject to Annam. Flora and fauna rich and varied. Climate of the lowlands hot and inimical to Europeans. Principal productions are rice, cotton, indigo, tobacco, sugar, silk, bees'-wax, pepper, cardamoms, aca-

nuts, ornamental woods, ivory, lac, bamboos, etc. Edible birds'-nests and trepang are among exports to China. Gold is washed in the riverbeds, and other metals worked. There is an emporium, with court and dignitaries, but government is really in French hands. Trade is with China and France, a little with Burmah and Siam. Fishing a very important industry. A little silk and cotton manufacture, metal and wood work. The various peoples belong to the Indo-Chinese race, a link between Chinese and Malays. Religion chiefly Buddhism. France appeared in Annam in the eighteenth century; and since 1847 military operations have frequently been undertaken. Cochinchina was annexed to France in 1861, Cambodia made a protectorate 1862; Tonquin annexed and Annam made protectorate in 1884. French authority is still disputed in some parts, and campaigning continues. A railway is proposed. It was stated, Oct. '88, that the result of recent negotiations between the Governor-General of French Cochinchina and the King of Annam is that the towns of Hanoi, Haiphong, and Tourane, with a considerable district round each, are converted into French concessions, within which the king surrenders all his rights. It is also arranged by the new Convention that French property throughout Tonquin and in the open ports shall be subject to French law alone. Genault Vignon's "Les Colonies Françaises," Reclus' "L'Inde et L'Indo-Chine (Géographie Universelle)," Keane and Temple's "Asia," Norman's "Colonial France," etc.

Annenkoff, Lieut.-General. The constructor of the *Transcasian Railway* (q.v.), and designer of a railway to India from the Caspian to Quetta, *via* Askabad, Sarakhs, Herat, and Candahar. This line would enable people to travel from England to India in nine or ten days. Annenkoff was b. 1837, educated at the Page School at St. Petersburg, served in the Polish war in '63, and took part in the draining of the Pinsk Marshes, and, running light strategical railways through them; constructed the Bender-Galatz military railway during the Russo-Turkish war ('78), and was afterwards appointed **Director of the Military Transport in Russia.** Suggested a railway from the Caspian to assist Skobelev in his campaign against Geok Tepé ('79), and supervised its construction. Afterwards advocated its extension to Samarcand, and was intrusted with the task, which occupied three years ('85-'88). Received for this the order of **Alexander Nevsky** in diamonds, and was appointed chief director of the line for two years. In order to make his proposed Transcasian route to India known to Europe, organised an excursion from Paris to Samarcand in Sept. '88, and in Nov. conducted Baron Alphonse Rothschild, of Paris, over the line.

Annobon. A lofty, basaltic, and volcanic island in the Gulf of Guinea. It is a Spanish possession, and its climate is salubrious.

Anstey, F., the nom de plume of Thomas Anstey Guthrie, author of "Vice Versa," "The Giant's Robe," "The Black Poodle," "The Tinted Venus," "The Fallen Idol," "Burglar Bill," which ran through *Punch* '88, etc., was b. at Kensington 1856. Educated at King's College School and Trinity Hall, Cambridge, where he graduated in '79. Called to the bar at the Middle Temple, '80.

Antarctic Expedition. See GEO. PROGRESS, '87, and OCCURRENCES DURING PRINTING, '88.

Anthropology, '88. The most interesting contribution to physical anthropology during the year has been Prof. Flower's study of the remarkable Akka skeletons, sent to the British Museum by Emin Pasha. The Akkas are a race of African pygmies discovered by Schweinfurth in '70. They seem to be the smallest people on the face of the earth, a full-grown Akka female measured by Emin Pasha, and believed to be a representative specimen, was only 3 ft. 9 in. high. They belong to the negroid branch of the human species, and are called by Hamy "Negrillos." An anthropometric laboratory has been established by Mr. Francis Galton, with permission of the Commissioners of the Exhibition of '51, in the western galleries at South Kensington, adjacent to the science collections. The visitor, on payment of a nominal fee, may here be measured with scientific accuracy, and as the results are methodically registered, they are available for future reference as family records. By periodical measurement of physical form and mental faculties timely warning may be had of remediable defects in development. The systematic physical examination of students at Cambridge by Dr. Venn has furnished data for some interesting conclusions. Mr. Galton has shown that the average growth of the head, and therefore presumably of the brain, proceeds much more rapidly in the "honour men" than in the "poll men." M. Bertillon's ingenious method of indexing French prisoners, with a view to their identification, has received much attention, and the general subject of personal identification has been brought before the Royal Institution by Mr. Galton. Mr. A. W. Howitt has continued his laborious researches into the complex marriage systems among the Australian aborigines, and Dr. E. B. Tylor has published the results of his long-continued studies of the marriage laws of various parts of the world, for the purpose of classifying them with scientific precision. Archaeological anthropology has received from General Pitt-Rivers an important contribution in the shape of the second volume of his great work detailing his excavations in Cranbourne Chase, and throwing much light on the civilisation of the Romano-British population.

Anti-Cellbacy Insurance Society. See ed. '88.

Anticosti. A large island in the Gulf of St. Lawrence under the Government of Canada. It is 125 miles long by 30 wide; area, 2600 sq. m.; pop. 600. The coast is rocky, barren, and dangerous. There are lighthouses, fishing and refuge stations, the only organised settlement. The interior is a wilderness of mountain, forest, and swamp, abounding in furred and feathered game. There are tracts adapted for cultivation, and fruit and vegetables raised experimentally seem of first-class quality. Mineral wealth is reported. A favourite resort for salmon and trout fishing. Discovered 1535 by Corbier, who called it Assumption.

Anti-Cyclones. See METEOROLOGY.

Antigua—i.e. "ancient," so called by Columbus. A British West Indian island. Area 108 sq. m., pop. 34,151. With Barbuda forms a presidency of the Leeward Islands. Its capital St. John, pop. nearly 10,000, is the seat of the federal government. English Harbour is a naval station, and one of the finest harbours in the West Indies. The island is hilly, attaining 1,200 feet. It is based on igneous rock on

the west, calcareous on the east. Though suffering sometimes from drought, it is very fertile. Produces sugar and rum, arrowroot, tobacco, and at one time cotton. Climate healthy; subject to earthquakes.—Government is administered by the Governor of the Leeward Islands, assisted by a local council of twenty-four members (twelve elected). Four delegates are sent to the Federal Council. Antigua was settled by British in 1632, seized by the French for a short time in 1666, but has since remained a British colony.

Antilles. Name of the chain of islands surrounding the Caribbean Sea. They are divided into Greater and Lesser. See **W. I. INDIES**.

Antiseptic Treatment is a method employed and directed against the development of fermentative micro-organisms in order to prevent the process of putrefaction in wounds. See ed. '86.

Anti-Slavery Society. See **BRITISH AND FOREIGN A. S.**

Anti-Vaccination. See **VACCINATION, ANTI-.**

Anti-Vivisection. See **VIVISECTION, ANTI-.**

Antwerp Quays. This work, recently completed, involved operations in the river Scheldt, opposite the city, to bring it to a uniform width of 150 metres, and to construct on the city side a new quay over two miles in length and 100 metres broad, enabling no less than 50 steamers of 1,000 to 3,500 tons butthen to be berthed alongside at the same time. See ed. '87.

Apple and Pear Conference. See **AGRICULTURE.**

Aquaculture. See **IRRIGATION, ed. '86.**

Aquatics, '88. The Oxford and Cambridge Boat Race, which was inaugurated in '29, but continued with irregularity until '56, takes precedence of all the rowing contests of the year. The race of '88 was rowed on the 24th of March, when the Cambridge crew proved greatly superior to their opponents. Shortly after the start, the Light Blues took the lead, at one mile (4 min. 24 sec.) they were two lengths ahead; at Hammer Smith Bridge Oxford were 17 sec. in the rear (time, 7 min. 52 sec. and 8 min. 9 sec. respectively); at Barnes Bridge Cambridge led by 19 sec., eventually winning by about six lengths. Time, 20 min. 48 sec. J. C. Gardner (Emmanuel) was stroke of the Light Blue crew, and L. Frere (Brasenose) stroke in the Oxford boat. Of the 45 contests so far decided, Oxford has been credited with 23 wins and Cambridge with 21, the race of '77 ending in a dead heat. Outriggers were first used in '46; in '57 boats without keels were introduced; in '73, in which year the time occupied by the winners was 19 min. 35 sec., the quickest on record, sliding seats were first employed. Since '64 the course has invariably been from Putney to Mortlake, a distance of about 4½ miles, and, with few exceptions, the date has been fixed for the Saturday before Good Friday.—The Royal Regatta at Henley took place on July 4, 5, and 6, when the Grand Challenge Cup was won by Thames R.C.; the Ladies' Challenge Plate by Lady Margaret B.C. (Cambridge); the Stewards' Challenge Cup by Trinity Hall, Cambridge; the Thames Challenge Cup by Lady Margaret, Cambridge; the Wyfold Challenge Cup by Thames R.C., and the Visitor's Challenge Cup by Brasenose College, Oxford. N. P. Symonds (Cambridge) and E. Buck (Oxford) took the Silver Goblets, beating D. McLean and Muttelbury (Leander). For the Diamond Challenge Sculls G. Nickalls (Magdalen, Oxford), defeated J. C. Gardner (Emmanuel, Cambridge) by a

length and a half, in 8 min. 36 sec. (fastest time on record, the previous best being 8 min. 51 sec.).—At Marlow Regatta, J. E. Spagnoletti (Thames) won the Senior Sculls; Thames R.C. the Senior Fours and Grand Challenge Cup; P. Landale (Trinity Hall) the Junior Sculls; C. Bell and P. Landale (Trinity Hall, Cambridge), the Pairs; and Trinity Long Vacation (Cambridge) the Junior Fours.—Kingston Regatta took place in July, when the Thames R.C. accounted for the Senior Pairs, Senior Fours, and Senior Eights; while for the Senior Sculls G. E. B. Kennedy (Kingston) defeated W. H. Cumming (Thames and Anglian), after a hard race, by three-quarters of a length.—At Barnes Regatta, in July, London R.C. won the Senior Eights, Bedford Modern School the Fitzgerald Cup, and Thames R.C. secured the Junior Sculls and Senior-Junior Eights, rowing over for the Senior Fours.—The Sandeman Challenge Cup at Reading Regatta, July 25, was won by London R.C., after a close race with Reading; the Maiden Erleigh Cup and Grand Challenge Cup went to Thames, and C. W. Hughes (Thames) was victorious in the Challenge Bowl (Senior Sculls).—The Metropolitan Amateur Regatta, in July, was more successful than for some years past. The Thames Challenge Cup fell to Thames R.C., the London Cup (Sculls) to W. H. Cumming (Anglian and Thames R.C.); the Metropolitan Challenge Cup to a Thames eight; the Pairs to D. D. Scott and F. E. Clark (Thames), and after a grand race for the Metropolitan Champion Cup (eights), victory rested with the Thames R.C., who beat Leander by half-a-length, in 7 min 26 sec.—On July 16th, the race for the Wingfield Sculls (which carries with it the Amateur Championship of the Thames), was rowed from Putney to Mortlake, when, as in '87, G. Nickalls (Oxford) proved successful, beating J. C. Gardner (Cambridge), by twelve lengths, the time being 23 min. 36 sec.—Doggett's Coat and Badge, originally instituted by Mr. Thomas Doggett, a well-known actor of his day, in commemoration of the accession of the family of her present Majesty to the throne of England, was rowed on August 1st from London Bridge to Chelsea. The event is confined to young watermen of the Thames, and the Fishmongers' Company contribute very generously to the prizes. The winner on the last anniversary was C. R. Harding (Chelsea), his time being 36 min.—In May, a Sculling Match for £200 took place on the Tyne between G. Bubeac and C. Carr, the former winning easily by three lengths, in the fast time of 21 min. 42 sec.—In February Wallace Ross defeated G. Bubeac for the Championship Challenge Cup and £200 a side, the course being from Putney to Mortlake. Ross's time to Hammersmith Bridge is the fastest on record.—W. Beach (Australia) having retired, the Sculling Championship of the World was claimed by Peter Kemp, who, after defeating T. Clifford, rowed Edward Hanlan for the championship and £1,000. The race took place on the Paramatta River, Sydney, Australia, on May 5, when Kemp won by five lengths, in 21 min. 26 sec. A second encounter between Kemp and Hanlan for £1,000 took place on Sept. 27th, on the Paramatta, when Hanlan was beaten by 19 secs. Subsequently Kemp was beaten by Henry Searle, a young sculler.—On June 13 Hanlan, in a sculling match for £1,000, on the Fitzroy River, Australia, defeated E. Trickett by ten lengths.—On May 30, J. Teemer, beat J. Gaulaur for the Championship of America and

£1,000.—At the **International Regatta at Deventer, Holland**, the **Professional Sculling Race** was won by G. Bubeare, England.—The **American University Boat Race**, over a four-mile course, was won by Yale, who defeated Harvard, by 24 lengths, in 20 min. 10 secs.—In Sept. L. McLean and H. J. Hill won the final heat in the London R.C. **Senior Pair**.—B. B. Cubitt won the London R.C. "**Monteuais**" **Sculls**.—The **Colquhoun Sculls**, rowed for on Nov. 14th, at Cambridge, were easily won by S. D. Muttelbury (Third Trinity), P. E. Shaw (Lady Margaret) being beaten by 30 yards.—W. H. Grenfell is the **Amateur Punting Champion**, and Abel Beesley, Oxford, holds the **professional championship**. On Nov. 24 O'Connor beat Teemer over a three-mile course on the Potomac, and three days later Beach defeated Hanlan over the Parramatta championship course. Consult "Boating," by W. B. Woodgate.

Arabi, Mohammed, son of an Egyptian peasant, was conscripted into army, became sergeant, and dismissed by Ismail for insubordination. Subsequently commissariat officer at Massowah, dismissed for peculation. Headed **military insurrection** in '82 and succeeded in obtaining dismissal of Riaz Ministry. Became sub-Minister and subsequently Minister of War. Was practically ruler of country, and had made himself personally responsible for order when **Massacres of Alexandria** (June 11, '82) took place. Refused to resign when called on by Khedive to do so. Gave orders for resistance to English bombardment of Alexandria, and to advance of British troops on Cairo, but himself carefully avoided danger. After Tel-el-Kebir surrendered to the English; was tried and condemned to death. Sentence commuted to banishment for life to Ceylon, where he now lives on pension from Egyptian Government.

Aral-Caspian Canal. It was stated in July '88 that the Russian Government had recently revised an ancient project of diverting part of the waters of the Oxus, or Amu Daria, to flow into the Caspian instead of the Aral Sea, a large staff of engineers being employed in making the necessary surveys. The Aral being without an outlet, the idea is that the reduction in the flow of the Oxus would reduce the sea area, and have an effect upon the marshy ground surrounding it. Peter the Great thought of connecting the two seas, to afford water access to Central Asia, but it seems to be probable, in view of the existence of the Transcaspian Railway (*q.v.*), that the water to be diverted will be used for irrigation purposes on the great plain, where it is so much required.

Arbitration, Board of. See TRADES UNIONS, ed. '86.

Arbitration and Conciliation, Board of. See MINING, ed. '88.

Arbitration, Cost of. Where, by a clause in an insurance policy, the company and the insured person had agreed that each party should pay their own costs in any arbitration that might arise, the Queen's Bench Division declined to hold that such agreement was unreasonable. (*Stephens v. The Commercial Assurance Company*, March '88.)

Arbitration, International. The principle of the substitution of arbitration for war in the settlement of international disputes. At a conference of the friends of peace, held at Brussels in October 1873, the **International Arbitration and**

Peace Association was founded, and has since been energetic in disseminating information on the subject. This body binds itself to no particular scheme for carrying the principle into practice. In connection with the subject of international arbitration a meeting was held in Paris of 21 Deputies and several English M.P.'s, representing 233 of their colleagues who are favourable to arbitration. A letter approving of the scheme for the establishment of international arbitration was read from Mr. Gladstone. (See our edition of 1886 for full details of the principal arbitration cases.)—**Judicial**. See ed. '88.

Arbor Day. A holiday specially set apart in most of the American States for the planting of trees by citizens and school-children. Adopted by Cape Colony in '88. See TREE PLANTING.

Arc de Triomphe, erected to commemorate the victories of Napoleon I., occupies the centre of the Place de l'Etoile, Paris. See ed. '87.

Arch, Joseph, b. at Barford, Waiwicksire, 1826. He was the son of an agricultural labourer, and for many years was a field worker himself. When a young man he attained considerable proficiency in public speaking by preaching from Primitive Methodist platforms. In 1872 he began an agitation in favour of improving the position of the agricultural labourers, which spread over a great part of England, and led to the establishment of the **National Agricultural Labourers' Union**, of which he was president. At the general election of 1885 he contested, as a Radical, North-West Norfolk against Lord H. C. Bentinck, and was returned; but in the July election of 1886 suffered defeat by a majority of 20 at the hands of the same noble lord, against whose return he filed a petition, which was dismissed with costs. During his short parliamentary career, Mr. Arch several times addressed the House.

Archbishops, English. See CHURCH OF ENGLAND.

Archdeacon. See DIOCESE.

Archery (for brief history of this see ed. '88). At the **National Archery Meeting** held at York, in the second week of August, '88, championship honours were awarded to Mr. C. E. Nesham and Miss Legh, and the leading county prizes were won by teams representing **Middlesex** and **Gloucestershire**. In the closing week of the same month the **Grand Northern Meeting** was held on the Giant-Axe Field, Lancaster, and after some excellent shooting the **championship challenge badge** with brooch was credited to Mrs. D. Ainsworth, of the North Lonsdale Archers; whilst the companion prize, the **champion silver medal** with clasp, fell to Mr. E. Sharpe, of the **John o' Gaunt's Bowmen**. The last-mentioned club celebrated its **centenary** in September with a meeting at Lancaster, and the competitors included the most prominent bowmen in the county. The struggle between Mr. C. E. Nesham and Mr. E. Sharpe in the most important contest terminated in favour of the former, the champion's shooting at the shorter ranges being exceptionally good.

Archep, Court of. The principal court for the trial of causes ecclesiastical in the Province of Canterbury (see ECCLESIASTICAL COURTS). Formerly a purely canonical authority, with jurisdiction in certain matrimonial causes, the Dean of Arches held his court in the church of St. Mary-le-Bow, or *Santa Maria de Archibus*,

receiving and determining appeals from inferior ecclesiastical courts within the Southern Province. By the **Church Discipline Act '41**, and the **Public Worship Regulation Act '74**, Parliament effected considerable modifications of the Court of Arches, supplementing the ecclesiastical by civil powers. By the latter Act (7th section) provision was made for the union of the Courts of the two Metropolitans. The two Archbishops were required to appoint a barrister of ten years' standing, or a judge of one of the Superior Courts, to be a judge of both Courts. Every person appointed must be a member of the Church of England, and when entering upon his office must sign a declaration to that effect. He retains the title of **Dean of the Arches**, but when sitting in the Northern Province is styled **Official Principal of the Province of York**. Lord Penzance, the first Dean of the Arches, appointed under this section, still holds the office. He has no Court, and usually sits in his dressing-room in the House of Lords—a circumstance which has entailed many disputes on points of jurisdiction.

Architectural Federation, Registration and Examination. See ed. '88.

Arctic Exploration. For history of this see ed. '86, and **GEOGRAPHICAL PROGRESS, '88'.**

Arctic Railway. This line has the distinguished honour of being the most northern railway in the world. The **Lulea-Ofoten Railway**, which is the property of the Swedish and Norwegian Railway Co., appears to have its *raison d'être* in bringing down the enormously rich iron deposits of the far north to the port of Lulea, and is still in course of construction. The works were pushed on vigorously during the summer of '87, and in the Dec. of that year the railway, 132 miles long, was laid from Lulea to the Gellivara Iron Mountain and was rapidly approaching completion. The boundaries of Lapland are passed at 60½ miles, and the arctic circle is entered at 77½ miles from Lulea. The ores are of almost virgin purity, their excellence having been thoroughly tested (see ed. '88). The whole scheme of the railway is to continue the line from the Iron Mountain, through the rich ore deposits of the neighbourhood, through Norwegian territory to the Ofoten Fjord. Some idea of the scope of the company's operations will be found in a prospectus published during the first week of Oct., '88, describing the immense beds of iron accessible by quarrying at a royalty of 6d. to 8d. per ton, the excellently equipped line, the quay accommodation and appointments at Lulea, and the establishment of the **Anglo-Scandinavian Steamship Co.** which had launched its first steamer of 4,000 tons to take part with 10 others in the trade. The prospectus offered 75,000 ordinary, and 101,700 five per cent. preference shares of £5 each, the total capital of the company being £750,000 ordinary, £750,000 preference, and £1,500,000 five per cent. debentures. Mr. Josiah F. Smith, the well-known past president of the Iron and Steel Institute, after visiting the railway and iron field, joined the Board of Directors, and issued a report of his observations. The first train of 41 wagons, containing 1,000 tons of ore, arrived at the company's quay at Lulea from the Gellivara Iron Mountain, on March 12th. During the following month the company concluded a further contract with Bolckow's, of Middlesbrough, for 6,000 tons of steel rails. It

was reported in November that the new brand of Swedish iron, made from Gellivara ore, was being offered at Walker-on-Tyne for 44s. 6d. per ton, some founders preferring it to the best Scotch.

Area and Population of United Kingdom. See P. AND A. OF UNITED KINGDOM.

Argentine Republic. A group of 14 States and 9 Territories, with an extensive seaboard on the east coast of South America. The constitution is, with some exceptions, identical with that of the United States. It vests the executive power in the hands of a President, elected for six years, not being re-eligible; and the legislative authority in that of a Senate of 30 members, 2 chosen by the capital and 2 by each province, and a House of Deputies of 86 members elected by the people. The provinces elect their own governors and legislators, and have complete control over their internal affairs. The State religion is Roman Catholic; but all others are tolerated. Education is highly developed. There are 3,028 elementary schools, with 227,452 pupils. Area, including Patagonia, 1,124,086 sq. miles; population, 3,500,000, the great majority of Spanish origin and of other European countries. Capital of the Republic, **Buenos Ayres**, with 462,000 inhabitants (census Dec. '87). Capital of the Province of Buenos Ayres, **La Plata**. The climate of the country is temperate and healthy. Revenue, 58,135,000 dollars in '87; expenditure, 50,019,000 dollars. Debt (internal and external) of the Republic on the 31st March, '88, 139,547,000 dollars. Army, about 7,400; national guard, about 350,000. Navy, 3 ironclads and 15 other ships. Commerce in '87, 218,000,000 dollars. Principal productions, wool in great abundance, hides, flax, sugar, maize, wheat. The rich mineral resources are beginning to be developed. Length of railways, 4,600 miles, connecting the capital with the principal cities of the Republic. Telegraphs, 13,645 miles, connecting all the Republic. Two cables (one by the Atlantic and the other by the Pacific) connect the Republic with all the cities in the world. On 31st Nov. '87 a law of national banks, similar to the banking law of the United States, was promulgated. There are at present 23 banks.

"Argosy, The" (monthly ed., illus.). First published Dec. '65, the first serial story being written by the late **Charles Reade**. In '68 **Mrs. Henry Wood** (d. '87), authoress of "**East Lynne**," became editor. Many of her stories appeared in the pages of the *A.* (published since '72 by **Messrs. Bentley & Son**). Mrs. Wood was for some time an anonymous contributor, under the nom de plume of **Johnny Ludlow**, of a series of shorter stories, which achieved wide popularity. Present editor, **Mr. Charles W. Wood**. Office: 8, New Burlington St., W.

Argyll, George Douglas Campbell, P.C., 8th Duke of (creat. 1701); Baron Sundridge and Hamilton (1766), by which title he holds his seat in the House of Lords; K.G. (1884). Was b. 1823; succeeded his father in 1847; **Lord Privy Seal** (Jan. 1853), and Postmaster-General (Nov. 1855); again Lord Privy Seal (June 1859 to July 1866); **Secretary for India**, and **President of the Council of India** (Dec. 1868); the third time Lord Privy Seal (1880 to April 1881); is Hereditary Master of the Queen's Household in Scotland, and Hereditary Sheriff of Argyllshire, Chancellor of the University of St. Andrews (1851); Rector of the University of Glasgow (1854); is chief of the great family of Campbell, and a

lineal descendant of the "MacCullum More." The Duke is well known as a prolific writer upon scientific, political, and social subjects, and is a frequent contributor to the pages of the *Nineteenth Century*, the *Contemporary Review*, and other leading periodicals. He is also the author of various works, among which may be mentioned "The Reign of Law," and his most recent publication, "Scotland as it Was and Is," '88. Has written recently several letters to the *Times* on the Home Rule question.

Armies, Foreign. Under this heading will be found the latest particulars relating to the military power of the countries of Europe, Japan, and the United States.

AUSTRIA. The total strength of the standing army is 267,000, composed as follows: **Cavalry** (35,700)—14 regiments of Dragoons, 16 of Hussars, 11 of Uhlans (Lancers), each regiment consisting of 7 squadrons (6 active and 1 depot). **Artillery** (25,600)—14 regiments of field artillery, each of 15 batteries of 8 guns; 12 battalions garrison (fortress) artillery of 6 companies each (3 active and 1 cadre). **Engineers** (4,600)—2 regiments of 5 battalions each. **Infantry** (144,400)—80 regiments of the line, each of 5 battalions (2 active and 3 reserve, with 1 depot battalion); the "Kaiser Jäger" Regiment (Tyrolean Rifles), 7 battalions; and 33 other rifle regiments of 1 battalion each. **Pioneers and Train** (5,200). **Departments, etc.** (23,800). **War strength.**—In case of war the Emperor could put in the field, at lowest computation, exclusive of reserves and garrisons, an army of 1,140,000, with 200,000 horses and 1,720 guns. **Constitution.**—The army is recruited by conscription on the universal liability system; term of service ten years, three with the colours and seven in reserve. By voluntary enlistment, self-equipment, etc., the male adult can commute his three years' active service to one before passing to reserve. The Cavalry is recruited principally as follows: Dragoons from Germans and Bohemians, Uhlans from Poles, Hussars from Hungarians. The infantry and artillery are principally made up of Germans, Slavs, and Hungarians; the rifle regiments are recruited principally from the highlands of the Tyrol, the Styrian Alps, and the Carpathians. The Austrian army possesses no Guards or *Corps d'élite*. See AUSTRIA-HUNGARY, New Army Bill.

BELGIUM. The total strength of the army on a peace footing with the colours, including Gendarmerie, is 69,380 men, 10,160 horses, and 204 guns. **Cavalry** (7,400)—2 regiments of Chasseurs, 2 of Guides, and 4 of Lancers. Each regiment consists of 4 squadrons active and 1 reserve. To the above have to be added the Gendarmerie (1,720 men). **Artillery** (7,900)—made up of 7 regiments, comprising a total of 34 field batteries of 6 guns each, with 6 batteries in reserve; 48 siege batteries, 3 in reserve; and 3 depot batteries. **Engineers** (1,400)—1 regiment of 3 battalions. **Infantry** (26,300)—Made up of 14 regiments of the line, of 4 battalions of 4 companies each, 3 active and 1 reserve battalion; 1 regiment of Grenadiers, similarly organised; 1 regiment of Carabiniers of 6 battalions (4 active and 2 reserve), and 3 regiments of rifles. **Constitution.**—The war strength is fixed at 142,000 men. Every able-bodied man who has attained his nineteenth year is liable to serve, but substitution is permitted. The term of service is eight years—two years and eight months with the colours.

BULGARIA. The peace strength of the standing army is 22,400, as follows: **Cavalry**, 1,400; **Artillery**, 1,740; **Engineers**, 880; **Infantry**, 16,800; **Gendarmerie**, 1,600. The war strength is 32,220, with 102 guns. Besides this the Reserves are estimated at 24,000, and the Land-sturm at 7,200, making altogether 63,420.

DENMARK. The army consists of 34,500 regulars and 13,000 second reserves. **Cavalry** (2,200)—5 regiments made up of 16 squadrons. **Artillery** (4,750)—2 regiments of field artillery of 12 batteries each with 8 guns; 2 battalions garrison artillery of 6 companies each. **Engineers** (620). **Infantry** (27,000)—31 battalions of the line. **Constitution.**—Service is obligatory on all able-bodied men who have reached the age of 22. Terms of service, eight years with the colours and eight in the reserves. The war strength is 49,000.

FRANCE. The effective strength is stated to be 1,500,878 men, of which the standing army is about 510,000. **Cavalry** (68,750)—12 regiments of Chasseurs, 26 regiments of Dragoons, 20 regiments of Chasseurs, 12 regiments of Hussars, 4 regiments of Chasseurs d'Afrique, 3 regiments of Spahis. **Artillery** (68,760)—38 regiments, comprising altogether 437 batteries; 2 regiments of Pontonniers of 14 companies, 13 companies Ouvriers d'Artillerie and Artificiers, 57 companies of Artillery Train. **Engineers** (12,000)—4 regiments of Sappers and Miners, of 5 battalions, each. **Equipages Militaires** (11,600)—20 squadrons, 11 companies, etc. **Infantry** (283,500)—144 regiments of the line, each of 4 battalions; 30 battalions of Chasseurs a pied, each of 4 companies; 4 regiments of Zouaves, of 4 battalions; 3 regiments of Tirailleurs Algériens, of 5 battalions; 6 battalions Foreign Legion, 3 battalions of Infanterie Légère d'Afrique. To the above have to be added 18,000 Commissariat, 26,000 Gendarmes, and 36,000 for staff and administration. The French law enacts universal liability to serve, but it is not strictly enforced. By the law of 1872 the total duration of service was fixed at twenty years—five with the colours, four in the active reserve, five in the territorial army, and six in the reserve of the territorial army; but in France the constant changes of government rather militate against the chances of any fixture either of establishment or condition of service, and this has to be allowed for. The total strength of the French army, on a war footing, is fixed at 3,753,000.

GERMANY. The German Army is in all respects a model of military perfection, and it has formed the basis upon which the military establishments of most of the other European states have been reorganised of late years. It may be useful, therefore, to review the organisation as explaining the advance made by Continental nations generally in the direction of warlike preparations. When France and Prussia were fast friends, in the time of Frederick the Great, the admiration for each other was carried so far as imitation in tactics, but Frederick and his successors fell into absurdities which the French avoided, and the defeat of the Prussian arms in the wars following the Revolution of 1793 was the result. Then it was that the need became apparent for a decided change in the construction and management of the army; and soon a system was adopted which, with constant improvements, has developed into its present dimen-

sions. Recruitment was fixed early in the present century at three years of active service, two years in the reserve, and seven years in the first ban of the Landwehr, which meant the securing of 200,000 men in the first line, 150,000 in the first ban of the Landwehr, and 120,000 in the second ban, or an effective of 470,000; the standing army being maintained at 130,000. The Crimean War brought to light discrepancies which had never before been seen, which were more and more emphasised in the few following years by the then prevailing excitement in Italy. Here was the opportunity of Kaiser Wilhelm to reform his army, which he readily grasped—at the same time taking into his counsel Prince Bismarck, himself struggling against strenuous opposition in the Prussian Parliament to become a prominent man. In '60, then, this new scheme was effected, and the army was divided into eighty-one regiments of infantry and forty-eight of cavalry. The old Landwehr was done away with, and the effective troops were greatly augmented in numbers. The term of active service was raised to seven years, with four years in the Reserve and five in the Landwehr. By this means the annual contingent reached from 40,000 to 60,000 men, and the entire army, which before '59 was 525,000 strong, now had a strength of 625,000 men, remarkable for its excellent discipline and the celerity of its movements. Six years later, when Prussia contended against Austria, the army placed in the field consisted of 326,000 soldiers, and the short, sharp, and decisive campaign, together with the rapid movement of the forces, spoke to its superiority over preceding armies. Whenever it was felt necessary to scatter the forces to save them from the enemy's fire, it was done without reluctance, and the discipline to which they had been subjected rendered the re-formation a matter of perfect ease. The Franco-Prussian War in '71, although it added lustre to the German Army, gave rise to consideration of further improvement; and since that time various laws have been passed for the purpose of bringing these about. Three years of active service, four years in the Reserve, and two in the Landwehr, are now the terms; while in addition there are five years to be served in the Landsturm: but the latter branch is only used as a "cry of distress" when the standing army and the Landwehr have been found insufficient for the requirements. It includes all the young men between seventeen and twenty, and those who have previously passed through the twelve years required in the other branches. At the beginning of November each year the recruiting into the Landwehr of young men of twenty commences. To facilitate this business the Empire is divided into "regions," each occupied permanently by an army corps, which draws from it in time of peace, as well as in time of mobilisation all its effective. The regions are each divided into seventeen districts, under the control of a similar number of officers. Four districts are expected to recruit a brigade, and ten an army corps. There is a further division of districts into company districts, each in charge of a sergeant-major. These grouped in twos, form eight "circumscriptions" for the recruitment of the Landwehr, and of a regiment of infantry. There is besides a battalion district for the reserve of the Landwehr, to complete the numbers lacking in the less populous districts. The recruiting service

for the Guard, which consists of the tallest and finest looking men, is carried out by a commission, consisting of officers specially nominated for the purpose. On a day appointed they meet at certain specified places, and here the young men are required to appear before them. The census reports, of course, give all information as to the names and addresses of inhabitants, and those within the prescribed age are called up, and passed or exempted, as the case may be. It is the duty of another official body to then revise the lists thus obtained, make a report to the Minister, and decide where the new arrivals shall be stationed. Under this system of recruiting, it may readily be imagined there are always more men than necessary to keep up the army strength. As to the term of service, it may be stated that, if the recruit be apt, the full three years are not demanded; two years sometimes suffice, and at the end of that period, if he can pass certain tests, he is granted leave of absence for the remaining year. In the standing army, at the close of three years' service, a further period of four years has to be reckoned with, during which time there are held every year reviews and other manoeuvres, occupying about four months. The second term at an end, the recruit passes into the Landwehr. Here the duties are lessened—the annual review, and a couple of periods of exercise of fourteen days each, being the extent of the demand made. But no one in Germany can consider himself safe from being called upon for military duty until he is past forty-two years of age, unless he be in feeble health. At any time he is liable to a recruitment in the Reserve, which would add yearly about 132,000 men to the effective force of the army. If it were possible for Germany to call up every man it has power to do by the various methods of recruitment, it could put into the field an army of 3,200,000 men, made up by 400,000 in the three active classes, 700,000 reserve of recruitment, 500,000 reserve of active army, 600,000 Landwehr, and 1,000,000 Landsturm. The peace effective, however, is only about 401,000, an eighth of this number being non-commissioned officers. In time of war the army is divided into three parts—(1) the Feld Armee, or campaign army, 744,031 men and 10,391 officers, 242,415 horses, and 2,040 guns; (2) the *Beratzungs Armee*, or garrison troops, 416,032 men and 11,240 officers, 38,393 horses, and 324 guns; (3) the *depot* troops—296,614 men and 4,796 officers, 31,373 horses, and 444 guns. These three armies, or divisions of the entire army, have each all the necessary machinery of armament and service, such as transportation, rations, etc. The order of battle of the army in the field, and the distribution of the garrison army, is already settled in time of peace; and at the very moment of mobilisation the commanders and staff officers are appointed. One hundred and sixty-one regiments of three battalions go to form the infantry. Each battalion has four companies, numbered from one to twelve. The infantry company has 5 officers, 20 non-commissioned officers, 202 soldiers and drummers, and a few needed for various services, bringing up the aggregate to 244. A regiment's aggregate is 3,189. Besides the 161 regiments named, there are 20 regiments of Chasseurs, with a personnel of 1,055 each. The cavalry, which is divided between the Prussian Guard and the German army, consists of 93 regiments. The latter section has eight

regiments of Cuirassiers, 28 of Dragoons, 19 of Hussars, 22 of Uhlans, one of Saxon artillery, one of Saxon Carabiniers, two of heavy Bavarians, and six of light-horse Bavarians. The Prussian Guard consists of a regiment of the Corps de Gardes, one of Cuirassiers, two of Dragoons, one of Hussars, and three of Uhlans. The entire cavalry organisation is formed into three categories: the heavy cavalry—having ten regiments of Cuirassiers, one of which is the body, and one the ordinary guard, cavalry of the line—25 regiments of Uhlans; and two of the heavy Bavarians; and light cavalry—28 regiments of Dragoons, 20 of Hussars, and six of Bavarian light horse. Every regiment has five squadrons, four for the field and one for depot guard, with a colonel, lieutenant-colonel, and a major, with an extra major for commandant; officers and men included, it numbers 648 men, while a division has 4,763 men, 5,107 horses, 18 field pieces, and 101 various vehicles. The Cuirassiers carry the straight sabre and the revolver; the Hussars a curved sabre with steel handle, and a carbine; the Uhlans a sabre, a carbine, a revolver, and a lance 103 feet long, at the top of which flutters a streamer. The artillery, so greatly admired for their dash, is composed of 37 regiments, furnishing 295 mounted batteries, attached to the cavalry—and six horse batteries—attached to the infantry. The mounted batteries have six 31-inch cannon; the others use cannon a trifle smaller. Then there are 116 companies of unmounted artillery. It goes without saying that there is an ambulance corps, with physicians, litters, ambulances, nurses, etc., the organisation of which is simply complete. The thoroughness of the military education in Germany is well known, the Empire having nine schools, six of which receive pupils at ten to fifteen years of age, who afterwards finish at either Lichtenfeld, Dresden, or Munich. The studies pursued at all of these three are very severe, and the pupils, even after passing through the preliminary course, are often sent back on examination to receive further tuition. The War Academy at Berlin is the highest of the military academies, but this is open only to lieutenants and captains who have served three years. Beyond all these institutions, which are military in the strict sense, there are other schools for artillery, marksmanship, riding, gymnastics, medicine, and surgery, and veterinary practice. The general staff of officers of the army, at the head of which is Count Waldersee (q.v.), is made up of the officers of the different armies temporarily attached. They form seven divisions, three study at a theatre of war, one occupies itself with the railroads, one with military history, one with geography and statistics, and the seventh with geodesy and topography. This staff of officers has access to a library which has been in formation for the last seventy years, and includes 60,000 volumes. With such a complete organisation, and such excellent opportunities for preparation in matters military, there can be little wonder that Germany is a nation of soldiers. This it certainly is, and its military atmosphere and bearing is apparent as soon as one enters the country. At the head of the whole is the Emperor, as Commander-in-chief of an army of nearly 3,500,000 men, whose motto is "For God, King, and Fatherland."

GREECE. The peace establishment of the

army is fixed at 30,000. Of these 1,500 are Cavalry, 4,300 Artillery and Engineers, and 17,000 Infantry. In case of war, it is understood that the force which Greece could put into the field would amount to fully 80,000 men.

ITALY. The standing army on a peace footing numbers 183,280 men, made up as follows: Cavalry—Comprising 22 regiments, 18,867 men; Artillery—80 batteries, 9,646, and 6 companies of Artillery artificers, 1,174 men. Engineers—4,132. Infantry—102 regiments, 128,000 men; 40 battalions of Bersaglieri, 16,165 men; Train, 2,460 men. Administrative Corps, 3,173 men. According to the new organisation it is computed that the army, including all forces, militia and reserve, will number 2,119,250 officers and men actually available for active employment. The army is organised in 12 army corps, 427,000 under arms, besides 12,000 for Alpine regiments, 100,000 movable Militia and the Territorial army. The system is based on the principle of universal service.

JAPAN. The standing army on a peace footing comprises 38,425 men. In case of war the number can be increased to 131,475.

MONTENEGRO. No standing army. The national army, a sort of Militia, is fixed at 30,000.

NETHERLANDS. The strength of the active army is about 62,000, the approximate numbers being—Cavalry, 4,500; Artillery, 13,000; Engineers, 1,400; Infantry, 42,700. In addition there is a "Schutterijen" of 111,000 men. The Netherlands possess in addition a Colonial army of about 38,000 men, of whom only 14,460 are Europeans. The home army is recruited partly by voluntary enlistment and partly by conscription.

PORTUGAL. The peace establishment is fixed at 24,000, in the following proportions: Cavalry, 3,700; Artillery, 3,580, with 9 guns; Engineers, 600; Infantry, 15,680; Miscellaneous, 440. The war establishment is 120,000 men, with 264 guns. There is in addition a Colonial army of 8,500. Compulsory service is the law, but the rules of exemption are most liberal, a sum of money paid to the Government being accepted as an equivalent.

ROUMANIA. The active army is 124,000, made up as follows: Cavalry, 10,000; Artillery, 8,500, with 218 guns; Engineers, 4,000; Infantry, 85,000; staff and general services, 17,000. The reserve army is 35,000, making a total of upwards of 160,000.

RUSSIA. The army on a peace footing gives a total of about 800,000 men. It is made up of the regular army, 457,872; the First Reserve, 180,740; and the Second Reserve, which makes up the number. Besides these there are irregular troops, such as the Cossacks, all of whom between the ages of fifteen and sixty are compelled to render service. The number of Cossacks serving under ordinary circumstances is 56,000. The war strength of the army is fixed at 2,490,000 men, as follows: Cavalry, 104,000, including 48,000 Cossacks; Artillery, 88,000, with 2,624 guns; Engineers, 35,000; Infantry, 758,000; Riflemen, 53,000; general services, 103,000. These form the active army, numbering 1,137,000. To them must be added the reserve army, 1,054,000; frontier battalions, 47,000; Cossacks, 142,000, with 222 guns. Besides these it is calculated that Russia could on an emergency raise 2,000,000 more men from Territorial Reserve and 1,200,000 from the National Militia, making altogether the enormous total of 5,500,000.

SERBIA. The field army is estimated at 50,000, with 264 guns; Reserves, 65,000, with 145 guns; Landsturm, 45,000; total, 170,000, with 409 guns.

SPAIN. The army, on a peace footing, is 100,000 men with 510 guns. The colonial forces, including militia, are estimated at 236,000. Service is compulsory for the regular army for 8 years, and in the colonies for 4 years.

SWEDEN AND NORWAY. The strength of the standing army of Sweden is about 30,000 men: 12,121 Cavalry, 4,500; Artillery, 4,700; Engineers, 900; and Infantry about 27,500. The army of Norway consists of about 750 officers and 18,000 men. This number, however, is gradually being increased, and will shortly be raised to nearer 50,000 men.

SWITZERLAND. The strength of the Federal army, consisting of able-bodied men between 20 and 32, is about 100,000; Cavalry 20,000, Artillery 280 Krupp field guns and 22 mountain guns; that of the Landwehr, composed of all men from 33 to 43, about 80,000—giving a total of about 180,000.

TURKEY. The army is divided into the Nizam, or active army; the Redif, or reserves; and the Mustaphiz, or Landsturm. Under the new organisation the strength is calculated at—Nizam—Cavalry, 37,800; Artillery, 37,800, with 1,512 guns; Engineers, 18,000; Infantry, 468,000—total, 588,600; Redif, 203,000; Mustaphiz (including irregulars), 370,000; making a total of 1,161,600, with 3,245 guns.

UNITED STATES. The strength of the army is set down at 2,200 officers and 24,236 men. Service is purely voluntary.

Armitage, Edward, R.A. historical and portrait painter, b. 1817. Educated in France and Germany. A pupil of Paul Delaroche, of Paris. In '30 he contributed "The Landing of Julius Cæsar in Britain" to the Cartoon Exhibition in Westminster Hall, and obtained a first-class prize of £300. In '45 he took a £200 prize for a cartoon and coloured design, "The Spirit of Religion," and (47) another first prize of £500 was awarded him for "The Battle of the Marston," now the property of the Queen. He afterwards visited the Crimea, and painted "The Charge of Balaklava" and "The Guards at Inkermann." Among his still life achievements were a colossal figure, entitled "Retribution," representing the suppression of the Indian mutiny; two frescoes in the upper waiting hall of Westminster Palace; and a series of monochrome wall paintings at University Hall, Gordon Square. Elected R.A. (72). Has been a regular contributor to the Academy since '48, sending in '87 a large canvas, "The Institution of the Franciscan Order," previous to presenting it to the Church of St. John, Duncan Terrace, Islington. Sacred and Mythological subjects are favourite studies with Mr. Armitage.

Armoured Ships. See NAVY, BRITISH, and NAVIES, FOREIGN.

Armour Plates and Ordnance. The use of armour plates as a protection against artillery appears to have been contemplated by inventors early in the present century. In 1812 John Stevens, of New Jersey, proposed it for ships, and Major-General Ford, R.E., obtained a trial of masonry, protected by iron bars, at Woolwich in '27. To Napoleon III., however, is the credit due of first employing iron on the sides of floating batteries in actual war in '55, when such a measure of success was achieved as led

to the construction of the *Gloire* and *Warrior*, the first ironclad ships of the French and British navies. The American War, soon after this, called out all the powers existing in the States available for the manufacture of armoured ships, and the notable part played by them in the war has led to the idea that America took a more leading part in the development of armour than was actually the case. The *Merrimac* and other American vessels were covered with armour made *impromptu* of railway iron, or of thin plates laid over each other, constituting what is termed "laminated armour," a kind which was found to possess about two-thirds of the resisting power of a solid rolled iron plate of the same thickness. In March '62 a Special "Committee on Iron" was appointed, under the presidency of Sir John Hay, then Captain R.N., who conducted a series of trials of plates at Shoeburyness. After disposing of the claims of various crude devices, and after a long series of experiments, this Committee decided in favour of soft wrought iron, bolted on to oak backing. Hard backing was found to support the armour better than soft, but at the expense of the bolts and structure, which were liable to be shattered by the blow of impact. At this time there were two distinct methods on which armour plates were attacked—namely, "racking," practised in America, and "punching" in Europe. The former consists in bending and distorting plates, and shaking the entire structure and dislodging bolts by heavy projectiles striking at a low velocity, such as might be discharged by the heavy cast-iron smooth-bore guns then employed in America. Punching, on the other hand, consists in driving a projectile through the plate—a task which is most easily performed with guns of smaller calibre discharging projectiles with high velocity. In its original form, racking soon went out, and for some years the development of armour and of the ordnance brought against it, consisted chiefly in the increase in the scale of both plates and guns, wrought iron being wholly used for armour. To the softness of this material the success is due of a projectile proposed, about '64, by the late Sir W. Palliser, which for many years was almost the only one employed for the attack of plates in England or abroad, and of which at the present date our main stores consist. This was a shot or shell made of iron cast in a metal chill, and thus rendered very hard, although brittle. These projectiles drove their sharp points into the soft iron, and their heads were buried and supported, before the full resistance was felt; thus they behaved better than the shot made of steel, which at that time were softer, and the chilled iron projectiles, being cheaply and easily made, maintained their reputation until '77, when *steel*, *steel-faced*, and *chilled iron armour* came in, with a hard surface, on which the chilled Palliser shot broke before it obtained support round the head. About '72 armour plates had attained a thickness of 12 in. and 14 in. on turret ships, such as the *Thunderer*, *Devastation*, and *Glatton*. (It is undesirable here to enter into questions of construction of ships, for which the reader is referred to the article NAVY, p. 392 of ed. '88.) But it should be mentioned that it was thought that the structure of a ship's turret might be distorted or racked, and the rotation and working prevented, by the impact of heavy shot. At Portland, on July 5th, '72, therefore, was made

the extraordinary trial of firing at the turret of the *Glanton* herself with the 25-ton gun of the *Hotspur*, when it was found that no shot of that day could so distort the turret as to interfere with its working, which was perfect after receiving two shots, fired at the short range of 200 yards. The turret was nearly perforated, and some bolts were torn off, but a goat, rabbit, and hen, which had been placed in the interior, were uninjured. So far wrought iron plates alone had met with approval in England, and, for the most part, everywhere. These were bolted on to wood for ships, and to concrete of various kinds as well as wood for land forts, by means of wrought-iron bolts made on the **Palliser English system**, the chief features of which were a projecting screw-thread, a clear space left round the shank of the bolt, and a spherical head. About this time appeared fresh forms of armour. In '68 armour made of chilled cast iron was tried at Tegel, in Prussia, by Hen Gruson of Magdeburg, which by '74 had established its reputation, and was adopted by the German Government for coast defence. In '76 solid steel armour exhibited such remarkable powers of resistance at Spezia, that steel, either in the solid form or compounded with wrought iron, was soon afterwards adopted in England and elsewhere. Chilled iron may be conveniently dealt with first. Gruson urged that it can be easily cast in the form of large massive curved shields, which are built up into shields and forts, generally in cupola form, closely resembling an orange from which the skin has been taken. Being cast, any desired form is easily given, and the thickness of each part is easily proportioned to the strain expected to fall on it. The hardness is such that the best projectiles that have been made, up to the present day, shiver into atoms against the surface of the chilled iron; and although the shield becomes fractured, so long as the fragments remain in their place the guns and men behind the shield are in complete safety, as there are no bolts or other lagridges to fly in the interior. Owing, however, to the fact that it breaks up under the continued fire of steel projectiles, its use has been confined to coast defence both in France and Germany. In this situation it is only exposed to the fire of ships for a short time, and thus it is admirably calculated to resist, even when the largest projectiles are used. This was exhibited in a notable trial of Gruson's armour at Spezia, in April '86, when a large shield, intended to form one portion of the ring of a cupola, was fired at by an Armstrong 100-ton breech-loading gun. The shield, though fractured, retained considerable resisting power after being struck by three specially made steel Krupp projectiles and one from St. Chamond, all fired from the 100-ton breech-loading gun. After this most successful trial, two Gruson's armoured cupolas or turrets were approved, each to contain two of Krupp's 19-ton guns, one on each side of the entrance of Spezia harbour. It should be understood that the mass required for a Gruson shield is considerable, so that it has not been seriously thought of for ships. In '76, **Bohneider's solid steel plates** were tested at Spezia in comparison with wrought-iron plates supplied by **Cammell, Marnell, and Brown**. Under the fire of 10-inch guns the steel plates cracked, while those of wrought-iron suffered but little. On the other hand, the steel stopped the projectile of the 100-ton muzzle-loading gun, which passed through the wrought iron plates

easily. It was thus discovered that steel has a remarkable power of transmitting the shock of impact through its mass, and so absorbing an enormous blow, though at the cost of its wholesale destruction, for the steel plates were broken to pieces; while wrought iron, on the other hand, yielded locally. Consequently steel armour is well suited to enable a vessel to pass a formidable battery of guns quickly, although such armour may gradually yield under long-continued fire even of light guns; while wrought iron bears continued fire well from any guns incapable of actually perforating it, but is perforated by projectiles which steel of the same thickness would keep out. Our naval authorities strongly objected to the fracture of ships' armour, and hence **steel-faced wrought iron plates**, which admit of a very hard face in conjunction with a soft back, met with more favour than steel in England. These steel-faced or compound plates have been made on two plans. Messrs. **Cammell** manufacture them on **Wilson's patent**, by which a wrought-iron "foundation plate" has a front or face plate of about half its thickness, formed by running cast steel on it while white-hot. Sir J. Brown & Co. manufacture plates on **Ellis's patent**, by which a thin steel face is cemented to a wrought iron foundation plate by running in steel between them. For Wilson's plates it is claimed that there are fewer junction surfaces and more soundness; for Ellis's that a specially excellent face can be secured. Compound plates are brought to their final thickness by rolling; solid steel plates are hammered. These compound plates have competed many times with Schneider's solid steel, with various results. At Spezia, where the trial was conducted with 10-inch plates, Schneider's has been eventually preferred. At Odessa, near St. Petersburg, Amager, near Copenhagen, and at Pola in Austria, the compound plates have been victorious. The plates in these cases were 12 inches thick, or less. In England, it is generally considered that it is not possible by any system of treatment to give to one solid piece of steel the soft tenacious back and at the same time the hard face that is desirable. Consequently, it is thought that plates compounded of hard steel and soft iron, or of a hard and a soft steel, ought eventually to form the best shield. During '88 competitive trials have been carried on with solid steel and steel-faced plates on board H.M.S. *Nettle*, at Portsmouth. Unfortunately Schneider could not be induced to offer plates for trial on such conditions as the Admiralty would accept, so that the trial is wholly of English-made steel and steel-faced plates. The experiments are not yet completed, and with the exception of some excellent results obtained with Wilson's plates, which were published in the American *Army and Navy Journal* and other papers, no report has been brought out. The following are only considerable makers of armour plates on any Schneider at scale: For solid steel, Messrs. **Creusot** in France and the **Terni** works in Italy. For steel-faced armour on **Wilson's patent**, Messrs. **Cammell, Sheffield; Marnell** at Rive de Gier, Loire; **La Compagnie des Hauts Fourneaux**, St. Chamond; the **Dillingen Works** in Germany, and **Tjora, Wicks, Kolping**, St. Petersburg. For steel-faced armour on **Ellis's patent**, Sir J. Brown & Co., Sheffield. Experimental steel plates tempered in lead have been

made on a small scale by the Société de Chatillon et Commeny recently, and competitive plates have been made by several English firms. As armour has become harder, chilled iron Palliser projectiles have been superseded by those of forged steel, of which very excellent ones were made in '78 by the late Sir Joseph Whitworth; but owing to a want of encouragement for some time past, the manufacture of steel projectiles has been pushed forward on the continent and neglected at home until recently. Krupp's steel projectiles, and those of St. Chamond Holtzer and Firmini, are the best known. The two latter firms have supplied steel shells for the British service. Now Firth, Hadfield, and other firms in this country, are succeeding in making excellent steel projectiles. The performances of armour in actual war were first displayed fully when the American Confederate ship *Merimac* destroyed wooden vessels in rapid succession until encountered by the *Monitor*. Ironclad ships were hulled times innumerable, without injury, during that war; and the British fleet in the attack of Alexandria, in '82, benefited undoubtedly by its armour, which was in no case perforated. Nevertheless, as the power of guns has increased, the value of armour has become the subject of serious question. To resist guns of the present day, plates require to be so thick that complete armour, such as that on the *Thunderer* or *Dreadnought*, has given place to armour of much greater thickness, amounting to 20 inches of steel-faced iron or 24 inches of iron, confined to the so-called vital parts of a ship. These consist of the engines, magazines, principal guns, and sufficient hull to insure the floating of the vessel. Protection is also partly given by horizontal armour—that is, by steel decks. These features are embodied in the *Inflexible* and the *Admiral* classes of so-called citadel ships, as well as belted cruisers and protected ships in a greater or less degree. It is only necessary here to notice the general principle on which a ship is plated—namely, that the deck plates should resist the same shot glancing on it at an angle of ten degrees that the side armour resists striking direct. It follows, then, that unless a ship heels over to an angle of ten degrees, or unless she is subject to plunging fire at a falling angle of tendencies, her deck is stronger than her side armour. Beyond this angle the deck is weaker, but it is only likely to be struck by high-angle fire or under very special circumstances. With regard to the protection now afforded by armour, it is doubtless true that guns are now afloat which are capable of piercing the side of any armoured ship. The 11-ton guns of the *Bentbow* perforate about 35 inches of iron or 28 of steel, if close to the muzzle. The 67-ton guns of the *Camperdown* or *Rodney* perforate 30 inches of iron or 24 of steel; and many guns of less power would perforate most of the armour afloat under favourable conditions. It is to be remembered, however, that in action a ship is generally struck obliquely, when armour will keep out shot which would perforate easily if striking directly; and more especially that the entrance of "dead metal" into the interior of a ship is a small evil compared with that of "live shell"; so that armour capable of keeping shell alone out, performs its most important function. An unarmoured ship is liable to be burnt and torn by common shell bursting in the interior, and the men swept down wholesale

by shrapnel shell bullets, as was shown in the *Shannon* trials at Shoeburyness in '75. If the steel projectiles, which now are of such high quality as to pass through steel and steel-faced armour unbroken, should prove capable of carrying fire into the interior of a ship, a serious blow will be dealt to armour; but even then it is probable that plates may be employed of increased hardness, which will break up all projectiles, though in the act of doing so they should be smashed, and perhaps even, in a great measure, stripped off the ship. The behaviour of chilled iron distinctly indicates the possibility of this alternative to that of exposing the ship without protection against the terrible attack of shells, especially from the quick-firing guns recently designed, which pour in many rounds per gun in each minute.

Armistead, Henry Hugh, R.A., sculptor, b. 1828. Elected an A.R.A. (1875), R.A. (1879). As a draughtsman, modeller, and chaser of silver, gold, and jewellery, he has executed a large number of works. His productions in marble, bronze, stone, and wood include the south and east sides of the *Albert Memorial*, Hyde Park, representing great musicians, painters, and poets; four large bronze figures of the *Albert Memorial*, representing chemistry, astronomy, medicine, and rhetoric; the external decorations for the Colonial Offices; and the effigy of the late Bishop of Winchester in Winchester Cathedral. Mr. Armistead also designed the carved oak panels, beneath Dyce's frescoes, in Her Majesty's robing-room at Westminster Palace, illustrating the life of King Arthur and the history of Sir Galahad.

Armstrong, George Francis, M.A., D.Lit., b. in Dublin 1845. Educated at Dublin and Jersey, and matriculated at Dublin Univ. '62. In '65 he won the Vice-Chancellor's prize for a poem on "Circassia," and was appointed President of the Philosophical Society. He gained the gold medal of the Historical Society for composition in '60, and '71 accepted the post of Professor of History and English Literature in Queen's College, Cork. In '72 the degree of M.A. was conferred upon him by Trinity College for his literary services, and that of D.Lit. from the Queen's Univ. Dr. A. is the author of the "Tragedy of Israel," "A Garland from Greece," "Ugones," "Stories of Wicklow," etc.

Army. The total cost of the army for the financial year '88-9 is £16,700,333. The various heads of expenditure are:—

Effective services:—	£
Pay of general staff, regimental pay (officers and men) and allowances	4,977,000
Divine service	58,300
Administration of military law	32,400
Medical establishments, etc.	304,900
Militia pay and allowances	555,000
Yeomanry pay and allowances	76,000
Volunteers pay and allowances	720,700
Army Reserve pay and allowances	442,200
Commissariat and transport and ordnance store establishments	659,000
Provisions, forage, fuel, transport, etc.	2,509,000
Clothing establishments, services and supplies	845,600
Supply, manufacture, etc., of warlike stores	1,410,000
Works, buildings and fortifications	643,300
Military education	119,800
Miscellaneous services	68,600
War Office establishment	257,900

Total cost effective services **13,672,700**

Non-effective services:—	
Rewards for distinguished services	17,200
Half pay	74,400
Retired pay, gratuities, and payments allowed by Army Purchase Commission	1,196,200
Widows' pensions and compassionate allowances	126,700
Pensions for wounds	14,700
Chelsea and Kilmainham Hospitals (in-pensioners)	31,300
Out-pensions	1,343,900
Superannuation, compensation, and compassionate allowances	178,300
Retired allowances to adjutants, militia, yeomanry, and volunteers	44,900
Total non-effective services	3,027,600
Total effective and non-effective services	16,700,300

The effective strength of the army and arms according to latest returns was: Household Cavalry, 1,029; Cavalry of the Line, 15,526; Royal Horse Artillery, 3,453; Royal Artillery—Field Batteries, 12,727; Garrison Batteries, 15,551; Royal Engineers, 4,927; Foot Guards, 5,249; Infantry of the Line, 120,847; Colonial Corps, 2,227; Commissariat and Transport Corps, 2,499; Ordnance Store Corps, 548; Medical Staff Corps, 2,258. **General total**, 286,839. The Establishment was 286,182—659 men being thus supernumerary, a state of things which has now existed for years. **Distribution**.—The army is thus accredited: To England and Wales, 73,641; to Jersey, 925; Guernsey and Alderney, 857; Scotland, 3,612; Ireland, 28,055: total for Home Service, 107,270. Egypt, 4,738; in colonies, 25,848; East Indies—Bengal, 44,668; Bombay, 19,025; Madras, 12,202; Burmah, 4,414: total Indian European Establishment, 72,345. The home establishment.—**Reserve and Auxiliary Forces**. The strength of the First-class Army Reserve on January 1st, '88, was 50,950; Second-class Army Reserve, 4,118; Militia, 121,411; Yeomanry, 11,267; Volunteers, 228,038. **Nationalities**.—The nationalities of non-commissioned officers and men of the home army, according to latest returns to the War Office, were: English 76,479, Scotch 9,856, Irish 15,363, Colonists 1,256, Foreigners 65. **Religious statistics**.—There are 70,048 who are members of the Church of England, 9,096 Presbyterians, 5,101 Wesleyans, 785 other Protestants, 17,989 Roman Catholics, and 74 whose religious views are not accounted for. **Educational acquisitions**.—The number of men who can neither read nor write is returned as 2,255; read but cannot write, 1,248; write but cannot read, 1,739; who can only read and write, 11,373; holding fourth-class certificates, 31,739; third-class certificates, 19,837; second-class certificates, 19,866; first-class certificates, 711; holding no certificates, 14,842. **Recruiting**.—In the period covered by latest official statistics 58,645 persons were served with notices by recruiters; 18,007 were rejected prior to attestation, 7,463 failed to come up for attestation, 33,059 were attested, 2,003 were rejected, 279 deserted. Altogether 30,751 were passed into the service. London was the best recruiting ground, giving 3,529 men, Dublin 693, and Liverpool 391. In the Regimental Districts Bristol gave largest number, 975, Glencorse (Edinburgh), 786, and Warwick 781. The smaller results were obtained at Carlisle and Inverness, 83 each, and Bodmin, 65. The ages of recruits who passed the army

were: under 17 years, 1,088; between 17 and 18, 74; between 18 and 19, 12,574; between 19 and 20, 6,307; between 20 and 21, 3,334; between 21 and 22, 2,608; between 22 and 23, 2,050; between 23 and 24, 1,535; between 24 and 25, 1,394; and 25 and upwards, 258. The heights were: under 5 ft. 4 in., 1,817; between 5 ft. 4 in. and 5 ft. 5 in., 6,810; between 5 ft. 5 in. and 5 ft. 6 in., 6,913; between 5 ft. 6 in. and 5 ft. 7 in., 5,282; 5 ft. 7 in. and upwards, 10,401. The chest measurements were: under 33 in., 1,571; 33 in. and under 34 in., 8,490; 34 in. and under 35 in., 11,678; 35 in. and upwards, 9,484. The weights were: under 120 lbs., 5,678; 120 lbs. and under 125 lbs., 5,453; 125 lbs. and under 130 lbs., 5,518; 130 lbs. and upwards, 14,574. **Conditions of Service**.—A recruit may enlist for any particular corps or department in which there are vacancies, or for general service. The limits of age are 18 to 25 years, except for Medical Staff Corps, when they are 18 to 28. Men of good character discharged from Army Marines, Navy, or Irish Constabulary, are taken up to 28. The height for Cavalry ranges from 5 ft. 6 in. to 5 ft. 11 in.; for Artillery from 5 ft. 4 in. to 5 ft. 6 in.; for Engineers from 5 ft. 4 in. to 5 ft. 6 in.; for Foot Guards 5 ft. 8 in. and upwards; for Infantry from 5 ft. 4 in. upwards. The minimum chest measurement is 33 in., and the minimum weight 115 lb. The terms of enlistment are: for long service (*i.e.* 12 years' Army service), or short service (*i.e.* 7 years' Army service), and 5 years' Reserve service, which will be extended to 8 years' Army service and 4 years' Reserve service if the period of Army service expires while a man is serving abroad. In the Foot Guards, short service consists of 3 years' Army service and 9 years' Reserve service. The rates of pay range from 6s. a day for a Brigade Sergeant-Major Royal Horse Artillery, and 5s. 40d. for Regimental Corporal-Major Household Cavalry, to 1s. 2d. for sappers and privates. **Deferred Pay**. An addition of £3 a year is made to the daily pay of a soldier during the first 12 years' Army service; but the issue of this is deferred until Army service is completed, whether on final discharge or transfer to the First-class Army Reserve. Soldiers who enlist for 3 years' Army service only are not entitled to deferred pay, nor are those discharged for misconduct or by purchase. Non-commissioned officers re-engaging are granted deferred pay up to 21 years' service. Soldiers who serve on to 21 years are entitled to life pensions varying from 1s. 1d. to 2s. 9d. a day, or if warrant officers from 3s. to 5s. a day. Men serving in the First-class Army Reserve receive pay at the rate of 6d. a day—*viz.*, 4d. a day pay, and 2d. deferred pay. They are liable to be called up annually for training for a period not exceeding 12 days or 20 drills. A soldier desiring to leave the army during the first three months of his service can do so on payment of £10. After three months the amount is increased to £18. **General Officers**. By Royal Warrant issued in 1881 and revised on Jan. 1st, 1887, the Establishment of Field-marshal is restricted to six, of whom two at present are Royal Princes—the Duke of Cambridge, appointed Nov. 9th, 1862, and the Prince of Wales, appointed May 29th, 1882. The "Service" *batons* are held by Lord Napier of Magdala, Sir Patrick Grant, Lord Wm. Paulet. The number of Generals on the Establishment is limited to 13: *viz.*, for Cavalry and Infantry 7, Royal Artillery 2,

Royal Engineers 1, and Indian Staff Corps 3. There are 43 Lieut.-Generals and 107 Major-Generals. Of the Lieut.-Generals 35 represent the Imperial and 8 the Indian army, and of the Major-Generals 85 come from the Imperial and 22 from the Staff Corps list. There is no limit of age for a Field-Marshal, but Generals and Lieut.-Generals are retired at 67, or after being 5 years unemployed, and Major-Generals at 62 or after 5 years' non-employment. There is no limit to the number of Colonels on the active list. The rank has hitherto been obtained after 4 years' service in command of a regiment or battalion, or for field service, or service on the staff. In future it will be much more difficult to attain, as since January 1st, 1888, new rules have come into force. The command of a regiment for a given period will not qualify for Colonel's rank: an officer must now to all intents and purposes be selected for the rank. A Colonel and Lieut.-Colonel has to retire at the age of 55, although as a special privilege some of the seniors are allowed to stay on to 58. **Mobilisation.** A scheme has been drawn up for the mobilisation of the forces. Under this arrangement two Army Corps will always be held in readiness for embarkation should the despatch of an expedition be rendered necessary. The regiments in the first Army Corps are maintained at an establishment of—Cavalry 625 of all ranks and 380 troop horses, Foot Guards 840 of all ranks, Infantry 812 of all ranks. Their reserves are liable to be called up at any moment, and their militia battalions would be embodied on the despatch of the Line battalions from England. Every arrangement has been made so that the regiments might be "put on board" with the utmost despatch, and with this view they are kept as much as possible consolidated—i.e., not on detachment duty. The second Army Corps is also told off, but the regiments forming it would be given a longer time to prepare. They are principally employed in Ireland, and at stations which necessitate a splitting up of troops and companies to supply out-stations. The Royal Body-guard consists of two Classes or Corps—the Hon. Corps of Gentlemen-at-arms, and the Yeomen of the Guard. The former, which forms the personal bodyguard of the Sovereign on all state occasions, was established in 1509, and consists of a Captain, always a peer, who goes out with the Government, Lieutenant, Standard Bearer, Clerk of the Cheque, and Adjutant, sub-officer, and forty Gentleman-at-arms. The appointments are in the gift of the Captain, and candidates must hold field officers' rank and be decorated for war service. The emoluments for ordinary "Gentlemen" are about £70 per annum. The Yeomen of the Guard were instituted by Henry VII. in 1485. They consist of a Captain, a peer who goes out with the Government, 7 officers, Lieutenant, Ensign, 4 Exons and a Clerk of the Cheque, and Adjutant, and 140 Yeomen. The officers must all have had war service, and are appointed by the Captain for the time being; the Yeomen are all pensioned non-commissioned officers who are selected by the Commander-in-Chief. **Aides-de-Camp, Queen's.** There are 4 personal Aides-de-camp, all members of the Royal Family, who hold honorary appointments; and 34 Aides-de-camp: of the latter 11—6 paid and 5 unpaid—are officers of the Imperial Army; 4—2 paid—are Indian officers, 2 unpaid repre-

sent the Royal Marines, and the remainder the Militia, Yeomanry, and Volunteers. The paid Aides-de-camp draw 10s. a day each from military funds. Officers only are eligible on full pay who have the rank of Lieut.-Colonel, and the appointments are made by the Queen on the recommendation of the Commander-in-Chief. The **Military Knights of Windsor** were instituted 1349, and consist of 13 Knights on Royal foundation, and 5 on lower. Officers are selected by the Commander-in-Chief who are in straitened circumstances, or who have special claims on the ground of war service, and are provided with rooms in the Castle. (For historical sketch of Army see ed. '87.) Consult Colonel Maurice in 9th ed. "Encyclopædia Britannica"; General Sir E. Hamley's "Operations of War"; Lord Wolseley's "Soldier's Pocket Book"; Prince Kraft's "Letters"; Baron von der Goltz's "The Nation in Arms"; Colonel Harrison's "Handbook"; Lord Justice Clerk Macdonald's "Common Sense on Parade"; publications and translations of the Manchester Tactical Society, chiefly those of Captain Spenser Wilkinson, of the *Manchester Guardian*; the new German Drill Book, Part II.; and the new English Drill Book.

Arnold, Sir Edwin, K.C.S.I., poet and journalist; b. 1832. Educated at King's School, Rochester; King's Coll., London, and Univ. Coll., Oxford, where he graduated, '54. He was subsequently appointed second master of King Edward the Sixth's School, Birmingham, and afterwards proceeded to India as Principal of the Government Sanscrit College at Poona. On his return to England, in '61, he joined the *Daily Telegraph*, with which he has been connected ever since. Sir E. A. has devoted much attention to the study of Indian literature. His best known works are "The Indian Song of Songs," a metrical paraphrase from the Sanscrit, and "The Light of Asia," an epic poem upon the life and teaching of the great Indian prophet, Buddha. Of Sir Edwin's latest productions is a volume of poems entitled "Lotus and Jewel," "Selected Poems: National and Non-Oriental," and a prose work, "Death and Afterwards." He was made a Companion of the Star of India on the occasion of Her Majesty's proclamation as Empress of India, '77, and received the honour of K.C.S.I. Jan. '88. On the death of Mr. Matthew Arnold last year he wrote an elegy which appeared in the *Pall Mall Gazette*, under the title, "To Matthew Arnold from Edwin Arnold." Sir E. A.'s latest work is "With Sa'di in the Garden."

Arnold, Matthew, son of the Rev. T. Arnold, D.D., head master of Rugby, was b. 1822. Educated at Balliol Coll., Oxford, where he graduated. Elected a Fellow of Oriel Coll. Private sec. to Lord Lansdowne (1847); appointed Lay Inspector of Schools under the Council of Education (1851), which post he resigned (Nov. 1886); published a number of poems, and was made Professor of Poetry at Oxford. Was sent as Assistant Commissioner to inquire into the system of education in France, Germany, and Holland (1859), on which he published a memoir (1861); visited the Continent again (1865), on the part of the Royal Commission on Middle Class Education, and published a work on the subject (1867); wrote a work on Celtic Literature (1868), as well as "Literature and Dogma," and several volumes on religious and other topics. Mr. Arnold visited the United States in 1883-4, and met with

a reception which indicated his great influence as a poet and social and religious teacher. He was the leader of that school of thinkers who distinguish between mythology and truth. Again visited the Continent on behalf of the Education Department in 1885, and prepared a *Report on the Elementary Schools of France, Germany, and Belgium*, and other European countries, in 1886. Had the degree of LL.D. conferred upon him by the University of Edinburgh (1869), and that of D.C.L. by Oxford (1870). Made a Commander of the Crown of Italy by the King for his care of the young Duke of Genoa, who resided in his family while pursuing his studies in England. Mr. Arnold contributed much to the leading magazines and reviews, and recently wrote articles vigorously attacking the Home Rule policy of Mr. Gladstone. Mr. Matthew Arnold died suddenly on the 15th of April last at Liverpool whither he had repaired to meet his daughter on her return from America. For *Bibliography of Mr. A's writings* see *The Torch*, June '88.

Arrest of Peers and Members. See PRIVILEGES OF PEERS AND MEMBERS.

Arrondissement. (From the French.) An extent of French territory under the administration of a sub-prefect (*sous-préfet*); also a portion of a town having its own civil officers. An *arrondissement*, as it is understood in France, may be compared to an English district; when it applies to the portion of a town, it is similar to an English parish or ward.

Art, '88. The past year will be remembered as one of special interest to artists and dilettanti. Not only have exhibitions been abnormally numerous and varied in character, but a growing interest in the broader scope of art has manifested itself with sustained vigour. Leading artists have expounded their views to large and fashionable audiences, whilst working men have flocked to listen with rapt attention to enthusiastic lecturers on art and its far-reaching influence. Yet in spite of a more general and keener appreciation, recent pictures have not sold well, and the lack of generous patrons has been severely felt in many studios. It is noteworthy, nevertheless, that a few works have fetched very high prices, and that on numerous and important collections coming to the hammer, wealthy buyers were readily forthcoming. The most popular exhibitions were again those held in the galleries of the *Royal Academy*. The English school was conspicuous at the winter loan exhibition, and the addition of a water-colour room was welcome. Examples of Renaissance sculpture proved of great interest. The 120th annual summer exhibition was generally deemed of greater average excellence than those of the past few years. Most Academicians of note were there represented. The President's "Captive Andromache," and Sir John Millais' landscape "Murthly Moss, Perthshire," were amongst the chief attractions, but Mr. Alma Tadema's "Roses of Heliogabalus" was the "sensation" of the year. Mr. Briton Rivière's "Requiescat" attracted much attention, and Messrs. Orchardson, Herkomer, Watts, Waterhouse, Richmond, Moore, Marks, Brett, and other other well-known painters sent remarkable contributions. The sculptures numbered, amongst others, examples from the chisels of Messrs. Woolner, Brock, Thorneycroft, Lawes, and Gilbert. The change in the management of the *Grosvenor Gallery* could not but make

itself apparent at the exhibitions held under the auspices of Sir Coutts Lindsay. The season's results, however, must be accounted satisfactory. Mr. Pettie's "Song without Words," Mr. G. D. Leslie's "Rosebuds," Mr. Briton Rivière's "Adonis's Farewell," were amongst the principal pictures; whilst Sir John Millais' portrait of Sir A. Sullivan was a masterly likeness of the musician. The winter exhibition at this gallery was, like that at Burlington House, of a miscellaneous character, and prominence was again given to the English school. Several Hogarths, familiar as prints, but seldom seen as the original paintings, were interesting exhibits; and Constable's "Hadleigh Castle," by some considered as his masterpiece, was here with a good selection from the same artist's brush. The first exhibition of *Pastel drawings* ever held in this country was also opened in the autumn at the *Grosvenor Gallery*, and proved a welcome novelty. Works by Messrs. Llewellyn, Blanche, Hare, Tofano, and others, as well as those by Mesdames Bilinska and Armstrong, were of remarkable merit. A rival to the *Grosvenor* was anticipated on the secession of Messrs. Comyns Carr and Hallé from the direction of that gallery. These gentlemen have lost no time in embarking in a new venture, and the outcome of their energy is the *New Gallery*, which is admirably situated in Regent Street. In May an eager public crowded the elegant rooms so rapidly constructed according to the plans of Mr. Robson, and was lavish of well-deserved approval. Several of the most prominent artists whose works formerly gave a special *cachet* to the *Grosvenor*, were there fully represented.—Mr. E. Burne-Jones sending three large pictures, "The Rock of Doom," "The Doom Fulfilled," and "The Tower of Brass." Mr. Alma Tadema "He loves—he loves me not," a sketch for his "Roses of Heliogabalus," and several other works. M. Legros' "Dead Christ" and "Femmes en Prière" showed this versatile artist at his best; whilst Mr. Hallé, with his "Paolo and Francesca," added much to his reputation, and Mr. Watts maintained his with "The Angel of Death." Sir John Millais exhibited "The Forlorn" and "The Last Rose of Summer." The percentage of portraits was great, the principal contributors in this branch being Mr. Herkomer, the Hon. John Collier, Mr. W. B. Richmond, Sir James Linton, and the late F. Holl. In the autumn the *New Gallery* was occupied by an exhibition of the *Arts and Crafts Society* under the ægis of Mr. Walter Crane. The talent and industry of Mr. Morris was there amply exemplified. The purpose of this exhibition is characteristic of the times, and likely to acquire extensive development. Another room is to be forthwith added to the *New Gallery*. The year has not passed without a note of discord in the Art clans, and it is at the *Society of British Artists* that the cry of secession was raised. Mr. McNeil Whistler, and above a score of members have left the Society. Nevertheless the exhibitions were held as usual in Suffolk Street, without conspicuous detriment to the quality of the works shown. Mr. Wyke Bayliss is the new president. The exhibition of the *Society of Painters in Water Colours* was a successful one, the new Associate exhibitors adding their share of the excellence of the collection. Sir John Gilbert sent some characteristic drawings, but

has resigned the Presidency of the Society. Nearly a thousand drawings were exhibited by the **Institute of Painters in Water Colours**, the meritorious contributions being somewhat in the minority. The **Institute of Painters in Oil Colours** also exhibited some 600 pictures in the **Piccadilly Gallery**. Mr. Shannon's "Rose Pink," Mr. Keely Halswell's "Autumn Landscape," and the President's "Maud and May," were excellent in their respective styles. The attention given to **Japanese Art** was a striking feature of the year. The completion and opening of the new room of the "White Building," as an addition to the **British Museum** has enabled the trustees to exhibit a selection from the collection purchased of Mr. W. Anderson by the nation. This has been done under the direction of the Keeper of Prints and Drawings. Typical drawings, ranging in period from the productions of Moh Ki and those of the Emperor Hawi Tsung in the 11th and 12th centuries respectively, to the work of modern artists, have been arranged on the walls and table cases of the appropriately fitted gallery. The twenty-four illustrations of the legend of "Kakio and the Shuten Doji" by an unknown artist of the Yamato-Tosa school, the "Seven Calamities," painted by Minamoto No O-ko in 1773, and some exquisite representations of birds and animals, have specially commended themselves to the general taste. Supplementary to this, instructive specimens of book illustrations were displayed in the **King's Library**. Japanese art was also the subject of a loan exhibition held in the **Fine Art Society's** rooms in New Bond Street, where a magnificent collection of Satsuma ware, Lac, metal work, embroidery, and carving, was chiefly due to Messrs. Masayuko, Kataoka and M. B. Huish. The **Burlington Club** had on view a comprehensive set of Japanese prints. The taste for things Japanese was further gratified by the pictures, drawings, and etchings which Mr. M. Menpes exhibited at **Messrs. Dowdeswells**, of New Bond Street. These were from sketches made in Japan by the artist. The brightly and daintily decorated room where the pictures were framed and hung Japanese fashion, was in excellent harmony with the work displayed. The exhibition of the **Fine Art Society** were numerous, Mr. T. C. Gotch, Mr. A. East, and Mr. Ingram contributing to the fifty-eighth of the series. In one of the rooms Mr. Herkomer showed about fifty landscapes and humorous studies under the title of "Round my Home." Great energy was manifested by the Society in the matter of exhibitions and the publication of prints. An improvement in the merit of the works exhibited was noticeable at the **French Gallery**, Professor A. Halenber, T. Rousseau, Corot, Seigler, Diaz de la Pena being credited with specially attractive works. At **Mr. Tooth's Gallery** some famous examples of Meissonier were on view, as well as a number of canvases by M. de Blaas, Mr. W. L. Wyllie, Mr. F. Murray, M. Deutch, M. Bourgeois, and others. The **18th Century Art Society** held three exhibitions during the year, and Messrs. Freeman and Marriott are to be congratulated on the continued success of the Association. Messrs. De Brauski, Norton, Shaw, Patry, and De Lacy's contributions were among the best. The **Fine Arts** were an important item in the **Italian Exhibition (q.v.)** at Earl's Court, and it is claimed that the thousand paintings and three

hundred and fifty sculptures brought there together by the influential committee, were thoroughly representative of modern Italy. Twelve pictures were lent by the **National Gallery** at Rome, and the King sent two large works, "Vittoria Colonna, and Micalangelo," by Jacovacci, and the "Charge of Bersaglieri," of Cammarano. The water colours were poor in quality and quantity. The sculptors Ferrari, Jeraci, and Monteverde contributed the most important plastic works. The **Irish Exhibition (q.v.)** held in "Olympia," at Kensington also had its art department. A series of portraits on loan from the Corporation of Dublin was perhaps more interesting in its historical than its artistic aspect. Several contributions from members of the Hibernian Academy contrasted favourably with the majority of exhibits. The works of art at the **Anglo-Danish Exhibition (q.v.)** at Kensington Gore, and those at the **Exposition des Laureats de France** in Westminster were disappointing. The various Art collections in the **British Museum** have received continued attention from the authorities in charge, and amateurs may now look upon a more advantageous display of the ceramic and glass wares and on other hitherto unsuspected treasures. Additions were made to the pictures in the **National Gallery**: amongst others were examples of Girolamo Macetto, Frank Hals, Van der Helst, and "The Card Players," by N. Maes. Considerable rearrangement of the paintings, particularly of the Italian and Flemish schools, was resorted to. The number of visitors to the **South Kensington Museum** has fallen off during the year, notwithstanding the constant improvement in the collections and buildings. Mr. G. Salting made some important additions to his collection of **Italian Earthenware**, now on loan in the Museum. The accessions to the gallery of the Corporation of London at the Guildhall consisted of two paintings by Mr. Richard Bevis, "A Solemn Joust on London Bridge," and "Fitzwiler receiving the City Banner from the Lord Mayor." The Earl of Pembroke and the Speaker were appointed Trustees of the **National Portrait Gallery** in the places of the Bishop of Chester and Mr. Bressford-Hope. The additions of the past twelve months have been the portraits of Lord Nelson, C. R. Darwin, Sir T. Malet, Michael Drayton, General S. Lawrence, Warren Hastings, Barry Cornwall, John Keats, Sir Cloudesley Shovel, Sir J. Hope Grant, Viscount Stratford de Redcliffe, the 5th Duke of Leeds, Professor H. J. F. Smith, Adelaide A. Procter, and several others equally interesting. Nearly a million and a half of visitors have been admitted to the gallery since its establishment in '59. A suitable building for its reception and proper preservation is still a desideratum. In August an exhibition was opened by the Duchess of Albany at the **People's Palace (q.v.)** in Whitechapel. A number of pictures by Mr. Watts, Mr. Crane's "Bridge of Life," the portrait of Madame Lemon by Mr. Alma Tadema, Mr. Strudwick's "Circe and Scylla," Mr. T. Faed's "Runaway Horse," with works by Messrs. Hallé, Tissot, W. B. Richmond, and others made a most attractive collection. Mr. Massey Mainwaring lent to the **Bethnal Green Museum** a fine collection of ceramic ware, plate, and artistic furniture of various epochs. There were several small but instructive popular exhibitions in various local centres of London. Art also received remarkable atten-

tion beyond the Metropolis. The *Royal Scottish Academy* exhibition in Edinburgh, and that of the *Royal Hibernian Academy* in Dublin, fully sustained the reputation of those institutions. The *Bristol Academy* also had a successful show of pictures. In the *Museum and Art Gallery of Birmingham* an important loan exhibition was opened under the management of Mr. Wallis. Lord Dartmouth, Sir T. B. Lennard, the Duke of Norfolk, the Duke of Westminster, the Marquis of Hertford, and other well-known amateurs sent pictures from their collections. At the *Walker Art Gallery in Liverpool*, and at the *Manchester Art Gallery* exhibitions were likewise held. The *International Exhibition, Glasgow (q.v.)*, was the *locale* of a goodly assemblage of paintings and other art objects; and in the Bishop's Castle and other temporary buildings at Gilmour Hill, the amateur found much to delight him. Numerous prints of *engravings and etchings* were published during the year, and Messrs. Bousso, Valadon, & Co., of Bond Street, were specially active in that direction. The number of pictures and art collections that came under the hammer of Messrs. Christie, Manson, & Woods was abnormally great, and the high prices that were often realised were remarkable in the face of the prevalent paucity of commissions in art circles.

Arterial Drainage of Ireland. See Session '88, sect. 8.

Artillery. (A concise history of artillery from early times is given in ed. '87.) On Her Majesty's accession, fifty years ago, all the guns in use by the army and navy were so simple in construction, and of so few patterns, that they might all be fully and accurately described in a single page of this book. For many succeeding years, and till the introduction of *rifled cannon*, all matters connected with ordnance remained almost in a state of torpor. Since then the wave of improvement and progress, set in motion by that change, has rolled on rapidly, sweeping away in its course nearly everything that was unfit to stand the tests of experiment and comparison. Improved means of forging and working large masses of iron and steel, and consequently of making guns of dimensions which seemed, and indeed were, unattainable ten years ago, have been utilised to the utmost. When the *80-ton gun*, popularly styled the *Woolwich Infant*, made its appearance, it was an object of general admiration, and the opinion was freely expressed that there would be no use in attempting to make a larger gun. But so rapid has been the advance in the direction of increased size, that the *Woolwich Infant* has been obliged to "take a back seat." While the size, range, and accuracy of guns have been increased, progress has been made, *pari passu*, in other directions. The appliances for mounting, loading, and moving big guns have been so much improved, that all necessary work with them is now done with less expenditure of manual labour than was formerly required to work guns of comparatively small size and weight. An inevitable result of adopting ingenious mechanical contrivances, instead of simple muscular exertion, and of utilising steam and hydraulic pressure in the service of artillery, is increased complexity in appliances, and the necessity of far more training and skill of naval and military gunners. Improvement in the construction of guns was for several years retarded, or rather almost stopped, by blind and obstinate adherence on the part of some

officials to the principle of *muzzle-loading*, long after it had been condemned by the most scientific and practical artillerymen of other countries. Since that unreasonable restriction has been removed, changes—most of them improvements—have been introduced with such startling rapidity, and types and patterns of guns, carriages, and projectiles have multiplied to such an extent, that it is impossible to describe them all in the limits of an article of reasonable length. All that can be done, therefore, is to mention those guns which, from novelty or importance, claim most attention, briefly noticing or passing over those which are, or soon will be, quite obsolete. The necessity for this limitation will be evident from the statement that there are more than a hundred patterns of cannon in the service, exclusive of mortars, machine guns, and old smooth-bores. The *largest gun yet made in England* is that called the *111-ton gun*. Without going into many figures, or quoting any of those calculations which have no attractions for general readers, it may be stated roughly that this enormous gun is almost exactly 15 yards long, weighs 111 tons, fires a shot of 1,800 lb. (about equal in weight to the whole broadside of a 120-gun ship), has a service-charge of 1,000 pounds of powder, and will penetrate an armour plate nearly a yard in thickness at 1,000 yards. The destructive effects in war of a shot or shell from such a gun must be for the present a matter of speculation, and we must wait for the next great war to realise them. But it may be safely predicted that the shell bursting in an earthwork would act like a mine, and would demolish, like a house of cards, a building that would withstand almost uninjured the explosion of any shell hitherto tried in war. Its shot would pass through and through an iron ship on the sides of which a shot from the *Woolwich Infant* would make but a slight impression, and from which the old spherical shot would rebound like peas, or crumble like snowballs. Next after the *111-ton gun*—for the present the *facile princeps* of British ordnance, both for sea service and land defences—comes the *100-ton gun*, a muzzle-loader, and intended for land service only, with a shot a little heavier than that of the former gun, but with much less penetrative power. Then we have the *80-ton gun*, and, in a descending scale of size and efficacy, some fifty other varieties of heavy guns, muzzle-loaders and breech-loaders. *Siege guns and guns of position*, carrying shot not exceeding 40 lb., contribute comparatively few to the long list of patterns. In guns of this class there have not been many changes within the last few years. Of field guns we have still fourteen patterns of muzzle-loaders, from 16-pounders to 7-pounders; and seven patterns of breech-loaders, from 20-pounders to 6-pounders. Although the superiority of breech-loaders for horse artillery and field batteries has long been admitted, the complete re-arming of these batteries has been delayed, from considerations of economy. The new 12-pounder, intended at first for horse artillery only, is, we are assured, notwithstanding the disadvantage of its excessive recoil, by far the best light field gun in existence. It weighs only 7 cwt.; and, with a charge of 4 lb., has a muzzle velocity of 1,770 per second, and a range, with 25° of elevation, of 7,930 yards. In all these particulars it claims to be superior to

any foreign gun of similar size and weight. The re-arming of our horse artillery batteries with this gun is proceeding so slowly as to prove the utter inadequacy of the Woolwich Gun Factory, even when working at high pressure, to supply the wants of the army. Of the new 20-pounder, from which so much was expected, and which has been favourably reported on, but little is heard just now; and some influential artillery officers are in favour of arming all our field batteries, as well as the horse artillery, with the new 12-pounder. Horse artillery batteries are expected to equal cavalry in rapidity of movement, while from field batteries great range and a crushing fire are required rather than extreme speed. The same pattern of gun cannot, therefore, be the best for both. If the new 20-pounder realise the expectations it has raised, it should be made in large numbers and supplied to the field batteries. The range and accuracy of rifled field guns have advanced with such rapid strides that the use of howitzers is now very limited, and it is not rash to predict that ordnance of that class will soon be consigned to the limbo of obsolete weapons in Woolwich arsenal. High-angle fire from siege guns has also been developed to such an extent, that mortars are vanishing from the lists of artillery, either for attack or defence. The present pattern of screw gun for mountain batteries will not, in all probability, be long retained without alteration; for if the plan of having a gun made in two pieces, to facilitate carriage in mountainous or rough country, be found very convenient, the principle will surely be carried so far as to have guns made in three or more pieces, so that the size of the gun when screwed together may be increased, while the difficulty of transport will be still further reduced. If, on the other hand, the slight loss of time in putting the gun together, and the greater liability to injury resulting from its construction be found to outweigh the advantages of its portability, a very light gun in one piece will be substituted. In one direction progress has been very slow. The ranges at which guns of all kinds can be fired with effect have lately been increased to such lengths, that man's unaided vision can no longer evoke the full powers of the guns. And here it may be mentioned that a shot from one of Longridge's wire guns, lately tried at Shoeburyness, at a high elevation, attained the extraordinary distance of twelve miles! The advantage of telescope sights for long distances has been fully proved for several years; but, till the conviction of the expediency of fitting all guns with such sights becomes general among artillery officers, much of the accuracy of fire of our guns will be lost by the adherence to the rough modes of aiming that were only good enough for the erratic old smooth-bore. The objection that telescope sights may be shot away, and are easily damaged, is not a valid one; for when the telescope can no longer be used, the ordinary sights will be available. If wonderful practice can be made with ordinary rifles fitted with telescope sights—and this has been done in war as well as on ranges—what degree of accuracy may not be attained with cannon so fitted when most of the errors caused by defective vision, and all the deviations caused by unsteadiness or nervousness, are eliminated? Scott's telescope sights have been tried for some years, and have been highly approved; but they have a grave defect. They

are not constructed to stand the concussion of firing, and must therefore be removed after laying the guns and before firing. Fixed telescope sights are needed to utilise fully the accuracy of all rifled cannon. Whether machine guns should be intrusted to artillery, or to cavalry, or to infantry, or to each arm of the service according to circumstances, is a question the decision of which seems remote. Perhaps our next great war will solve it, or the next but one. In the meantime the improvements which are being made in the construction and working of machine guns, and of "quick-firing" shell guns, are enlarging the sphere of utility of these guns, and keeping professional opinion as to their use in a state of constant transition. Of machine guns we have already in the service six patterns of the Nordenfeldt, five patterns of the Gardner, and three patterns of the Gatling; and of "quick-firing" guns we have the Nordenfeldt 6-pounder, and the Hotchkiss 6-pounder and 3-pounder. But the 36-pounder and 70-pounder guns lately made at Elswick are far more formidable weapons than those just named. These guns can fire from 10 to 15 well-aimed shots per minute, and can pierce an armour plate 5 inches thick at 1,000 yards. As regards the Maxim gun, which will fire away as long as it has any ammunition, though all that worked it be killed, it is to be regretted that the Government did not secure its exclusive possession, even at enormous cost. As for the dynamite tube gun, of which we have heard lately, it seems only prudent to follow the American's advice, "Never prophesy till you know." The nature and quality of ammunition are intimately, indeed inseparably, connected with the construction and patterns of guns. The use of some of the "higher explosives" has been successfully tested, at least for filling shells; and the secrets of making mellinite and cocoa powder have been acquired from France and Germany respectively. Diversity in the modes of granulating gunpowder has been found so advantageous that the size of the grains (if they may be so called) increases in approximate proportion with that of the guns; so that those for use with the largest guns are perforated hexagonal prisms, some inches in length and diameter. Can these accurately moulded and polished powder masses be any longer called grains? With so many and so startling inventions for attack and for defence as have lately been made public, and with others the destructive powers of which are darkly hinted, the future of warfare—even the near future—defies calculation, and must be a subject for vague but intensely interesting conjecture to those by whom, and on whom, these new agents of destruction may be tried.

Artin, Yacoub Pasha. Egyptian statesman b. 1846. Armenian by nationality; Christian by creed. Under-secretary of State for Public Instruction '84-88. Just appointed Egyptian Administrator of Railways in Egypt. Yacoub Pasha Artin is an Egyptian of quite exceptional attainments. A profound scholar of Arab literature. He is European in his tastes, speaking six languages with equal facility. To sound common sense he adds a genuine love for his work in the Education department, to which his promotion will be a great loss.

Artists, Musicians, and Actors Deceased (Jan. 1st to Nov. 30th, '88). See OBITUARY.
Arts and Crafts Exhibition. See NEW GALLERY.

Asbestos. See ed. '88, and more fully ed. '87).

Ascension Island. Discovered by Gallego, a Portuguese, on Ascension Day, 1501. Lies in the South Atlantic, 960 miles from African coast, and is a British possession. Area 35 sq. m., pop. 140. The port is called George-town, and is furnished as a naval station with batteries and storehouses. The island is naturally barren and rugged, rises to a height of 2,870 feet, and consists of extinct craters and scoria-streams; but cultivation is improving it. Sea turtles are taken in great numbers. Wild goats abound, and some sheep and cattle are reared. Climate dry and healthy; and the place has been used as a sanatorium for people from West Africa. The Governor is a naval officer appointed by the Admiralty. It has belonged to Great Britain since 1815.

Ascot Gold Cup. See TURF.

Ashbourne, Lord, P.C., 1st Baron (creat. 1885), b. 1837, formerly Mr. Edward Gibson, who is, with the above title, the Lord Chancellor of Ireland, is a native of Dublin. Graduated with high honours at Trinity Coll., Dublin, and (1875-85) was elected to represent the University of Dublin in parliament. Called to the Irish bar (1860), and for years practised in Ireland, and gained a high reputation in his profession. On entering parliamentary life as one of the members for his University, he took a prominent part in all the important debates which have taken place during the last ten years, rendering valuable service to the Conservative party, to which he attached himself. Mr. Disraeli early took note of the fine capacities displayed by Mr. Gibson, and appointed him Attorney-General for Ireland (77-80). In the debates on the Irish Land Act of '81 he took a prominent part. Lord Ashbourne brought into the House of Peers the Holdings Act (Ireland), which has become law.

Ashkenazim. See JEWS.

"Asiatic Quarterly Review." A review the first number of which appeared Jan. 1st, 1886, devoted to the consideration and discussion of Asiatic questions which are becoming increasingly of interest to the British public. Questions are treated from an Oriental as well as European standpoint. Among other distinguished contributors have been the Countess of Dufferin and the Marquis Tseng. A chronicle of Asiatic events and literature forms a feature of the Review. Editor: Mr. D. Boulger, M.R.A.S.

Askabad. A new Russian town and administrative centre of the province of Transcaspia, 280 miles by railway east of Michaelovsk, on the Caspian, on the direct road to Sarakhs, Herat, and India. Annexed by Skobeleff in '81, and the plan of a Russian town laid out, which has since been built upon and occupied by a mixed Russian and Asiatic population of four or five thousand. Contains several fine streets full of shops, a large public garden, and the handsome house of the Governor-General Komaroff. Does a large trade with Meshed, distant 200 miles. Russia is endeavouring to get permission from Persia to construct a railway to this point, and has levelled the road to the frontier. This move practically renders her mistress of Khorassan.

Asquith, Herbert Henry, M.P., b. 1852. Educated at City of London School, and Balliol College, Oxford, where he graduated B.A. '74,

1st class Classics, and Craven University Scholar. Called to the bar at Lincoln's Inn '76. Elected as Liberal member for E. Division Fife-shire '86, which he continues to represent. Mr. A.'s speeches have received high commendation on several occasions, notably at the annual meeting of the Liberation Society in '88. Mr. A. is engaged on behalf of Mr. Parnell, together with Sir C. Russell (q.v.) at the Parnell Commission (q.v.)

Assab. An Italian possession on the Red Sea coast of Africa, now practically abandoned in favour of Massowah.

Assessed Taxes. See ed. '88, and consult Dowell, "History of Taxation and Taxes in England," vol. iii., bk. 3, and Laws of Excise—Bell and Dwellly (*Maxwell*).

Assiniboia. Named after the Assiniboine river. A district of the North-West Territories, and a future province of the Dominion of Canada. Lies directly west of Manitoba along the United States boundary. Area 95,000 sq. m. Capital Regina, which is the present seat of government for the Territories generally.

Association Internationale du Congo. See CONGO FREE STATE.

Assyriology, '88.—The last two years have not been unproductive either in archaeological discoveries or in researches in the field of Assyriology. Although the Government have not provided sufficient funds for the continuation of the explorations in Babylonia, they were able to make a supplementary grant for the purpose of despatching Mr. E. A. W. Budge on a scientific mission. This expedition was supplementary to his successful work in Upper Egypt, and to the same field he now returned. This visit to Egypt was for the purpose of examining an important series of cuneiform records which had been discovered in the tombs in the neighbourhood of Tel-el-Amarna. In the tomb of a scribe of the period of the eighteenth dynasty were found a number of clay tablets inscribed with cuneiform characters. These documents were examined, and were at first thought to be works of a later period, being supposed, after a hasty inspection merely, to be records of the invasion of Egypt by Nebuchadnezzar in the time of Amasis. The tablets, about three hundred in number, were purchased partly for the Royal Museum at Berlin, whilst a larger portion were acquired by the authorities of the British Museum. The tablets at Berlin were first examined by Professor Schrader, and were found to be a series of despatches relative to the intercourse between Northern Syria, Babylonia, and Egypt. The documents in the British Museum belong to the same series, and are shortly to be published. These tablets contain despatches from Tûshratta, King of Mitanni, to Amenophis III., King of Egypt, and relate to a matrimonial alliance with the royal family of Egypt. Amenophis being spoken of as the brother-in-law of Tûshratta. There are also despatches from Burraburiyash, King of Karduniyash, or Babylonia—a fact which indicates a close intercourse between the two great empires. The light which these tablets throw upon one of the most important periods in Oriental history is very great. Assyria, which but a few years before had been only a Babylonian province, was now, as shown by the tablet of synchronous history, rising into power, its priest-kings

having thrown off the rule of the southern mother-land. It is seen from these documents that the Egyptian ruler found it to his advantage to form alliances of as close a nature as possible with the rulers of Syria and Babylonia. Among the former, no doubt, were the Hittites and the Vannic tribes. In like manner Babylonia was anxious to be on friendly terms with the rising Egyptian power; and Bursururiyash, therefore, sent rich presents to the King of Egypt. The date of these documents is to be placed about 1500 B.C. Almost at the same time that this important find was made in Egypt, the native workmen in Babylonia brought to light a large number of inscribed tablets. In one of the chambers of the Temple at Aboo-Hubba, where Mr. Rassam had made most important discoveries, were found over two hundred thousand inscriptions relating to the revenues and lands of the city of Sippara or the Sun-God. Of this collection, a large number were examined and selected by Mr. Budge, and sent to this country, while native dealers also despatched considerable collections. These inscriptions cover a very considerable area of time, the earliest dating as far back as B.C. 2300, and extending until a century before the Christian era. Many of the earlier documents are of the class known as envelope inscriptions, in which one copy of the text is placed within the other. These inscriptions relate to the reigns of Khammurabi and his son Samsu-iluna, and are in the majority of cases written in the Sumerian language. Other more important inscriptions were found at the same time, especially a large one of terra-cotta bearing an inscription of Khammurabi recording his restoration of the Temple of the Sun-God in about B.C. 2200, and a stone socket with an inscription of Bursururiyash (B.C. 1500), recording the making of canals in Babylonia. These valuable records are now in the University Museum at Boston. Among the latter deeds are inscriptions dated in the reigns of most of the Assyrian, Babylonian, Persian, and Greek rulers of the empire; and some of the latter bear Greek and Pagan dockets. The work of Dr. Strassmaier, S.J., upon the "Inscriptions of Nabonidus" (see ed. '88), has now advanced considerably, and contains examples from these later finds; and Mr. W. St. Chad Bosawen has also published translations of inscriptions relating to Belshazzar, the son of Nabonidus. The most complete analysis of these commercial, fiscal, and legal documents, so valuable to the student of Babylonian sociology, is to be found in the great work now issued by the MM. Réville, entitled "Les Obligations en Droit Egyptien comparé aux autres Droits de l'Antiquité." In this work the code of commercial life, the rules of finance and legislation in all forms are clearly set forth and illustrated by numerous quotations. The important discoveries which led to Mr. Budge being despatched to the East also stimulated the American students of Assyriology to endeavour to participate in some active manner in the work of exploration in Babylonia, and a fund was raised for the purpose in Boston. The object of this expedition, for which the magnificent sum of £8,000 has been contributed, is to continue the excavations commenced by Mr. Rassam at Aboo-Hubba, the ancient Sippara; and the task has been entrusted to Dr. Peters of Boston, assisted by Dr. Long, of the Robert College in Constantinople. The expedition has already started for the East, with the intention of commencing operations as soon

as the necessary firman or permit is granted, and has reached the Egean Sea. Mr. Budge has also arrived at Constantinople on his way to Mesopotamia. It is expected that he will obtain a firman to continue the excavations in the Tigro-Euphrates valley. Among the principal publications of '88 in England, on subjects connected with Assyriology, may be mentioned "The Grammar of the Cuneiform Inscriptions" (Trübner's series of *Abridged Grammars*), by Mr. George Bertin; and a new and revised edition of Professor Sayce's *Hibbert Lectures*. Mr. Pinches has continued and completed his valuable translation and commentary on the Babylonian Canon; and has also issued a *Catalogue of the inscribed Tablets from Babylonia in the Collection of Sir Henry Peek, Bart.* In the *Babylonian and Oriental Record*, now a recognised monthly medium of publication on matters relating to Babylonian and Oriental Archaeology, contributions from Professors Sayce, Schrader, Oppert, De Lacomperie, and from Messrs. Arminaud, Pinches, Réville, Bosawen, and others, have appeared. It should be stated, also, in this connection, that one of the special results of recent researches into this branch of archaic learning, is the deepening conviction of the great interest which is to be found in the history of Babylonia by British students, on account of its intimate connection with our own civilisation. On the Continent most important work has been accomplished. The Louvre authorities have arranged in a special saloon the antiquities obtained by M. Dieulafoy at Susa. These consist of enamelled tile facades from the palaces of Artaxerxes and Darius, the most important being a frieze of soldiers of the body-guard, in rich colouring. Under the direction of M. Léon Heuzey, the publication of the great work illustrative of the discoveries of M. de Sarzec at Tel-loh on the Shat-el-Hier, or the Great Canal, which in ancient times connected the Tigris and the Euphrates, penetrating to the very heart of the intervening district—in South Babylonia, has been continued. One of the most curious discoveries in this collection is that of some bricks with bilingual Greek and Aramean inscriptions of Adad-Nadin-Akki, a Nabathean prince who ruled in South Akkadea about B.C. 126. The archaic inscriptions have been analysed by MM. Arnaud and Mechineau, who have published a comparative table of the cuneiform characters based upon this work. In Germany the most important works of issue have been the "Assyrische Wörterbuch" of Professor Delitzsch, and the "Nimrod Epos" of Dr. Paul Haupt. The latter has also issued in America a work entitled "Prolegomena to a Comparative Assyrian Grammar," a kind of production which has been much desired by students. Consult Dr. Birch's Preface to vol. i. of "Records of the Past"; Mr. H. Fox Talbot's Introduction to the Translation of the Inscription of Khammurabi, in same vol.; Rev. A. H. Sayce, *passim*, in same work—Babylonian Literature, and Lectures upon the Assyrian Language; Mr. George Smith's "Chaldean Account of Genesis," "Chaldean Account of the Deluge," and "History of Babylonia"; Dr. E. Richmond Hodges' "Cuneiform Decipherment," in the third edition of Cory's "Ancient Fragments"; Birch and Pinches' "Bronze Ornaments of the Palace Gates of Balawat"; Mr. E. A. Wallis Budge's "Babylonian Life and History"; Mr. W. St. Chad Bosawen's "From under the Dust of Ages";

Professor Sayce's "Hibbert Lectures on the Religion of Babylonia," second edition; George Bertin's "Languages of the Cuneiform Inscriptions"; Ragozin's "History of Assyria" and "History of Chaldea"; "Babylonian and Oriental Record"; "Transactions and Proceedings of the Society of Biblical Archaeology"; "Zeitschrift für Assyriologie"; "Revue Archéologique"; "Journal of the American Oriental Society"; Lyon's "Assyrian Manual"; Fouilles, in illustration of De Sarzec's "Découvertes en Chaldée"; Dieulafoy's "Voyages en Perse"; and others. Dr. L. Oberziner, of Vienna, is preparing, it is understood, a new and important work on Assyriology. Lectures have been delivered during the year at the British Museum on this subject. (For concise history of Assyriology see ed. '87.)

Astronomy, '88. In pursuance of the resolutions adopted at the Paris Congress, '87, experiments have been made, both at Greenwich and other observatories, with a view to obtain the best photographic plates and also to ascertain what accuracy may be attained in the measurement of the plates. The flat plate seems equally good as the curved plate, and it is found that great accuracy in measurements may be obtained if due regard be had to systematic errors arising from the distortion of the film and the optical field, and, contrary to expectation, it has been shown that this accuracy increases with exposure. The English Government has agreed to provide two photographic telescopes—one at Greenwich, the other at the Cape. The astronomical phenomenon of the year was the Total Lunar Eclipse, Jan. 28th. Extensive preparations were made throughout Europe, and as usual, when such is the case, the weather was unfavourable. Apart from the physical phenomena attendant on an eclipse, the one object is to secure as many occultations of stars as possible. This observation consists in noting the exact time a star disappears at one limb of the moon, and also that of its reappearance at the other limb; the object being the determination of the shape of the moon's disc, its diameter, parallax, and position in the heavens. Despite the weather, Dr. Dollen of Pulkowa, who has undertaken the discussion of the observations, reports the receipt of 396 disappearances and 397 reappearances. The reddish tint of the moon, noticed during eclipse, was not so pronounced as that of '84. The theory of this may be stated. The red colour is due partly to solar light refracted through our atmosphere, and partly to some chemical or physical changes of the moon's surface during totality. Prof. Filopanti points out that many, if not all, opaque bodies, after prolonged exposure to a strong light, retain for some time a sort of phosphorescence. The moon is exposed to sunlight for fifteen days. The pale and grey illumination is due to refraction; it follows immediately the beginning of the eclipse, while the reddish colour does not appear till several minutes later. Herr Ludwig Struve of Pulkowa has completed a laborious comparison of the Pulkowa Star Catalogues and that of Bradley, with the object of deducing the constant of precession and the motion of the Solar system in space. Bessel's value of the luni-solar precession is $50.3635''$, Struve's $50.3514''$. He shows that the solar system is moving towards a point in the heavens situated R.A. 273° , Dec. $+27^\circ$, and that the rate of motion is $4.36''$, as seen from a 6th magnitude

star. The mean of previous determinations place the vertex R.A. 273° , Dec. $+30^\circ$. The Royal Astronomical Society has appointed a committee on Solar Eclipses "to bring into communication with each other gentlemen desirous of observing eclipses, and also to be a centre of information." A careful and interesting determination of the sun's period of rotation has been made by Mr. Crew. His method (not new) consists in observing, by means of the spectroscope, the motion of the sun's limbs in the line of sight. He deduces a rotation period of 25.48 days, but points out that there are great discrepancies in the results obtained by the use of different lines in the spectrum. Thus the line E_2 gives a period of 24.29 days, while line 5166\AA gives 28.33 . Dr. Wilsing, by measuring faculae on solar photographs, has also deduced a period of 25.23 days for the sun's rotation. He is also of opinion that the layer containing the faculae revolves round the sun as a solid—i.e., the faculae in high latitudes do not lag behind, as is the case with sun spots. Much has been written this year concerning the phenomena supposed to have been observed on the surface of Mars. The numerous and peculiar canals observed by Terby, Perrotin, and Schiaparelli have given rise to much controversy: some call them rivers, others say they are clefts in glaciers. In all probability they have no objective existence, being in a great measure due to phenomena of diffraction. Prof. Prithard continues his researches in photographic stellar parallaxes: he has now published his results for four more stars, making now in all seven: Polaris $0.052''$; α Cassiop. $0.072''$; β Cassiop. $0.187''$; γ Cassiop. $0.050''$. Ten small planets have been discovered this year, bringing the total up to 281. Six comets have visited us, two expected, and one a naked-eye comet (comet Sawyer discovered at the Cape). Comets visible to the naked eye are few: there were two in each of the years of '81 and '82, and one in each of '83, '85, '86, '88. The fifth comet of this year was discovered by Barnard at the Lick Observatory, which is now in full work. Mr. Holden, its director, has published a handbook for the guidance of intending visitors. It contains a full history of the Observatory, and also some excellent chapters on astronomical work generally.—Longitude Greenwich—Paris. In 54 the difference of longitude Greenwich—Paris was determined by Airy and Le Verrier, and the result obtained ($9\text{m. }20.64\text{s.}$) implied a correction of a second to the previously accepted value. European geodesy has since then been actively carried on, and wishes have been for years expressed that a re-determination of the longitude Greenwich—Paris should be made, in order to connect the Continental with the British geodetic surveys. It was decided to do this in the autumn of '88, and four observers started work at the end of September. The idea was to have one French and one English observer at Greenwich, one French and one English at Paris; and that, by interchanging during the operations, many errors due to personal bias would be eliminated. The result, owing to the unfavourable weather, cannot be known till the Spring of '89. Prof. Piazzi Smith has resigned the office of Astronomer-Royal of Scotland, after a tenure of forty-three years. Mr. R. A. Proctor, the well-known lecturer on Astronomy and editor of *Knowledge* (*q.v.*), died of yellow fever in New York on Sept. 12th, while pre-

paring for England. He was born in 1837. The crown disc for the 28-in. refractor for the Royal Observatory has at length been successfully cast, and is now in the hands of Sir Howard Grubb, who is to make the telescope.—**Events for '89.** In '89 there are three solar and two lunar eclipses. The solar eclipses are not visible in England, but the two lunar are both partially visible. 1. Jan. 16th. First contact with shadow, 13 h. 59 m.; last contact, 20 h. 20 m. The moon sets at 20 h. 10 m. 2. July 13th. First contact, 7 h. 43 m.; last contact, 10 h. 5 m. The moon rises at 8 h. 14 m. (evening). **Mercury** evening star Jan., Feb., May, June, and Sept. **Venus** evening star in spring, and well situated for observation. **Mars** not well situated for observation except morning, summer and autumn. **Jupiter** too far south. **Saturn** well seen up to June and again in Dec. Consult the *Observatory*, the *Astronomische Nachrichten*; "Astronomy for Amateurs" (edited by J. A. W. Oliver); Sir G. B. Airy's "Popular Astronomy"; J. N. Lockyer's "Elementary Lessons in Astronomy"; the works of R. A. Proctor; and other popular treatises.

Asylums Board (Metropolis). See POOR LAW. **"Atalanta."** A new magazine (6d. monthly) profusely illustrated, commenced Oct. '87. Many of the best known and most popular writers of the day contribute to its pages. One feature of *A.* is the *Atalanta Scholarship and Reading Union*, which aims at the encouragement of a systematic habit of recreative reading in English literature. **Programme '88-89.** "English Men and Women of Letters of the Nineteenth Century," continued. Editors: L. T. Meade and John C. Staples. (*Hatchards*, Piccadilly, W.)

Athabasca (Indian, "swampy"). Named from its great lake. A district of the North-West Territories, and future province of the Dominion of Canada. Lies north of Alberta and east of the British Columbia. Takes in the celebrated Peace River district. Area 122,000 sq. m.

"Athenæum." The leading English literary journal (weekly 3d.), founded 1828. Amongst its editors are included the names of Rev. H. Stebbing, Mr. Dilke, and Mr. Hepworth Dixon (who retired in 1869). Shortly after its origin, it was acquired from its founder, Mr. Silk Buckingham, by Mr. John Sterling, and subsequently passed into the hands of Mr. Dilke, to whose ability its success was mainly due. The review of *Continental books* is now published in the summer instead of at the close of the year. An interesting history of Mr. John Francis' connection with the *A.* is given in a new work by Mr. J. C. Francis, "John Francis and the *Athenæum*," '88.

Athletics, '88.—The governing body of this branch of sport is the Amateur Athletic Association. A Professional Pedestrian Association has also recently been formed. New athletic and cricket grounds at Maida Vale, Paddington, were opened in April by H.R.H. the Duke of Cambridge. The Oxford and Cambridge Sports, at the Queen's Club, West Kensington, in March, resulted in favour of the Light Blues, who won five of the customary nine events composing the programme. Cross (New College, Oxford), as in '86 and '87, won the mile race; and Montgomery (Merton College, Oxford) has four years in succession secured the high jump. From the commencement of these competitions, Oxford claims 113 points,

against 111 by Cambridge. The Southern Counties' Cross-Country Championship, on Feb. 18th, was won by the Finchley Harriers, who scored 99 points; and the Northern Counties' Championship on the same date, fell to the Salford Harriers, with a score of 39 points; while in the contest for the National Cross-Country Championship, at Manchester the Birchfield Harriers were successful, defeating Salford by 4 points. The Amateur Championship Meeting was held on June 30th, at Crewe. J. S. Mitchell threw the hammer (16 lb.) from a 9 ft. circle 124 ft. 8 in. (a record); F. Westing (Manhattan A.C.) won the 100 yards Flat Race for Challenge Cup, in 10½ s.; E. W. Parry (Salford Harriers) proved victorious in the four miles flat race—time, 20 m. 22½ s.; and G. R. Gray (New York A.C.) put the weight (16 lb.) from a 7 ft. square 43 ft. 7 in. (a best on record at these meetings). At the International Athletic Meeting at Dublin, in July, F. Westing (Manhattan A.C., New York) won the 100 yards in 10 s.; T. P. Conneff (Manhattan A.C.) the mile in 4 m. 26½ s.; W. C. Dohm (New York A.C.) the 220 yards and 440 yards; C. M. Smith (New York) the half-mile in 2 m. 5 s.; and Conneff beat E. C. Carter (New York) in the five miles match—time 25 m. 24 s. P. Davin (Carrick-on-Suir) was awarded the all-round championship—a new feature in British athletics. The A.A.A. ten miles championship, decided at Crewe in April, resulted in the victory of E. W. Parry (Salford Harriers)—time, 53 m. 43½ s. At Surbiton, in April, A. G. Le Maître (Oxford University) ran 600 yards in 59½ s. (a record, the previous best being 61 s. by H. R. Ball). At the Finchley Harriers' Sports, Aug. 18th, the large field of 114 turned out for the one mile handicap, won by G. H. Boon (Finchley H.). H. C. L. Tindall (Cambridge University) beat the English record in the 600 yards race, at the Civil Service Sports, winning by 4 yards, in 1 m. 12½ s., the previous best being 1 m. 12½ s., by Cross (Oxford); L. E. Myers (America), however, holds the world's record, with 1 m. 11½ s. E. H. Polling (Ranelagh H.) won with ease the 100, 250, and 440 yards races; and the last-named athlete, at the London Athletic Club Meeting on Sept. 22nd, ran 250 yards in the wonderful time of 24½ s., beating the record of 25½ s., made by G. C. Wood in '87. E. W. Parry (Salford H.) won the four miles race in 20 m. 34 s. A. B. George, at the Spartan Harriers' sports in September, secured the 3 mile scratch race, in the fast time of 14 m. 54½ s. At Reading in August C. W. V. Clarke (Amateur Champion), won, from scratch, the Two Miles Walk in the good time of 14 m. 24½ s. The South London Harriers' meeting took place on Sept. 29th, at Kennington Oval, when J. Kibblewhite (Spartan H.) won the 1320 yards race in 3 m. 13½ s. (record for a grass track); and also was successful in the two miles handicap (15 yards start); time 9 m. 35½ s. D. S. Duncan ran a mile at Edinburgh in September in 4 m. 28 s., a Scottish amateur record. F. J. K. Cross (New College Oxford) beat the record in a half-mile race, covering the distance in the extraordinary time of 1 m. 54½ s. At Preston W. G. George was defeated by W. Cummings in a three-quarter mile professional championship race by 2 yards, in 3 m. 13½ s.; and Cummings was also victorious over a mile, beating George by 10 yards, in 4 m. 31½ s. On Sept. 10th, the ex-amateur champion, A. Wharton, Darlington (773 yards start) won the 200 yards Doncaster Handicap at Sheffield by 2 yards. T. Ray (Ulverston) is the champion pole-jumper, with a record of 11 ft. 8½ in. J. S. Mitchell threw

the hammer (161b.) from a 7 ft. circle, 121 ft. 7 in.; and J. M. Barry, at New York, was credited with a throw of 122 ft. 6½ in. At Glasgow, in November, P. Cannon (Stirling) ran three miles in 14 m. 34½ sec., and four miles in 19 m. 25½ sec. (professional records, the previous best being the long-standing records of 14 m. 36 sec. and 19 m. 36 sec. respectively, by J. White).

Atlantic Air-Ship. See BALLOONING.

Atoms and Molecules. A molecule is the smallest portion of matter which can exist by itself, or which can be produced by (or take part in) any chemical reaction. Nothing definite is known about the sizes or the masses of molecules, although attempts have been made to measure them. An atom is the smallest portion of matter which can exist in a molecule. The atomic weight of an element is the number of times by which an atom of that element is heavier than an atom of hydrogen. See ed. '87.

Attorney. See SOLICITOR.

Attorney-General, The, is the chief counsel of the Crown, acting on its behalf in its revenue and criminal proceedings, and other matters. The income is £7,000 a year, exclusive of fees. The Attorney-General has likewise political functions, and has always since 1673 been a member of parliament, receiving his office from the Sovereign on the recommendation of the Government in power. All Government measures on legal questions are in his charge. The Prince of Wales also appoints an attorney-general, who is, however, generally called the Attorney-General for the Duchy of Lancaster, or for the Duchy of Cornwall, according to his appointment. The present Attorney-General is Sir Richard Webster. There is also an **Attorney-General for Ireland** (Mr. Peter O'Brien), who is always a member of the Irish Privy Council.

Auckland (New Zealand) Graving Dock. One of the largest in the Southern Seas; opened in '87 (see detailed description ed. '87).

Auctioneers' Commissions, Law on, '88. The right of auctioneers to fix a certain scale of remuneration for sales conducted by them by order of the Court of Chancery was raised in the case of *In re Walford*, heard before Mr. Justice Kay in July '88. It was contended that auctioneers' charges should be measured by the scale acted upon in cases of sales by free owners, but the learned judge held that all they are strictly entitled to, beyond expenses for outgoings, is a "proper remuneration" according to the court scale. In the case of *Peacock v. Freeman*, carried to the Court of Appeal, the point was whether an agreement, by which the defendants undertook to pay a certain commission to the plaintiffs if they effected the sale of certain property, could be enforced when, though a sale had been made, the purchaser subsequently refused to carry out his contract. The court declined to hold that the defendants were bound to pay the commission if the sale proved abortive, and upheld the judgment giving the amount payable to the plaintiffs under the agreement in the event of there being no sale.

Aumale (Duc d'), fourth son of King Louis Philippe, b. 1822. When only a youth he took part in several campaigns in Algeria '40, '42, '43, and '44. In the latter year he married a daughter of Prince Leopold of Salerno. He was **Governor-General of Algeria** when the revolution of '48 broke out in Paris, but at once resigned and joined his father in England, where he chiefly

resided until the law banishing the Orleans princes was repealed in '71, after his election to the National Assembly. He was chosen one of the Forty in '71, and was made a **General of Division** in the following year. He was president of the Council of War which tried and condemned Marshal Bazaine. The Duke is the author of a *History of the Princes of the House of Condé*. When the Expulsion Bill passed, two years ago, he left France, having been at the same time struck off the roll of the French army by the War Minister, General Boulanger. It was discovered soon after that he had bequeathed his beautiful *Chateau of Chantilly (q.v.)*, with its art treasures, to the French nation.

Aurora Borealis, The, or the Northern Light, a ruddy glow that at times overspreads the northern horizon, is supposed to be due to the passage of electricity through the rarefied atmosphere of the polar regions. It was last observed in England in October 1870.

Austin, Alfred, b. 1835. Published his first poem, entitled "The Season," in '62. Acted as war correspondent for the *Standard* (a paper with which he was connected for some length of time) during the winter of '70-71 at Versailles. His poem "*Madonna's Child*" is considered by many to be the most charming poem Mr. A. has written. His other works include "*Interludes*," "*The Human Tragedy*," "*Savonarola*," "*Soliloquies in Song*," and "*Prince Lucifer*." Is the editor of the *National Review*, and has contributed many political articles to the *Quarterly Review*.

Australasia. A loose term variously applied. It usually signifies (1) the Australian colonies, together with Tasmania, New Zealand, and Fiji; or (2) Australia, Tasmania, New Zealand, New Guinea, New Britain, and New Ireland, Solomon Islands, New Caledonia, and New Hebrides. Consult Wallace's "Australasia."

Australasian Federation. See ed. '88, and IMPERIAL FEDERATION.

Australia. The largest island in the world. Is situated south-east of Asia, dividing Pacific from Indian Ocean. Extends 2,400 miles west to east, and 1,971 miles north to south. Area computed at 3,031,169 sq. miles, or twenty-six times the size of Great Britain and Ireland. Present total population 2,819,367. Wholly British possession. Divided into the colonies of **Queensland**, capital Brisbane; **New South Wales**, capital Sydney; **Victoria**, capital Melbourne; **South Australia** (including Northern Territory), capital Adelaide; and **Western Australia**, capital Perth. Australia is a great plateau, elevated on the east and inclined towards the west. The eastern half and most of the other territories bordering the coasts on north and west are extremely fertile, and well adapted for grazing. Wool still continues to be the staple export. The great central depression is sterile, and almost impassable on account of want of water, together with prickly growths; having no drainage, the rainfall collects in extensive salt lakes and marshes. In the habitable districts there is a rich and unique flora and fauna. Coal abounds in various districts; gold, iron, copper, are extensively worked. Climates vary from tropical to temperate. Rainfall capricious: in some years excessive, in others prolonged drought. Principal rivers, the Murray and its affluents, navigable many hundred miles in wet seasons. There are 7,000 miles of railroad, and 52,000 miles of telegraph, several large cities,

and many towns. The black aborigines are few, and rapidly disappearing. For latest statistics see **BRITISH EMPIRE**, etc. (table). Known to Dutch navigators, and then called **New Holland**. Visited by Cook, and first British settlement (originally penal) formed at **Botany Bay** in 1788. Consult Blair's "Cyclopædia of Australia," Forrest's "Explorations in Australia," Giles' "Geographic Travels in Australia," Gordon and Gotch's "Australian Handbook for 1888," Petherick's "Catalogue of the York Gate Library," the *Torch*, etc.

Austria-Hungary is an empire under the rule of Francis Joseph I. of Hapsburg, Emperor of Austria and King of Hungary, and is composed of a Cisleithan portion, officially known as Austria, and a Transleithan portion known as Hungary, each possessing its separate parliament, but uniting under a common sovereign in the establishment of a common army, navy, financial, diplomatic, postal and telegraphic services, administered by delegations composed of 120 deputies—half by Austria and half by Hungary—the upper house in each country selecting 20 and the lower 40 members. The estimated revenue and expenditure for the common affairs of the monarchy for '88 is £11,205,700, nearly seven-tenths of this total being borne by Austria, the remainder by Hungary. General debt, about £230,000,000. Imports of Austria-Hungary, including Bosnia and Herzegovina ('86), £59,920,000; exports, £96,860,000. For army and navy see A. and N. FOREIGN. **Austria** (capital Vienna)—area 115,913 sq. miles, estimated population in '86, 23,070,688—is governed by an Emperor and a Reichsrath or federal parliament, consisting of a house of peers partly hereditary and partly nominated by the Crown for life, and a house of deputies chosen by popular election. Purely local matters are administered by the seventeen provincial diets (viz., of Upper and Lower Austria, Salzburg, Styria, Carinthia, Carniola, Tyrol, Vorarlberg, Gorizia, Istria, Trieste, Dalmatia, Bohemia, Moravia, Silesia, Galicia and Bukovina). Estimated revenue for '89, £44,876,270; expenditure, £44,862,148; Austria's special debt, about £64,000,000. — **Hungary** (capital Buda-Pesth)—area 125,039 sq. m.; estimated population in '85, 20,570,146—consists of the kingdoms of Hungary, Croatia, Slavonia, and Transylvania, and is governed by a King (the Emperor of Austria) and a parliament composed of an upper and hereditary house and a lower and elective house. Estimated revenue for '89, £28,390,847; expenditure, £27,410,980; Hungary's special debt, about £112,000,000. — **Bosnia-Herzegovina** (area 33,262 sq. m., pop. 1,504,091), though in strictness still a province of the Porte, has since the Treaty of Berlin in '78 been occupied and administered by Austro-Hungary, and may fairly be considered as belonging to that empire. Since the reconciliation of the Magyars with the House of Hapsburg, in '67, great progress has been made in reconciling the various races in different stages of civilisation which inhabit this heterogeneous empire (so much so that it is by no means unlikely that Austria-Hungary may be the political heir to a considerable part of the European dominion of the Ottoman Empire, and the possible head of a South Slavonic confederation). — **Political History '88**. The war here, which in '87 disturbed the empire, was succeeded generally by a more pacific feeling, though occasionally disturbed by Russia's

military movements and her proposed joint action of the Powers to interfere (February) in Bulgarian politics and depose Prince Ferdinand. The relations of Germany (*q.v.*) to Russia and France caused uneasiness to the dual empire from time to time; but the speech of M. Tisza, in the Hungarian Chamber of Deputies (Jan. 28th), on the foreign situation, and the publication of the text of the secret treaty (Feb. 3rd) of '79, in the *Reichsanzeiger*, of the Austro-German Defensive Alliance, providing for common military action between the two empires in the event of an attack by Russia, and Prince Bismarck's speech, in the Reichstag, a few days later, on the relations subsisting between Germany and Austria, in connection with the Military Bills (see **GERMANY**), did much to reassure the public mind. To strengthen the defences of the empire in view of possible external complications, the new **Spirit Tax Bill** was, at a Select Committee of the Reichstag (April), officially stated to be designed to meet the requirements of the external political situation, it being estimated that the new tax would yield for Austria alone some 26,000,000 fl. (fl. = 1s. 8d.). A bill also authorising the Government to call out certain classes of the Reserve in time of peace was (April) passed by the Austrian and Hungarian Parliaments. The concentration of Russian troops on the western frontier was followed (May) by a counter-arming in Galicia. An important speech made (May) by M. Tisza (*q.v.*), Hungarian Prime Minister, dissuading Hungarians from taking any part in the Paris Exhibition (*q.v.*) of '89, on the ground that pecuniary risk and possible insult to the Hungarian flag might ensue, was followed by a protest by M. Goblet, of which, however, no official notice was taken. An important debate on M. Tisza's speech took place in the Lower House of the Hungarian Parliament. A speech also made by Count Kalnoky, in the Budget Committee of the Austrian Delegations (June 18th) on Foreign Affairs, the change of sovereigns at Berlin, and the close alliance of Austria with Italy, attracted much attention. The death of the German Emperor William (March 9th), at whose funeral the Crown Prince Rudolf represented the Court, and the succession to the throne and untimely death of the Emperor Frederick (June 15th), caused no break in the cordial relations subsisting between Germany and Austria, the foreign policy of Prince Bismarck being especially favoured by the present German Emperor William II., who in October last visited the Emperor Joseph at Vienna, when he was received with every mark of honour and distinction. The meeting between Prince Bismarck and Count Kalnoky at Friedrichsruh (Sept. 16th) assisted to strengthen the *entente cordiale*. In the autumn (Oct. 31st) the Austrian Parliaments voted the Cisleithan share of 47,000,000 fl. to be spent on the whole Monarchy on extra military preparations. A new Army Bill was (November) presented to the Reichsrath, its chief provision being the maintenance of the war strength of the army at its present figure of 800,000 men, but providing that in case of need this number shall be actually available for service, the number of the yearly contingent of recruits being increased by some thousands for this purpose. The Landwehr is also to be used as the direct support of the army in the field, garrison duty and local defence service being intrusted to the Landsturm. The bill further proposes to

fix the number of the annual contingent of recruits for the next ten years, but the control of Parliament over the number of this contingent is not disturbed by the new bill. The recruits for the army and the Landwehr are in future to number annually 125,000 men. For the navy a kind of second reserve is to be created, by which the term of service will be raised to twelve years, as is the case with the Landwehr.—In connection with Austria's relation to foreign powers may be noticed the royal visits of H.R.H. the *Princes of Wales* (Sept.), appointed honorary colonel of the 12th Hussars, who was received with much distinction by the Emperor; the King and Queen of Greece (*incognito*); the King and Queen of Portugal, and the Duke of Oporto; King Milan of Serbia; the Queen of Roumania, and Queen Nathalie; the Crown Prince Alexander (May); the Princess of Wales (who also visited Gmünden); the Empress of Russia, and the Czarewitch. H.M. Queen Victoria was met by the Emperor Joseph at Innsbruck on her way to Germany. In July Count *Károlyi* retired from the embassy at St. James's, and Count *Dyma* has been appointed to succeed him.—In internal politics, among the measures introduced or passed during the year were the *Workmen's Accident Insurance Act* (the third Act recently passed in the interest of workmen) and the *Trades Marks Act*. In September the Diet of Galicia took measures to raise a loan of 57,000,000 fl. to indemnify the Galician landowners, who by the Spirit Act (which came into operation on Sept. 1st) had been deprived of the right of "propination"—i.e., distilling and selling spirits on their estates. The *Austrian Budget* for '89 (Oct. 24th), for the first time in the history of Austrian finance, showed a surplus of 169,459 fl., the income being estimated at 538,515,245 fl., and the expenditure 538,345,786 fl., this favourable result being due to the increased yield on alcohol, sugar, and tobacco. A *Conversion Bill* to provide for the creation of about 40,000,000 sterling of new 4 per cent. Rentes, was in November passed by a great majority in the Hungarian Parliament.—Among political acts and incidents of the year may be noticed the prohibition, by an Order in Council, suspending trial by jury of *Anarchist offenders* in almost all parts of the empire—including Vienna, Brünn, and Prague—for the further term of one year (August); the popular ovation accorded at Agram to *Bishop Strossmayer*, the Pan Slavist; and the trials of *Dr. Karl Zirm*, editor of the *Parlamentär*, accused of high treason at Vienna (Feb.), and *Herr von Schönerer*, the anti-semitic politician (May).—General *Intense cold* prevailed in January '88 in Austria-Poland; many deaths occurred in Galicia; it caused suspension of traffic and the closing of schools. Later on (March) severe snowstorms of extraordinary violence swept over Galicia, interfering greatly with the railway traffic; while a shock of earthquake was felt in Herzegovina, and shocks took place in Odenburg and Northern Hungary (April). The phenomenon of "red snow" was observed in the Gail Valley, Tyrol. Terrible fires occurred in the spring at Hethars, Khik-kinda, Mezo-Bereny, Steinitz, Skole, and Czernowitz, caused by a violent hurricane which swept over that district (March 30th). The town of Jezierny was also destroyed in July by fire. Later in the year a disastrous forest fire was reported from Jenbach, near Innsbruck; also in Galicia a fire destroyed the town of Calbuszowa (May 20th); and in August

a great fire broke out in the forest of Trentino, and the mountain forests of Castelbarto, Dosso, and Ronchi were completely destroyed. Terrible floods inundated various parts of the empire. In April the river *Theres* burst its banks near Felzyoe, between Czongrad and Czony, covering over 10,000 acres, the damage being estimated at a million francs. In addition, the rivers Raab, Koeroes, Bega, and Temes overflowed their banks, doing immense mischief. Later in the year (Sept.) in the Tyrol the Inn overflowed, and did great damage to winter and autumn crops. A devastating hailstorm (July) swept over Southern Hungary, many persons being killed by hailstones, and several wounded. The harvest crops and numerous buildings, in many cases, were totally destroyed. In August hail again caused wholesale destruction of crops in various parts of the empire, and much interruption in the railway communication ensued. *Phylloxera* appeared (July) in the Rust vineyards of Lower Hungary. A Congress on P. was held at Fünkirchen (Aug.). In Southern Tyrol the vineyards were also much damaged by millions of grasshoppers. Alpine accidents in the summer were frequent, Count Taaffe, the Minister for Home Affairs, directing the local authorities to adopt means for their prevention.—Among the social events of the year were the *Maria-Theresa Exhibition* (April), an ensemble of the life and society in the latter part of the eighteenth century; the *International Jubilee Art Exhibition* opened in Vienna (May); the *National Industrial Exhibition of Austria*, opened by the Emperor (May—Oct. 31st)—over 2,000 exhibits representing every branch of Austrian manufacture—and other celebrations, including the unveiling of the *Maria-Theresa statue* by the Emperor, and the *National Rifle Meeting* (Sept.) in honour of the Emperor's fortieth year of accession. The famous Austrian Spa of *Gastein* was lighted in '88 for the first time by electricity, and Sir A. Sullivan's *Mikado* was performed in German at the Theater an der Wien (March), and also before the Princess of Wales and a royal audience at the Gmünden Theatre (Sept.). The magnificent Burg Theatre at Vienna, was opened in October. The installation, with royal pomp, of the Archduchess Marguerite Sophie as abbess of the Community of the Noble Ladies of the Hradchin (June); the marriages of Prince Conrad Hohenlohe with the Countess F. Schönborn (June); Sir Francis Montefiore with Mlle. Marianne von Gutmann, daughter of the wealthiest ironmaster of Austria (Sept.); the diamond wedding celebration of the Duchess Louise of Bavaria, mother of the Empress (Aug.); the death of Prince Joseph of Saxe Coburg Gotha (Aug.), followed by that of the Bishop of Linz (Sept.), and Duke Maximilian of Bavaria (Nov.), and the exhumation and reinterment of the remains of Beethoven and Schubert with great pomp, engaged public attention.—Of commercial events may be noticed the report of the *Limberg-Czernowitz Railway*, indicating the disastrous result of the customs war between Austria-Hungary and Roumania, the transport of corn on the Austrian line having fallen from 174,227 tons in '8 to 75,875 tons in '87, the traffic on the Roumania lines being less than 45 per cent. as compared with '85. It was also stated (April 25th) that the *Forfe* had granted a concession to the Austrian Länderbank, the Comptoir d'Escompte de Paris, and the banking-house of Allatini Bros., at Salonica, with a capital of 5,000,000 fl., the

bject of the bank being to promote the commercial relations between Western and Eastern Europe. A *maise ring* was formed in May by a number of Austrian and Hungarian landowners and noblemen, with a capital of 7,000,000 fl. to 1,000,000 fl. A Congress of ironmasters, mine-owners, engineers, etc., was held under the presidency of Prince Hugo of Salm-Reiferscheid (Sept.). The failure of the Vienna banking firm of Albert Reiss, with liabilities 1,500,000 fl. was announced in September. By a new Treaty of Commerce between Austria-Hungary and Switzerland (signed Nov. 23rd), the latter obtains the same tariffs as Italy in respect of silks and machinery, A.-H. obtaining reductions in cereals, flour, cattle, and timber. (For Austria-Hungary's action in respect of the *Sugar Bounties* see *SUGAR BOUNTIES*.) Consult Prof. A. Jambéry's "Story of Hungary" (Story of the Nations Series); Baron H. de Worms "Austro-Hungarian Empire"; Statesman's Year Book; and *Almanach de Gotha*, etc.

Austrian Political Parties and the Reichsrath. The "Reichsrath," or Council of the Empire, is the central legislative body of Austria, or "Cisleithania." It consists of an *Upper House* (*Herrenhaus*) and a *Lower House* (*Abgeordnetenhaus*). The Reichsrath, like the legislative body of Hungary or "Transcithania," has its own ministers and government, and exercises full parliamentary functions in all matters within its competence—from which, however, *Foreign Affairs and War* are excluded. These latter questions are dealt with by a supreme body known as the *Delegations* composed of 60 members representing the legislative body of Austria, the upper house returning 20 and the lower house 40 delegates, and of an equal number, similarly chosen, representing the legislative body of Hungary. The present *Upper House* of the Austrian Reichsrath contains 205 members. It is composed of the Princes of the Imperial family who are of age, of whom there are 18; of certain "Erbliche Mitglieder," or hereditary members, upon whose families the privilege has been conferred, and who in the present parliament are 65 in number; of the archbishops, who rank as Princes of the Church, and number 17; and of 105 life members nominated by the Emperor or distinguished services in science or art, or to the Church or State. The *Lower House* contains 353 members, who are the popular representatives of the seventeen provinces which comprise the Austrian Empire. Bohemia has the largest number of members in the Reichsrath, its contribution being 92; Galicia comes next, with 63; and then follow in order, Lower Austria (including Vienna), 37; Moravia, 36; Styria, 23; the Tyrol, 18; Upper Austria, 17; Silesia and Carniola, 10 each; Bukowina, Dalmatia, and Carinthia, 9 each; Salzburg, 5; Trieste, Gorizia, and Istria, 4 each; and finally the Vorarlberg with 3. Each of these provincial divisions, however, has its own *separate Diet*, consisting of one chamber only, for dealing with purely local matters. The conflict of parties may be said to attain its highest pitch in the lower house of the Reichsrath, which naturally includes members of widely varying race and creed. The most numerous element in the Cisleithan Chamber is the *German*, which numbers about 200, but is still unable to command a majority, owing to the dissensions within it. Comprised, indeed, in this one

powerful national element, are four distinct parties—viz., the so-called *German-Austrian Party*, the *German Party*, the *German Clerical Party*, and the *Centre Party*. The remaining national groups are the *Czechs*, led by Dr. Rieger, who muster 65; the *Poles*, led by Dr. Grocholski, with 58; the *Slavonians and Italians* with 10 each; the *Croatians* with 9, and the *Ruthenians* with 6. Legislation is therefore only possible by means of combinations; and this is the invariable mode of obtaining a majority, the combination changing at times, although it usually has as its basis the Czechs and Poles and minor nationalities. Such has been the condition of things since 1879, when the united German party, which professes moderate Liberal principles, was broken up through the opposition to the occupation of Bosnia and Herzegovina. The leader of the present German-Austrian party, of 86, is Dr. Herbst, an ex-Minister of Justice and a pre-eminent orator. Allied to this group is the *German party*, led by Dr. Heilberg. Up to February '87 this party was 45 strong, but in that month 18 of its members seceded, and formed a separate *Anti-Semite* party. This secession has led to the German-Austrian and German parties coming somewhat closer together. The two last-named groups are occasionally supported by a fraction of the *Centre party*, led by Count Coronini, and known as the *Coronini party* (16); but even it all three parties steadily combined, they would still fall considerably short of an absolute majority. The *German Clerical party*, which is headed by Count Hohenwart, with 38 followers, and Prince Liechtenstein, with a following of 20, is Clerical first and German afterwards. It is therefore invariably to be found in opposition to the German Liberals, and unites with the 65 Czechs, the 58 Poles, and the remaining minor factions, which are always found in opposition to the purely German element. Another small group that generally votes with the majority is the *Trentino party* of 7 members, led by Dr. Bertolini, all of whom sit for the Tyrol. There are also some 20 "Wilde," or Savages, who belong to no party.

Azores Islands. A group of islands in the North Atlantic; belong as an integral part of the kingdom of Portugal. Area 1,005 sq. m., pop. 260,401. Capital *Ponta Delgada*, on San Miguel Island, but the Governor usually resides at Angra, in the island of Terceira. Fayal has an excellent and much frequented harbour, lying directly in the track of vessels crossing the Atlantic. Climate mild and healthy; soil fertile and islands beautiful. Wine and fruit exported. People Portuguese and Spanish, mostly very poor. Governed as a province of Portugal. Discovered 1439. Called also *Western Islands* or *Terceiras*. See COLONIES OF EUROPEAN POWERS.

Bacon, Sir James, the last of the Vice-Chancellors, retired from the judicial bench in 1886, at the age of eighty-eight. Called to the bar in 1827, he acquired a large bankruptcy practice; Q.C. (1846). Appointed Commissioner of Bankruptcy for the London district (1868), Chief Judge in Bankruptcy, and Vice-Chancellor (1870), and a Judge of the High Court (1875). Sir James Bacon had a powerful grasp of intricate and complicated facts up to the moment of his retirement.

Baddeley Cake, The. A singular bequest of £100 in the consols, left by the founder, in 1794, for the purchase of a cake to be cut every Twelfth-night and divided among the artistes employed at Drury Lane Theatre. The B. commemoration has, during Mr. Harris's tenancy, assumed the proportions of a *reunion* of literary, artistic, and dramatic notabilities.

Bahama Islands. Older name Lucayos Islands. Stretch between Florida and the Greater Antilles. Comprise 700 islands or rocky islets, 25 of which are inhabited. Area 44,66 sq. m., pop. 43,521.—The chief island politically is **New Providence** (85 sq. m.), on which is the capital, **Nassau**, pop. 12,000, a large and handsome city, and a winter health resort for Americans and West Indians. Other islands are Andros, Elcuthera, Great and Little Bahama, Abaco, Inagua, etc. The southernmost, **Turk's and Caicos Islands**, have been annexed to **Jamaica**. Formation of calcareous rock, generally low. Small islets, called Cays, are of coral. Navigation difficult and wrecks frequent. Climate healthy and pleasant; but hurricanes and long droughts occur. Water found by sinking. Very fertile. Much forest of valuable timbers. Cattle largely reared. Exports sponges, turtles, pineapples, and other fruit, a little sugar, and coconut. Cotton growing has fallen off. Great former salt industry now crippled by American protective tariffs. Resources very inadequately developed.—Government is representative. There is a Governor and Executive, a Legislative Council and a House of Assembly. For latest statistics see **BRITISH EMPIRE**, etc. (table). San Salvador (either Cat Island or Watling Island, probably the latter) where Columbus first landed in America is one of the Bahamas. The Spaniards deported the aborigines as slaves. First colonised by English in 1620. Alternately held by Spanish, English, and Buccaneers till 1783, since when a British colony. Consult Lady Brassey's "The Trades, the Tropics, etc."; Blake's "Try the Bahamas," in *Fortnightly Review*, 1886; Powles' and Smith's "Bahamas."

Bain, Alexander, LL.D., b. at Aberdeen, 1818. Educated at the University of that city, where he graduated '40. He early distinguished himself as a student of both mental and natural philosophy, and in '45 accepted the chair of Natural Philosophy in the Andersonian Univ. of Glasgow, which he occupied only for a few months. He was appointed Assistant-

Secretary to the Metropolitan Sanitary Commission in '47, and to the General Board of Health in '50. He had previously commenced his career as a philosophical writer by contributing to the *Westminster Review*, to "Chambers' School Series" and "Information for the People." The publication of "**The Senses and the Intellect**," in '55, and "**The Emotions and the Will**," established his reputation as one of the profoundest investigators of psychological problems. His other important works include "**Mental and Moral Science**," "**Logic, Deductive and Inductive**"; "**Mind and Body—Theories of their Relation**"; "**Education as a Science**," a biography of James Mill, and personal recollections of John Stuart Mill. Professor Bain has also edited the minor works of George Grote, of whom he is the literary executor, and a new edition of whose celebrated History of Greece he is now preparing. He was appointed **Regius Professor of Logic** in the Univ. of Aberdeen, '60, and **Lord Rector** of that Univ. in '81 (the year after his retirement from his professorial duties), and re-elected '84. Appointed Examiner in Logic '57, and Moral Philosophy in the Univ. of London, and in '58 Examiner in Moral Science at the India Civil Service Examinations. To both these offices he was frequently re-elected.

Baird Lectures. The late **Mr. James Baird**, of Gartsherrie (1802-76), the founder of the lectures called after his name, was a Scottish iron-master and coal-owner of immense wealth, and of a proportionate beneficence. He was, before all, a princely benefactor to the **Established Church of Scotland**, for whose benefit, in '73, he conveyed to a specially appointed "**Baird Trust**" a gift of £500,000, "to assist in providing the means of meeting, or at least as far as possible promoting the mitigation of spiritual destitution among the population of Scotland." In the course of the meeting of the General Assembly of the Church of Scotland, in May '72, Mr. Baird declared his "intention to found a lectureship, to be called 'The Baird Lecture,' for the illustration and the defence of the vital truths of Christianity, as well as for the promotion of Christian knowledge and Christian work generally, and for the exposure and refutation of all error and unbelief." The deed of trust executed in pursuance of the intention so announced directed the trustees "to hold an annual sum of £220 out of the revenue of the funds under their charge for the purposes of said Lectureship." The conditions and terms of the incumbency of the lectureship are, in the words of the same deed, that (1) "the lecturer shall be a minister of the foresaid Church of Scotland who shall have served the cure of a parish for not less than five years, or a minister of any of the Scottish Presbyterian Churches who shall have served as pastor of a congregation for a similar period in his own Church; and in making the appointment care shall be taken by the trustees to choose a man of piety, ability, and learning, and who is approved and reputed sound in all the essentials of Christian truth, as set forth 'in a declaratory statement already issued by the founder' of what is meant by sound religious principles. (2) The lecturer shall be appointed annually in the month of April by my said trustees, and the appointment shall be made

at a meeting of the trustees to be called for the purpose, and held in Glasgow. (3) The lecturer shall deliver a course of not less than six lectures on any subject of theology, Christian evidences, Christian work, Christian missions, Church government, and Church organisations, or on such subject relative thereto as the trustees shall from year to year fix in concert with the lecturer. (4) The lectures . . . shall be delivered publicly at any time during the months of January and February in each year, in Glasgow, and also, if required, in such other one of the Scottish University towns as may from time to time be appointed by the trustees. The first Baird lecturer, as stipulated under the foundation, was the Rev. Robert Jamieson, D.D., minister of St. Paul's Parish Church, Glasgow, who had been Moderator of the General Assembly in which Mr. Baird had announced his intention to institute the lectureship. Dr. Jamieson, who chose for his subject *The Inspiration of the Holy Scriptures*, delivered his lectures in '73; and amongst the more remarkable of the subsequent lectures have been the two series delivered by the Rev. Robert Flint, D.D., LL.D., Professor of Divinity in the University of Edinburgh, who, in '76 and '77 treated severally of *Theism and Anti-Theistic Theories*. In '81 Dr. George Matheson, minister of Lunan, delivered a noticeable series of lectures on the "*Natural Elements of Revealed Theology*"; and in '83 the Rev. William Purdie Dickson, D.D., Professor of Divinity in the University of Glasgow, contributed a course of lectures on "*St. Paul's Use of the terms Flesh and Spirit*."

Baker, Sir Samuel White, one of the most intrepid and successful of modern explorers, was first brought into notice by the establishment of a mountain colony in Ceylon, at Newera Ellia, in '47, of which an interesting account is given in his "*Eight Years' Wanderings in Ceylon*." In '61 he organised at his own cost and conducted an expedition for the discovery of the sources of the Nile. In this expedition he was accompanied by his wife, who is a daughter of M. Finnian von Sass. Having reached the junction of the Atbara with the Nile on June 13th, he explored the basin of the Blue Nile, and in June '62 made his way to Khartoum, where he organised a party to explore the course of the White Nile. He set out on this journey in Dec. '62, and in the following February arrived at Gondokoro, where he met Captains Speke and Grant, who had started from Zanzibar on a similar quest, and reported having reached Victoria Nyanza, which they believed to be the source of the great river. Baker having assisted them to go on to Khartoum, resolved to follow up their discoveries, and without either interpreter or guide, and in face of many difficulties and dangers, set out from Gondokoro on March 26th, '63, and a year afterwards sighted the waters of a great lake which he called the *Albert Nyanza*. For this discovery the Royal Geographical Society awarded him the Victoria gold medal, and Her Majesty conferred upon him the honour of knighthood. In '69 he undertook a successful expedition into Central Africa on behalf of Khedive, and in '79 was sent by the British Govt. to investigate the resources of Cyprus. He has since undertaken journeys through Syria, India, Japan, and America. His works consist of narratives of his travels, and some of them have run through several editions.

He is a Gold Medallist of the Geographical Society of Paris, and has received the Order of the Grand Cordon of the Medjidie.

Balfour, Rt. Hon. Arthur James, M.P., F.R.S., Chief Secretary of State for Ireland, was born 1848, and educated at Eton and Trin. Coll. Camb. He entered Parliament in '74 as M.P. for Hertford, which constituency he represented until '85, when he was elected for East Manchester, for which he still sits. By his work entitled "*A Defence of Philosophie Doubt*," Mr. B. gave promise of abilities which could hardly have failed to win recognition by the Conservative party, even had he not been connected by family ties with Lord Salisbury. Mr. B.'s mother is a sister of the noble Marquis. He acted as private secretary to his uncle at the Foreign Office during the critical period '78-80, when the Berlin Treaty was negotiated. He was President of the Local Government Board in Lord Salisbury's first Administration, and on the return of his lordship to power in '86, after serving for a short time as Secretary for Scotland, was appointed Secretary for Ireland. Mr. B. introduced the Coercion Bill of 1886, and since its adoption has energetically devoted himself to the enforcement of its provisions. Mr. B.'s reputation as a parliamentary debater rose considerably during the animated debates which preceded and followed the enactment of that measure. He is Lord Rector of the Univ. of St. Andrews, and an hon. LL.D. of Edinburgh and of Cambridge. In April '88 Mr. B. was entertained at a banquet given by the National Union of Conservative Associations at St. James's Hall. In October there ensued a correspondence in the *Times* in consequence of a speech by Mr. W. O'Brien (*q.v.*). Mr. B., together with Sir F. Leighton (*q.v.*), received last year the freedom of the Grocers' Company. He also read a paper on "*Positivism*" at the Church Congress (*q.v.*).

Balkh. The Ameer of Afghanistan controls a large territory north of the Hindoo Koosh, called Afghan Turkestan, the capital of which is Balkh. If the Russians march upon India from Turkestan *via* Cabul, they must first take Balkh, or *Mazar-i-Sherif*, as the Afghans call the town they have erected near the site of that ancient city. Hence Balkh is a sort of key to Cabul, although more as a basis of close intrigue than in a military sense, as the passes of the Hindoo Koosh, closed by snow six months of the year, afford a protection lacking in the case of Herat. The Ameer maintains a strong garrison at Balkh, and from it despatches the troops that garrison the rest of the territory between the Hindoo Koosh and river Oxus.

Ball, Sir Robert Stawell, LL.D., F.R.S., b. at Dublin July 1st, 1840. Educated at Chester by Dr. Brindley. Appointed Andrews Professor of Astronomy in the University of Dublin and Royal Astronomer of Ireland (1874). He is the author of several works, besides many papers on mathematics, astronomy, and physical science in various publications. He has frequently lectured on astronomy in the leading institutions in the United Kingdom, and delivered "Christmas Lectures on Astronomy" at the Royal Institution (1881-82). The honour of knighthood was conferred upon him in '86.

Ballooning. The art of aerial navigation, or rather of researches into its principles, is said to date from the fourteenth century. The first ascent recorded was by the brothers *Montgolfier* by means of a fire balloon, at Annonay, in 1783;

and MM. Robert and Charles were the first to use a hydrogen balloon for a similar purpose at Paris in the following month. The following are the chief events since our last issue (to which we would refer the reader for a detailed history up to this point).—In Jan. '88 a meeting of aeronauts was held at Paris, under the presidency of M. de Fouvillie, when M. Villa Parries gave an account of his introduction of captive balloons into China, as recorded in our last volume. No one, he said, could be persuaded to ascend till the Viceroy of Petchili set the example; when 320, including mandarins of the highest rank, tried the experiment. On April 1st an aeronautical exhibition was opened at Vienna, when there was, amongst other things, a collection of twelve balloons, all inflated, and varying from the cigar shape to the ring. In May it was reported from Paris that M. Jovis was preparing a special "Atlantic air ship," with which he hoped to cross from New York to some point in Northern Europe in the autumn. The balloon was to be about 200 feet high, and have a cubic measurement of some 25,000 metres. The weight was to be about 4,500 lb., or with car, passengers, etc., about double that. The car, being square, was to have a wooden deck, rising above which was a quarter-deck reached by a ladder. The aeronaut, accompanied by five friends, expected to reach Ireland or Northern Europe in 34 days; the whole apparatus was expected to cost £8,000. Some sensation was caused by the announcement that on the Whiteside Bank Holiday (May 1st) a lady "professional" known as Leona Dare would ascend from the Crystal Palace, Sydenham, hanging to a trapeze, attached to a balloon, by her teeth only. The real nature of this "feat," however, was explained in the House of Commons by the Home Secretary, who stated (Sept. 17th) that she was further suspended from the car. On July 28th the aeronaut referred to in our last volume, who safely descended (July 6th, '87) from a balloon when 5,000 ft. high by means of a parachute, at Quincy, Illinois, commenced a series of highly-successful experiments in England, at the Alexandra Palace, Muswell Hill. Professor Baldwin's method is to attach the parachute in collapsed form to the side of his balloon, and he ascends seated in a loop of rope fastened to a cross bar underneath the balloon itself. On reaching any height from which he considers it safe to descend, he pulls a rope which either opens the escape valve of the balloon or slits the silk, and immediately casts himself off, holding on to a ring from which the ropes of his parachute radiate. His weight detaches him from the balloon and he drops like a stone for at least 100 ft., when the action of the rapid descent causes the upper portion of the parachute to expand and the daring aeronaut floats to earth slowly and with no little grace. The special feature of the parachute is that it has a circular orifice at the top and thus the descent is steadied. The opening of the valve of the balloon causes it to collapse and come down. Baldwin made a number of successful ascents and descents, his systematic method attracting no little attention from scientists and military men, home and foreign. The only apparent failures, if they may be so described, were the occasional escapes of the balloon, the valve cord apparently not acting, and the aerial machine floating to some distance before coming to earth. On August 20th Mr. Simmons, the

aeronaut, ascended from the Irish Exhibition, London, intending to take a party of three besides an assistant to Vienna. They descended at Kimbolton in Hunts the same evening, whence two of the passengers returned by train. The remainder ascended again next morning at six o'clock, but entering a thick mist were obliged to approach the earth three times to find their way. In the end, finding that they were being driven out to the North Sea, the balloon returned to earth finally at 8.30, the descent being made at Ramsey. This well known aeronaut (Mr. Simmons) met with his death under melancholy circumstances on August 27th. With two companions, Messrs. Field and Myers, he ascended from the Irish Exhibition in the afternoon, the intention being to proceed to the Continent. In the evening the aeronaut decided to descend at Uting, in Essex; the grappling irons caught in one of three elm trees, when the balloon came down with a bump, sprang up again, struck a tree, and the silk bursting, the car was dashed to the ground with great violence. Mr. Simmons had his skull fractured and died a few hours afterwards; Mr. Field had a broken thigh, and Mr. Myers escaped with a severe shaking. Another accident happened on August 29th at Willenhall, near Wolverhampton. A balloonist named Lemprier, of Birmingham, accompanied by a local surgeon named Toaks, attempted an ascent, but the balloon struck a house and burst, and both the occupants of the car were injured. It was reported in the Paris *Figaro* of September 10th that Commandant Renard had discovered a method of steering balloons, and that a complete apparatus was in course of construction at Meudon. The balloon was to be furnished with a new motor 500 kilogrammes in weight, of 50 horse-power, to produce a speed of sixty miles an hour, and be navigable in any direction except in an actual gale. Mail news received in England reported a shocking accident as having occurred on September 26th at the central Canada Exhibition, Ottawa. A Professor Williams was announced to ascend with a balloon 1,000 ft., and then drop to earth by means of a parachute. When the crowd, who were holding the balloon down, were told to let go, all did so but one young man named Wensley, who was whisked into the air, holding on to the rope, before he realised his position. He fell from the height of about 1,000 feet, turned a somersault, and came upon the earth flat, being terribly mangled, and of course killed. Williams came down in safety, quite unconscious of the tragedy. On October 12th, 21st and 28th, interesting balloon races, for a charitable object, took place from Paris, there being six, eight, and ten competitors respectively. A man named Charles Higgins made a successful parachute descent in the same manner as Baldwin at Lea Bridge Road, near London, on October 27th. On November 19th, Higgins made a successful parachute descent at Leicester, the height attained being 4,000 ft.—**MILITARY BALLOONING.** A painful sensation was caused by a published announcement, on Feb. 11th, '88, that Major J. L. B. Templar, of the King's Royal Rifles, and second in command of the Aeronautical School at the School of Military Engineering at Osham, had been placed under arrest for divulging scientific secrets in connection with his department, the matter apparently arising from a tender which came from Birmingham for the supply of steel

tubes to contain reserve supplies of gas. A further statement appeared to the effect that the appliances used in the Italian Expedition to East Africa were based on the secret English designs, which led to disclaimers from Messrs. Howard Lane & Co., of London and Birmingham (Feb. 14th), and Mr. Delward of the Nordenfiet Company. On April 5th a general court-martial assembled at Chatham for the trial of Major Templer, on eight charges; and a mass of evidence was given, special reference being made to a charge of having visited Birmingham and assisted in the construction of a balloon there. The major was honourably acquitted at the end of the inquiry on April 9th. In the House of Commons, on April 19th, the Secretary for War, in reply to questions, said that the secret which Major Templer was charged with revealing related to the skins of balloons, but the result of the court-martial had absolutely cleared the accused, who would resume his duties at Chatham, and be reimbursed any expense he had been put to.—In connection with the above-mentioned balloon exhibition at Vienna in April, it transpired that the Austrian army was the only one in Europe without an aeronautical department. From the same city it was reported on April 26th that a special commission of Russian army and navy officers had been making some interesting experiments with balloon signalling at Kluiburn, mouth of the river Dnieper. The balloons were made of transparent linen and filled with gas. The body of the balloon was connected by a wire with an electric battery placed on the ground, and this at a height of 2,000 metres made the light inside the balloon visible for several miles. On May 16th the Richter-Majert gas producer, for military use in the field, was tried at Fürstenwalde, near Berlin. In appearance the engine looks like a road or threshing machine, may be fed with any kind of fuel, and will produce enough hydrogen gas for a captive balloon in two hours. Drawn by six horses, it is said it may be taken wherever a field gun can go, but if necessary it may be left at the base of supply, and there fill the gas tubes for further transport, the object being at least to obviate the carrying of gas cylinders for long distances, as in the case of the British army. The Prussian War Minister has adopted the invention. At Toulon on July 17th an experiment was made, when a captive balloon was sent up, and its occupant, a naval officer, kept himself in telephonic communication, for observation purposes, with the frigate *Indomptable*. It was reported from Paris under date August 22nd, that on the previous evening a balloon with three occupants ascended from Berchem, near Antwerp, on the previous evening for military purposes. The balloon was swept away to the North Sea, into which it fell, but the three occupants were picked up by H.M.S. *Warrior* and landed at Dunkirk.

Bampton Lectures. These lectures are named after their founder, the Rev. John Bampton, who was educated at Trin. Coll., Oxford, where he took the degree of B.A. in 1709, and proceeded M.A. in 1712. Having taken holy orders, he was collated, April 25th, 1718, to the prebend of Minor Pits Altaris in Salisbury Cathedral, in which he was installed on the 10th of the following month. He continued to hold this preferment until his death, in 1751. By his will he bequeathed his lands and estates

to the authorities of the University of Oxford in perpetual trust for the endowment of "Eight Divinity Lecture Sermons," to be established for ever in the said University, and to be preached annually at Great St. Mary's, their delivery being followed by publication, within two months of the conclusion of the course, at the expense of the estate. The eight lectures thus endowed are preached, in accordance with the founder's directions, on as many Sunday mornings in full term, "between the commencement of the last month in Lent Term and the end of the third week in Advent Term, upon either of the following subjects: To confirm and establish the Christian faith, and to confute all heretics and schismatics—upon the Divine authority of the Holy Scriptures—upon the authority of the writings of the primitive Fathers, as to the faith and practice of the primitive Church—upon the Divinity of our Lord and Saviour Jesus Christ—upon the Divinity of the Holy Ghost—upon the articles of the Christian faith, as comprehended in the Apostles' and Nicene Creeds." The Lecturer, who must be at least a Master of Arts of Oxford or Cambridge, is chosen yearly by the heads of Colleges on the fourth Tuesday in Easter term. No one can be chosen a second time. For some reason or other the Bampton endowment did not become operative until nearly thirty years after the death of the founder; the first lecturer being the Rev. James Bandinel, D.D., of Jesus College, and Public Orator of the University, who inaugurated a long and generally distinguished succession of annual courses in 1780. From that time, with three exceptions, there has been an unbroken series of lectures—the exceptions being in the years 1834 and 1835, when no appointment was made on account of other inevitable demands upon the funds; and in 1841, when the late Bishop Wilberforce was unable, owing to the death of his wife, to occupy the lectureship to which he had been appointed, and for which he had carefully prepared. The value of the Bampton Lectureship, at its institution, was estimated to be about £120 a year; and the *Oxford University Calendar* for '88 says that "the estate provided for the endowment now produces £200 to each lecturer." There has been, therefore, no very considerable increase in the relative value of the emolument of the office, which has been almost exclusively reserved for the members of Canon Bampton's own University of Oxford. It is understating the case to say that there are not half a dozen names of Cambridge Masters of Art, who are equally eligible in the terms of the founder's will, in the roll of Bampton lecturers. The incumbency of the Lectureship has long been regarded as the cause, the promise, or the indication of eminence; as the distinction of men who either—as in a few cases—had attained, or, as in a greater number of instances, were in process of attaining, the highest dignities in the Church of England. The first Bampton lecturer after Dr. Bandinel who claims an imperative mention was the Rev. George Stanley Faber, A.M., Fellow of Lincoln Coll., who, in 1801, delivered a course of lectures entitled, *Homo Mosaius*; or, *A View of the Mosaiical Records, with respect to their Coincidence with Profane Authority, their Internal Credibility, and their Connection with Christianity*. In 1812 the lecturer was the Rev. Richard Mant, afterwards successively Bishop of Killaloe, and of Down, Connor, and Dromore.

Dr. William van Mildert, afterwards successively Bishop of Llandaff and Durham, lectured in '74; and was followed the next year by **Reginald Heber**, afterwards the first Bishop of Calcutta. In '22 the **Rev. Richard Whately**, who finally became Archbishop of Dublin, was the lecturer; and in '27 the **Rev. Henry Hart Milman**, then Professor of Poetry at Oxford, and afterwards Dean of St. Paul's, delivered a course of lectures on *The Character and Conduct of the Apostles considered as an Evidence of Christianity*. The **Rev. Renn Dickson Hampden**, afterwards Bishop of Hereford, was the lecturer in '32, when he delivered a course on *The Scholastic Philosophy considered in its Relation to Christian Theology*. In '47 **Dr. Walter Augustus Shirley**, Bishop of Sodor and Man, delivered only two lectures before his death, April 21st, and these, with two more ready for delivery, and some other discourses, were published as *The Supremacy of Holy Scripture*. The **Bampton Lectures** for '58 were delivered by **Henry Longville Mansel**, B.D., Reader in Moral and Metaphysical Philosophy at Magdalen Coll., and afterwards Dean of St. Paul's, whose subject, *The Limits of Religious Thought Examined*, and his method of treating it, gave rise to considerable discussion. The list of later **Bampton Lecturers** includes the names of **Canon Liddon**, who, in '66, treated of *The Divinity of our Lord and Saviour Jesus Christ*; **Rev. John Wordsworth**, '81, now Bishop of Salisbury; **Dr. Temple**, Bishop of Exeter, and now Bishop of London, who, in '84, discussed *The Relations between Religion and Science*; **Archdeacon Farrar**, who, in '85, reviewed the *History of Interpretation*; **Dr. William Boyd Carpenter**, Lord Bishop of Ripon, '87; and the **Rev. Robert Edward Bartlett**, M.A., whose Lectures for '88 have recently been published.

Bangor. **Rt. Rev. James Colquhoun Campbell**, D.D., Bishop of, b. 1813, at Stonefield, Argyleshire. Educated at Trin. Coll. Camb., where he graduated in honours in '36. Appointed vicar of Roath, Glamorganshire, '39, rector of Merthyr Tydvil '44, and Archdeacon of Llandaff '57, which post he continued to fill till '59, when he was nominated to the see of Bangor.

Bangweolo Lake. See CONGO FREE STATE.

Banjarmassin. A state and Dutch settlement in Borneo (q.v.).

Bank of England (for its history see ed. '87). Projected by **William Paterson**, whose proposal for the same was laid before the Government in the year 1691. Three years later the Bank was established, starting its operations with a loan to the Government of £1,200,000 at 8 per cent., secured on taxes. The **Bank Charter**, granted for eleven years, appointed a governor and twenty-four directors to be elected annually from members of the company possessed of at least £500 stock. Consult *"The First Nine Years of the Bank of England,"* by Prof. Thorold Rogers (*Clarendon Press*), '87.

Bank Holidays. The Act, which declared that certain days in the year should be kept as public holidays, was brought in by Sir John Lubbock, and passed May 25th, 1871. The holidays are, in **England and Ireland**: Easter Monday, Whit Monday, First Monday in August, and Boxing Day (unless Sunday). **Scotland**: New Year's Day, Christmas Day (but should either fall on Sunday, then the following Monday), Good Friday, First Monday in May, and First Monday in August.

Banking Law in '88. Several important decisions affecting banking companies have been given during the past year. In the case of **Williams v. The Colonial Bank**, three executors, finding in the estate, which they administered 121 certificates, each of ten shares, in the New York Central Railway, sent them to stockbrokers to be forwarded to New York and there registered. The indorsements contained transfer forms which the executors signed in blank. The stockbrokers, however, pledged the certificates with two banks, and subsequently became bankrupt. The executors thereupon sought to recover the shares, but the banks, which knew nothing of the fraud, refused to surrender them. Mr. Justice Kekewich held that, as the bankers had acted honestly, they had a valid charge on the shares. The Court of Appeal, however, decided (May '88) that the shares were not negotiable, and that the absence of a certificate of transfer in accordance with the requirements stated in the indorsement ought to have put the bankers on inquiry. He directed judgment to be entered for the plaintiffs.—The case of the **London and County Banking Company v. The London and River Plate Bank** arose out of the **Warden and Watters** frauds of '83. The question was which of the two banks was to suffer by these frauds, so far as they concerned a certain number of negotiable securities which had been stolen by **Warden** from the strong room of the **River Plate Bank** (of which bank he was manager), handed by him to his confederate **Watters**, an outside broker, pledged by **Watters** with **Messrs. Capps & Record** to secure advances, pledged again by the latter with the **London and County Bank**, re-obtained from the **London and County Bank** by a cheque (subsequently dishonoured) drawn by **Capps & Record** *bona fide* against a fictitious cheque of **Watters**, and so passed back by **Watters** and **Warden** to the possession of the **River Plate Bank** in order to pass the audit, but with the intention of again stealing them, and passing them back again by the same channel as soon as they had been placed before the auditors. The point of law arising out of this extraordinary state of facts was whether the defendants, the **River Plate Bank**, could be considered holders for value of these securities so returned into their possession, as against the plaintiffs, the **London and County Bank**, who had recently given value for them, and who contended that they had been dispossessed of them by fraud. The Court of Appeal, affirming the decision of Mr. Justice Manisty, answered the question in favour of the defendants.—Another case which seems to involve some hardship is that of **Vagliano v. The Bank of England** (Nov. '88). **Messrs. Vagliano's** clerk, who is now undergoing ten years' penal servitude, forged Russian acceptances to the amount of £71,500. They were indorsed in the ordinary way by the firm and cashed by the bank, who could not tell whether the bills were forged or not. Mr. Justice Charles decided, however, that the bank must be held responsible.—The question whether a banking company can authorise payments for the benefit of the family of an important officer who has died while in their service, was raised in the case of **Henderson v. The Bank of Australasia**. The plaintiff sought to restrain the directors from making any such payment, on the ground that it was beyond the scope and object of the

company, but Mr. Justice North held that the directors might make such payments where they were conducive to the interests of the company. In this case the beneficial effect likely to be produced was the attraction of the best men to the service of the company. If a majority of the shareholders were opposed to this action it was clear that they had their remedy without coming to the Court of Chancery.

Bankruptcy Act, '83. Upon the commission of an act of bankruptcy by a debtor, any of his creditors (with certain exceptions specified by the Act) may present to the court a bankruptcy petition verified by affidavit. Upon this petition the court may make a receiving order, whereby an official receiver (appointed by the Board of Trade) is constituted receiver of the debtor's property. This order is followed by a public sitting of the court, at which the debtor is examined as to his affairs. A general meeting of creditors is to be held as soon as may be after the making of the receiving order, and is to decide whether or no the debtor is to be adjudged bankrupt. A composition must be approved at a subsequent meeting by a majority in number representing three-fourths in value of the creditors, and must be confirmed by the court. If a composition is not accepted, the debtor must be adjudged bankrupt, and the creditors may either appoint a trustee in bankruptcy, or leave his appointment to the committee of inspection (a committee of not less than three, nor more than five, chosen by the creditors from among themselves, meeting at least once a month, and looking after their interests). The debtor must attend the first meeting of his creditors, and give such information as they require, besides giving, at all times, any information useful in the realisation of his property and its distribution among his creditors. At any time after adjudication the bankrupt may apply for his discharge, which, the Court may grant at its discretion, but not if he has committed any misdemeanour under the Act, or under Part II. of the Debtors Act 1869. An adjudication of bankruptcy disqualifies for sitting in either House of Parliament, and for acting as justice of the peace, town councillor, guardian of the poor, &c. The disqualification ceases if the adjudication be annulled, or if he be discharged with a certificate that his bankruptcy was occasioned by no misconduct on his part. The property divisible among the creditors does not include the bankrupt's tools (if any), or the necessary bedding and apparel of himself, his wife, and children, not exceeding £20 altogether. The first dividend is to be declared and distributed within four months after the first meeting of creditors, and subsequent dividends at intervals of not less than six months. In the distribution, all local rates due at the date of the receiving order which have become payable within the twelve months preceding, all taxes assessed up to the 5th April next before the date of the receiving order, and not exceeding one year's assessment, and all wages of any servant, clerk, labourer, or workman due in respect of services rendered within four months before the date of the receiving order, and not exceeding £50, must be paid in full in priority to all other debts. Any person to whom rent is due from the bankrupt may either before or after the commencement of the bankruptcy distrain upon the bankrupt's goods for

one year's rent. The Act does not, except in so far as expressly provided, extend to either Scotland or Ireland. The courts having jurisdiction in bankruptcy are the High Court and the county courts. **Bankruptcy Discharge and Closure Act, '87,** provides a means for the discharge of a bankrupt under the repealed Bankruptcy Acts, and for closing proceedings under the Act of '69.

Bankruptcy of Peers and Members of Parliament. See PRIVILEGES OF PEERS, &c.

Banks and Banking. The origin of banking in England in anything like the modern sense of the term dates from the foundation of the Bank of England, in the reign of William III. Charles II. had ruined the credit of the Exchequer by seizing the gold lodged with the Government for safe keeping, and as a consequence William III. found it impossible to borrow money for carrying on his wars. It was then that the scheme for the formation of the Bank of England was brought forward and carried. The Bank made advances to the Government, and in return became sole keeper of the Government balances, and the only joint-stock bank permitted to issue notes in or near London. The formation of other joint stock banks in England dates from 1826, when the disastrous panic of the preceding year, attributed to the bad management of the country private banks, enabled the ministry to compel the Bank of England to give up some of the privileges of its charter. It was ultimately agreed that joint-stock banks should be formed beyond a radius of sixty-five miles from the Metropolis. Country joint-stock banks, however, did not spring up very rapidly at first, and it was not until the prosperous years '33-'36 that any considerable increase in their number took place. Upwards of forty banks were established in '36. The creation of joint-stock banks in London arose from a discovery made in '22 that the Bank Charter Act did not prohibit joint-stock banks being formed in London to carry on business on the lines adopted by London private banks. The Bank's charter gave the Bank of England the exclusive privilege of issuing notes payable on demand, but it did not give it the exclusive privilege of receiving deposits. In the old days, when the charter was framed, the term banking referred chiefly to the issue of notes, deposit banking being hardly known. The result of this discovery was the introduction of a clause into the Bank Act of '33 permitting joint-stock banks to be formed in London, providing they did not issue notes. The London and Westminster and London Joint-Stock banks were formed in '36, the Union and London and County in '39, followed at intervals by others. For several years after this period many legal questions respecting the acceptance of bills, the power of suing for debts, &c., arose from time to time, and constantly embarrassed the operations of the joint-stock banks. All these disabilities, however, were finally swept away by the Joint-Stock Banking Act of '44. It was not, however, till '58 that an Act was passed permitting the creation of joint-stock banks with limited liability. The failures of the City of Glasgow and West of England banks, in '78, brought about another important alteration of the law respecting the liability of banks. The ruin caused by those two catastrophes drew the attention of the public to the hardships of the system of unlimited liability, and in '79 an Act was passed to

establish "reserve liability." The essential element of "reserve liability" is that a portion of the bank's uncalled capital shall be set aside to be called up only in case of failure, and for the purpose of liquidation. Banking practices in England and Scotland differ in many respects, but the cardinal distinction between the two systems lies in the power granted to Scotch banks of issuing notes not convertible except at the head office. It is entirely owing to this privilege that the Scotch banks are able to open so many branches. There is no necessity to keep gold reserves at the branches; a parcel of bank notes is all that is wanted. The Act of '45 regulating Scotch bank issues prohibits any new bank that may be opened in Scotland from issuing notes, and it is easy to see that this proviso renders banking in Scotland a monopoly. The Irish banks are also permitted to issue notes like the Scotch banks, but in their case all notes are payable "at the place or places where they have been issued or are issued." Thus the banks in Ireland, unlike the Scotch banks, must keep some gold at every branch. In England no banks located in London are permitted to issue notes, and even when an English country bank wishes to enter London it is compelled to give up its bank-note issue, should it have any. No new bank starting business in England is allowed to issue notes. At present the total note circulation of the country private and joint-stock banks is under 2½ millions sterling, whilst the note circulation of the Bank of England is about 25 millions. The Scotch and Irish banks have a note circulation each of 5½ millions. The total number of joint-stock banks established in the United Kingdom is 185, many of which have numerous and very important branches. Their total paid-up capital is about £70,000,000. The deposits held by all the banks in the United Kingdom, both private and joint stock, are estimated at about 600 millions, the increase during the last ten years being about 50 millions sterling. Judging by the dividends paid, banking in the United Kingdom is one of the most prosperous of mercantile pursuits.

Bank's Reserve, The. See MONEY MARKET.

Banting. Dieting with a view to reducing corpulence. See ed. '87.

Baptists. The Baptists hold that the only Scriptural mode of baptism is by immersion, and that the proper subjects are "believers"—persons of ripe age to exercise belief. Any other baptism they consider to be contrary to the original institution, contrary to the example of Christ, and also opposed to the spiritual design of the ordinance. Historians, themselves not Baptists, have shown that through many centuries Baptist views have been held amongst the Waldenses, the Albigenses, the Vaudois, the Lollards and Wycliffites. Formerly, on the Continent and in England, they were opprobriously called *Anabaptists*. In 1537 Henry VIII. issued a proclamation against their heresy, as persons who rebaptised themselves. They began their separate existence as *Particular Baptists* in 1633, at a meeting-house in Wapping. As early as 1611, many Baptists, because of persecution, fled to America, and the feeble remnant in London published a *Confession of Faith* (1611) to vindicate their orthodoxy. In 1620 they memorialised the king for liberty of worship. *Confessions of Faith* they published again in 1644 and 1646. In 1689 a *General Assembly* of Baptists in London published a confession in

thirty-two articles, and a Baptist Catechism, after the model of the Assembly's Catechism. Though Baptists do not formally subscribe to any creed, yet there is singular harmony of belief throughout the body. Almost from the time of the Reformation Baptists have been divided in two sections: the "*Particular*" (or Calvinistic), and the "*General*" (or Arminian) Baptists. Both sections numbered in 1887 (latest returns), in the United Kingdom, 2,764 churches, 3,701 chapels, with 1,198,027 sittings, 1,860 pastors, 4,118 local preachers, 304,385 church members, 458,200 Sunday scholars, 46,786 teachers. These figures include only those churches which have sent returns to the Baptist Union. A rough estimate of the number of members and scholars in non-reporting churches would give about 10,000 members and 20,000 scholars additional. The colleges for training the rising ministry are: Bristol, founded 1770; Regent's Park, 1810; Rawdon, Bradford, 1804; Haverfordwest, 1839; Pontypool, 1836 (formerly Abergavenny, 1807); Llangollen, 1862; Manchester (Brighton Grove), 1866; the Metropolitan, Pastor's College, 1856; Scotland, the Theological Hall, 1869. The Baptist Foreign Mission was originated in 1792 (see *MISSIONARY SOCIETIES*). Baptist churches are congregational in government, holding to the order of pastors (bishops) and deacons. The interests of different counties are cared for by 49 local associations; and the wider affairs of the denomination are attended to by the Baptist Union of Great Britain and Ireland, formed in 1831, which Union, while it has no legislative authority, is adapted to secure united action throughout the whole country. Of late years British and Irish missions have become affiliated with the Union, and the Annuity, Augmentation, and Education Funds have been established. These societies represent the distribution of upwards of £12,000 per annum by the Council of the Union, under one executive. Many of the General Baptists early merged into Socinianism, so that in 1770 the "*New Connexion*" (Evangelical) became the true exponent of General Baptist views in the country. They have one college for the training of the ministry, at Nottingham, established in 1797, and also separate foreign and home missions; but they are affiliated with the Union for general and united action in Christian work, and are included in the foregoing statistics. There are 192 churches, 170 pastors in charge, 26,500 members; in addition to 10 churches, 9 agents, and 1,332 members in the Foreign Mission field. Outside the Baptist denomination there are the *Scotch Baptists*, with a plural eldership. In England there are some 300 *Hyper-Calvinistic Churches*. It is computed that in the world at large there are 37,478 Baptist churches, 22,150 pastors and missionaries, and 3,326,542 church members. During the latter part of '87 and in '88, the Baptist body was considerably agitated by the *Down-Grade Question*, arising from the withdrawal of Rev. G. H. Spurgeon (*q.v.*) from the Baptist Union, in consequence, as he alleged, of the growing tendency on the part of that body towards heterodox views. The position remains practically unchanged. President of the Baptist Union for the year 1888-9, Rev. John Clifford (*q.v.*), M.A., LL.B., B.Sc., D.D. Secretary, Rev. S. H. Booth, D.D. Office of the Baptist Union, 19, Farnival Street, London, E.C. Consult *The Baptist Handbook*.

Baralong Marriage. See MARRIAGE.

Barbadoes. A British West Indian island; geographically but not politically one of the Windward group. Area 166 sq. m., pop. 171,860.—Divided into eleven parishes. Capital **Bridgetown**, pop. 20,947, a fine city, headquarters of H.M. forces in the West Indies. Speightstown is of second importance. There are twenty-six miles of railway.—Barbadoes is of coral formation, and rises in a succession of limestone and coral terraces to a height of 1,104 feet; while it is almost encircled by coral reefs, which render the approach to it dangerous to mariners. The climate is healthy, but violent hurricanes occur and cause great damage. The scenery is bold and picturesque in parts. There are subterranean streams and caverns. Chief products are sugar and rum, aloes, indigo, cotton; but tobacco, arrowroot, ginger, and other tropical products will yield well. Coal and petroleum are found, and the fisheries are profitable.—Government is vested in a Governor and Executive, a Legislative Council, and a House of Assembly elected on a low franchise. Education is remarkably well provided for, and there is **Oodington College**, now affiliated to Durham University (*q.v.*). The Church of England is established, but endowed concurrently with other bodies. Private endowment is also considerable. One of the West India regiments (negro) is stationed here, and there is a fort on the island. The people (most of whom are negroes) are industrious, and the colony very prosperous. For latest statistics see **BRITISH EMPIRE**, etc. (table). First colonised in 1625. Barbadoes has ever since remained undisturbed in British hands. The effects of slave emancipation were less felt than in the rest of the West Indies. It is at present our most valuable West Indian colony. Consult Layard's "Through the West Indies."

Barbecue. "To barbecue" is a term used in the West Indies for roasting a whole hog upon a gridiron; the word is found used in this sense by Pope, also by Lamb in "Essays of Elia." "A barbecue" has been adopted in America as a term to express any great gathering of people, where a large animal, such as an ox or a hog, is dressed whole and partaken of by those assembled.

Barbuda. A British West Indian island; a dependency of Antigua, and under the federal government of the **Leeward Islands**. Belongs to the Codrington family, and enjoys proprietary government locally. Area 73 sq. m., pop. 813. Is low and level, and chiefly used for stock breeding. Little cultivation. No town and no harbour.

Barcelona International Exhibition. The Opened on May 20th, '89, by the Queen Regent of Spain in the presence of a numerous and distinguished company, among whom were the Duke and Duchess of Edinburgh, the Duke of Genoa, Prince George of Wales, the diplomatic body, and the officers of various European naval squadrons then lying off the port. The exhibition continued open for several months, and was attended with fair success. Germany, Austria, France, and Belgium were large exhibitors, and the English section was well filled with machinery. The exhibition was expected to give an impetus to Spanish manufactures and to the import and export trade. Perhaps the most noteworthy feature was the brilliant State pageant that marked the opening day.

The presence of the infant **King of Spain** evoked much enthusiasm. The royal child, dressed entirely in white, was seated on a throne on a raised dais under a rich canopy of white silk with crimson velvet hangings fringed with gold, and on the same dais were seated five members of foreign royal families. On the steps at the foot of the throne His Majesty's sisters were seated. The hall was crowded with the diplomatic and consular services, Spanish officials and foreign naval officers. Everything that was possible to make the exhibition a national undertaking, and to give it foreign official recognition was done, and the opening scene was one of true Spanish magnificence. The exhibition marked in a noteworthy manner the recent revival in the Peninsula of the industrial and commercial spirit.

Bar Committee. The result of the June '88 election of members to serve on the Bar Committee was as follows: Sir Horace Davey, Q.C., Mr. R. B. Finlay, Q.C., M.P., Mr. G. Pitt-Lewis, Q.C., M.P., Mr. E. Cutler, Q.C., Mr. W. C. Renshaw, Q.C., Mr. E. W. Byrne, Q.C., Mr. Hall, Q.C., and Messrs. H. F. Boyd, F. Evans, G. Farwell, H. Jefferys, M. Ingle Joyce, W. W. Knox, R. H. Pinhey, D. Sturges, and E. P. Wolstenholme. The result was declared by the Chairman, Sir Henry James, Q.C., M.P.

Baring, Sir Evelyn, C.B., K.C.S.I., G.C.M.G., son of late Henry Baring, 1st cousin of present Lord Northbrook, b. 40. Captain R.A. '68, major '75; private secretary to Lord Northbrook (Governor General of India) '72-'76; English Commissioner of the Public Debt '76-'79. Married '76 Ethel, daughter of Sir Rowland (Stanley) Errington, Controller General of Egyptian Finance '79-'80; Financial Member of Council India '80-'83. Since Oct. '83 H.M.'s Consul General and Minister in Egypt. Sir Evelyn possesses a more complete knowledge of Egypt than any living English official. While Controller General he, jointly with his colleague Mons. de Hégneries, practically ruled the country, and since his return to Egypt has again had to do so under perhaps more difficult circumstances. To a thorough knowledge of finance he joins remarkable administrative ability, extreme industry, strong common sense, and a rough and ready straightforwardness which baffles Oriental diplomacy more than the most studied untruth.

Barlow Lectures. These Lectures, which are consecrated to an exposition of the "Divina Commedia," owe their name and their institution to the late Henry Clark Barlow, M.D. (1806-'76), one of the most thorough and accomplished of British students of Dante in the present century. Dr. Barlow, who, with all the ardour and devotion of a pilgrim, visited as shrines the scenes and places about which the personal and literary history of Dante is conversant, took a prominent part in the celebration of the sixth centenary of Dante's birth (14-'16 May, '65), at Florence, and further assisted at the festival which took place at Ravenna on 24-'26 June following, in consequence of the recent discovery there of the bones of Dante. He spared, indeed, no pains of travel or expense in the collation of Dante MSS. in every capital and city of Europe in which a characteristic text of the great Florentine poet was available. The force of his enthusiasm was evidenced in his lifetime by the production of much pertinent and illustrative Dante literature; and was more particularly manifested

after his death, which took place at Salzburg, November 8th, '76, by his bequest of £1,000 consols to University College, London (*q.v.*), for the endowment of an annual course of Lectures on Dante. The conditions attached to the Barlow Lectures include the gratuitous admission of the public of both sexes; and contemplate a retention of office by the Lecturer for a term of three years, with eligibility for re-election at the end of that period. From this stipulation, Mr. Charles Tomlinson, F.R.S., the first Barlow Lecturer on Dante ('78-'80), inferred a plain intention on the part of the founder that the three cantica of Dante's work might form in turn the subjects of the three years' course. Accordingly Mr. Tomlinson, after three several lectures on introductory subjects, the first of which was delivered April 25th, '78, devoted the remaining nine lectures of the year to a *Study of the Inferno*, reserving the *Purgatorio* and the *Paradiso* for exposition respectively in '79 and '80. Professor Antonio Farinelli, whose lectures were uniformly delivered in Italian, followed the same method in the two periods of his Lectureship ('82-'83 and '84-'86). The Rev. Edward Moore, D.D., Principal of St. Edmund Hall, Oxford, the present Barlow Lecturer, has devoted himself during so much of his term of office as has already elapsed ('87 and '88), chiefly to the Textual Criticism of the *Divina Commedia*.

Barnaby, Sir Nathaniel, K.C.B., was b. at Chatham, 1820, and served his apprenticeship as a shipwright at Sheerness. He obtained in '48 an Admiralty Scholarship in the School of Naval Architecture at Portsmouth, and secured an appointment in the designing room of the Admiralty in '55. During the thirty years that he was connected with this department, he rendered important services in the design and construction of our fighting ships. The substitution of steel for iron in shipbuilding was mainly due to his exertions. Sir N. B., who was made a K.C.B. on his retirement as Director of Naval Construction in '85, is the author of the article on the Navy in the "Encyclopædia Britannica." He has also identified himself with various philanthropic movements, and is a Vice-President of the South-East Sunday School Union and the Nat. Temperance League.

Barnum, Phineas Taylor, the American showman, b. in Connecticut, 1810. He realised a considerable fortune by his purchase of the American Museum in New York in '41, but in '55 he returned to Connecticut, and engaged in a series of disastrous land and manufacturing speculations, which resulted in his bankruptcy. He returned to the management of his museum, however, and again amassed wealth. In '68 he retired from business, but after a few years resumed operations as showman on a very extensive scale. When the late Jenny Lind was at the height of her popularity she accepted an engagement from Mr. B. to sing at 150 concerts in the United States. It was while fulfilling this engagement that she married Mr. Goldschmidt, and arranged to cancel the contract with Mr. B., after 93 concerts. Mr. B. was a member of the Connecticut Legislature in '65, and an unsuccessful candidate for Congress in the following year. He has written his autobiography, as well as works entitled the "Humbugs of the World" and "Struggles and Triumphs." Mr. Barnum did a great stroke of business by the purchase of "Jumbo" in '81. His show was burnt out in

'87, that being the third time Mr. B. has suffered the misfortune of a conflagration.

Baroda. See DIPLOMACY.

Barometer. See METEOROLOGY.

Baronets created between January 1st and Nov. 27th, '88. Collet, Mark Wilks, of St. Clere, in the parish of Igham, Kent; Tupper, Sir Charles, G.C.M.G.; King, Sir James, Lord Provost of Glasgow.

Barbary. A legal term, signifying foul practice on the part of a shipmaster.

Barrett, Wilson, the distinguished actor, was b. 1846, and made his *début* at Halifax ('64), subsequently visiting Leeds, Blackpool, and Leicester. Became manager of a theatre in Lancashire. Not being very successful he again sought engagements, and played at Aberdeen. Afterwards Mr. Barrett married Miss Heath, an artiste, and together, with much success, they performed in the provinces. Mr. Barrett's first appearance in London was at the Surrey Theatre in "East Lynne." Mr. Barrett achieved much reputation in "The Lights o' London" ('81), "The Romany Rye" ('82), "The Silver King" ('82), "Claudian" ('83), "Chatterton" ('84), "Hoodman Blind" ('85), "Sister Mary" ('86), and especially in his representation of *Hamlet* ('84). In the autumn of '86 he commenced a successful season in the United States. On his return at the end of '87, Mr. Barrett took the leading part in the "Golden Ladder," a play produced conjointly by Mr. G. R. Sims and himself. Mr. B. has been engaged in '88 on a new play called "Good Old Times," written in collaboration with Mr. Hall Caine. He also has recently written a play named "Now-a-days."

Barrister-at-law. See ed. '88.

Barristers and Clients. Asked to express his views in reference to the occasions when a barrister may advise and otherwise act for a client without the intervention of a solicitor, the Attorney-General (Sir R. Webster) has written as follows:—"In contentious business, which frequently affects the rights of other persons, it is most important that the facts should be as far as possible accurately ascertained before advice is given. For this purpose, as a barrister cannot himself make proper inquiry as to the actual facts, it is essential that he should be able to rely on the responsibility of a solicitor as to the statement of facts put before him. As regards non-contentious business the case is, in my opinion, somewhat different. It is scarcely possible to state the rule in a way which will be absolutely accurate under all circumstances, but speaking generally, there is, in my opinion, no objection to a barrister seeing and advising a lay client, without the intervention of a solicitor, upon points relating to the lay client's own personal conduct or guidance, or the management or disposition of his own affairs or transactions. I only desire to add that great care should be exercised by members of the Bar who do advise lay clients to abstain from advising upon matters which are, in effect, of a contentious character. As regards the fee in cases in which counsel are willing to advise a lay client under the circumstances to which I have referred, I know of no rule beyond this—that no junior should accept a fee of less than £1 3s. 6d., and no leader of less than £2 4s. 6d."

Barristers' Fee Bill. See ed. '88.

Barry, The Rt. Rev. Alfred, D.D., D.C.L., Bishop of Sydney and Primate of Australia, b. 1826. Educated at King's Coll., Lond., and

Trinity Coll., Camb.: B.A. '48, Fourth Wrangler, and Seventh in the first class of the Classical Tripos. Ordained '50, and '51 appointed Sub-Warden of Trinity Coll. Glenalmond. In '54 he accepted the post of head master of the Leeds Grammar School, which he held till '62, when he was appointed principal of Cheltenham College. He was for some years a member of the School Board for London. In '68 Dr. Barry was elected Principal of King's Coll., Lond., in '80 Chaplain in Ordinary to the Queen, in '81 Canon of Westminster, and in '83 **Bishop of Sydney**. Among his best-known works are the "**Introduction to the Old Testament**," "**Notes on the Gospels**," and "**Cheltenham College Lectures**." Dr. Barry is also the author of a life of his father, Sir C. Barry, R.A., the architect of the Houses of Parliament. Has recently visited England in connection with the Pan-Anglican Conference, at which he brought forward a motion in favour of recognising the work and status of Nonconformity. See LAMBETH CONFERENCE.

Barthélemy-Saint-Hilaire, Jules, French statesman and philosopher; b. in Paris August 10th, 1805. At an early age he was a regular contributor to the *Globe*. In July '30 he signed the memorable protests of the journalists. Appointed ('34) teacher of French literature in the Polytechnic School. Professor of Greek and Latin Philosophy in the College of France ('38), and gained admission to the Academy of Moral and Political Science ('39). In '40 he was for a short time associated with Mr. Cousin, Minister of Public Instruction. After the Revolution of 48 M. Barthélemy-Saint-Hilaire was returned to the Constituent Assembly by the Department of Seine-et-Oise. After the *coup d'état* (Dec. 2nd, '51), he refused, as a Professor, to take the required oath, and resigned his chair in the College of France, and returned to his literary labours. He was a member of the committee to examine the scheme of M. de Lesseps for constructing the Suez Canal. In '69 he was returned to the Chamber of Deputies by the Department of Seine-et-Oise. After the Revolution of '70, and during the siege of Paris, he remained in that city. After the armistice he joined the Left in the National Assembly, and was one of the members intrusted to assist the Government in the negotiation of peace with Prussia. He was elected to the Senate Dec. '75. In '77 he was decorated with the Legion of Honour. He held the office of Minister of Foreign Affairs ('80) under M. Ferry.

Basic Slag. See ed. '88.

Basseterre. Capital of Guadeloupe (*q.v.*). Also capital of St. Christopher (*q.v.*), pop. 7,500.

Bastian, Henry Charlton, M.A., M.D. Lond., F.R.S. ('68), b. at Truro, 1837. Educated at University College, Lond. Elected Fellow of the Royal College of Physicians in '71, Lecturer on Pathology in St. Mary's Hospital in '66, Professor of Pathological Anatomy in University College in '67, and Physician to University College Hospital '71. He has contributed largely to the transactions of the learned societies with which he is connected, and published several works illustrative of the doctrine of evolution and the origin of life. One of his best known works is "**The Brain as an Organ of Mind**," which has been translated into German and French. Dr. B. is also an eminent authority on the diseases of the nervous system.

Bastille, The. Was the ancient state prison of Paris, the storming of which by the populace on the morning of the memorable 14th July, 1789, opened the active campaign of the French Revolution. The *Paris fêtes of the 14th July* are annually celebrated in commemoration of this great event, and it is proposed to hold its centenary with great rejoicings in July of the present year. In anticipation of this celebration a Bastille exhibition at the Champs de Mars, Paris, was opened in May last. The attractive feature of this exhibition was a restoration of the famous prison in painted wood. The Bastille, with its grim towers frowning down upon the Faubourg St. Antoine, was the monument of all that was hateful in the traditions of the kings of France. Its dungeons had for ages been the living tombs of patriots and heroes who had dared to champion the cause of the oppressed people against the intolerable bigotry, tyranny, and injustice of their rulers. The dark deeds enacted in this horrible fortress had made it a name of terror throughout Europe, and the memory of the noble sons of France who had been plunged into its awful solitude at the bidding of remorseless tyrants or their confessors, favourites, and mistresses, appealed powerfully to the quick imagination and sympathy of the French people on the eve of their emancipation from the long centuries of oppression to which they had been subjected. There were stories associated with the Bastille—such as that of "the man in the iron mask"—which sent a thrill of horror throughout Christendom, and the publication of his own memoirs by Latude, who had been confined to this ghastly prison-house for thirty-five years at the instance of the abandoned and capricious Madame Pompadour, emphasized the popular indignation which the sight of the Bastille, or even the mention of its name, aroused. Successive kings of France had done their best to make this gloomy fortress impregnable. The walls of each of its eight towers were from thirty to forty feet thick at their bases and six feet thick at their summits. Deep moats crossed by drawbridges surrounded the massive solidity of the fortress, which had been successfully defended even against the assaults of the great Conde. Daylight found its way into the fortress only through narrow loopholes, behind which cannon were posted in readiness to sweep a lane through any crowd of assailants. A clock, supported by two figures of chained captives, to remind prisoners of the hopelessness of their condition, and of the tardy movement of the hands of time, was the only ornament which adorned the Titanic masonry of this sombre pile. One of its three courts was an arsenal, containing stores of ammunition and cannon loaded with case-shot; and on the tops of the towers were heaped many tons of cannon-balls, bar-iron, and paving stones, in readiness to be hurled over the parapets upon the heads of any attacking party which might take possession of the drawbridges. Fortunately for the leaders of the assault of the famous 14th, only a small garrison, consisting of a few men of the Swiss Guard and some Invalides, was then stationed in the fortress, and most of the ammunition had been removed to the Swiss barracks. The cry of "To the Bastille!" "Down with the Bastille!" had been raised in the streets of Paris on the night of the 13th, and by midnight an immense crowd of excited men and women had assembled within the shadow of

its gaunt towers. On the morning of the 14th a wild shout, "Down with it!" accompanied by the firing of musketry upon the sentinels of the towers by some armed men among the crowd brought De Launay, the governor of the prison, to the parapet. In anticipation of an attack he disposed of the garrison to the best advantage, charged the guns on the towers with ball, and prepared for the emergency. Meantime, however, the crowd had made a diversion to the Hospital des Invalides to seize the thirty thousand stand of arms, their demand for which Benzenval, on the day previous, had treated with cool contempt. He had no conception of the forces that were at work, not only amongst the infuriated populace, but amongst the soldiery, whom he imagined might be depended upon to keep the people in check. He now found, however, that they not only refused to fire upon the people, but actually fraternised with them; and the Swiss and German mercenaries were not numerous enough to cope with the revolutionary mob thus reinforced by the bulk of the regular army. At nine o'clock in the morning the crowd rushed into the Hospital and carried off 28,000 muskets and 20 pieces of cannon, and again made for the Bastille. The Committee at the Hotel de Ville had already sent a deputation to De Launay, imploring him to draw back his guns, promising that if he did so he should not be attacked. The Committee, however, were powerless to perform any such promise, and no sooner had their deputation quitted the fortress than Thuriot, the personification of the determined spirit of the Revolution, entered and commanded De Launay to surrender in the name of the people. He also demanded of the garrison not to fire—a demand to which the Invalides as they looked down from the battlements on the surging multitudes beneath readily acceded, though the Swiss made no reply. From that moment De Launay began to lose his head. Seizing Thuriot by the arm, he cried, "You abuse the character of a deputy: you have betrayed me"; and as he held him there amongst the sentinels Thuriot seemed to be in his power. That undaunted man, however, declared, "One word more, and I swear that one of us shall go headlong into the fosse." De Launay let go his grasp, and Thuriot, after receiving the assurances he required, quitted the Bastille, promising to report to the people and to the Hotel de Ville the result of his interview, and to send a civic guard to protect the garrison. After, however, Thuriot had departed for the Hotel de Ville the crowd became ungovernable and rushed to the first drawbridge, the chains of which were cut by two men of the guard-house, and the bridge fell. A rush was then made for the second drawbridge, where the assailants were met with a deadly fire of musketry, which had the effect of aggravating the fury of the uncontrollable multitude. On the appearance of the deputation, headed by the city solicitor, the sentinels on the towers hung out the white flag, and the people also ceased firing and followed the deputation into the courtyard,—where, however, they were met by another murderous discharge of musketry from a portion of the garrison from the lower part of the fortress who were ignorant of the hoisting of the white flag above. The crowd, believing that they had been trapped into the courtyard in order that they might be mown down by the

fire of the garrison, grew frenzied with rage, and swore that their dead bodies should make a bridge for those behind them to advance to the attack. Notwithstanding that they were supported at this moment by a column of the French Guards, they were impressed with the conviction that they were to be attacked in the rear by Benzenval and the troops—an impression which was increased by the reading of a letter from that officer to De Launay, urging him to hold out till reinforcements arrived. On hearing this letter read, the deputation was sent to the Hotel de Ville by the populace to demand the head of Flesselles, whom the people regarded as the author of their supposed betrayal. No sooner had this message been despatched, however, than the arrival of some Guards loaded with faggots and combustibles to assist in the burning of the gates of the inner court, which had already been commenced, created a more favourable impression. A terrible scene ensued on the attempted escape of a young lady, whom the crowd believed to be the daughter of De Launay. She was rescued from a horrible death by the heroism of a young man in the crowd. As De Launay looked down upon this wild scene he was suddenly seized with despair, and rushed down from the battlements to the magazine of the fortress with the intention of firing its vast stores of gunpowder, and blowing the whole castle and its contents and its garrison into the air. He was arrested, however, in the attempt by two officers of the garrison, who crossed their bayonets and made him their prisoner. All this time a mad scene was also being enacted at the Hotel de Ville over the demand for the head of Flesselles. At length, however, a wild cry was heard outside that building—"The Bastille is taken!" and another rush of the populace was made into the hall of the Hotel, amongst those who entered being the liberated prisoners of the horrible dungeon, one of the emancipated captives carrying its keys, which he delivered up to the National Assembly. After De Launay's paroxysm the garrison of the Bastille surrendered, and the mob, flushed with triumph, rushed in. De Launay was dragged to the Place de Grève, surrounded by an infuriated mob, and there trampled to death, his head being afterwards cut off and carried in triumph on a pike. Flesselles met with an equally tragic fate. The mob now became masters of the city. The National Guard under the command of Lafayette was formed, and the tricoloured Cockade was adopted. On August 4th the National Assembly adopted a measure abolishing all feudal rights, tithes, and unequal taxation, and aiming at the realisation of the ideal state of society, formulated on "The Rights of Man," a manifesto which was published a few days afterwards, and became the creed of the Revolution. On Oct. 5th an armed mob marched from Paris to Versailles, surrounded the Royal Palace and the Hall of Assembly and demanded that the Royal Family and the Assembly should remove to Paris. Both the king and the Assembly were now completely controlled by the people. By the new constitution of 1790, the Provinces were divested of their ancient privileges, France was divided into 84 *départements*, crown lands and church property were confiscated to the nation, the choice of bishops and clergy, as well as of the popular representatives, was given to the people; promotion in the army was open to all ranks, hereditary titles were abolished,

and trial by jury instituted. The nobles, alarmed by the progress of the Revolution, and the excesses of the people, migrated in large numbers, and attempted to form a Royalist party to crush popular movement from without. In 1791, Louis, with his queen **Marie Antoinette** and their family, attempted to escape to Metz in order to join the Royalist party and commence a civil war. The royal fugitives were discovered, however, at Varennes, and brought back to Paris. By the death of **Mirabeau**, the chief controlling force of the Revolution was removed, and the ultra-revolutionists or **Jacobins**, under the leadership of **Robespierre** and **Danton**, became masters of the situation. In 1792 the **Girondists**, the party which sought to establish a republic on the historical model, and from whom a ministry had been chosen, forced Louis to declare war against Austria, who had interfered in the internal affairs of France. The threat against the leading revolutionists, issued by the Duke of Brunswick on his invasion of France with 50,000 men, enabled Danton and his leading colleagues to stir up an insurrection of the people, who on Aug. 10th sacked the Tuileries and massacred the king's Swiss Guards. Subsequently the **National Convention** was formed and the chief power invested in Danton, Robespierre, and **Marat**. On Sept. 2nd, a massacre commenced in the prisons of Paris, which had been filled with persons suspected of being enemies of the Revolution. The National Convention, Sept. 20th, declared France a Republic, put the king on his trial, and condemned him to death. He was guillotined on Jan. 21st, 1793, and a year later **Marie Antoinette** shared his fate. The execution of the king arrayed all the powers of Europe in arms against the Republic. The Convention prepared to defend the country with marvellous energy. War was declared against England, Holland, Spain, Austria, Prussia, Portugal, the Roman States, Sardinia, the two Sicilies, and Piedmont, and an army of 300,000 men was raised. A committee of public safety, composed at first of 25 revolutionary leaders, but ultimately controlled by Robespierre, was appointed. It was the object of this committee to destroy all who opposed the revolutionists. Its appointment was followed by the **Reign of Terror**, during which it is estimated that 700,000 persons perished; 19,000, including 2,000 nobles and 1,000 priests, were guillotined in Paris alone. Under the directions of Carnot, the Minister of War, the defence of the country against foreign invasion was carried on throughout this period with marvellous energy and success. The death of Robespierre by the guillotine, in July 1794, marked the termination of the Reign of Terror, the famous Jacobin Club was closed, the Revolutionary Tribunal suppressed, and the National Guard reorganised. By the Constitution of 1798 the Legislative Power was vested in the Councils of the Five Hundred, and the Ancients and the Executive in a council of five persons called **directors**, appointed periodically by these two assemblies. Under the Directory, however, Paris became again disaffected, and the National Guard, siding with the disaffected, mustered to the number of 30,000 men to overawe the Councils. The Directory selected **Barras** to organise the defence, and he selected as second in command, a young artillery officer, **Napoleon Buonaparte**, who had rendered signal service at the siege of Toulon. He advised that a train of artillery should be brought up to Paris under

Lieutenant **Murat**. The defending force, though only 6,000 strong, was so skillfully disposed under Napoleon's advice, and so animated by his spirit, that the National Guard was forced to yield, and the reign of the army and of Napoleon commenced. Thus ended the great French Revolution, one of the most important events of modern history. Consult Carlyle's "French Revolution"; "The Bastille," by Capt. the Hon. D. Bingham, '88.

Basutoland. A native province of British South Africa. It lies inclosed between Natal, the Orange Free State, the Transkeian Territories, and Cape Colony. Area, 10,293 sq. miles; pop. 128,176, of whom only 469 are whites. It is described as a land of grass and mountain, with beautiful scenery, a fertile soil, and a delicious climate. The Basutos, or Mountain Bechuanas, are a brave and intelligent people, and have probably made the greatest advance in civilisation of any of the South African races. Since 1848 the Basutos, under their chief Moshesh, have been under a semi-protectorate of the British. In 1868 their country was more formally annexed, and in 1871 it was joined to Cape Colony. But in 1879 a section of them, under the chief Moirosi, revolted. The first reason for this was the arrest for horse stealing, and rescue, of the chief's son; the second, the attempted enforcement of an Act passed for the disarmament of the native tribes. The Cape Government also proposed to confiscate the territory of offenders. Almost the whole tribe of Basutos rose in arms, and the Cape forces were unable to reduce them. They made overtures in 1881, and submitted to the arbitration of the High Commissioner. Eventually the obnoxious Act was repealed, and confiscations and fines were not enforced. The Basutos desired to remain British subjects, but objected to be ruled by the Cape Government. In compliance with their wish, Basutoland was disannexed from Cape Colony in 1883, and has since been administered by a Resident Commissioner, under the direct authority of the Crown. For Commissioner. Consult "Short History of Basutoland," by Capt. L. Darwin, R.E., '86.

Batavia. Capital of Java (q.v.).

Bath and Wells, Rt. Rev. Lord Arthur Charles Hervey, D.D., 66th Bishop of (founded 905), fourth son of the 1st Marquis of Bristol, b. 1808. Educated at Eton and Trin. Coll., Cambridge; M.A. ('30), when he was sixth in 1st class in classics. Ordained deacon ('32), priest ('33); was rector of Ickworth ('33) and of Horningsheath ('53-69). Archdeacon of Sudbury ('62 until elevated to the episcopate '69). In '88 Lord H. received a handsome testimonial from the clergy in his diocese, in connection with his 80th birthday.

Bath, The Most Honourable Order of the. Originally established by King Henry IV., at his coronation, 1399. This order fell into neglect in the seventeenth century, but was revived in 1725, under George I. It was remodelled by the Prince Regent in 1815, to commemorate the auspicious termination of the long and arduous contest in which the Empire had been engaged, and was further enlarged in 1845, and now has three classes, each with Military and Civil (nominal) subdivisions:—

G.C.B. . . Knight Grand Cross Bath.
K.C.B. . . Knight Commander Bath.
C.B. . . . Companion Bath.

Members of the first two classes, being knights, are entitled to the prefix "Sir." The G.C.B.'s are not to exceed 50 for military service, exclusive of the sovereign and princes of the blood, and such distinguished foreigners upon whom may be conferred the honorary dignity, and 25 for the civil service; of the second class there may not be more than 123 for military and 80 for the civil service, excluding in the former case those admitted as honorary members, and except in certain special circumstances when there is power to increase the numbers. Of Companions there may be 940, of whom 690 may be for military and 250 for civil service. An officer must have received a medal or some similar honour, or have been specially mentioned in despatches for distinguished service in action, before he can be nominated; and he must be of the rank of rear-admiral or major-general, and must have been appointed to the second class, before he can receive the Grand Cross of the order. The badge is a crimson ribbon, with motto "*Tria juncta in uno*" (Three joined in one). The Dean of the Order is the Dean of Westminster. Admiral the Hon. George Grey is Bath King of Arms; Sir Albert W. Woods is Registrar and Secretary, and Charles George Barrington, C.B., is Gentleman Usher of the Scarlet Rod. See KNIGHTHOODS conferred in '88.

Batoum. The chief mercantile outlet of the Russian province of the Caucasus; acquired from the Turks in 1878, and used as a free port until '86, when Russia repudiated the *port franco* protocol of the Treaty of Berlin. The Russians have almost entirely rebuilt the town, which now contains 10,000 inhabitants, is defended by a series of batteries, and it being provided with a new harbour at a cost of half a million sterling. The Czar visited it Oct. 7th, '88, and laid the foundations of a new Orthodox Cathedral. Is not only the outport of the petroleum industry of the Caspian, with which it is connected by a railway 560 miles long, but also of the new Transcaspiian Railway (*q.v.*), extending from opposite Baku to Samarcand, nearly nine hundred miles, and tapping the trade of Central Asia. A regular service of thirty tank steamers now runs from Batoum to the ports of Europe, and the port is provided with storage accommodation for 20,000,000 gallons of oil, which is equal to twenty-five tank cargoes of 3,000 tons apiece. Export, '87, nearly 300,000 tons of petroleum products; besides wine, maize, and manganese ore. Is a second-class naval station, ranking next to Sebastopol, and possesses a direct military road to Kars.

Battenberg, Prince of. See HENRY MAURICE.
Bavaria. See GERMANY; and for Ministry see DIPLOMACY.

Bayard, Thomas Francis, U.S. Senator and Secretary of State, was born at Wilmington, Delaware, Oct. 29th, 1828. Mr. Bayard was educated for a mercantile career, but adopted the profession of law, and practised at the U.S. bar for several years. He was elected to the U.S. Senate as a democrat in March 1869, in succession to his father, and was re-elected in 1875 and 1881. On the succession of Governor Grover Cleveland to the Presidency, Mr. Bayard was appointed Secretary of State (March 15th, 1885). He is the fourth of his family in direct succession who has sat as Senator for Delaware, and claims to be a lineal descendant of the Chevalier Bayard, the knight *sans peur et sans*

réproche. Mr. Sec. Bayard was President of the Fisheries Commission, which sat at Washington, Jan. '88, and which adopted the terms of the treaty, which the American Senate subsequently refused to ratify.

Bazaine, François Achille, a French general, b. February 13th, 1811. Joined the army '31, served in Africa '32, made lieutenant '37, and obtained the Cross of the Legion of Honour. He distinguished himself in Algiers in '39. Joined the Mexican expedition in '62 with the rank of General of Division, remaining there until '67, when he effected his retreat by Vera Cruz. In '64 he was made a Marshal of France. In the Franco-Prussian war he commanded the Third Army Corps, when he occupied Metz, where, after a seven weeks' siege, he capitulated with an army of 175,000 men. Summoned before the Military Commission of the National Assembly, August, '71, he was tried by court martial and found guilty of treason, and condemned to death and degradation. The sentence was commuted to twenty years' seclusion in the Isle Ste. Marguerite, from which he escaped. He died at Madrid Sept. 23rd, '88, at the age of 77.

Bazalgette, Sir Joseph William, C.B., who has held the office of chief engineer to the Metropolitan Board of Works since its establishment in 1856, was b. at Enfield 1819, and learnt his profession from the late Sir John MacNeil. The chief works which he has designed and executed are the Main Drainage System of London; the Victoria, Albert, and Chelsea embankments, and the bridges over the Thames at Putney, Hammersmith and Battersea.

Beale, Lionel Smith, M.B., F.R.S., was b. in London, 1828, and educated at King's College, London, of which he is an honorary Fellow. He is Professor of the Principles and Practice of Medicine at the same institution, and physician to the hospital in connection with it. He is a member of a number of learned societies both at home and abroad, and is in the front rank of those scientists who have distinguished themselves by their microscopical research and their discoveries in the departments of Physiology and Medical Chemistry. Amongst the most important of his works are "Protoplasm; or Life, Matter, and Mind," "Disease Germs," "Life Theories: their Influence upon Religious Thought," "The Mystery of Life: Acts and Arguments against the Physical Doctrine of Vitality," "The Physiological Anatomy and Physiology of Man" (published in conjunction with the late Dr. Todd and Mr. Bowman), and "How to Work with the Microscope," which has run through many editions.

Beaufort's Scale. See METEOROLOGY.

Bechuanaland. The country of the Bechuanas (pron. Bethswana). A region of S. Africa, extending from Cape Colony to the Zambesi, between the Transvaal and Kalahari. It now consists of three sections—British Bechuanaland (*q.v.*), Northern Bechuanaland Protectorate, and the undefined portion beyond. The first has been formally annexed, and is ruled by an Administrator acting under the Governor of Cape Colony. A body of mounted police maintain order here and in the Protectorate. British Bechuanaland extends from the Grigqualand and Transvaal borders to the Molopo river and Ramathlabama Spruit. The limits of the Northern Bechuanaland Protectorate are:—West of the boundary of the South African Republic as defined by Convention of Feb. 1884, to the 20th

meridian of E. longitude, thus including part of Kalahari; north of R. Molopo as far as the 22nd parallel of S. latitude. Portions of these lands are thickly wooded and well watered, intersected here and there with open plains in the south, while in the north immense plains are dotted with numerous "vleys" of fresh water, and large salt "pans" or lakes. Gold, coal, and lead have been found in Bechuanaland; and as this vast country has not yet been scientifically prospected for minerals, it is reasonable to suppose that it is possibly not inferior in this respect to its neighbours, Matabeleland, the Transvaal, and Griqualand, countries rich in the precious metals, diamonds, and coal. In 1883-4 bands of Boer filibusters had invaded what is now British Bechuanaland, had deposed certain chiefs and set up others, and were forming two so-called "republics," **Stellaland** and **Goshen**. At length their lawless proceedings obliged the British Government to interfere. Sir Charles Warren, with a force of 4,000 troops, was sent into the country. He suppressed the fighting and raiding that had been going on, restored order, arranged and delimited the Protectorate, which was declared in March 1885, the annexation of British Bechuanaland being effected in September of the same year. It may be added that in 1886 Boer raiders trekked in numbers into the country beyond the Protectorate and **Matabeleland** (*q.v.*). Bechuanaland possesses a wide extent of fairly fertile land, a splendid climate (suitable for Europeans), a sufficient rainfall, a peaceful native population, and means of access by railway; and time, patience, and steady rule are all that are needed to create in Bechuanaland a future outlet for the more respectable element of the surplus population of this country. During the past year (88) considerable agitation has taken place respecting the annexation of this district. Consult "Proceedings of Royal Geographical Society," Bechuanaland Blue-Book (Capetown, 1888); Mackenzie's "Austral Africa"; "Correspondence respecting the affairs of Bechuanaland, South Africa, and the adjacent territories," with maps (Parliamentary Paper); "Further Correspondence" (Parliamentary Paper); "Bechuanaland," by a Member of the Cape Legislature; Rev. J. MacKinnon's "South African Traits"; Silver's "Handbook to South Africa"; Theale's "History of the Boers"; Petherick's "Catalogue of the York-Gate Library"; *The Torch*, etc.

Bechuannas, or Betschuanas, a people of the Bantu race, allied to the Basutos and Kaffirs, inhabiting the central region of S. Africa, N. of Cape Colony. For history see ed. '86.

Bedford, Rt. Rev. R. C. Billing, Bishop Suffragan of, b. 1836. Graduated at Worcester Coll., Oxon, '57; curate of St. Peter's, Colchester, '58-60, and of Compton Bishop, Somerset, '61; sec. Church Missionary Soc., Diocese York, '61-63; vicar of Holy Trinity, Louth, '63-73; and of Holy Trinity, Islington, '73-78, in which year he accepted the rectory of **Spitalfields**, which he held until his appointment as Bishop Suffragan of Bedford, in succession to Dr. Walsham How. Dr. B.'s appointment gave great satisfaction in the East End of London (which is a part of the diocese of London), where he has worked earnestly amongst the poor, having devoted his attention chiefly to the elevation of the degraded classes, and the rescue of fallen women. In '86 he was appointed **Prebendary** of Holborn in

the See of London, and Commissioner under the Pluralities Act, for the Archdeaconry of London. He was also Chaplain of the London Lay Helpers' Association. Dr. B. is a Liberal Low Churchman, and works harmoniously with men of all schools of thought.

Bedford Grammar School, founded 1566; reorganised 1879. Annual income, £4,500. Two exhibitions to any place of higher education approved by the governors of £70 and £60 for four years, fall vacant annually. Pupils, 550. **Head-master**, J. S. Phillipotts, M.A.

Bedford Park. See ed. '86.

Beecher-Stowe, Harriet Elizabeth, the daughter of Lyman Beecher, was b. 1812, at Litchfield, Connecticut. Married in '36 the Rev. Calvin E. Stowe, D.D., and soon afterwards wrote several tales and sketches which were published under the title of "The May Flower." In '50 she wrote for the *National Era*, an anti-slavery paper, a serial entitled "Uncle Tom's Cabin," published in book form ('53), and met with great success in the United States, 313,000 copies being sold in three years and a half. In Great Britain its sale was enormous. The work has been translated into twenty different languages, and it has been dramatised in various forms. Afterwards published "A Peep into Uncle Tom's Cabin for Children" ('53), "A Key to Uncle Tom's Cabin" ('53), "The Christian Slave," a drama founded on "Uncle Tom's Cabin" ('55). Visited Europe ('53), and soon afterwards produced "Sunny Memories of Foreign Lands" ('55), "Dred" ('56), "The Minister's Wooing" ('59), "The Pearl of Orr's Island" ('62), "The Chimney Corner" ('68), "Pink and White Tyranny" ('71), **Paganic People: their Loves and Lives** ('78). She is a sister of the late Rev. Henry Ward Beecher. During '88 Mrs. Beecher-Stowe was seriously ill, but has now partially recovered.

"Beefeeders." See YEOMEN OF THE GUARD.

Begum, an Indian word signifying Princess or Queen.

Belgian Political Parties. The chief parties are two—viz., the **Clericals** and the **Liberals**—and there are, in addition, the minor groups of **Protestants** and **Socialists**. Neither of the two last named, however, wield an independent parliamentary influence, and both in the ordinary affairs of political life are anti-Catholic, and consequently vote with the Liberals. The **Catholics**, or **Clericals** as they are usually called, have now been in power for rather more than four years, the present ministry, under M. Beernaert, having, in October '84, succeeded the Liberal administration of M. Frère-Orban, who had held office since June '78. At the present time the Catholics are in a considerable majority, commanding 97 votes in the Chamber, against the 41 of the Opposition. The last election to the Chamber was in June '80, previous to which the strength of parties was—Catholics 98, Liberals 40. The ministerial party consequently lost a seat at last year's elections, although at those held in June '86 it increased its numbers from 86 to 98, the electoral practice being for one-half the Chamber to retire every two years. The **Senate**, which is composed of exactly one-half the number of members of the Chamber of Representatives, viz., 69, contains 50 Catholics and 19 Liberals. At present, the chief source of political trouble in Belgium is the demand of the unfranchised for universal suffrage. The continued refusal of the Govern-

ment to introduce a measure for this purpose having led to repeated demonstrations both in Brussels and elsewhere. The Beernaert ministry, however, steadily refuses to support any measure granting the suffrage to that section of the population which does not at present enjoy it, and which is, for the most part, exclusively Socialist and strongly anti-Clerical.

Belgium. A kingdom under Leopold II. of Saxe-Coburg. By constitution of 1831 Belgium is declared to be a constitutional and hereditary monarchy—executive power in King; legislative power jointly vested in King, Senate, and Chamber of Deputies. Deputies must be Belgians of twenty-five years of age, elected for four years (half the Chamber retiring every two years, except in case of dissolution, when all go out) by citizens of twenty-one years of age who have passed an elementary examination, belong to the professional classes, or who pay £1 13s. 6d. annually in direct taxes. One deputy allotted to each 40,000 of population; present number of Chamber is 138. Both senators and deputies are paid by State. Number in Senate half that of the Chamber; senators are elected by same electorate for eight years (half retiring every four years except on dissolution), to be forty years of age and pay taxes to annual amount of £84. **Area,** 11,373 sq. m.; pop. 5,909,975. (For army and navy see **ARMIES, FOREIGN, AND NAVIES, FOREIGN.**) Estimated ordinary revenue for '88, £12,545,662; expenditure, £12,309,724; debt ('87-'88), £77,000,000, in addition to which there are various annuities to be met, amounting to £1,204,000; special imports, '86, £52,402,000; special exports, £47,279,000. No state religion. (For history '84-'87 see ed '88.)

General. The chief events of general interest in the year '88 have been the exhibitions, the chief of which was the International, held at Brussels, and opened by the King in state in June, the British section being under the charge of Mr. Lee Baptay as Commissioner. A great international horse show of exceptional magnitude and importance, at which England and France were especially well represented, was held in the same month. Mr. W. Gilbey received a gold medal. This was succeeded by an interesting exhibition of hygiene and life-saving apparatus, which took place at Ostend, as well as the important Bird Show and International Horticultural Congress at Ghent. Great fête took place at Antwerp, in celebration of the twenty-fifth anniversary of the suppression of the Scheldt tolls, from which the development of Antwerp—now the first commercial port on the Continent—dates. The tonnage of vessels which entered the port has risen from 236,000 in '51 to 3,000,000 tons in '87. An important fête, also, was held in honour of the Lord Mayor of London, Sir Polydore de Keyser, at his native town of Dendermond (August), succeeded a little later by grand banquets at Ghent and Brussels. A memorial fête on an extraordinary scale was held at the Brussels Exhibition (*q.v.*) in September. The question of slavery came prominently to the front as a leading subject, due to the crusade in Europe conducted by Cardinal Lavigne, who (August) preached at the church of Ste. Gudule before a highly distinguished audience. An influential deputation from Presbyterian churches of the English-speaking countries, thanking the King for his efforts to civilise the interior of Africa, was received by him at Ostend. The

position of Mr. Stanley (*q.v.*) also excited discussion.—**Social.** Among social occurrences of interest were the visit of the King of the Belgians to the Continent and England, and the marriage of the Princess Ludmilla of Arenberg to the Hereditary Prince of Croÿ-Düllen (April), celebrated with great pomp—which was, however, marred by the riotous conduct of a number of students and roughs, who insulted the guests (including several foreign Princes), on their way to the Arenberg Palace. This incident formed the subject of an interpolation in the Senate. International goodwill was emphasised both by the visit of the Lord Mayor of London (see *supra*) and by the reception of the Belgian burgomasters and aldermen who were entertained at the Mansion House in London (May). A fatal duel between M. Thuillier, a journalist of Liege, who was killed, and his nephew, M. Lejeune, a barrister, created a great sensation (September). The death of M. Philippe Bourson (March), the oldest working journalist in Europe, for the last fifty-seven years editor of the *Moniteur Belge*; M. Théodore Just, the eminent historian (Aug.); and Jan Van Beers, the Flemish poet and orator (Nov.), occurred during the year.—**Political.** Of chief importance were the elections which took place in June, giving a preponderating majority to the Conservative and Clerical party (see **BELGIAN POLITICAL PARTIES**); the action taken by Belgium in respect of the Sugar Bounty Convention (see **SUGAR BOUNTIES**); and the extraordinary credit for military expenditure, chiefly with respect of the new fortifications on the Meuse, which were to be commenced in June '88, and completed in '90. A Government Bill was also adopted which introduces a system similar to the English ticket-of-leave. The question of creating a Belgian Council of State, composed of nine Councillors and six assistants, to prepare the money bills to be laid before the Chambers, and the judging of political and administrative legislation were under serious consideration (August). The concluding meeting of the Belgian Fishery Commission, which took place in May, adopted a report, one of the proposals of which is to modify the International Convention of '82, and especially article 19. Of commercial interest, the Merchandise Marks Act has caused some irritation among Belgian manufacturers, preventing, as it does, the marking of their goods as English. The excise duty on sugar was abolished Sept. 1st. Belgian industries will be represented, though unofficially, at the forthcoming Paris Exhibition (*q.v.*). The International Congress on Commercial Law, which met at Brussels (September), discussed, as its chief business, a project of international legislation in bills of exchange and maritime law. It was stated (Oct.) that *La Société Générale*, of Paris, was about to open a branch office in Brussels. Strikes, which earlier in the year caused industrial disturbances, took place in the coal trade towards the close of November. Consult J. L. Motley's "The Rise of the Dutch Republic," and his "History of the United Netherlands"; *The Almanach de Gotha*; *Statesman's Year Book*.

Belize (Bay-leez). Capital of British Honduras (*q.v.*) and a port. Formerly the name of the whole colony. Pop. 5,767 in 1881.

Beluchistan. A British protectorate south of Afghanistan, extending to the Persian Gulf. Has a scattered population of a quarter of a

million tribesmen, far the most part poor and offensive. Country barren and mountainous. and undergoing no development except in the vicinity of Quetta, the administrative centre. Here, since the completion of the railway, a large trade has sprung up with Candahar, and numerous settlers have been attracted to the neighbouring valleys by the security offered by British rule. The chiefs of Beluchistan are mere nonentities, and receive small pensions from the Indian Government.

Bengal. See INDIA; and for Ministry, etc., see DIPLOMATIC.

Bengal Tenancy Bill. See ed. '88, and more fully, 87.

Benguella. A province of Portuguese West Africa. See ANGOLA.

Bennett, Sir James Risdon, M.D., F.R.S., b. at Romsey, 1809. M.D. Edin. '33. President of the Royal College of Physicians ('76-80). Is consulting physician to Victoria Park Hospital for diseases of the chest, and hon. phys. and Governor of St. Thomas's Hosp. He was a commissioner to the Paris Exhibition '78, and Chairman of the Executive Committee of the International Medical Congress '81, in which year he was knighted. His "Essay on Acute Hydrocephalus" obtained the Fothergill gold medal. He is also the author of "Lectures on Cancerous and Intra-Thoracic Growths," and is one of the most eminent living authorities on chest diseases.

Ben Nevis Observatory. Meteorologists in all countries are endeavouring to establish stations at as great elevations as is feasible, in order to note changes of temperature, &c., in the upper strata of the atmosphere. In the *United States* there are *Pike's Peak* (14,134 feet), and *Mount Washington* (6,279 feet); in *France* the *Pic du Midi* (9,380 feet), and the *Puy de Dome* (4,823 feet); in *Austria* *Hoch Obir* (6,706 feet); in *Switzerland* the *Sentis* (8,094 feet); and there are many others. The *Scottish Meteorological Society* has long had in view the erection of an observatory on the top of Ben Nevis, at a height of 4,406 feet, the highest point in these islands. This has been carried out, the staff having entered into residence on the summit in Oct. 1887.

Berbera. A town and port on the north Somali coast. Caravans from the African interior arrive here, and trade with Aden is considerable. In '73 it was occupied by Egyptian troops; but in '85 the British Government took possession of Berbera, and the north coast of Somaliland from Zeilah to a point east of Berbera, where German territory now begins. A small Indian force is stationed here to keep order among the motley population of various nationalities. During the trading season from October to March the natives from the surrounding country flock in with their produce to the number of 10,000 to 15,000. Berbera supplies large quantities of sheep, goats, and cattle to Aden. It is an excellent and capacious harbour, free from all danger, and affords good anchorage. See SOMALILAND and ADEN.

Berboles. A county of British Guiana (q.v.).

Beresford, Lord Charles William Delapoor, M.P., was b. 1846. Entered the Royal Navy (1859). In 1863, while a midshipman on board the *Defence*, he twice saved life from drowning, and received the bronze medal of the Royal Humane Society, and the gold medal of the Liverpool Shipwreck and Humane Society. To these distinctions was added the

clasp of the Royal Humane Society (24th Feb. 1871). Accompanied the Prince of Wales to India (1875-76) as naval aide-de-camp. At the bombardment of Alexandria in 1882, commanded the *Condor*, carrying three guns, and distinguished himself during the action by his bravery and naval skill. The *Condor* was largely instrumental in silencing the Marabout fort, and earned the honour of a special signal from the Admiral, "Well done, *Condor*." For these services Lord Charles was promoted to the rank of captain. Served in the Soudan campaign under Lord Wolseley for the relief of General Gordon, and took part in the expedition across the desert. Elected Conservative Member for E. Div. *Marylebone* ('86) and appointed a Lord of Admiralty in same year; resigned Jan. 18th, '88. At the Cutlers' Feast last September, Lord Charles made an important speech on the state of the Navy, contending that much greater efficiency might be secured in the service without increasing the estimate for its administration annually voted by Parliament.

Berlin Treaty. The leading provisions of the T. of B., which was signed on July 13th, 1878, by the representatives of England, Germany, Austria-Hungary, France, Italy, Russia, and Turkey, will be found given in ed. '87.

Bermuda Islands. Called after Bermudez, a Spaniard, who discovered them in 1515. Also named *Somera Islands*, after Admiral Somers, whose ship was wrecked here in 1609. The "Bermoothes" of Shakespeare. Situated in the North Atlantic, 600 miles east of Cape Hatteras. Area 10 sq. m., pop. 15,036. Capital *Hamilton*. The islands and reefs inclose a very spacious harbour (St. George's), which is fortified, and a naval station. Local industry principally market gardening for American consumers. Very fertile and healthy. Fisheries and turtle.—The Governor and Privy Council are Executive, and there is an elective Legislative Assembly. For latest statistics see BRITISH EMPIRE, etc. (table). First colonised in 1609, has been a British colony since 1684. A garrison of some 1,300 Imperial troops is maintained here. The Bermudas are said to be 365 in number, but only five are of any considerable size. They are difficult of access, being enclosed on three sides, N., W., and S., by formidable coral reefs. There is regular steam communication between Bermuda and New York.

Bernard-Beere, Mrs., a popular actress. Has played leading parts in several high-class companies. In '86 she secured great popularity in the provinces by her powerful rendering of *Fédora*, a character in which some time previously Madame Bernhardt had made a great sensation in Paris. Mrs. Bernard-Beere's latest successful impersonation was *Ariane*, in the play of that name by Mrs. Campbell-Præd.

Bernhardt, Mademoiselle Rosine Sarah, b. in 1844, at Paris; the most distinguished French actress of her day. She is of Jewish descent. She entered the Paris Conservatoire at the age of fourteen, where she studied tragedy and comedy. Joining the staff of the *Théâtre Français*, she made her *début* in Racine's "Iphigénie," and in Scribe's "Valérie," but was not very successful, and retired for a time from the stage. Her first grand success was as *Marie de Neuberg*, in Victor Hugo's play of *Ruy Blas*. Becoming very popular by her representations in "Junie," in "Andromaque," and in "La Sphinx," she was replaced on the

staff of the Théâtre Français. Since that time her popularity has been constantly increasing. She visited London, in company with other members of the Comédie Française, and performed at the Gaiety Theatre in '79 and '86. Mlle. B. married, in '82, M. Damala. She is also noted as an amateur artist and sculptor. M^{de}. B., early in '88, performed in the play "*La Tosca*" at the Lyceum Theatre, and has an engagement at the Paris Exhibition (*q.v.*). '89. Has recently had the Order of the French Academy conferred on her. She is also the authoress of a one-act play entitled "*L'Aveu*," produced in '88.

Besant, Walter; b. at Portsmouth 1838. Educated at King's College, Lond., and Christ's College, Camb., where he graduated in mathematical honours. After leaving the University he accepted the appointment of Senior Professor in the Royal College of Mauritius, which he resigned in consequence of ill health. He made his *début* as an author in '68 with "*Studies in Early French Poetry*," which was followed two years later by the "*French Humorists*." He subsequently contributed to the "*Ancient and Foreign Classics*," and "*New Plutarch*" series of publications. In conjunction with the late Mr. James Rice he commenced a successful career as a romance writer; the most popular production of their joint authorship was "*Ready Money Mortiboy*," which they also dramatised and put on the stage at the Court Theatre. Of the novels which Mr. Besant has published in his own name, the most popular are, "*All Sorts and Conditions of Men*," "*All in a Garden Fair*," and "*Children of Gibeah*." There is a charm of style about Mr. Besant's writings which marks his strong individuality; and the far-reaching influence he has exerted by his graphic delineations of the social life of the present day has been manifested by the inauguration of various movements for relieving the dull monotony of the lives of the poor in our crowded cities. The most important of these movements was that for the establishment of the *People's Palace* (*q.v.*), in the East End of London. Mr. B.'s latest productions are "*The World went very well Then*," published in '87, and his Christmas annual, "*Katharine Regina*," ('87), and "*Fifty Years Ago*" ('88). His most recent books are "*Herr Paulus*" ('88), "*Eulogy of Richard Jefferies*" ('88), and "*The Inner House*" ('88). He has for many years been secretary to the Palestine Exploration Fund, and in '71 produced, jointly with the late Professor Palmer, a history of Jerusalem. Mr. B. has also interested himself in questions affecting the rights of authors, and was appointed first chairman of the executive committee of the Incorporated Society of Authors (*q.v.*).

Bessarabia. A Russian province bordering on the Danube, ceded by Turkey to Russia in 1812. It acquired political prominence at the close of the Crimean war by the surrender of a portion of it which Europe compelled Russia to make, in order to check her aggressive aims for dominating the mouth of that river. The portion withdrawn from Russian rule was added to Moldavia, which coalesced in time with the adjoining province of Wallachia, and formed the principality of Roumania. At the close of the last Turkish war (1877-78), Russia made it a point of honour to recover the territory she had lost, and in spite of the unwillingness of the Roumanians, the latter

had to surrender it, receiving in return the wretched territory of the Dobrukscha, south of the Danube. Since the annexation, which brought Russia down to the Danube again, the people have become contented with their new masters, and a considerable development has taken place in the trade of B., owing to the establishment of a subsidised line of Russian steamers on the Danube. Area 28,386 sq. m., pop. 1,369,075.

Beth Din. See **Jews**.

Beth Hamidraah. See **Jews**.

Betting, Law on, in '88. By the decision of the High Court in the case of *Cox v. Andrews*, a bet must be made in a house or place kept for the purposes of betting. The sending out of circulars, with a view of inducing people to make bets, has, therefore, not been held to constitute an offence against the Betting Act of '74. The point, however, has been again raised recently, and a case stated for argument before Her Majesty's judges.

Bible Society, The British and Foreign. was established, in 1804, its object being the circulation of the Scriptures. Up to 1888 over 116,459,000 Bibles and portions of the Bible, in 286 languages and dialects, had been issued under its auspices. The expenditure of the Society in 1887-8 was over £224,800. A special effort, begun in July 1884, to reach the very poor, both at home and in the Colonies, by the publication of a *New Testament* at one penny (half its cost), has resulted in the sale of upwards of 3,625,000 copies. Subscriptions and donations should be made payable to Mr. C. Finch, at the Bible House, 146, Queen Victoria Street, E.C. Secretaries, Rev. J. Sharp, M.A., Rev. W. M. Paul.

Biblical Archaeology. Although comparatively a new branch of antiquarian research, the study of Biblical archaeology—that is, the study of the monuments, inscriptions, manners and customs of the lands and the people mentioned in Holy Scripture—is daily increasing in importance and enlarging its area of investigation. The study is emphatically the result of the labours of the explorer and the decipherer; for, as the former recovered the records of a once forgotten past from the grave of centuries, so the latter has forced from their long silent characters the secret they had so jealously preserved. '88. The criticism brought to bear on the cuneiform inscription on a *terra-cotta* tablet of about the seventh century B.C., which was assumed to incorporate a definitely Messianic prediction, has not borne out the expectations once entertained of its prophetic character and pertinence. The entire tablet is a document belonging to a class which at present defies all attempts at interpretation. The success, indeed, which has hitherto attended such attempts is illustrated by the fact that the quasi-Messianic prophecy in question, which has been independently explained by three several writers, appears each time as containing an entirely different statement. Professor Sayce and Mr. Pinches, who have treated the whole document, differ very widely with respect both to its meaning and grammatical construction; the former considering it to be a prayer, whilst the latter recognises in it the aspirations of an ancient hero who has conceived the idea of a Messiah. **M. E. and V. Revillout**, the discoverers of this discredited prophecy, have been more fortunate in their researches in other directions (see paper on

Biblical Archæology, March '88, under the title of "Notices sur un nouveau Contrat daté de Hammourabi et sur les données historiques que nous fournissent les Contrats de ce Temps.") The Rev. James Marshall has also contributed some valuable information upon an interesting event in apostolic history, in the course of which he estimated the significance of still extant monuments and literature as illustrative of the account of St. Paul at Athens. At the May meeting of the Society of British Archæology, the Rev. A. Löwy contributed a paper on the *Legendary Description of Hell*, being the second of a series in which he is drawing the thoughtful attention of students of the Old Testament to *Ancient Jewish Legends on Biblical Topics*. Mr. Löwy, in July last, also issued a defence of the Jews against the theory that *Jehovah* was a national God. The Society of Biblical Archæology (Sec. W. H. Rylands; Office, 9, Conduit Street, W.) records the progress of Biblical criticism. Publications: *Proceedings* (monthly), and *Transactions* (annual). In connection with this Society important papers on the *Coptic Antiquities of Egypt* have been published,—notably a paper by Professor E. Amélineau, entitled *Les Actes Coptes des Martyres de St. Polycarpe* (May). Of these the Professor supplies a Coptic text,—all but literally transcribed, and, generally, without correction, as it is found amongst the Coptic manuscripts in the Vatican,—and a French translation; his researches in the Coptic literature which has come down to us have proved to him that the Christians of the Nile valley concerned themselves so exclusively about their own private affairs as practically to have neglected the great works of Greek genius, and the monuments belonging to the last two centuries of the Christian Church. The great majority of the productions which compose the literature in question consist of histories or of works purely local and Egyptian, liturgical works of every kind, lives of monks, acts of martyrs, fabulous narratives, poetical works, homilies, and discourses. Of the Scriptures M. Amélineau says there are at least three versions—*la memphitique, la thébaine, et la baschmourique*. He is of opinion that there were many versions, in each dialect. Miss Simcox (June *Proceedings*) details the resemblances between *Egyptian and Basque marriage contracts*. The singularities of Egyptian marriage law, according to which husbands surrendered everything to their wives, still await explanation; and the problem is to discover the *rationale* of the usages which appear so paradoxical on the surface, though they cannot certainly have been wanting in practical convenience and utility, being associated with one of the longest-lived civilisations which mankind has known. In the typical Egyptian marriage contract, the husband secures to his wife various annual allowances, minutely specified, and constitutes his and her eldest son heir of all his property present and to come; and, setting aside minor varieties of usage, the essential peculiarity consists in making the father virtually only a trustee for his children. If the father did not in this way make over his property to the eldest son of the marriage, he might make it over to his wife, either directly or by pledging his whole property as security for a debt, very possibly fictitious, and which at any rate he did not mean to repay, so that the forfeiture was intended to take effect. There is one, and it is believed only one community in the world,

which resembles Egypt in according exactly the same proprietary rights to women and to men; and in the still surviving customs of this singular and very ancient people it may be possible to find a key to the Egyptian problem. We have in the *Basques* the last, westernmost survivors of the first historic wave of population flowing from the east before the dawn of Greek and Roman civilisation. The marriage customs of the modern Basques are as old as Strabo, and as there is no reason whatever to suppose them to have been invented in Spain, probably they are a survival of the usages of Babylonia and Egypt. The nineteenth session of the *S. B. A.* was opened on 6th November, '88, when, after a philological discussion introduced by the president, on the Egyptian quality or origin of the word *Abrek*, in Genesis xli. 43, Mr. E. A. Wallis Budge contributed a paper on "Cuneiform Despatches from Tushratta, King of Mitanni, Buraburiyash the son of Kuri-Galzu, and the King of Alashiya, to Amenophis III., King of Egypt, and on the Cuneiform Tablets from Tel-el-Amarna." Consult Dr. Samuel Birch's Inaugural Address on the "Progress of Biblical Archæology," in vol. i. of the "Transactions of the Society of Biblical Archæology"; Rev. A. H. Sayce's "Fresh Light from the Monuments"; Professor Schröder's "Cuneiform Inscriptions and the Old Testament"; "Transactions of the Society of Biblical Archæology"; Rev. Dr. W. Wright's "Empire of the Hittites"; "Journal of the Victoria Institute"; Mr. Tyler's British Museum Lectures on the "Hittites," etc., etc.

Biblical Brotherhood, The. See ed. '86.

Bilbao Harbour Works. On Sept. 21st, '88, was inaugurated what was described as one of the most important current public works in Spain—viz., the construction at Bilbao of an outside harbour or secondary port at the entrance of the river Nervion, to be known as the port of *Abra*. It is intended that the effect shall be to supersede the existing dangerous entrance to the river caused by the open bar. The principal breakwater is to start from the coast to the north-west of the fishing village of Santurce, extending 1,000 metres across the bay towards Al Gorta, from which point it takes a southerly direction towards the entrance of the Bilbao river, extending about 500 metres in this direction. On the opposite coast a second breakwater, starting to the south of Al Gorta extends in a westerly direction 750 metres towards the first, but some 500 metres nearer the mouth of the river, the space between the two being 640 metres for the passage of vessels. The works are from the designs of the Spanish engineer Churrua, but are said to resemble those recommended years before by Sir John Coode and Mr. Vignoles. The cost is estimated at 30,000,000 pesetas, and the time for the completion of the scheme twelve years. The Spanish Government grant a subvention of £10,000 a year, and the town had already subscribed on the inaugural day £120,000. The official inauguration was by the Ministers of Public Works and Marine, and on the same day the foundation stone was laid of the new shipbuilding yard of the united firms of Martinez Rivas and Palmer's Shipbuilding Co. of Jarraw-on-Tyne, who will build three large cruisers for the Spanish navy.

Bill Brokers. See MONEY MARKET.

BILL, Parliamentary. A Parliamentary bill is either (1) public or (2) private.—(1) If a public bill is to be introduced in the House of Commons, the first step is to move, after giving notice, that leave be given to bring in a bill. If leave be given, the Speaker asks, "Who will prepare and bring in the said bill?" and the member who had moved for leave mentions names. Subsequently the mover, on being called on by the Speaker, walks up from the bar and presents the bill, which is then read a first time and ordered to be printed; then read a second time (and this is the occasion for discussing its principle); after which it is committed and its details debated by a committee of the whole house, or by a committee selected from the house, or by one of the two Grand Committees (*q.v.*). It is then reported with the amendments of committee, if any; it is next considered as amended, and is then read a third time. It is then carried by a member to the Lords and delivered to the Lord Chancellor. There it goes through the same stages, excepting that of Grand Committee, and if amended comes back to the Commons. If the houses cannot agree upon the amendments, the bill drops; but if they are accepted, then the bill goes back to the Lords with an announcement to that effect. If a public bill be commenced in the House of Lords, the stages are very similar, only that a peer can present a bill without first asking leave. The stages of a bill are introduction and first reading, second reading, committee, consideration as amended (if amendments have been made in committee), and third reading; and it is not the practice, except in case of urgency, to advance a bill more than one stage at a sitting.—(2) **Private.** An important branch of the business annually transacted by Parliament. The total number of bills deposited for the session of '88, which relate to railways, canals, tramways, subways, and the supply of gas and water, amounted to 168, against 143 of the session of '87; in '86 the figure was 150, the number for '85 was 203, and for '84 it was 227. The total amount of money proposed to be raised in the session of '88 was £29,317,842, against £20,525,080 in the previous year, £23,434,718 in '86, £54,527,189 in '85, £67,280,666 in '84, and £94,347,729 in '83. The Parliamentary work involved in this mass of business is performed partly by a paid staff of officials, and partly by peers and members, whose services are unremunerated. The procedure on a private bill differs from that on a public bill in some important particulars, among which are that the initial proceedings are taken at fixed dates, which do not depend upon the sittings of the Houses, and usually fall in the Parliamentary recess; that a private bill can only be introduced into the House of Commons on petition first presented, which shall have been deposited in the Private Bill Office; and that an inquiry by a small committee, which may hear counsel and witnesses, is substituted for a discussion in committee of the whole House. Another point of difference is that, while at a dissolution or a prorogation all public bills which have not received the Royal assent fall to the ground, it is customary to provide when a dissolution takes place in the spring that the private bills in progress shall be taken up by the new Parliament at the stage where they had been left by the old Houses. This course was taken

by special resolution in '80; and Parliament went further in '86, when some of the bills in progress were not only renewed after the general election, but were kept alive during the short session of August and September, and through the prorogation and the recess until the commencement of the session of '87. Private bills are generally placed by promoters in the hands of gentlemen who make this branch of business their particular study, and who are known as Parliamentary agents. During recent years the system of provisional orders has been largely availed of by promoters. In the Queen's speech, delivered at the opening of the session '87, a bill was promised for improving and cheapening the process of private-bill legislation, but, owing to pressure of other business, it was never introduced. A joint committee investigated the question during the session of '88 (see Session '88, sect. 84). For detailed account of Private Bill procedure see ed. '87.

Bill of Sale. The statute law relating to bills of sale in England is contained in the Acts of 1878 and 1882. A bill of sale upon goods or chattels corresponds to a mortgage of real estate; and the above Acts are chiefly directed to prevent the fraudulent granting of bills of sale. Every bill of sale given by way of security for the payment of money is void unless made in accordance with the form in the schedule of the Act of 1882. It must be duly attested by one or more credible witnesses not being a party or parties thereto. It must be registered within seven days after making, and the registration must be renewed once every five years. When first registered, a copy of the bill, together with an affidavit of the time of such bill being given, of its due attestation, and of the residence and occupation of the person giving the same, and of every attesting witness, must be presented to the registrar and filed by him. If the bill of sale be given subject to any defeasance, condition, or declaration of trust, such defeasance, condition, or declaration must appear, if not in the body of the bill, at least on the same paper, and must be set forth in the copy filed. A transfer or assignment of a registered bill of sale need not be registered. Bills of sale comprising, in whole or in part, the same chattels, take priority in order of registration. Delays, omissions, or mistakes in the registration of bills of sale may be rectified by the order of any judge of the High Court. A bill of sale executed within seven days after the execution of an unregistered bill of sale will be held void, in so far as it affects the same chattels, unless it is proved not to have been executed for the purpose of evading the law. Any bill of sale not complying with the conditions of attestation and registration, is void as against the giver's trustee in bankruptcy, etc. A bill of sale given in consideration of a sum less than £30 is void. A bill of sale is void except as against the grantor with respect to any personal chattels acquired by him after its execution. But this provision does not apply to growing crops or fixtures or machinery subsequently acquired in substitution for fixtures or machinery specified in the bill. Chattels assigned under a bill of sale are not liable to be seized by the grantee unless (1) the grantor make default in paying the money thereby secured, or in fulfilling any condition necessary to the security; (2) the grantor become a bankrupt, or allow the

goods comprised in the bill to be distrained for rent, rates or taxes; (8) the grantor fraudulently remove, or suffer to be removed, from his premises the goods comprised in the bill; (4) the grantor refuse, without reasonable excuse, to produce to the grantee his last receipts for rent, rates, and taxes; (5) execution has been levied on the grantor's goods under any judgment. Law on, in '88. Several important decisions have been given by the Courts of Law during '88 with reference to the Bills of Sale Acts. In the case of *Thomas v. Kelly*, the House of Lords laid it down that a bill of sale, purporting to include property acquired by the grantor after the date of the bill, is altogether void. The same court also decided, in the case of *Talbot v. the Official Receiver*, that the assignment of future book debts in a bill of sale is sufficiently definite, and therefore valid. Another very important decision, going to the root of the whole policy of the Bills of Sale Acts is that of *Redhead v. Westwood*, where Mr. Justice Kay reluctantly recognised the validity of an agreement whereby the would-be borrower, instead of giving a bill of sale, sold his furniture outright, and then took it back again from the purchaser on a hire-purchase agreement, thus evading the necessity for registration, and all the formalities of the Bills of Sale Acts.

Billiards. This game each year becomes more popular. Slate tables were first played upon in this country in 1827. The season of '88 was remarkable for the large breaks made by prominent players. J. Roberts, jun., upholds his position as champion spot-barred player, while W. J. Peall is generally recognised as the spot-stroke champion. The following are the best breaks made by the players named: W. Cook, 936 all in (which stood a record for several years), and 462 spot-barred; J. Roberts, jun., 1,100 all in, 604 spot-barred; W. J. Peall, 2,143 all in (best on record), 322 spot-barred; and W. Mitchell, 1863 all in, 312 spot-barred. In the match for the spot-stroke championship (15,000 up) in March, '88, Peall beat Mitchell by 8,247 points, the former making breaks of 1,203, 2,192, 1,498, 1,125, and 2,031. In a match against F. White, Peall's chief break realised 1,314. J. Roberts, jun. (spot-barred), playing Peall (limited to 100 spot-strokes), for £1,000, made a break of 514, but lost the match by 2,627. On March 8th and 9th, Peall, playing F. White, compiled a break of 1,547, and the latter made 1,064 (spot allowed).—J. G. Sala is champion of Scotland, and on March 20th, in a contest against J. Bennett, he scored 2,012 in one break. Sala also claims the "screw-back" record, with 186 spots (previous best, 184, by Peall).—An American Tournament at the London Aquarium in May (400 up) was won by F. Brereton (received 75), securing six games. Mr. W. D. Courtney won the National Amateur Championship (Southern Division), played in London; and Mr. H. A. O. Lonsdale was successful in the Northern Amateur Championship, decided at Manchester. R. Shackelford is champion bagatelle player. On Nov. 18th, in a match of 10,000 up, spot-barred, W. J. Peall defeated J. North by 2,914 points.

Bimetallism is a term currently employed for denoting a Double Standard of Value. The standard of a country is said to be bimetallic when two metals can be used indiscriminately as legal tender for the payment of debts up to any amount, the ratio of value between these

two metals being arbitrarily fixed by law. Thus, in France the ratio of value between gold and silver is fixed at 1 to 15 $\frac{1}{2}$, in weight; that is to say, a debtor may offer his creditor either one ounce or one pound, as the case may be, in gold, or 15 $\frac{1}{2}$ ounces or 15 $\frac{1}{2}$ pounds in silver. The essence of bimetalism is, firstly, that the ratio of value between the two metals selected as standards is fixed by law; secondly, that the mints of the country are open for the coinage of both metals to any extent required by the public; and thirdly, that either metal can be used by a debtor in discharge of liabilities, however great. As a matter of fact, however, the only two metals that have been selected for the purpose of establishing a double standard have been gold and silver. In England gold and silver circulate together, and are interchangeable at a fixed rate; but silver is legal tender up to only forty shillings, and the coinage of the metal is limited by the mint. Gold, on the other hand, can be coined to any extent, and can be offered in payment for all debts. England, therefore, is a gold-monometallic country, silver being used solely as token currency. In India, and in Mexico, silver alone is entitled to unlimited coinage; gold in those countries is merely merchandise. In China, silver is not coined, but it has monetary power, and circulates by weight in ingots. Silver-monometallicism, therefore, prevails in the three last-named countries. In France, in Germany, and in the United States, gold is at the present moment entitled to unlimited coinage; silver is wholly treated as merchandise. There is, however, in each of these three countries an enormous mass of silver coins, the legal tender of which is not limited to a certain amount. This may be styled partial bimetalism. Each of these countries had originally adopted either silver-monometallicism or bimetallicism, but circumstances had compelled them to cease the free coinage of silver; hence their peculiar position of possessing neither a purely single nor a double standard. (For detailed discussion of the question see ed. '87.) The Royal Commission appointed in the autumn of '86 has recently issued its Report, which as most people expected, leaves matters very much where they were before. The Commission is unable to agree as to what course should be followed by the Government with reference to the proposed formation of a Bimetallic International Union. Of the twelve Commissioners, six consider any alteration of the present standard as "a leap in the dark," and advise that nothing should be done; whilst the other six are in favour of Bimetallism, and recommend that negotiations with other Powers should be at once commenced. The six members who take the monometallic view are: Lord Herschell, the Hon. C. W. Fremantle (Deputy-Master of the Mint), Sir John Lubbock, M.P., Sir T. H. Farrer (of the Board of Trade), Mr. J. W. Birch (formerly Governor of the Bank of England), and Mr. Leonard H. Courtney, M.P. The opposing six members who support bimetallicism are: Sir Louis Mallet, Mr. A. J. Balfour, M.P., Mr. H. Chaplin, M.P., Mr. D. Barbour (representing the Indian Government), Mr. W. H. Houldsworth, M.P. (of Manchester), and Mr. Samuel Montague, M.P. (see CURRENCY, ROYAL COMMISSION ON).

Biology. For detailed description of B. see ed. '86. Consult leading text-books on Botany

and Zoology; and for practical work Huxley and Martin's "Biology," Sedgwick's "Elementary Text-Book of Zoology," Aveling's "General Biology," G. B. Howes' "Atlas of Elementary Biology," For larger generalisations Herbert Spencer's "Principles of Biology."

Birds, Migration of. See ed. '87, and consult annual "Report on Migration" (*Simpkin & Co.*).

Birkbeck Institution, The, was founded by Dr. Birkbeck in 1823, as a mechanics' literary and scientific institute. The foundation stone of the present building, Bream's Buildings, W.C., was laid by the Duke of Albany in 1883, and the building subsequently opened formally by the Prince of Wales.

Birmingham and Bristol Ship Canal. This is a modification of a scheme of some antiquity, the present idea being to open up a waterway between the Midland metropolis and the Bristol Channel for vessels of 200 tons. A committee was appointed in 1886 to see what could be done in the matter, and in Jan. '87 they decided to approach the Sharpness New Docks Co. and Gloucester and Birmingham Navigation Co., with a view to obtaining their general approval and support. On April 27th the *Times* published an interesting article on the subject under the heading "From the Midlands to the Sea," wherein the "long-felt want" of some such outlet for the heavy goods of the Black Country was set forth. (For details as to comparative costs of carriage of ironware, timber, grain, etc., and engineering difficulties and proposals, etc., see ed. '88.) The project was well pushed during '88. In March it was reported that the Birmingham Town Council had appointed a committee to apply to Parliament, either to insert clauses in the *Railway Rates Bill*, then under consideration, or to introduce a separate measure authorising the formation of canal trusts, etc. A deputation waited on the President of the Board of Trade on May 15th, to urge the desirability of improving canal communication between the Midland counties and London, Hull, Liverpool, and other ports. The whole of the coal and iron industries of Staffordshire were represented, besides one or two corporations, and the associated Chambers of Commerce. In the end, Sir M. Hicks-Beach said he appreciated the importance of the position, but he was afraid of legislation that might encourage corporations to speculate.

Birmingham and Trent Canal. A new scheme is now under consideration—viz., to connect Birmingham with the river Trent by means of a short canal 80 ft. wide, and to widen and dredge that river to the point at which the Lower Trent navigation commences, the traffic to be carried on by fleets of barges drawn by tugs. It is stated that the Marquis of Anglesey has navigation rights for 20 miles over a stretch of the Trent, with free access to the German Ocean, and that his lordship is willing to make over these rights to a new company. In effect the scheme would give Birmingham a waterway 7 ft. to 8 ft. deep, and 80 ft. wide at least, to the North Sea. It is estimated that, at the rate of 8s. per ton, the new company would be able to convey goods to and from the estuary (170 miles) in twenty-four hours, the saving of carriage rates being very great. In the second week in June '88 the Birmingham manufacturers held a meeting, and passed a resolution calling upon the Government to inquire into

the canal system without delay, with a view to its acquirement by the State. It was further suggested that a main through canal route, between the Thames and the Mersey, the Severn and the Trent, would be the most efficient means of promoting the commercial interests of the country in this matter, and such a scheme was recommended.

Birmingham, King Edward's School, comprises a grammar school for boys, a grammar school for girls, a high school for boys and a high school for girls. Founded 1552, reorganised 1878; income, £25,000. Numerous scholarships and exhibitions both for boys and girls. The boys number over 1,000. Headmaster, Rev. A. R. Vardeir, M.A.

Birmingham Liberal Association. See NATIONAL LIBERAL FEDERATION.

Births. The following list gives the principal births which have taken place from Jan. 1st to Nov. 27th, '88.

Acland, w. of Capt. W. A. Dyke, R.N., s. (May 16)
Acland, w. of Capt. F. E. D., late Roy. Art., d. (June 14)

Adaway, Lady Anne, d. (Sept. 1)

Addison, w. of the Mayor of Portsmouth, s. (June 15)

Adelmannsefelden, Countess Rudolf Adelmann

von (née von Zeppehn), d. (Aug. 12)

Astley, Lady Florence, s. (March 3)

Austria, Archduchess Maria Theresa, w. of Archduke Charles Stephen, of, d. (Jan. 2)

Bailhe, w. of Lt.-Col. C. D., s. (June 25)

Bellef, Baroness Roissard de, s. and heir (Feb. 18)

Bentinck, Countess, s. (June 21)

Berry, w. of Sir Graham, d. (Jan. 26)

Bertie, Hon. Mrs. George, d. (April 29)

Bertie, Lady Caroline, s. (Aug. 12)

Bevan, Hon. Mrs. D. A., d. (June 9)

Birkett, w. of Daniel Maule, M.A., d. (Feb. 4)

Bosanquet, w. of F. A., Q.C., d. (June 16)

Bridgeman, Hon. Mrs. Francis, s. (July 25)

Bridges, Lady Grace, d. (March 16)

Brodie, Lady, s. (March 6)

Brodrick, Lady Hilda, s. (Feb. 21)

Burke, w. of H. Farnham, F.S.A., d. (Feb. 17)

Butley-Massey, w. of Lt.-Col. Hon. L., d. (May 29)

Buxton, w. of Sydney, d. (April 17)

Calthrop, w. of John Clayton, s. (posthumous)

(April 11)

Cameron, w. of Edward John, President of the Virgin Islands, s. (Jan. 10)

Campbell, w. of Capt. Sir Guy, Bart., 60th Rifles, d. (March 18)

Cariati, Princess (née d'Ehrenhoff), s. (April 23)

Carpenter, w. of Arthur B. M.B., of Wykeham

House, Bedford Park, Croydon, d. (June 10)

Castlerosse, Viscountess, d. (Jan. 1)

Chalmers, w. of Sir David Patrick, Chief Justice

British Guiana, s. (July 1)

Champneys, Mrs. Basil, d. (March 6)

Churchill, Lady, of a s., who survived only a

few hours (Jan. 18)

Clarke, w. of Lt.-Col. Courtney, d. (June 21)

Clinton, Lady, s. (July 1)

Clonourry, Lady, d. (March 28)

Coleridge, w. of Hon. Stephen, s. (Feb. 17)

Crespigny, Lady Champion de, s. (June 14)

Cross, w. Hon. William Henry, d. (Aug. 1)

Curtis, Lady, d. (April 14)

Dalrymple, Viscountess, d. (Feb. 23)

Daunt, w. of Maj.-Gen. W., C.B., d. (March 8)

Deane, w. of Prebendary, d. (May 4)

Denmark, Princess Valdemar of, s. (Aug. 13)

Digby, Lady Emily, d. (July 11)

Douglas, w. of A. Akers, d. (Feb. 25)

Drummond, Lady Katherine, *d.* (July 8)
 Brysdale, *w.* of Dr. Alfred. S. (March 1)
 Hurst, *w.* of Canon, S. (July 23)
 Abington, Viscountess, S. (June 14)
 Eohlin, *w.* of Comm. Frederic, R.N., *d.* (Feb. 21)
 Eden, Lady, S. (Oct. 6)
 Elgin, Countess of, S. (June 11)
 Elliott, *w.* of Sir Charles Alfred, K.C.S.I., S. (July 27)
 Elphinstone, *w.* of Maj.-Gen. Sir Howard, *d.* (May 27)
 Falkland, Viscountess, *d.* (Sept. 29)
 Farren, *w.* of Gen., C.B., S. (Aug. 5)
 Fildes, *w.* of Luke, R.A., S. (April 13)
 Firth, *w.* of J. F. B., M.P., S. (June 20)
 Fraser, *w.* of Maj.-Gen. G. W., B. S. Corps, S. (May 22)
 Freyne, Lady de, S. (Sept. 6)
 Gainsborough, Countess of, S. (April 10)
 Garnier, *w.* of Commander Keppel, R.N., *d.* (March 22)
 Germany, Empress Augusta Victoria, S. (July 28)
 Giffard, *w.* of George A., Commander R.N., H.M.S. *Wanderer*, *d.* (Feb. 11)
 Gladstone, Mrs. S. E., daughter-in-law of the ex-Premier, S. (Oct. 28)
 Glyn, Lady Mary, *d.* (Feb. 22)
 Goldsworthy, *w.* of Maj.-Gen., *d.* (March 4)
 Gordon, *w.* of Major J. M., Dep.-Assist. Adj. and Quarterm.-Gen. Natal, *d.* (Jan. 12)
 Graham, *w.* of Commander Walter H. B., R.N., H.M.S. *Ready*, *d.* (Feb. 13)
 Graham, Lady Margaret, S. (April 8)
 Granby, Marchioness of, *d.* (April 24)
 Greece, Queen of, S. (Aug. 10), at Russian Imperial Castle, Pavlovsk
 Greene, Lady Lily, S. (June 8)
 Grenfell, Mrs. W. H., Taplow Court, S. (Mar. 30)
 Grosvenor, Hon. Algernon, *w.* of, *d.* (Sept. 5)
 Guise, Lady, S. (Sept. 18)
 Hales, *w.* of Maj.-Gen. Arthur, late Col. commanding 1st Batt. Roy. Inniskilling Fusiliers, *d.* (June 30)
 Hamilton, Lady Victoria, *d.* (March 26)
 Hammond, *w.* of Lt.-Col. A. G., V.C., *d.* (June 7)
 Harcastle, *w.* of Frank, M.P., *d.* (March 12)
 Head, *w.* of Sir R. G., Bart., S. (June 2)
 Henderson, *w.* of J. Dalgety, S. (Feb. 3)
 Hoare, *w.* of Charles R. Gurney, *d.* (Feb. 13)
 Holmes, *w.* of Rt. Hon. Justice, S. (July 24)
 Hornaby, *w.* of Lt.-Col. R.A., *d.* (March 5)
 Hozier, Lady Blanche, S. and *d.* (April 2)
 Hubbard, *w.* of Hon. Egerton, M.P., S. (July 1)
 Hughes, *w.* of Prof. T. McKenny, S. (June 16)
 Humboldt, *w.* of Baron H. P. von, Assessor to the German Consulate General, S. (April 30)
 Hutton, *w.* of Lt.-Col. Fitzmaurice, S. (July 7)
 Inchiquin, Lady, *d.* (March 4)
 Kemble, *w.* of Com. Horatio F., R.N., S. (Feb. 13)
 Key, Lady Cooper, S. (posthumous) (June 19)
 King, *w.* of Lt.-Col. C. Cooper, S. (July 19)
 Knollys, Lady, *d.* (Feb. 6)
 Leach, *w.* of Col. Edward Pemberton, V.C., C.B., Roy. Eng., *d.* (June 30)
 Leinster, Duchess of, S. (Sept. 21)
 Leitrim, Countess of, *d.* (March 22)
 Lewisham, Viscountess, S. (March 14)
 Lighton, *w.* of Sir Robert, Bart., *d.* (Aug. 24)
 Limerick, Countess of, S. (Oct. 16)
 Little, Lady Guendolen, *d.* (Sept. 3)
 Lowe, Lady Lucy Drury, *d.* (Oct. 22)
 Lubbock, Lady, S. (June 10)
 Macartney, Lady, S. (July 13)
 Maitland, *w.* of Maj.-Gen. E., C.B., R.A., S. (May 11)
 Mather-Jackson, *w.* of Sir H., Bart., *d.* (May 31)

Maxwell, *w.* of Sir William F., of Cardoness, *d.* (May 30)
 McLeod, *w.* of Maj.-Gen. Sir John, S. (Aug. 26)
 Mills, Hon. Mrs. Charles, S. (April 2)
 Monck, Lady Edith, S. (Nov. 3)
 Monson, Lady, *w.* of Hon. Sir Edmund Monson, K.C.M.G., H.M. Min. at Athens, S. (Oct. 28)
 Montpensier, Infanta Eulalia, *w.* Prince Antonio, S. of the Duc de, S. (Nov. 5)
 Merston, *w.* of Lt.-Col. Macdonald, S. (July 18)
 Morgan, *w.* of Rev. Henry Arthur, Master of Jesus Coll., Camb., *d.* (March 30)
 Mostyn, *w.* of Rev. and Hon. H. W., *d.* (Mar. 5)
 Naiah, *w.* of Lord Justice, *d.* (June 19)
 Newark, Viscountess, S. (July 25)
 Newdigate, *w.* of Maj.-Gen. H. R. L., C.B., *d.* (June 17)
 Norman, *w.* of J. E., solicitor, Nottingham, two *d.*'s and a S. (March 7)
 Northcote, *w.* of Hon. and Rev. A. F., *d.* (Apr. 29)
 Pienardi, Countess Albertoni, S. (May 7)
 Pigott, *w.* of Commander, H.M.S. *Cruiser*, *d.* (Feb. 28)
 Pitt-Lewis, *w.* of George Q.C., M.P., S. (Apr. 28)
 Ponsonby, Mrs. Edward, *d.* (June 15)
 Powerscourt, Viscountess, *d.* (Jan. 13)
 Prideaux-Brune, Hon. Mrs. Chas., *d.* (Oct. 16)
 Raashleigh, Lady Edith, *d.* (May 13)
 Ricci, *w.* of James Heiman de, S. (April 14)
 Robertes, Lady, *d.* (Nov. 21)
 Roberts, Hon. Mrs. Page, *d.* (July 19)
 Robinson, Lady S. (July 13)
 Rodney, Hon. Mrs., *d.* (Sept. 25)
 Roland, Hon. Mrs. Leslie Melville, *d.* (Aug. 7)
 St. Davids, *w.* of Bishop of, *d.* (July 4)
 St. John, *w.* of Frederick R., H.M. Envoy Ext. and Min. Plenip. to Servia, S. (March 26)
 Salomons, Lady, *d.* (Oct. 31)
 Saltun, Lady, S. (Sept. 7)
 Sassoon, *w.* of Joseph S., S. (March 11)
 Selwyn, *w.* of Rev. E. C., M.A., Headmaster of Uppingham, S. (Feb. 25)
 Sharpin, *w.* of Archdeacon, *d.* (May 1)
 Sladen, Lady Sarah, S. (May 28)
 Smith, *w.* of Maj.-Gen. Percy, R.E., *d.* (July 20)
 Smyth-Pigott, *w.* of Cecil, *d.* (April 28)
 Spartali, *w.* of Demc, S. and *d.* (July 10)
 Staurope, Marchioness de, S. (Sept. 29)
 Stafford, Marchioness of, S. (Aug. 29)
 Stewart, Lady Mary, S. (March 29)
 Stewart, *w.* of Lt.-Col. Harry H. A., S. (Feb. 25)
 Strutt, Hon. Mrs. Edward, *d.* (March 25)
 Thomas, Lady Isabelle, S. (Aug. 24)
 Thompson, *w.* of Lt.-Col. Royal Scots, S. (Jan. 19)
 Torpichen, Lady, S. (April 20)
 Trafford, Hon. Mrs. E. S., S. (March 18)
 Turner, Lady Henrietta, S. (April 8)
 Tweeddale, Marchioness of, S. (Nov. 2)
 Vane, Lady Catherine, S. (Oct. 28)
 Vernon, Lady, S. (Sept. 28)
 Vivian, Lady Jane, *d.* (July 18)
 Waldstein, Countess, *w.* of Col. M. D. Treherne, *d.* (July 7)
 Walker, *w.* of Prof. Hugh, *d.* (Jan. 28)
 Walker, *w.* of Maj.-Gen. Foister, C.B., C.M.G. S. (April 14)
 Westernagen, *w.* of General von, *d.* (May 8)
 Westminster, Duchess of, *d.* (Feb. 5)
 Willis, *w.* of E. Cooper, Q.C., *d.* (March 2)
 Wodehouse, Lady, *d.* (June 16)
 Wolmer, Viscountess, *d.* of the Prime Minister, S. (Sept. 26)
 Wontner, Blanchard, *w.* of, (April 21)
 Wrightson, *w.* of Prof., S. (March 1)
 Wykeham-Musgrave, *w.* of W. A., of Thame Park, S. (April 27)

Bishop. See CHURCH OF ENGLAND and DIOCESE.

Bishop of London's Fund, The. Instituted (1863) for a term of ten years, as a means of helping to provide for the spiritual wants of London and its suburbs. In the ten years ending Dec. 31st, 1873, from the foundation of the fund, £467,909 was subscribed; and it was determined, at the commencement of 1874, that the fund should be continued as a permanent diocesan institution for the following objects:

—(1) Missionary clergy to work under the bishop's control, and to be confined in their work to particular parishes; (2) Scripture readers, mission women, and other lay workers; (3) The housing of the clergy; (4) Mission and school buildings; (5) In special cases assistance towards endowment; (6) Church building; and (7) Generally such other objects as it may be found desirable to promote from time to time. It is estimated that some £50,000 per annum will be wanted to meet the current annual needs of the diocese. **Offices**, 46a, Pall Mall, S.W. **President**, the Lord Bishop of London; **Hon. Secs.**, Messrs. E. Thornton and John E. Nelson. **Clerical Sec.**, Rev. H. Kirk, M.A.

Bishops, Terms relating to. **Bishopping**, a term sometimes applied to Confirmation. **Bishop's Charge**, the instructions of a bishop to the clergy and laity at his Visitation (*v. infra*). **Bishop's Court** is held in the cathedral of each diocese, and dispenses the canon law. The **Bishop's Chancellor** is the judge. In large dioceses Consistory Courts are held by the Bishop's commissaries. **Bishop's Pastoral**, a letter addressed by a bishop to the clergy and laity of his diocese on some special occasion. **Bishop's Ring**, worn by all bishops, signifies his spiritual marriage to his see. **Bishop's Visitation**, the summons to meet their bishop issued to his clergy and laity. (The canonical age for the consecration of a bishop is thirty years.)

Bismarck Archipelago. A group situated north of eastern part of New Guinea, including islands formerly called New Britain, New Ireland, and New Hanover. Area 18,150 sq. m., pop. 188,000. They are mountainous but fertile, inhabitants intractably savage, and are a German possession. See COLONIES OF EUROPEAN POWERS.

Bismarck-Schönhausen, Count Herbert von, son of Prince Bismarck, b. at Berlin Dec. 28th, 1849. Is a major in the German army, has served the German empire in various diplomatic capacities, and was embassy secretary in London, and minister at the Hague. He sits in the Reichstag as one of the members for Schleswig-Holstein, and is the head of the German Foreign Office. Created a Privy Counsellor with the title of Excellency. Visited England during '88. In October Count H. B. received from the Emperor of Austria the high distinction of the **Grand Cross of the Leopold Order**; and M. Tisza (*q.v.*) gave a dinner in his honour on the occasion of the Emperor William's visit to Austria-Hungary.

Bismarck-Schönhausen, Otto Eduard Leopold, Prince; created Count September 16th, '65, and Prince (Fürst) von Bismarck, March '71, the most powerful statesman of Europe in modern times; b. of an old noble family of the "Mark" (Brandenburg) at Schönhausen, April 1st, 1815. He led a somewhat tempestuous youth, in the course of which he studied and fought duels at the universities of Göttingen and Greifswald, spent some time in the army,

and subsequently settled down as a country gentleman, managing the family estates and discharging the office of inspector of dykes. Brought up in the political faith of the Junkers, or Prussian Tory squirearchy, he became (46) a member of the Provincial Diet of Saxony, and of the Prussian Diet, in which he first attracted attention by his fiery speeches in defence of the old monarchical party. During the revolutionary period of 1848 the services he rendered in the public debates to the Conservative cause so impressed the Prussian Ministry that he suddenly found a diplomatic career opened to him. The representation of Prussia in the Diet of the old German Bund at Frankfort falling vacant, the Premier introduced Herr von Bismarck to the King, who, not without misgiving, appointed him to that important post. Here he remained for several years, discharging the arduous duties of his office with an ability which won for him the admiration of the Prussian court. The remarkable series of private despatches which he addressed to the Prussian Premier, and which have recently been given to the world, are models of diplomatic skill and statecraft. Austria was then all-powerful in the German Bund; and, supported by nearly all the other German states, had systematically prevented Prussia from exercising that influence in the councils of the Confederation to which, from her position as by far the greatest of the purely German states, she was justly entitled. From the time of Bismarck's appearance, however, the voice of Prussia began to have increasing weight. The successful audacity with which he checkmated Austrian intrigue at Frankfort was the source of constant irritation at Vienna, and naturally tended to produce some estrangement between the Austrian and Prussian courts. Herr von Bismarck was sent as ambassador to St. Petersburg ('59-62). In May '62 he was promoted to the then most difficult and important post in the diplomatic service—that of Prussian ambassador at Paris, where Napoleon III. was then in the plenitude of his power. Five months later he was summoned to Berlin, and made First Minister of the Prussian Crown. The first ten years after Herr von Bismarck assumed power are amongst the most remarkable in modern European history. Within that brief period he had humbled the Austrian empire, destroyed the French empire, and created the new German empire. He remodelled the map of Europe, dismembering Denmark and France. He enlarged the frontiers of Prussia by the annexation of various provinces, including the dominions of three dethroned German princes; and succeeded in placing Germany, which had previously been the weakest and least respected of the great powers, at the head of all the states of Europe. His first task as Minister President was, however, one from which a statesman of less resolution and of less firm belief in the rights of the Crown, might well have recoiled. The Chamber of Deputies had refused to pass the military budget, as it demanded increased grants, which were required to carry out the reorganisation of the army in accordance with the ideas of the King. The House uniformly refused these supplies, and for several sessions heated debates and violent scenes, in which the Minister President and the Liberal leaders were the principal antagonists, were of constant occurrence. In spite of the rejection of

the budget by the Chamber the Government spent the money, and the House threatened Von Bismarck with impeachment for violating the Constitution. In the midst of this quarrel a Congress of all the Princes of Germany was invited to meet at Frankfort to reorganise the German Bund; but the King of Prussia, by advice of his minister, refused to appear; and the project, although discussed and approved by five-sixths of the German sovereigns, came to nothing. The German Bund having, at Herr von Bismarck's instigation, resolved to invade the Elbe duchies in support of the claims of the Duke of Augustenburg, Austria, Prussia and Saxony, were intrusted with the execution of the task; and a war broke out in 1864 with Denmark, resulting in the loss to her of the duchies of Schleswig-Holstein and Lauenburg. Instead of giving them up to the Duke, Von Bismarck, now created Count, determined, if possible, to annex them to Prussia. The Austrian and Saxon troops were recalled, and the quarrel eventually led (in '66) to a war between Prussia and Austria, who was joined by Bavaria, Hanover, Hesse Cassel, Hesse Darmstadt, and Nassau. The arms of Prussia were victorious: Austria suffered a crushing defeat at Sadowa (Königsgrätz), in Bohemia. Hanover and the South German states were likewise vanquished; and the war, which was over in seven weeks, led to the treaty of Nikolsburg, by which Austria was permanently excluded from the German Bund, and Hanover, Nassau, Hesse-Cassel, and Frankfort, as well as Schleswig-Holstein and Lauenburg, were annexed to Prussia; and the North German Confederation, with Prussia at its head, was established in place of the old Bund, while with the South German states an offensive and defensive alliance was concluded, giving the King of Prussia supreme command of all their troops in time of war. Of the North German Bund Count von Bismarck was created Chancellor, and President of the Federal Council. In addition to these successes, in consideration of which the Prussian House of Deputies passed a bill of indemnity, forgiving his former breaches of the Constitution, Count von Bismarck obtained great popularity for creating a representative branch of the new Federal Government, on the basis of manhood suffrage. The Diet, which first assembled in 1867, consisted of delegates representing a nation of 29,000,000 Germans. Napoleon III., jealous of the growing power of Prussia, attempted to obtain some compensation for France by the annexation of the Grand Duchy of Luxemburg, which Holland had consented to cede to him. But in this scheme the French Emperor was thwarted, chiefly by the energetic attitude of Count von Bismarck; and in the end the Duchy was declared neutral territory, and the fortifications of the capital were demolished. In 1868 Count von Bismarck withdrew for some months from active public life, but he was in power again before the end of the year. Already for some time the biography of Count von Bismarck had practically been the history of his country; and, great as were the events through which he had conducted Germany, he was destined to lead her shortly through greater events still: notably by the defeat of the French in 1870, the dispute growing out of the offer of the crown of Spain to Prince Leopold of Hohenzollern. The King of Prussia, as the head of the family, had consented to his acceptance

of the honour, afterwards revoked. After a campaign consisting of an unbroken series of victories, largely due to the strategic genius of Count von Moltke (g.v.), King William was able, through his Chancellor, to dictate terms of peace to his helpless assailant. Of the events in Prince Bismarck's life subsequent to the Franco-German war, it may be mentioned that he presided at the Congress of Berlin ('78), the Berlin Conference (1880), and the Congo or Colonial Conference (1884). In his domestic legislation Prince Bismarck has been far less fortunate than in his diplomatic negotiations. In his economical policy, after beginning as a Free Trader he has become a Protectionist. He first largely reduced the customs tariff, and ten years later imposed heavier duties than ever. While he thus alienated the Liberals, his May Laws, interfering to an unwise extent with the religious liberty of the Catholic priesthood, led to a long and bitter struggle with the Roman Church, and made all its adherents his bitter enemies. Equally unfortunate was his policy with regard to the Social Democrats, his Draconic measures against whom have produced the profoundest discontent among the working classes of the large cities. The measures he has sanctioned against the Polish settlers in the eastern provinces of Prussia, formerly belonging to Poland, savour of harshness. In the course of his career Prince Bismarck has given utterance to expressions which have since become familiar in every civilised tongue. In the heat of the controversy with the Catholics he once said, "We shall never go to Canossa"; but, like the Emperor Henry IV. to Pope Hildebrand (Gregory VII., the Great), he has since found it expedient to send an ambassador to the Vatican (Feb. '86), and to repeal the harshest portion of the May Laws. He had previously (Dec. 31st, '85) received the decoration of the Order of Christ from the Pope. Prince Bismarck is often called the man of "iron and blood," because in one of the first speeches he delivered as Minister President (in '62) he said that "it was not by speeches and majority votes that the great questions of the time would be settled, but by iron and blood." The Danish, the Austro-German and the Franco-German wars form a significant commentary on this expression. Other phrases attributed to him are that "Might goes before Right," the definition of a journalist as "a man who has failed in his profession in life," and many others. Prince Bismarck's name was, two years ago, very prominently before the public mind in connection with the Triple Alliance between Germany, Austria, and Italy, which is understood to be directed against a possible alliance between Russia and France against the German Powers. It is believed that the terms of the Triple Alliance were arranged at a personal interview between Prince Bismarck and Signor Crispi in October, '87, and embrace among other things the invasion of France by Italy in certain eventualities. Subsequently Europe was profoundly moved by the official statement in a Berlin paper that during an interview between Prince Bismarck and the Tzar, on the latter's return from Copenhagen to St. Petersburg, the German Chancellor informed His Majesty that he had been the dupe of some Orleans clique, who had forged a diplomatic correspondence and forwarded it to the Tzar, the object of which was to show that Prince

Bismarck was intriguing against Russia in Bulgaria. Since the death of the Emperor William I. in March, '88, Prince Bismarck has repeatedly sought to conciliate Russia. During the brief reign of the Emperor Frederick he successfully opposed the contemplated matrimonial alliance between the Princess Victoria, daughter of the Emperor, and Prince Alexander of Battenberg, late Prince of Bulgaria, on the ground that it would be objectionable to the Tzar, though it was understood that both the Emperor and Empress Frederick personally approved of the match. It was doubtless on the advice of Prince Bismarck that the present Emperor, immediately after his succession, arranged an interview with the Tzar at Peterhof. A few weeks later, viz., in August, an interview took place between the Chancellor and Signor Crispi, the Italian Premier. This interview following immediately upon the dispute between Italy and France over the Massowah question gave rise to much speculation, it being generally believed that the object of it was to strengthen the Triple Alliance, and especially to emphasise the understanding between Germany and Italy, in view of a possible rupture of either of those Powers with France. The general aim of Prince Bismarck's overtures to Russia, and his policy with regard to the Triple Alliance, is evidently to effect the isolation of France. The publication of the late Emperor Frederick's Diary in September last put a new light upon some of the Imperial transactions in which Prince Bismarck has been engaged. Much sensation was created both in Germany and elsewhere by the revelation of the diary respecting the authorship of the idea of German Unity. The late Emperor claimed to have proposed this policy, and to have experienced great difficulty in persuading Prince Bismarck of its practicability (see FREDERICK, EMPEROR). The degree of D.D. has recently (Nov.) been conferred on Prince B. by the University of Geissen. Two attempts have been made on the Chancellor's life: the first by a lunatic named Blind, on May 7th, '66, at Berlin; and the second on July 13th, '74, by Kullmann, at Kissingen. Of the extensive literature on Prince Bismarck the chief original sources in German are Poschinger's edition of Prince Bismarck's Frankfort Letters and Despatches; his Correspondence, by Köppen; his Political Life and Labours, and his Speeches, by Hahn; his Biography, by Hezekiel, and the works of M. Busch entitled "Bismarck and his People." There is an excellent English work, "Prince Bismarck," by Mr. Charles Lowe.

Bissao and Casamansa. Portuguese stations on west coast of Africa, between Gambia and Sierra Leone. Area 26 sq. m., pop. 9,282. The island of Bissao was the great stronghold of the Portuguese slave trade. See COLONIES OF EUROPEAN POWERS.

Black, William, novelist, b. at Glasgow 1841. Commenced his career as a journalist, and was successively connected with the *London Morning Star* (acting as special correspondent during the war between Prussia and Austria in 1866), and the *Daily News* (of which he was assistant editor). He is the author of "*A Daughter of Beth*," "*A Princess of Thule*," "*Madcap Violet*," "*Adventures of a House Boat*," and ('88) "*In Far Locharber*," for *Harper's Magazine* (q.v.).

Blackfriars New Railway Bridge. This new bridge and the new station, St. Paul's, in Queen Victoria Street, were opened for public

use without ceremony May 10th, 1886. The London, Chatham, & Dover Railway Company have therefore now four City stations—Holborn Viaduct, Snow Hill, Ludgate Hill, and St. Paul's—served by seven lines over the new and four over the old bridges. For description of the new bridge see ed. '87.

Blackie, John Stuart, b. at Glasgow, 1809; son of a banker at Aberdeen; appointed Professor of Humanity at Marischal College, Aberdeen (1842), and Professor of Greek in the University of Edinburgh (1851). Author of a number of poems and prose works, of which the most popular, perhaps, is "*Self-Culture*." An unconventional style, with ready wit, characterise the Professor both as a lecturer and a writer. He retired from his professorial duties in 1882. His latest work is a "*Life of Burns*," published in Feb. '88.

Black-Letter Saints' Days. See COMMEMORATION, DAYS OF.

Black Mountain War. See BURMAH.

Black Rod, Gentleman Usher of the. An officer of the House of Lords appointed by the Crown, who assists at the introduction of peers, has charge of the arrangements for the maintenance of order below the bar, near the Throne, and in the strangers' gallery, and who summons the Commons whenever their attendance is required in the House of Peers. When he, or his deputy, the Yeoman Usher, performs the last-mentioned duty, he knocks thrice at the door of the House of Commons with his rod of office; and on being announced and admitted, "commands" the immediate attendance of the honourable House, if Her Majesty is personally present in the House of Peers, but only "desires" their immediate attendance if they are to wait upon the Lords Commissioners. The present holder of the office is Admiral Hon. Sir J. R. Drummond, G.C.B.

Black Sea Conference. The, was a Conference of the European Powers called to meet in London in January 1871, in consequence of a declaration by Russia that she "denounced" her contract in the Treaty of Paris 1856, with regard to the navigation of the Black Sea.

Black Sea (Port of Novorossisk). The new harbour works here are expected to be completed by the end of '88, the total cost being estimated at 3½ millions of roubles. The protection embankment will be 3,500 feet long, consisting of heavy hewn stones in cement; the length of the mole 2,800 feet, and its height from 16 to 24 feet, while at the end will be a lighthouse. A railway is to be laid along the mole and the embankment. These works in great measure owe their existence to the opening up of the fertile Kuban district.

Blackwall Tunnel. As far back as 1882, amongst the plans before the Metropolitan Board of Works towards a settlement of the vexed question of providing communication across the Thames below London Bridge, was a tunnel between Blackwall and the vicinity of Greenwich and Woolwich. In 1884 Parliament rejected the scheme, but the pressure of public opinion became so great that, although the Tower Bridge works (which see) had been commenced, in August 1886 the Board determined that another year should not pass without another effort being made to carry out some subway scheme. On a vote the Blackwall site was chosen in preference to another at Shadwell which was proposed, and the bill

accordingly lodged for the session of 1887. The Board's bill passed through both Houses of Parliament in the ordinary way during the session of '87, the third reading taking place in the Lords on July 28th. The annual report of the Metropolitan Board of Works, published later in the year, gives an official description of the new artery, beginning on the north opposite the East India Docks, and on the south opposite the Greenwich workhouse, the land ways being partly covered and partly open. Towards the end of the year (Nov. 16th) it was stated that the Metropolitan Board of Works intended next session to apply for a bill empowering them to construct a new tunnel instead of the one authorised by the Act of '87. It was contemplated to make the tunnel more to the west. In the House of Commons, Feb. 21st, '88, in reply to Mr. Board, Mr. Tatton Fegerton, on behalf of the Metropolitan Board of Works, stated that negotiations had been commenced with the owners and occupiers of property, and the work would be begun shortly. Again it was stated in the House of Commons on June 15th that the Metropolitan Board would be ready to enter into the first contract as soon as the question of rehousing the artisans displaced on the north approach had been decided by the Home Secretary. The general plans had to be approved, but the first tunnel could be made in a year after commencement. The Bill was read a third time in the House of Lords and passed on June 21st, and received the royal assent on June 28th.

"**Blackwood's Magazine**" (28. 6d.), founded 1817. Conservative in politics, it includes in its pages original articles and reviews on the social and political questions of the day, notices of travels, biographies and subjects of general interest, with a serial novel. Amongst the contributors to its pages have been Prof. Wilson (Christopher North), De Quincy, Lord Lytton, George Eliot, and other distinguished writers. **Office:** 45, George St., Edinburgh.

Blaine, James Gillespie, American statesman; b. at West Brownsville, Penn., '30. Educated at Washington Coll., where he graduated with distinction. He was for a short time Professor of Mathematics in the Kentucky Military School, but subsequently became editor of the *Portland Daily Advertiser*. Mr. B. since his marriage ('53) has resided in Augusta, Maine, and ('58-62) was a prominent member of the legislature of that State. In '62 he was elected to Congress, and was Speaker of the House of Representatives ('69-74). In '76, '80, and '84 he was an unsuccessful Republican candidate for the Presidency. On the last occasion Mr. B. polled 4,845,022 popular votes to 4,913,975 recorded for Mr. Cleveland (*q.v.*); but of the electors' votes in the several States he polled only 182 against Mr. C.'s 219. Mr. B. lost the selection through the opposition of a section of his own party known as the "**Mugwumps**" (see AMERICAN POLITICAL PARTIES). Mr. B. is the author of "**Twenty Years in Congress**." He is a confirmed Protectionist. He declined to be nominated for the Presidency last year, but strenuously supported the Republican candidate. Mr. B., in company with Mr. Carnegie (*q.v.*), made a coaching tour through England and Scotland last summer.

Blake, Sir Henry Arthur, K.C.M.G., entered the Royal Irish Constabulary in '59, and was a resident magistrate from '76 to '82, when he was appointed one of the five special resident

magistrates to concert and carry out measures for the pacification of Ireland. He had executive charge of the E. division. In '84, he was appointed Governor of the Bahamas, and three years later Governor of Newfoundland. On the death of Sir Anthony Musgrave, Governor of Queensland, in Sept. '88 Sir H. A. Blake was selected as his successor, his appointment causing much opposition on the part of the colonists. It was announced by Lord Knutsford, in the House of Lords (Nov. 27th), that Sir H. B. has requested to be relieved of the appointment.

Bland Act. See BIMETALLISM, ed. '87.

Blantyre A mission-station in Africa, founded in 1876 under auspices of Established Church of Scotland. Situated on highlands between Lake Shirwa and Shiré river. It is becoming the centre of much independent British settlement and trade. Progress rapid. Already has longer and better roads than exist in the old Portuguese colonies on the coast. Communications by steamers up Zambesi and Shiré, and by newly opened overland route to Quillimane. See NYASSA, ZAMBESI, etc.

Block System. See RAILWAY SIGNALLING, ed. '88.

Bloemfontein. Cap. Orange Free State (*q.v.*).

"Blue Books" are the official reports, papers and documents printed for Government, and laid before the Houses of Parliament. They are uniformly stitched up in dark blue paper wrappers. **Germany**, white; **France**, yellow; **Italy**, green; **Spain**, red; **Portugal**, white. Consult article B.B. *Chambers' Encyclopaedia*. See also PARLIAMENTARY PAPERS.

Blue Ribbon Gospel Temperance Movement. An unsectarian Mission to promote Christianity and total abstinence, originated by Francis Murphy, in America, where it was known as the "**Murphy Movement**." Introduced into this country by William Noble, and inaugurated in the Standard Theatre, Shore-ditch, on Feb. 10th, 1878. The title of "Blue Ribbon Army" (the last word of the title was dropped '83), and the "Blue Ribbon" badge were adopted, and the work established in the Hoxton Music Hall, where nightly meetings have since been held. One million pledge cards were issued during the first three years, and the movement spread throughout the United Kingdom. Missions are conducted in all the principal towns. Returns show that 80 per cent. of converts adhere to the pledge. In Scotland and Ireland the movement has been successfully carried on, and it has been extended to the Continent and the Colonies with satisfactory results. **President**, Mr. W. I. Palmer, J.P., of Reading. **Organ**, *Gospel Temperance Monthly*; **Office**, 134, Hoxton Street, N.; **Gen. Sec.**, J. T. Rae.

Blum Pasha, C.B. Austrian subject; was a banker's clerk, and subsequently manager of the Austro-Egyptian Bank at Alexandria; became Secretary to Ismail Pasha Mueftish. **Egyptian Minister of Finance** '73-76, and subsequently **Secretary of Finance** '76-78. On the fall of the European ministry under Ismail's *coup d'état* in '78, he followed Sir Rivers Wilson out of office. On the accession of Tewfik he was named Under-Secretary of State for Finance, which office he has since held. Invariably courteous under all circumstances, perfectly upright and omnivorous of work, he is one of the most valuable officials of the Egyptian Government.

Blumenthal, Lieutenant-General Leonard von. A great strategist; b. 1810 at Schwedt-on-the-Oder. He studied at the Military Academies of Culm and Berlin. Was successively appointed Second Lieutenant in the Guard (Fusilier Guards) 1827; Adjutant to Landwehr (1837); Premier Lieutenant of the General Staff (Topographical Division) 1846; and Captain of the General Staff 1849. He was made Chief of the Staff of the Army in Schleswig-Holstein in recompense for his services in that war (1849); Major in the Grand General Staff (1853); Chief of the General Staff of the Mobile Army Corps against Denmark (1863); Major General (1864); Chief of the General Staff of the second army, which invaded Bohemia (1866); Chief of the General Staff (1870), a post he has since held; and Field Marshal (1888).

Blunt, Wilfred Scawen, b. at Crabbett Park, Crawley, 40. Educated at Stoneyhurst and St. Mary's College, Oscott, his mother, the daughter of an English clergyman, having adopted the Roman Catholic faith under the influence of Cardinal Manning. Attaché to the British Embassies at various European Courts ('58-69). Married ('69) Lady Anne Isabella Noel, daughter of the Earl of Lovelace. Quitting the diplomatic service, he went on a series of adventurous travels through Spain and Algeria, Egypt, the Holy Land, Mesopotamia, and the Syrian Desert. These adventures are recorded in Lady Anne Blunt's "Bedouins of the Euphrates." Subsequently visited Arabia, and published "The Future of Islam." Mr. B. again visited Egypt, when he championed the cause of Arabi. On his return to England Mr. B. stood as Conservative Home Ruler for N. Camberwell ('85), when he was defeated by Mr. Strong. He has since engaged in the Irish Nationalist movement. Having taken part in the prohibited meeting at Woodford, held in connection with the Plan of Campaign, Mr. B. was sentenced to two months' imprisonment, the sentence being confirmed on appeal. He was the unsuccessful Radical Candidate for Deptford, when a vacancy was caused by the resignation of Mr. Evelyn. Mr. B., beside his other works, is the author of "Sonnets and Songs," and "The Love Sonnets of Proteus."

"Board of Trade Journal." A journal issued about the middle of every calendar month, under the authority of the President of the Board of Trade. It contains Board of Trade notices, and extracts and translations from the official documents of the Home, Colonial and Foreign Governments, relating to changes in Customs tariffs, the operation of commercial treaties, fluctuations of trade and industry in various parts of the world, and other valuable information of importance to merchants, shippers and manufacturers. It can be had in London of Messrs. Eyre & Spottiswoode, East Harding Street, Fleet Street, etc.; in Edinburgh of A. & C. Black, and in Dublin of A. Thom & Co., Ltd., Abbey Street. The first number was issued in August '88. Price 6d.

Board of Trade Returns. See TRADE, '88.
Boat Race, Oxford and Cambridge. See AQUATICS, '88.

Boehm, Joseph Edgar, R.A., sculptor, of Hungarian extraction, and was b. in Vienna (1834). Has resided in England since 1862. Was elected R.A. (1882). Executed a colossal statue of the Queen (1867), and has produced among other works recumbent statues of the late Princess Alice and her daughter, and of

the late Prince Imperial. Executed the statue of Lord Beaconsfield for Westminster Abbey, and has made busts of Mr. Gladstone, Mr. Bright, Lord Idlesleigh, and Mr. Ruskin. Nominated Sculptor-in-ordinary to the Queen ('81). Mr. Boehm was the designer of the Queen's effigy on the Jubilee coinage. Among his latest commissions are an equestrian statue of the Duke of Wellington for Hyde Park Corner, a colossal statue of the Queen for Sydney, a recumbent statue of General Gordon for St. Paul's Cathedral, and an effigy of the late Prince Leopold, in Highland costume, for the Albert Chapel, Windsor. In '88 Mr. B. has been engaged on a statue of Prince Albert Victor.

Boers. See BECHUANALAND, ORANGE FREE STATE, TRANSVAAL, SWAZILAND, AMATONGALAND, and ZULULAND, and see ed. '86.

Bohn's Libraries. See ed. '88.

Bokhara. A feudatory Central Asian State attached to the Russian province of Turkestan. Conquered in '68, it has been rapidly losing all independence since, and the completion of the Transcaspian railway to Samarcand practically places it at Russia's mercy, and incorporates it with the Czar's dominions. Is the most populous khanate of Turkestan, possessing 2,000,000 inhabitants, while Bokhara (70,000 inhabitants) is the principal trade centre of the region. The railway station of B. is situated ten miles from the city, and here the Russians intend to build a "New Bokhara," allowing the older city, for political reasons, to fall into decay. The Russian Political Resident, M. Tcharykoff, will remove to this point in '89, and a Russian garrison will be established there. The Ameer is allowed to maintain an army of 30,000 troops for administrative purposes, and these are being drilled by Russian instructors. It is suspected they will shortly be entirely placed under Russian military control. Russian imports into B. in '87 were 16,675,000 roubles, and B.'s exports into Russia 15,040,000 roubles (over three millions sterling together), showing a surplus in Russia's favour of 1,635,000 roubles. The yearly import of green tea, chiefly from India, alone amounts to 288,000 lbs., valued at 6,720,000 roubles (£672,000). Most of the Caspian steamboat companies have agencies in B., and the trade is rapidly passing into Russian hands.

Bolivia. Bounded on the north by Peru and Brazil; on the east by Brazil and Paraguay; on the south by the Argentine Republic and Chili; on the west by Chili and the Pacific Ocean. Capital La Paz, pop. 26,000. It is ruled over by a President with a Congress of two Chambers, elected by universal suffrage, as was the case with the three preceding Presidents. Its area is 2,150,000 square kilometres; and population, 2,000,000. Revenue '87-'88, \$4,000,000. Expenditure, \$4,300,000. Average value of imports, £1,200,000; exports, £1,800,000. It has no exterior debts. Only one loan was made in London, and has been settled with the shareholders. The standing army is fixed at 1,500 men, commanded by four Generals and 365 officers. This is a very rich country, with great variety of climate. It abounds in mines of all kinds of metals, especially copper and silver; its production of the latter-named metal takes the third place in the whole world—namely, after the United States and Mexico. It produces potatoes, barley, grapes, coffee, cacao, etc.; and it exports wool and minerals. But industry is wanting in the country, which

offers a wide field to European labourers. For Cabinet, etc., see **DIPLOMACY**.

Bolometer, an electrical instrument, invented by Professor P. Langley, for measuring radiant heat. By its aid very interesting experiments have been made into the ultra-red rays of the spectrum (see *Nature*, Nov. 3, 1881).

Bombay. See **INDIA**; and for Ministry, etc., see **DIPLOMACY**.

Bonaire. Otherwise **Buen Ayre** (*q.v.*)

Bonapartists. See **FRENCH POLITICAL PARTIES**.

Bonghi, Ruggiero, distinguished Italian statesman and writer, b. at Naples 1828. He was exiled from his native city for the part he took in the Revolutionary movement of '48. In '49 was appointed Professor of Philosophy at Milan, and in '64 accepted the chair of Greek literature at Turin. Subsequently accepted the Professorship of Latin at Florence, and that of Ancient History at Rome. He entered Parliament in '60, and in '74 was appointed Minister of Public Instruction. He is now the leader of the Right (Conservative Party). He is the author of the *Guarantee Laws*, regulating the present position of the Pope. He attended the opening of the Italian Exhibition in London (*q.v.*), '88, and acted as president of the Room Committee. He has been a frequent contributor to journalistic literature, and is a voluminous author. He has translated the *Metaphysics* of Aristotle, and brought out in '58 an edition of the works of Plato.

Bonheur, Rosa, d. of a talented French artist, was b. at Bordeaux 1822. Her artistic studies were directed by her father, and her first two pictures, "*Chèvres et Moutons*," and "*Les Deux Lapins*," which were exhibited in '47, attracted much attention. In '55 "*The Haymaking Season in Auvergne*" was hung at the Universal Exposition in Paris, and in the same year she sent the "*Horse Fair*" to the French Exhibition in London, where it was the centre of attraction for the season. In '80 the *Leopold Cross* was bestowed on Mlle. B. by the King of the Belgians, and at the *Siege of Paris* the Crown Prince of Prussia directed that her residence should be left unmolested. She exhibited ('69) "*A Foraging Party*" (last year shown in Mr. McLean's gallery), and "*On the Alert*" at the Antwerp Academy, having been admitted a member of the *Institute of Antwerp* ('68). As a painter of horses, Rosa Bonheur has had few rivals. A fine specimen of her work is hung in the *National Gallery*.

Bonney, Rev. Thomas George, F.R.S., D. Sc., Camb., LL.D., F.S.A., Fellow and formerly Tutor of St. John's, Cambridge, Professor of Geology and Mineralogy in the University of London. He has written a great deal on the Alps, and is President of the Alpine Club; *Past President* of the *Geological Society* and the *Mineralogical Society* of London; *Hulsean Lecturer* ('84). He has carried on numerous researches in *Petrology*, especially the microscopic structure of rocks. He is a *Lecturer* at the *Royal Institution*, a large contributor to Cassell's "*Picturesque Europe*," and a constant contributor to the *Quarterly Journal* of the Geological Society and the *Geological Magazine*.

Bonze. Name given to the priests of Buddha in China, Burmah, Japan, etc. They live in monasteries, and are unmarried. There are also female bonzes, who resemble nuns.

"*Book of the Dead*." See **EGYPTOLOGY**.

Booth, Edwin, American tragedian, b. near Baltimore, 1833. He was early trained to the stage by his father, who was also a distinguished actor. In '51 he played Richard III. for his father, who was prevented by illness from sustaining the part. Mr. Booth visited England in '61, and again in '81, when, with Mr. Irving (*q.v.*) he alternately played *Othello* and *Iago*. As a tragic actor Mr. B. has had few rivals. He has devoted himself almost exclusively to the impersonation of leading *Shakespearean* characters. In '83 he played, with great success both at Berlin and Hamburg. Mr. B. commenced in '68 the erection of the theatre in *New York* which bears his name, and in which he sunk a considerable fortune.

Booth, Rev. William, better known as "*General*" Booth, the founder of the *Salvation Army*, was b. at Nottingham, 1820. Entered the Methodist New Connexion Ministry '50. He resigned, however, when the Conference of that body in '61 desired him to settle down to regular circuit work, as he preferred that of an evangelist amongst those who never attended a place of worship at all. In '65 he established in the *East End* of London the *Christian Mission*, out of which grew the great organisation known as the *Salvation Army*, which has not only invaded almost every town of England and Wales, but has sent missionary contingents into various foreign countries. General B. is the author of "*Orders and Regulations for the S. A.*"; and in conjunction with Mrs. Booth, who possesses great powers of organisation, has published various other works for the guidance of the members of the Army, and for attracting recruits. His eldest son is the chief of the staff, and his eldest daughter has greatly aided the progress of the movement in Switzerland and France. Other members of his family have also co-operated with him in his missionary enterprise; the *Clapton Institutions*, for the training of both men and women officers, respectively being under the direction of his third son and second and third daughters. Another son is at the head of the *Colonial contingent* of the Army. "*General*" B. in '68 paid a visit to Switzerland, where the progress of the Army has met with much opposition from the local authorities.

Bordeaux and Narbonne Maritime Canal. This project—the *Canal des Deux Mers* as it has long been styled—was discussed at the annual meeting of the French Association for the Advancement of Science held during the autumn of '87 at Toulouse. It is a scheme for making a maritime waterway between Bordeaux and Narbonne, and a company has now been formed to make a preliminary survey. According to their plan the canal would be about 330 miles long from sea to sea; and, starting from the western side of Bordeaux, would follow the left bank of the Garonne for 50 miles, cross the river at Castel-Sarrasin by an aqueduct, and then follow the right bank of the river to Toulouse. Hence to the Mediterranean seaboard at Narbonne it would proceed by twice crossing the Canal du Midi. There would be 38 locks, the fall ranging from 20 to 30 feet, the curves would not be less than those of the Suez Canal, viz., 6,000 feet, and the depth 24 to 27 feet, according to circumstances. A novel feature in the enterprise is that the vessels would be drawn at a mean speed of seven miles an hour by locomotives running on the banks. The canal is to be lighted by electricity

generated from the locomotives, and the total cost is estimated at £26,000,000. This canal would save 680 miles of the journey between the western ports of France and the Mediterranean. Late in April '88 it was reported from Paris that **General Boulanger**, who had not long lost the portfolio of War Minister, had appealed to the promoters of this canal on the ground that political squabbles in Parliament left no time to attend to the interests of France. It was mentioned as a retort, however, that the scheme was not sufficiently matured to bring forward.

Borneo. From the Sanscrit "Bhoorni," land. A large island of the Malay archipelago, divided into various States. Estimated total area 290,000 sq. m., estimated pop. 1,846,000.—Holland claims as a possession 203,714 sq. m. of territory on the south, east, and west of the island. In reality this immense tract is parcelled out into various native states. Those on the coast are more or less under Dutch influence. Of the interior little is even known. The principal Dutch settlements are at **Sambas**, **Pontiana**, **Banjarmassin**, and **Koti**. On the north-west coast is the State of **Sarawak**; area 40,000 sq. m., pop. 280,000. It is under British influence, though not a British dependency, being ruled by an English rajah (H.H. Charles J. Brooke). North-east of Sarawak is the independent State of **Brunei**, or **Borneo Proper**, a territory of less extent. Beyond it lies **British North Borneo**, area 30,000 sq. m., which is not an official dependency, but is the property of an English trading company, to whom a royal charter has been granted. Between this and the Dutch territories on the east is the native state of **Sulu**. (Political and other details will be found under **SARAWAK**, **BRITISH NORTH BORNEO**, etc.)—**Physically**, Borneo is one of the most attractive portions of the earth's surface. Lofty mountains dominate the interior, from which descend numerous rivers to water the plains, many of them being considerable streams. Large lakes are also believed to exist. Lying directly under the equator, the flora is exceedingly rich and profuse. Probably no tropical forests excel those of Borneo in the wealth they hold in their vast recesses. The most valuable timbers, dye-woods, scent-woods, fruits, spices, drugs, gums, etc., are abundant. The fauna, too, comprises wonderful variety. There are the elephant, rhinoceros, wild cattle, bears, deer, the tiger-cat, tapir, pig, flying squirrel, orang-utang, baboon, ape, alligator, python, cobra. The birds are of brilliant plumage, and even the fish display gorgeous and varied colouring. Among minerals are coal, iron, gold, diamonds, antimony, quicksilver, etc. The soil is exceedingly fertile, and well adapted for the cultivation of all tropical products. The principal articles exported are sago, beeswax, edible birds'-nests, camphor, hides, rattans, tortoise-shell, cinnaab, tripang, antimony, coal, gold, diamonds, pepper, indigo, arrowroot, caoutchouc, gutta-percha, spices, drugs and dyes, etc. The people belong to various races—Malays, Dyaks, Kyans, Negritos, Bugis, and Chinese. Tattooed races, Kanowits, Pakatans and others, inhabit the interior.—Previous to the advent of the Spaniard, Portuguese, and Dutchman in these regions, some of the Bornean states had attained a high degree of civilisation. The wealth of their princes, the splendour of their

cities, and the extent of their commerce and industry, have been described in glowing terms. The condition of things seems to have been similar to that of India. But under the baneful influences just alluded to wealth was spoliated, commerce diverted, industry checked, and the social prosperity of the island destroyed. In Sarawak and in Brunei the wise and philanthropic efforts of **Rajah Brooke** and his successor have done much towards restoring ancient prosperity; and now it is to be hoped that the **British North Borneo Company** will contribute towards the development of this rich and resourceful island. Consult St. John's "Life in the Forests of the Far East," Wallace's "Malay Archipelago," Hatton's "North Borneo," Penny's "Ten Years in Melanesia."

Boro-Glyceride. A chemical compound of boracic acid with glycerine, patented by Prof. Barff. It is a powerful antiseptic, and being perfectly harmless is a most efficient preservative for food. Besides its use in preserving food, it is used as an antiseptic in surgery, and on the toilet table for corns, cuts, etc. See ed. '88.

"Borough English." A singular local custom by virtue of which the youngest son is heir to his father. Abolished in Scotland in the eleventh century; it still survives in some parts of England. **Law on**, in '88.—A case in point was raised March, '88, in the Chancery Division, when the question raised was which of two brothers was entitled to considerable copyhold in the **Royal Manor of Kennington**, the fines and fees of which are the Prince of Wales's property. By the custom of the Royal manor of Kennington the youngest son is heir to the copyhold property, and the question for the judge to decide was whether the elder brother should inherit the property, or whether the youngest son, according to the custom of the manor, should take possession of it. Mr. Justice Stirling decided that the youngest son was entitled to the property in accordance with the custom of the manor.

Boroughs, County. See **SESSION '88**, sec. 27a.
Bosnia and Herzegovina. Two Turkish provinces situate south of the Danube, with Servia on the east and Dalmatia on the west. They were placed under Austrian rule by virtue of the Treaty of Berlin (q.v.). Their united area (including the Sandjuk of Novibazar) is 23,571 sq. m., and the population 1,504,091, of whom two-fifths are Mohammedans, two-fifths Russo-Greek, and one-fifth Roman Catholic; but the races and religions are so mixed in the various districts that it would be almost impossible to create from the medley a single harmonious state of any size. It was expected, none the less, that the provinces would be difficult to rule; instead of which, Austria occupied them with very little difficulty, and with the exception of a slight seething in 1882, rapidly quelled, the 14,000 troops garrisoning the country have had no serious difficulties to contend with.

"Bosphore Egyptian." See ed. '86.
Bosphorus. A channel, nineteen miles long, connecting the Sea of Marmora with the Black Sea, and separating Europe from Asia. About seventeen miles long, and from half a mile to a mile and a quarter wide. It has no equal in the world for the depth of its bed, and the numerous bays with which its steep cliffs are furrowed afford everywhere such a safe anchorage that the whole channel may be regarded

as a continuation of the roadstead of Constantinople. Men-of-war can approach so close to the shore that they strip the foliage off the trees. The channel is defended by a series of strong forts, so well placed and powerfully armed as to render the passage of a hostile fleet practically impossible, even without taking into account the strings of torpedoes that would bar the waterway in time of war. Constantinople stands on the west side, at the outlet, and partly on the Sea of Marmora, opposite Scutari. Also called the Thracian Bosphorus, to distinguish it from the Cimmerian Bosphorus, now called the Straits of Yenicale.

Botany (*botanē*, a grass), the study of plants. **Morphological B.** deals with the structure of plants. The investigation of the structure of organs is **Anatomical B.**; that of the minute structure of the tissues is **Histology**. The functions of plants are the subject of **Physiological B.** The classification of plants is termed **Systematic B.** **Geographical and Geological B.** (Paleophytology) investigate the distribution of plants. For detailed description of B., see ed. '80. Consult Sachs' Text Book (Vines, translator), Prantl's Botany (Vines, translator), Thome's (Donnet, translator), De Hay's "Vegetative Organs of Phænogams and Ferns," Vines and Bower, translators, Henfrey's Botany (edited by Masteis and Bennett), Hillhouse's Practical Botany, based on Strasburger's Practical Botany, based on Strasburger's Practical Botany. For **Systematic Botany**: Hooker's Student's British Flora, Bentham's British Flora. Generally, Hooker and Bentham's "Genera Plantarum," describing 756 genera of plants. For **Commercial purposes**, Thomas Christy's "New Commercial Plants" (in progress). For **German students** besides the originals of the above translations, Sachs's "Vorlesungen über Pflanzen Physiologie," Schwendener's "Das mechanische Princip," Strasburger's "Des botanische Practicum," Haberlandt's "Physiologische Pflanzenanatomie"; for **specialists** the "Handbuch der Botanik" (in progress), to which the best German botanists contribute.

Boucicault, Dion, actor and dramatist, b. in Dublin 1822. Educated at London University. His first important play, *London Assurance*, was brought out at Covent Garden '41. Mr. Boucicault has attained great celebrity as the author of several Irish dramas—notably, "The Colleen Bawn" (Adelphi, London, '60); "Arrah-na-pogue" (Dublin, '64); and "Shaughraun" (Drury Lane, '75). During the first runs of these popular plays Mr. Boucicault personally took the leading parts. He is a most prolific writer; but "Flying Soud" ('66), "After Dark," and "Formosa" ('68), may be said to be his last most popular productions outside of his Irish plays. Mr. Boucicault is resident in America, but in '87 visited this country, taking part in one of his plays, "The Jilt," at the Prince's. He has recently inaugurated a movement for establishing a *histrionic conservatoire* in New York.

Boughton, George Henry, A.R.A., b. 1833, spent his early years in studying alternately at New York, London, and Paris. In 1861 he opened a studio in London, and has since chiefly resided in that metropolis. His works, which have been numerous exhibited at the Royal Academy and the National Academy of New York, include "Winter Twilight," "The Lake of the Dismal Swamp," "Passing into the Shade," "Coming into Church," "Morning

Prayer," "The Sealed Letter," "The Idyll of the Birds," and "The Return of the Mayflower." At the exhibition of 1886 his "Councillors of Peter the Headstrong" attracted much notice. He exhibited a landscape at the Royal Academy in '88.

Boulanger, George Ernest Jean Marie, French ex-Minister of War, was b. at Rennes (1837). Entered the Military College of St. Cyr (1855), sub-lieutenant (1857). He was sent to Algeria, and served under Marshal Ranelon in the Kabyle campaign. He also took part in the Franco-Italian war, and was wounded at the battle of Turbigo. He obtained his full lieutenancy in 1866, and two years later was promoted to a captaincy, having in the interim seen service in Cochinchina. In 1870, just before the declaration of war, he became major. He was with Bazaine at Metz, but, by some means, escaped the fate of Bazaine's army, and made his way back to Paris. He was promoted to a lieutenant-colonelcy by the Government of National Defence (Oct. 1870), and fought at Champigny (Nov. 30th to Dec. 2nd). While leading his troops against the Communists he was wounded. After the suppression of the Commune his newly attained promotion was quashed by the Grade Revision Committee, but was restored to him in 1874. In 1880 he became brigadier-general as is alleged, through the influence of the Duc d'Anville, whose name General Boulanger was, six years later, to strike from the Army List. Appointed to the command of the army of occupation of Tunis, General Boulanger had a disagreement with M. Camilleon, the Resident-General, and was recalled. He then held the War Office appointment of Director of the Infantry Division, and became **Minister of War** in the De Freycinet Cabinet Jan. 7th, 1886. When M. de Freycinet resigned, and was succeeded by M. Goblet (Dec. 9th, 1886), General Boulanger retained his portfolio; but on the fall of M. Goblet, Boulanger's name did not appear in the Cabinet of M. Rouvier. The General was soon after despatched to Clermont-Ferrand to take command of an army corps, receiving a great ovation at Paris on his departure. When the *Limousin scandal* broke upon Paris like a thunderclap, it was at one time thought that General B. was implicated; and in an indignant letter denying the accusations levelled against him he made some rather free remarks about General Ferry, War Minister, who immediately ordered him under close arrest for thirty days at his own headquarters. Just prior to this M. Jules Ferry, in a public speech, spoke of Boulanger as a safe concert hero, a sarcasm which led to a challenge from the ex-War Minister; but no hostile meeting took place. In November the period of the General's arrest expired. He came to Paris to take part in the deliberations of a Military Commission of which he was a member, and returned soon after to Clermont-Ferrand. The Government having decided, in March '88, to cashier the General by placing him on the retired list, he decided to take advantage of his growing popularity to inaugurate a vigorous campaign against the Ministry. Vacancies shortly after occurred in the representation for the Dordogne and the Nord. Though he declined to stand for the former, his supporters insisted upon working for him, and, to the General's surprise, he was returned by 59,500 votes to 35,750 polled by the Opportunist candidate. In the Nord, where he

personally conducted the campaign, his triumph was still more remarkable, the number of votes polled for him being 172,528 against 75,901 for M. Foucart, and, 9,647 for M. Moreau. This was on the 15th of April, '88, which, in a manifesto he issued to the electors, he declared would be marked in the annals of the country as a date of true deliverance. He became the hero of a series of demonstrations, and received ovations wherever he went. He was idolised by the populace as the coming man who was to save France from the blunders of incompetent statesmen and frauds of immoral political combinations, and as the possible leader of her hosts to victory in a war of revenge. Subsequently his popularity waned for a time, and his candidate, M. Paul Déroulède, in the Charente Department, suffered defeat. The General's appearance in the Chamber of Deputies, to demand the Dissolution of the Chamber, gave rise to a stormy scene. M. Floquet made a vigorous attack upon the General, and in the altercation between them General Boulanger exclaimed "You lie." This led M. Floquet to demand satisfaction, and on July 13th a duel was fought between them, in the grounds of Comte Dillon's property at Neuilly. Rapiers were the weapons chosen. M. Clemenceau and M. Georges Perin were seconds to M. Floquet, and M. Laisant and M. le Hérissé acted in a similar capacity for the General. The combatants fought with great determination, with the result that the General received a deep wound in the neck. After his recovery he appeared as a candidate at bye elections at the Nord, the Somme, and Charente Inférieure, and was returned by large majorities. It is Boulanger's policy to unite the discordant factions opposed to the Government. The marriage of General B.'s daughter to Captain Driant took place in Oct. '88.

Boundary Commission. This Commission was appointed in '87 to inquire as to the best mode of adjusting the boundaries of the county and other areas in England and Wales for the purposes of the Local Government Bill. The Commissioners were Lord Brownlow, chairman, Lord Edmond Fitzmaurice, Lord Basing, Sir Henry Selwyn Ibbetson, and the Rt. Hon. J. T. Hibbert. Major-Gen. Owen Jones acted as Chief Assistant Commissioner and secretary. The Commissioners issued their report on Nov. 15th last. It consists of two large volumes of coloured maps of all the local and county divisions, with an explanatory introduction. Price 25s. each volume. (*Eyre and Spottiswoode.*)

Bourse, The Paris. See STOCK EXCHANGE.
"Bo-vril" (or Beef Force). A combination of the juice of beef with a concentrated preparation of beef itself. See ed. '88.

Bowen, The Rt. Hon. Sir Charles, S. C., one of the Lord Justices of Appeal, was born in 1835, and, after a brilliant career at Oxford, was called to the bar in 1861. He was senior member of the Truck Commission in 1870, and junior counsel to the Treasury in 1872, but never took silk. In 1879 he was appointed a Judge of the Queen's Bench Division, and in 1882 a Lord Justice of Appeal, being at the same time sworn of the Privy Council. Lord Justice Bowen, who has proved himself one of the most able members of the Court of Appeal, is the author of an historical essay entitled "Delphi," and of a pamphlet on the Alabama question.

Has also published a translation of the *Bologues* and *First Book of the Æneid* of Virgil.

Boycotting. A system of "sending to Coventry," or refusing to have dealings with, a person who for some reason or other has displeased a considerable section of the community. The practice prevails extensively in Ireland, where a farmer who takes a holding from which a tenant has been evicted is promptly "boycotted" by his neighbours. No one will buy stock from him or sell him the necessaries of life, and he is regarded as having "moral leprosy." The excuse offered by the boycotters is that, without such combinations to make a "land-grabber's" life unendurable, the Irish tenants would have absolutely no means of protecting themselves against the landlords. It was for a long time declared impossible to stop boycotting, but clauses aimed at its suppression were included in the *Crimes Act* of '87, and under them two convictions were obtained in December last. In the one case a tradesman was imprisoned for refusing to supply goods, and in the other a blacksmith was sent to gaol for declining to shoe a horse. The word had its origin in the fact that the system was first applied to Captain Boycott, an Irish landowner.

Boyle Lectures. The Hon. Robert Boyle was the seventh son of Richard, the "great Earl of Cork", and was born at Lismore, in the province of Munster, January 25th, 1626-7. He died December 30th, 1691. In physics, besides the great merit of having rendered the air-pump available for experiment, and of having discovered the law of gaseous elasticity, he invented a compressed air-pump, and directed the construction of the first hermetically sealed thermometers made in England. He was almost equally celebrated as a philologist and theologian; and his attainments were accounted as "superior to titles and almost to praise." When the *Royal Society* was incorporated by Charter, in 1662, Mr. Boyle was appointed one of the Council; but nothing could induce him to accept the office of President. Throughout his life he was a munificent supporter of projects for the translation and diffusion of the Scriptures; and he made strenuous and splendid efforts to insure the spread of Christianity in various parts of the world. In a codicil to his will, dated July 28th, 1691, Mr. Boyle formulated his "intention to settle in his lifetime the sum of Fifty Pounds per annum, for ever, or at least for a considerable number of years, to be for an annual salary for some learned Divine, or Preaching Minister, from time to time to be elected, and resident within the city of London or circuit of the Bills of Mortality, who shall be enjoined to perform the following offices: viz., first to preach eight sermons annually for proving the Christian religion against notorious infidels—viz., Atheists, Theists, Pagans, Jews, and Mohammedans, not descending lower to any controverted matters that are among Christians themselves; these Lectures to be on the first Monday of the respective months of January, February, March, April, May, September, October, November, in such church as my trustees herein named shall from time to time appoint; to be assisting to all companies, and encouraging of them in any undertaking for propagating the Christian religion to foreign parts; to be ready to satisfy such real scruples as any may have concerning these matters, and to answer such

new objections or difficulties as may be started to which good answers have not yet been made."

The first of the Boyle Lectures was the famous Dr. Richard Bentley, who in 1692 inaugurated the long series and procession with *A Confutation of Atheism*. He was immediately followed by Dr. Richard Kidder, Bishop of Bath and Wells, and, more remotely, by other bishops, dignitaries, and clergymen, the ability of whose successive performances gradually accumulated around the Lectureship a considerable amount of prestige for its power and usefulness. In a short retrospect of the history of the Boyle Lectures, the Rev. William Van Mildert, M.A., who afterwards became successively Bishop of Llandaff, '19-26, and Durham, '26-36, observes that "during a course of nearly fifty years, the publication of the Discourses preached for this Lecture was continued with little intermission; and such was the accumulation of these labours that in the year 1739 they were collected into three large folio volumes, comprising a most valuable body of Divinity. Since that period, although it appears that the Lecture has been constantly preached, few only of its productions have been submitted to the public eye; but among them are some of distinguished excellence. The last of these was published in 1782." After 1806 there was no printed issue of the Boyle Lectures until 1821, when the Rev. William Harness published his *Connexion of Christianity with Human Happiness*. In '46, the course delivered by the Rev. J. F. D. Maurice was published under the title of the *Religions of the World*. The more eminent Boyle Lecturers of recent years, whose courses have been published, include Dr. Charles Merivale, '64-65, *The Conversion of the Roman Empire and the Northern Nations*; Professor Stanley Leathes, '68-70, *The Witness of St. John to Christ—with an Appendix on the Authorship and Integrity of St. John's Gospel, and the Unity of the Johannine Writings*; Professor Henry Wace, '74-75, *Christianity and Morality, or, the Correspondence of the Gospel with the Moral Nature of Man*; Principal Alfred Barry, '77-78 (now Bishop of Sydney) (*q.v.*), *The Manifest Witness for Christ*; and the Rev. George Herbert Curteis, M.A., '84, Bampton Lecturer for '71, *The Scientific Obstacles to Christian Belief*.

Boyle, Robert Whelan, F.R.S.L., in early life entered the journalistic profession. He removed to London, and contributed to various journals. He subsequently became assistant subeditor of a well-known London "daily," and after several years' experience in this capacity he was appointed to the editorship of a provincial newspaper. On his return to London he became chief sub-editor of *The Hour*. In 1877 he was appointed to the editorship of the *Daily Chronicle* (*q.v.*). Is author of a "Jubilee Ode," accepted by Her Majesty ('87); and a novel "*Love until Death*" ('88), published in Blackett's series, and other works in poetry and prose.

Brackenbury, Major-General, C.B., R.A., was b. 1837 at Bolingbroke, in Lincolnshire. Entered the army ('56). Saw active service in the Sepoy rebellion ('57-58), and afterwards held several appointments on the staff of the Royal Military Academy at Woolwich. In the war between France and Germany in '70, he devoted himself to the care of sick and wounded under the auspices of the British National Society, receiving distinctions from

both sides for his services. Military secretary to Sir Garnet Wolseley ('73-74) in the Ashantee war. Adjutant-general ('78) of the forces, he was sent to occupy Cyprus, and organised the military police in that island. Again ('79) military secretary to Sir G. Wolseley, chief of his staff in the operations against Sekukuni. Private secretary to Lord Lytton ('80), viceroy of India; military attaché at Paris ('81-2), and for a time Assist. Under-Secretary for Ireland. He was a member '88 Committee appointed to inquire into the reorganisation of the Artillery. He is in favour of the separation of the garrison from the field artillery.

Braddon, Mary Elizabeth, daughter of Mr. H. Braddon, born in London in 1837. She is a prolific writer, for besides many sound contributions to general literature, she is the author of nearly forty novels, the best known of which are "*Aurora Floyd*," "*Lady Audley's Secret*," "*Eleanor's Victory*," and "*Henry Dunbar*," whilst her more recent works are "*Flower and Weed*," "*Ishmael*," "*Wyllard's Weird*," and the "*Mohawks*," "*Like and Unlike*" ('88), and "*The Fatal Three*." Her husband is Mr. John Maxwell.

Brahms, Johannes, b. at Hamburg 1833, and was the son of an undistinguished but hard-working musician. An eulogistic critique of Schumann's brought Brahms into prominence. In 1861 he went to Vienna, where he has since resided, and devoted himself to composition. His great "*German Requiem*" (1868) established his reputation. Brahms is the composer of many symphonies, "*Rinaldo*," "*The Song of Destiny*," songs, cantatas, etc. His unrivalled settings of "*Hungarian Dances*," and his own "*Liebeslieder*" dances with choral accompaniment are the most graceful classical compositions of the kind since Chopin.

Braidism. See HYPNOTISM, ed. '88.

Brain. For detailed article on its structure see ed. '86.

Brakes, Railway. See RAILWAY BRAKES, ed. '88.

Bramwell, Sir Frederick, D.C.L., F.R.S., was b. 1818, and served his time as a mechanical engineer to John Hague. He was elected Associate of the Institute of Civil Engineers in '56, a member of the Council of that body in '67, and its President in '84. He has also been President of the Institute of Mechanical Engineers in '74. Hon. Sec. to the Royal Institution since '85. Chairman of the Executive Council of the Inventions Exhibition '84, and is Chairman of the Executive Council of the City and Guilds of London Institute for the Promotion of Technical Education. Sir Frederick was knighted in '81, and was, '88, elected President of the British Association for the advancement of science. He is a brother of Lord Bramwell, and son of the late George Bramwell, banker.

Bramwell, George William Wilshere Bramwell, P.C., 1st Baron (creat. 1882); son of George Bramwell, Esq., banker; b. in London 1808. Called to the bar at Lincoln's Inn (1838); appointed a Q.C. (July 1851); a Baron of the Exchequer (Jan. 1856); a judge of the High Court of Justice, Exchequer Division (1875); a Lord Justice of Appeal (1876); retired from the bench 1881. Lord Bramwell is a frequent contributor to the debates in the House of Lords, where his common-sense remarks always secure him the ready ear of the peers. He is an active member of the Liberty and Property Defence League. Under the

familiar signature "B" Lord Bramwell often writes to the *Times* on questions of the hour.

Brazil. An empire in Central South America, occupying the west coast from 5° N. lat. to 29° S. lat., and comprising the vast valley of the Amazon and its affluents, as well as the watershed of other great rivers. Its present ruler is the Emperor Pedro II., of the house of Braganza. By the constitution of 1824 the executive power in imperial affairs is confided to the Emperor, and the legislative to a Senate and Chamber of Deputies. Senators are chosen for life by the Emperor, each from one of three candidates nominated by the people; the deputies are elected directly for four years. The Chamber has the initiative in taxation, and in the choice of the sovereign if necessary. Provincial affairs are dealt with in the provincial assemblies. State religion is Roman Catholic; but all others are tolerated. Education not in a very forward state, 84 per cent. of population being illiterate. Area 3,218,082 sq. miles; pop. 12,333,375. Estimated revenue ('88), £16,360,450; expenditure £16,829,000; debt, foreign and home, including paper-money, £93,605,628. Capital Rio Janeiro, pop. 357,332. Since the close of the war with Paraguay, in 1870, little remains to note, with the exception of the slavery question. In 1867 it was decreed that slavery should cease in twenty years, and that all children of slaves born after that year, and all slaves who were soldiers, should be at once free; and in 1871 the Rio Branco Law made further provision for gradual emancipation. Since the latter date, 90,000 have been emancipated by private generosity and 19,000 by the above law; and in 1881 the province of Ceara freed all its slaves, 30,000 in number. More recently the extensive construction of railways has opened up the country and exercised a beneficial effect upon its economic development. During '87 a loan of £639,000 was contracted, and the Emperor made a tour to the continent of Europe. In '88, while travelling on the Continent, the Emperor became dangerously ill. Since his recovery he has returned to Brazil. The complete emancipation of the slaves was effected last year. A banquet to celebrate the event was held at the Continental Hotel, Paris, at which Prince Pedro, grandson of the Emperor of Brazil, M^{rs}. Goblet, Ferry, and Jules Simon were present (July 10th). An interesting paper—"An Exploration of the Rio Doce and its Tributaries, Brazil"—was communicated to the Royal Geographical Society by Mr. W. J. Stearns, Jan. '88. For Ministry see DIPLOMATIC.

Breach of Promise Actions '88. Special Damages. An action for breach of promise of marriage does not survive against the executors of the promiser, unless special damage to the property, and not to the person, of the promisee is alleged; and such special damage must have been within the contemplation of both parties at the time when the promise was made. This principle was affirmed in *Davies v. Skole* (Queen's Bench Division, July '88).

Breach of Promise of Marriage. See ed. '87. Consult Leake's "Law of Contract."

Brewing Industry of the United Kingdom. According to last returns respecting brewing, the number of licensed brewers-for sale on the 30th September, '87, was 12,944. One of these brewed 400,000 and under 450,000 barrels of malt liquor, one 450,000 and under 500,000, one 500,000 and under 550,000, two 600,000 and

under 1,000,000, and one 1,000,000 and over. The amount of licence duty paid and beer duty charged to the last-named brewer was £453,615 13s. 6d. From later returns issued by the Commissioners of Inland Revenue the number of barrels of malt liquors charged with duty for the year ended 31st March, '88, was as follows: viz.—

	Brewed by Brewers for Sale.	Brewed by other Brewers.	Total.
England . .	24,480,010	88,850	24,568,860
Scotland . .	1,392,233	183	1,392,416
Ireland . .	2,275,143	27	2,275,170
Total . .	28,147,386	89,060	28,236,446

The gross receipts from beer duty during this period was £8,874,510, while the repayments on beer exported amounted to £162,977, leaving a net receipt of £8,711,533, which exceeded that of the corresponding period of the previous year by £215,616. The quantity of ingredients used by licensed brewers-for-sale for the year ending Sept. 30th, '87, was, malt and corn, 52,159,027 bushels, and the quantity of sugar (including the equivalent of syrup) was 1,465,039 cwt. 3 qrs. 4 lbs. The quantity of beer exported from the United Kingdom for the year ending 31st March '88 was 52,209 barrels. Compared with '86-7 there is a decrease of 6,605 in the number of licences issued which the Inland Revenue Commissioners think is due to a great extent to the operation of the *Custom and Inland Revenue Act of '86*, which exempted persons occupying premises of an annual value not exceeding £8. Several public brewers, in addition to carrying on the aerated water, engage in the wine and spirit trade. The extension of the latter business by brewers is advocated by the *Country Brewers' Gazette*, and especially by those who have "tied" publichouses to serve with malt liquors.

Bridge, John Frederick, Mus. Doc., organist of Westminster Abbey, was b. at Oldbury 1844. Educated at the Cathedral School, Rochester. He subsequently became a pupil of the late Sir John Goss. In '69 he was appointed organist of the Manchester Cathedral, and in '71 Professor of Harmony at Owens College. He has been connected with Westminster Abbey since '75, and is also Professor of Harmony and Counterpoint at the Royal College of Music. His "Hymn to the Creator" was produced at the Worcester Festival of '84; "Rock of Ages" at the Birmingham Festival '85; and "Callistho" at Birmingham Festival, '88.

Bridgetown. Capital of Barbadoes (*q.v.*), pop. 20,947.

Bridgewater Treatises. See ed. '87.
Bright, Right Hon. John, M.P. for Central Birmingham, was born November 16th, 1811, near Rochdale. His father, Jacob Bright, was a cotton-spinner and manufacturer, at Greenbank, near Rochdale, and at a comparatively early age Mr. Bright became a partner in the firm. The only education he received was derived from the usual sources available in a small provincial town. He never entered a public school, nor studied at a university, and has all his life regarded with disfavour what is known as a classical education. His first introduction to public or semi-public life was at local meetings, where he advocated temper-

ance and other social reforms. It was at such gatherings that he began to acquire that rare faculty of expression and that clearness of vision which led him many years after to be regarded as one of the most formidable debaters and one of the most impressive orators who ever spoke in Parliament. He took part in the reform agitation which preceded the great Act of 1832; but it was not till he joined the Anti-Corn Law League, in 1839, that he became prominent as a public man and as a powerful platform speaker. His first candidature for Parliament, was in 1843, when he contested Durham against Lord Dunsannon. The latter was successful, but subsequently was unseated on petition, and Mr. Bright was elected in the following year, and represented Durham till 1857, when he was returned for Manchester. During this period he constantly took part inside and outside Parliament in the great discussions on Free Trade which then raged from one end of the country to the other. Financial and political reform, the repeal of the taxes on knowledge, and every movement which had for its object the elevation and education of the people, engaged the earnest advocacy of the member for Manchester, the representation of which he had to contest in 1852. He won the election, and two years after, when the Crimean war broke out, he plunged into the thickest of the opposition to the policy of the Government, and denounced the war as cruel and useless squandering of the blood and money of the nation. His speeches on this subject are perhaps the most eloquent and powerful he ever delivered. Their earnestness and consistency, their lofty moral tone, the simplicity and majesty of the language in which the orator denounced the authors of the war, make them stand out as among the greatest speeches ever delivered in the House of Commons. It was all in vain, however. He found little support either in Parliament or the country. The war was popular, and terminated in the Treaty of Paris, and a display of fireworks and candle illuminations in the capitals of all the allied powers. Just before the war ended Mr. Bright had an attack of severe illness, which compelled him for a time to withdraw from active public life. He was on the Continent when Lord Palmerston was defeated in the China debate in 1857, and when the Premier appealed to the country Mr. Bright and Mr. Milner Gibson lost their seats by large majorities. In August of the same year he was elected for Birmingham, and has been one of the representatives of that town ever since. About this period he constantly advocated the extension of the suffrage, and it is perhaps to him more than to any other individual that the country is indebted for all the reforms in this direction since the days of Earl Grey. Mr. Bright visited Ireland in 1866, and was entertained at a banquet in Dublin. Two years later he was presented with the freedom of the city of Edinburgh, and in the same year (1868) he was prevailed upon by Mr. Gladstone to accept office as President of the Board of Trade. Once more illness interposed, and in 1870 he resigned, and for the next three years was practically invalided. When restored to health, he again entered the cabinet as Chancellor of the Duchy of Lancaster, with merely nominal duties, and held that post till the Government was driven from power in 1874. For the next six years he was in Opposition, though he took a less

prominent part in the debates than before. When the Conservatives fell in 1880 Mr. Bright was again appointed Chancellor of the Duchy in Mr. Gladstone's Government, but resigned on the eve of the bombardment of Alexandria—an act which, in his explanation to the House of Commons, he considered as a violation of the moral law, but which Mr. Gladstone, on the same occasion, justified as in harmony with that law. Mr. Bright, it may be said, is not what is called a "peace-at-any-price" man, as many suppose; but as a rule he has been found in opposition to wars waged by England. He was, in fact, in office during the Transvaal war. At the general election which followed the late Reform Act Mr. Bright was opposed at Birmingham by Lord Randolph Churchill, who was defeated after a hard contest. The latest important position taken up by Mr. Bright is his opposition to Mr. Gladstone's Home Rule scheme (see HOME RULE), and his support of the Conservatives and Liberal Unionists who are opposed to it. In October '87 Mr. Bright shared with Mr. Gladstone the honour of being invited by the United States Government to the celebration of the Centenary of the Adoption of the American Constitution. Advancing years, however, prevented his accepting the invitation. On the question of Protection Mr. Bright has been true to Radical traditions, especially with reference to the resolution passed at the Oxford Conference of Conservative Associations in '87, in favour of protection. Mr. Bright is an hon. D.C.L. of Oxford, and has served the office of Lord Rector to the University of Glasgow. His speeches have been collected and edited by Prof. Thorold Rogers, and make a valuable contribution to the political history of the Victorian era. At the time of going to press Mr. Bright's illness was causing much anxiety.

Brisbane. Capital of *Queensland* (q.v.), on river Brisbane, about 25 miles from its mouth, in Moreton Bay; pop. 50,000.

Brisson, Henri, the President of the French Chamber of Deputies when the Ferry Ministry was overthrown (by 308 to 161 votes) on March 30th, 1885. On the assembling of the new Chamber, November 10th, a scene arose on the Tonquin question with respect to alleged military mismanagement; and on the 14th M. Brisson's statement did not appear to have any effect in allaying the excitement. At the conclusion of the debate, December 26th, the Government only had a majority of 4 votes, and a crisis at once became apparent. On December 28th, M. Jules Grévy was re-elected President of the French Republic, and on the same day M. Brisson announced that the diplomatic relations between Egypt and France were considered to be interrupted at Cairo. On the 29th M. de Freycinet was again requested to form a cabinet, and virtually the Brisson Government ceased to exist with 1885, after a short term of office extending over barely nine months. He was put in nomination for the Presidency on the resignation of M. Grévy, but received practically no support.

Bristol and English Channels Ship Canal. During '88 some attention was called to a project of Mr. Owen, of London, for the union of the Bristol and English Channels by a ship canal, running from Stolford, near Bridgwater, which has the advantage of being opposite Cardiff; *via* Bridgwater, Taunton, and Exeter to Langstone Point, on the west side of Exmouth Bight,

where would be formed the southern harbour. This route is described as offering every facility for the work, the chief elevation, White Ball Hill, which is 535 feet high, being turned by following the course of the old Great Western Canal. As much of the existing canals, or their remains, and the floating basin at Exeter, with its $\frac{1}{2}$ miles of canal to the Exe, are intended to be acquired, and the deepest cutting of the whole scheme will not exceed 200 feet. The canal will be on the level of the sea, taking its supply chiefly from that source, with sea locks only at each end. The dimensions will be: length, 62 miles; width at surface, 125 feet; at bottom, 36 feet; and depth, 21 feet. These are the figures of the Grand Ship Canal of Holland from Amsterdam to the Helder, which admits loaded vessels of 1,000 to 1,500 tons, drawing 16 feet. A large and remunerative trade is looked for—coal alone from South Wales and adjoining fields offering, it is thought, a large revenue for a short cut to the English Channel, and thence to London, say 355 miles, thus competing with the North of England. The cost of the scheme is set down at £3,080,000, and the estimated profits from coal alone at about 12 per cent.

British Association. Founded at York in 1831, at the suggestion of Sir D. Brewster, for the purpose of stimulating scientific inquiry and for promoting the intercourse of scientific men. The Association meets annually for a session of one week, each year in a different town, but never in London. The only occasion on which a meeting has been held out of the United Kingdom was in 1884, when the Association visited Montreal. It was formerly the practice to elect occasionally as the president a man of high social position, but since 1867 this custom has been dropped, and the chair is now invariably occupied by a man of scientific eminence. The Association issues an annual volume, divided into two parts: the first contains reports on the state of science, prepared by committees specially appointed, and often assisted by grants of money for conducting researches. This part also contains such papers as are ordered by the General Committee to be printed at length. The second part is devoted to addresses and abstracts of papers communicated to the several sections at the annual meeting. The Association is now divided into eight sections, distinguished by letters as follow: A, **Mathematics and Physics**; B, **Chemistry**; C, **Geology**; D, **Biology**; E, **Geography**; F, **Economic Science and Statistics**; G, **Mechanics**; H, **Anthropology**. Each section is governed by a president, vice-presidents, secretaries and committee. (For list of the successive presidents of the whole Association see ed. '87.) The last meeting was held at Bath, in Sept. '88. President, Sir F. Bramwell, whose opening discourse dealt with engineering topics. The evening lectures were by Prof. Ayrton on "The Electric Transmission of Force," and by Prof. Huxley on "The Foundation Stones of the Earth's Crust." Sir J. Lubbock lectured to the artisans of Bath on "The Customs of Savage Races." In the section for **Mathematics and Physics**, Prof. Fitzgerald delivered the presidential address on electro-magnetic action; in the **Chemical Section** Dr. Tilden dwelt on chemical education in this country; Prof. Boyd Dawkins opened the **Geological Section** with an address on tertiary and post-tertiary formations; in the **Biological Section**

Mr. Thiselton Dyer advocated the claims of systematic botany; Sir C. Wilson, in presiding over the **Geographical Section**, enlarged on the importance of commercial geography; in the **Economic Section** Lord Bramwell trenchanted on the domain of politics; in the **Mechanical Section** Mr. Freecz discoursed on electrical mechanics, and in the **Anthropological Section** Gen. Pitt-Rivers pleaded for the establishment of an anthropological museum so arranged as to illustrate the evolution of culture, and he described the working of the Ancient Monuments Act, which he administers. The next meeting, commencing on Sept. 11th, '89, will be held at Newcastle-on-Tyne under the presidency of Prof. W. H. Flower. Offices, 22, Albemarle Street, W.

British Bechuanaland. A portion of Bechuanaland (*q.v.*) south of the Molopo river. It has been annexed, and is distinct from the Northern Bechuanaland Protectorate. The extension of a railway from Kimberley into it has been proposed. Consult "Affairs of Bechuanaland" (Blue-book, Capetown, 1887), and Mackenzie's "Austral Africa." For Governor, etc., see DIPLOMATIC.

British Columbia. A province of the Dominion of Canada which lies between the Rocky Mountains and the North Pacific Ocean, and from the United States boundary to 60° N. lat. Area 390,344 sq. miles; pop. 80,000. Capital Victoria, on south-east of Vancouver Island. Chief town on mainland, New Westminster, on Fraser river. Vancouver City is the terminus of the Canadian Pacific Railway. Esquimaux, in Vancouver, is an Imperial naval and military station. Province mountainous. Agricultural land limited. Much forest and pasture. Products, gold, coal, timber, furs, fish; cattle ranches and fruit farms. Climate of Vancouver quite English; mainland a warmer summer and colder winter. Mineral resources vast, especially coal and gold. Output of gold £6,602 oz. in 1885. Administered by a Lieut.-Governor and Executive Council, 4 members of which belong to the elective Legislative Assembly. The province has 3 seats in the Dominion Senate, and 6 in the House of Commons. Land obtainable on easy and liberal terms. Male sex largely outnumbers female. Till 1858 part of Hudson Bay Territory; then gold discoveries brought settlers, and it became a colony. Vancouver Island, 14,000 sq. miles, became a colony same year; with Queen Charlotte Island joined to British Columbia in 1866. Since 1871 a province of Dominion. See CANADA. Consult pamphlets obtainable at High Commissioner's office, 9, Victoria Chambers, London, S.W. For Ministry see DIPLOMATIC.

British Guiana (pron. Gwi-ah'-nah, or Ghe-ah'-nah). A British colony in South America. On coast extends from Orinoco to Corentyn river, 300 miles, and inland 400 miles. Area variously computed from 76,000 to 109,000 sq. m.; pop. 277,038. Divided into three counties—Essequibo, Demerara, and Berbice (pron. Berbees). Capital, Georgetown (Demerara), pop. 49,000, a picturesque, well-built city and port, provided with various excellent modern institutions; second town and port, New Amsterdam (Berbice), pop. 9,000. Rich alluvial low-lying plains extend forty to seventy miles from the coast, and are the seat of cultivation and settlement. Beyond rise mountains, covered with forest, and scarcely explored. Sundry fine rivers, the Essequibo, Demerara, Berbice,

Corentyn, Cuyuni, Rupununi, Massaruni, Siparuni, etc., navigable for boats, but broken cataracts. Flora and fauna very rich. Forests teem with beautiful flowers and rare plants, and possess immense resources in timbers, fibres, oils, and gums. Beasts, birds, reptiles, fish, and insects in great profusion. Climate fairly healthy for the tropics. Staple article cultivated is sugar-cane. Cotton, coffee, indigo, ginger, have at times been grown; cocoanut, cacao, tobacco, occupy attention. Iron and gold exist. Gold mining is now attracting considerable attention. Resources great, but enterprise deficient, except as regards the sugar industry. Government representative; constitution unique. Executive in hands of Governor; legislation conducted by Court of Policy of ten members, five nominated by elected College of Seven Kiezers. To pass finance six elected representatives added, forming Combined Court. Civil law is modified Roman-Dutch; criminal law is English. Clergy of Churches of England and Scotland have charge of eighteen parishes. Garrison of small detachment of troops (West Indian), two companies volunteers, and a nominal militia. For latest statistics see **BRITISH EMPIRE**, etc. (table). Exports consist of sugar, rum, molasses, timber, shingles, charcoal, and cocoanut. 134,874 tons of sugar shipped in 1887. Population includes West Indians, white, coloured, and black, some Portuguese, Chinese, and 60,000 Hindu coolies. The aboriginal Indians of various tribes number perhaps 10,000. The three colonies of Essequibo, Demerara, and Berbice were taken from the Dutch in 1803, and united as one in 1831. During the year '88 gold has been worked in considerable quantities in the N.W. part of the colony; but the boundary dispute with Venezuela retards the development of the industry. Placer working only is now carried on; but when the boundary is delimited and diplomatic relations with Venezuela resumed, capital will flow to the colony, and quartz mining be commenced. The amount of gold exported in '87 was 11,906 oz. as against 6,518 oz. in '86. On several of the sugar plantations works, of which nearly all are lit by electricity, new machinery has been introduced from England and Germany. The Sugar Bounties Convention has given heart to the planting interest, whose prospects have much improved during the year. A new town has been laid out by the Government at Bartica, at the confluence of the Essequibo, Mazaruni, and Cuyuni rivers, and roads are being cut through the country into the gold-yielding districts. The new Governor, Viscount Gormanston, K.C.M.G., has been compelled to leave the colony owing to ill-health, and a successor has not at the time of writing been appointed. Consult Bates' "South America," and "Her Majesty's Colonies."

British Honduras. A colony in Central America, bounded by Yucatan on N., Guatemala W. and S., and Caribbean Sea E. Area 7,562 sq. m., pop. 27,459. Capital and port Belize, pop. 5,767. Coast low and swampy, with an almost continuous line of coral reefs and bays, within which is a protected line of shore navigation. Good pasture land on west. Much heavy forest, abounding in valuable timber. Soil fertile, suited for all tropical productions. Mahogany, logwood, dyewoods, caoutchouc, abound. Sugar-cane, coffee, cacao, cocoanut, tobacco, and fruits cultivated; cochineal; indigo,

fustic, sarsaparilla, tortoiseshell, exported. The staples of the trade are cochineal and mahogany. British settlements for the cutting and shipping of mahogany were established in 1638, and the right to the territory has been maintained by Great Britain chiefly on account of the importance of this branch of industry. Fauna extensive. Gold and other minerals exist. Climate hot and damp, but there are few epidemics, while earthquakes and hurricanes are unknown. Government administered as in a Crown colony, presided over by a Governor since 1884. Education mostly denominational. There is a police, but no local defences. Industries are wood-cutting, sugar, coffee, and other planting. Great demand for imported labour. Experience has shown that Europeans can work and prosper here. For statistics see **BRITISH EMPIRE**, etc. (table). Crown lands sold at 4s. per acre, leased at 5d. per acre. White immigrants are desired. Bulk of population Negro Creoles. After much strife between England and Spain, the colony became finally British in 1798, by conquest and treaty. It was a dependency of Jamaica till 1861, from then till 1884 under a Lieut.-Governor subordinate to the Governor of Jamaica. Consult Bates' "Central and South America," and "Her Majesty's Colonies."

British Empire, Colonies, Dependencies, and Protectorates. We furnish a table of the British empire throughout the world, showing the geographical distribution of the various parts of it, their respective capitals, area, population, public revenues and expenditure, imports and exports, the dates at which they were acquired, and their political status and government. The dependencies are classified thus:—(a) Colonies possessing a full constitution, with responsible government; (b) colonies in which the legislature is partly elective and partly controlled by the governor, styled representative government; (c) Crown colonies, which are ruled directly by the Imperial government, through their respective governors and local officials; (d) dependencies subordinate to the government of others, provinces and parts of colonies, administered by functionaries appointed by the governments on which they are dependent; (e) protectorates, internally independent, but more or less subject to British control, by treaty and otherwise; (f) places nominally belonging to Great Britain, but either unoccupied or not under authority. Territories occupied by troops, but not declared to be actually British possessions (e.g., Egypt, Suakim), have not been included in this table. During '88 the following protectorates have been proclaimed: Christmas Island (q.v.) and Rarotonga; also a virtual protectorate over British North Borneo (q.v.), Brunei, and Sarawak. Details of the various dependencies will be found under their respective headings elsewhere. The total figures of the entire empire, at home and abroad, may be approximately reckoned as:—area, 9,217,798 sq. miles; pop. 325,625,000; revenue, £212,278,000; public debt, £1,157,000,000; imports and exports, £1,035,000,000. The figures given in the Table are the latest received in England. Population is, generally speaking, that of the census of 1881, except in the responsibly governed colonies and some others, where it is the estimate up to June 1888. Financial figures are generally those for 1887-8, the year ending in June, in most cases. (See following pages.)

Table of the British Empire

	Name and Date of Acquisition.	Capital.	Area, Square Miles.	Population
In The North Sea . .	The United Kingdom of Great Britain and Ireland	London . .	121,115	37,350,000

British Dairy Farmers' Association. See DAIRY FARMING.

British East African Association. A company recently constituted by Royal Charter to exploit certain territories on the Suahili coast of Africa. By the treaty concluded in '86 between Great Britain, Germany, and Zanzibar, the former's "sphere of interest" was declared to extend from the Tania river north and east to Somaliland. **Mombasa** is now virtually a British port, and the centre of this territory. Late in '87 the Syud of Zanzibar ceded to the Association all his rights over the coast from Port Wanga to the German port of Vitu.

British and Foreign Anti-Slavery Society. Founded 1839, its first president being Thomas Clarkson. The objects of the Society, which carries on the work of previous Anti-Slavery Societies, the need for which had ended in the emancipation of slaves in British colonies, are. "The universal extinction of slavery and the slave trade; and the protection of the rights and interests of the enfranchised population in the British possessions, and of all persons captured as slaves." There is a large number of distinguished corresponding members in various parts of the world, who supply the Society with information. A great proportion of the work of the Society is carried on gratuitously. *Journal, The Anti-Slavery Reporter*, Sec., Chas. H. Allen; Office, 55, New Broad Street, E.C.

British Medical Association. See MEDICAL PROGRESS.

British Museum. The establishment of the Museum dates from the acquisition in 1753 of the **Sloane collections**, which were bequeathed by Sir Hans Sloane to the nation on condition of a payment of £20,000. The Museum and Library were established in **Montague House**, and opened in 1759. Since that time many valuable libraries and collections have been acquired by gift or purchase, and the accumulations have so outgrown the space in Great Russell Street that it has been necessary to remove the natural history collections to a handsome and extensive building erected for their reception at South Kensington, which was opened in April 1881. The departments still remaining in Bloomsbury include, in addition to the department of printed books and maps and that of manuscripts, those of prints and drawings, Egyptian and Assyrian antiquities, Greek and Roman antiquities, British and mediæval antiquities, and ethnography and coins and medals. The Library contains not only the finest and most extensive collection of English literature in the world, but also the best library in each European language existing out of the country in which that language is spoken, as well as extensive collections of Hebrew and Oriental books. The department of MSS. is worthy of the collection of books, and in particular contains the most valuable materials for our national history. The number of printed books is about 2,000,000 and of MSS. over 50,000, besides as many charters. The annual **accessions**, from all sources, about 45,000 volumes, under the Copyright Acts alone are about 10,000 volumes. In consequence of the inconvenient extent to which the manuscript catalogue of the printed books had attained, (altogether nearly 3,000 large folios), it is now being put into print as rapidly as the funds will permit. It is hoped that the new printed catalogue will be complete in about 600

volumes by the year 1900. In 1883 a new wing was added to the building, from funds bequeathed by the late Mr. William White; and part of the space thus gained has been devoted to separate accommodation for newspapers and parliamentary papers. During '88 a fine collection of English and foreign pottery, porcelain and glass, as well as a display of Japanese and Chinese paintings, have been open to the public. The number of visitors to the exhibition galleries at Bloomsbury in 1886 was 504,893, and to the natural history collections at South Kensington 382,742. The number of readers in the library during that year was 176,893, or an average of about 580 per diem. Number of books supplied to them, 1,247,888. In '87 the number of readers had risen to 182,778 or an average of 604 per diem, and the number of books supplied to them to 1,852,725. Admission to the exhibition galleries is freely open to the public. A reader's ticket is granted to persons over twenty-one years of age on producing a recommendation from a householder.

British North Borneo. A territory in the north of the island of Borneo recently ceded to a British company. Area estimated at 30,000 sq. m., pop. 150,000. Capital **Sandakan**, otherwise **Elopura**; other ports Kudat and Gaya. The seaboard extends some 500 to 600 miles, with numerous good harbours and large navigable rivers. The coast regions comprise extensive plains of fertile soil, where not cultivated covered with forest and jungle. Interior mountainous, — peak of **Kina-balû** rising to 13,680 feet. Mineral resources said to be immense. (See BORNEO.) The country was originally ceded in 1878 to a private company of Englishmen by the sultans of Brunei and Sulu. Efforts were then made to obtain a royal charter, and, in spite of much opposition from the Governments of Spain and the Netherlands, this was granted by her Majesty in 1881. In Oct. '88 an announcement was made of the establishment of a **virtual protectorate** over B. N. B., Brunei, and Sarawak. By this arrangement British influence is now supreme over the whole of the N.-W. and N. coast of Borneo. The total area of this united protectorate will probably be about 70,000 square miles. Administration is in the hands of a Governor, who is assisted by a Council, and by Residents appointed to preside over provinces and districts; the machinery being similar to that in Crown colonies. For latest statistics see BRITISH EMPIRE, etc. (table). The land round Sandakan has been largely taken up by capitalists, and future prosperity seems assured. The people are mild and peaceable. Malays and Dyaks form the bulk, with a sprinkling of Chinese and Arabs. Consult Hutton's "North Borneo," Penny's "Ten Years in Melanesia."

British Sound. See DIEGO SUAREZ BAY.

Broad Church. See CHURCH OF ENGLAND.

Brock, Thomas, A.R.A., b. 1847. Educated at the Government School of Design at Worcester. Studied at the Royal Academy. Becoming a pupil of the late Mr. J. H. Foley, the sculptor, he completed that artist's unfinished works, including the O'Connell monument in Dublin. Among Mr. Brock's works are "Salmacis," "Hercules strangling Antæus," statues of Paris and Enone, and a large equestrian group, "A Moment of Peril," purchased for the nation by the Royal Academy.

His portrait statues are well known. Elected A.R.A. (1883).

Brokers (London) Relief Act, '84. See 84.

Brook Farm. See CO-OPERATIVE (APARTMENT) HOMES, ed. '88.

Brooke, Rev. A. Stopford, M.A., was b. 1832. Educated at Trin. Coll., Dublin, where he graduated (1856), winning the Downe Prize and Vice-Chancellor's medal for English verse. Minister of Bedford Chapel, Bloomsbury (1876), where he now officiates. Chaplain to the Queen (1872). In 1880 Mr. Brooke seceded from the Church of England in consequence of his not holding the orthodox views on miracles. Is the author of several works, among which are "Life and Letters of the late F. W. Robertson," "Primer of English Literature," an able review of which is to be found in Mr. Matthew Arnold's "Miscellaneous Essays," "The Early Life of Jesus," several volumes of sermons, and a volume of poems issued '88.

Brotherhood, The Pre-Raphaelite. See PRE-RAPHAELITE.

Broughton, Rhoda, a native of North Wales, has achieved notice as a clever novelist. Her first work, "Cometh up as a Flower," which was published about twenty years ago, at once made her name; and was closely followed by "Not Wisely but too Well," "Red as a Rose is She," and these, with her latest novel "**Doctor Cupid**" (1887), are generally considered to be the best of the nine or ten volumes she has published.

Brown, Ford Madox, painter, b. 1821. Educated on the Continent. Exhibited ('48) his "Wickliff Reading his Translation of the Scriptures," at the Free Exhibition, near Hyde Park; his "King Lear" ('49). At the Royal Academy ('51) he produced his third large picture, representing "Chaucer at the Court of Edward III." and ('82) "Christ washing Peter's Feet." Opened an exhibition in Piccadilly ('61), his picture "**Work**" being considered his chief work at that time. His subsequent productions include "The Coat of Many Colours," "Cordelia's Portion," "Elijah and the Widow's Son," "Romeo and Juliet," "The Entombment," "Don Juan," and "Jacopo Foscari," as well as a painting representing Cromwell dictating the famous protest to the Duke of Savoy. Mr. Madox-Brown has recently been engaged in illustrating the history of Manchester in the Town Hall of that city.

Browning, Robert, poet and writer of plays, was b. at Camberwell 1812. Educated at Univ. Coll., London, M.A., Hon. Fellow of Balliol, Oxford, LL.D. Cambridge ('79), D.C.L. Oxford ('82), LL.D. Edinburgh ('84). His first poem, "Pauline" ('33), was written at the age of twenty, and attracted the attention of Rossetti, who was much struck by its many beauties and originality. In '34 Browning visited St. Petersburg, and spent many months in Italy, studying Italian art and life. In '35 "**Paracelsus**" appeared; and Macready having accidentally suggested the writing of a play, "**Stratford**" was written and produced at Covent Garden in '37, Macready and Helen Faucet playing the chief parts. This was followed ('40) by "**Sordello**," together with the series called "Bells and Pomegranates," including "Pippa Passes," "King Victor and King Charles," "Dramatic Lyrics," "The Return of the Druses," "The Blot on the Scutcheon," "Colombe's Birthday," "Dramatic

Romances," "Luria," and "A Soul's Tragedy" ('47-46). Between '46 and '68 Mr. Browning published many of his greatest works: "Men and Women," "Christmas Eve and Easter Day," "Dramatis Personæ," and many shorter poems. In '68-69 appeared the "**King and the Book**." His best known poems are "Balaustion's Adventure" ('71), "Flâne at the Fair" ('72), "Red-cotton Nightcap Country" ('73), "Inn Album" ('75), "Pacchiarotto" ('76), "La Saisiaz" ('78), "Dramatic Idylls" ('79-80), "Jocoseria" ('83), "Dramatic Poems" ('84), "Fertishall's Fancies" ('85), "**Parleys with certain People of Importance in their Day**" ('87). A complete list of Browning's works has been issued by the **Browning Society**. Mr. Browning married ('46) the poetess, Elizabeth Barrett (d. '61). He has recently taken up his residence at Naples.

Browning Society, The. Instituted (1881) for the study of the works of the poet. Among its vice-presidents are Sir F. Leighton, and Mr. Henry Irving. Of Browning's plays, "Colombe's Birthday," "The Blot on the Scutcheon," and "Stratford," have been performed. The society issues to its members the best papers read at its meetings, with abstracts of the discussions thereon. It has also issued free to its members, the various books published as handbooks to Browning's works. The meetings of the Society are held at University College, Gower Street. Hon. Sec., Walter H. Slater, 39, Wolsey Road, Crouch End, London, N.

Bruce, Edgar, actor, made his first appearance on the Liverpool stage (1868). He is well known as an exponent of modern comedy, having taken leading parts in many of the entertaining pieces that have been put on the London stage for the past dozen years. Mr. Bruce is now proprietor of the **Prince of Wales's Theatre**. In 1881 he there produced Mr. Burnand's æsthetic comedy "**The Colonel**," which had a long and successful run. Having at the same time organised a provincial company, he went on tour with it and took the *title rôle* himself. While in Scotland, it is worthy of mention, Mr. Bruce had the rare honour of performing "**The Colonel**" before the Queen, at **Abergeldie Castle**. At Mr. B.'s theatre a unique triumph has been achieved by the success of the comic opera, "**Dorothy**," which has had one of the longest runs upon record.

Brusch, Heinrich Karl, Ph.D., a distinguished Orientalist, b. at Berlin 1827. While yet a student at the Gymnasium, he distinguished himself by his researches in Egyptology, and with the assistance of King Frederick William IV. was enabled to prosecute his studies in that subject in the principal European museums. He first visited Egypt in '53, and on his return was appointed keeper of the Egyptian museum in Berlin. On the death of Baron Minutoli, whom he had accompanied to Persia, he was appointed **Prussian Ambassador** to that country. He was subsequently appointed Professor of Oriental Languages in the Univ. of Göttingen, and in '69 succeeded the French archæologist, M. Mariette, as keeper of the collection of Egyptian antiquities at **Boulaq**. He returned from Egypt in '81 with the titles of **Bay and Pasha**, and communicated the results of his researches in a course of lectures delivered at the Univ. of Berlin. Dr. B. is a voluminous writer on Egyptian antiquities, and has compiled a "**Demotic Grammar**" and a "**Demotic and Hiero-**

glyphic Dictionary. His well-known "*History of Egypt under the Pharaohs*," derived entirely from the monuments, has been translated into English.

Brunei. Otherwise known as "Borneo Proper," is an independent state in the north of Borneo (*q.v.*). Area about 25,000 sq. m. Capital **Brunei**. It is ruled by a sultan, who, however, is not vested with despotic authority, certain officers of his court having similar powers to those of a constitutional ministry. It was formerly the seat of great opulence and splendour; but early spoiliations and intrigues of Portuguese and Dutch caused relapse into decadence. Of late years the influence of the Brookes and other Englishmen has caused a marked improvement. But much remains to be done to develop a country rich in resources.

Bruneles, Sir James, senior, b. 1816, at Kelso, who was the engineer of the *Mersey Tunnel Railway* (*q.v.*), received the honour of knighthood (May 7th, 1886). In the course of a long and varied experience at home and abroad, Sir James built the *San Paulo Railway*. He is a past president of the Institution of Civil Engineers, a member of the French Society of Civil Engineers, a Fellow of the Royal Society of Edinburgh, besides other learned societies, and was created a Knight of the Order of the Rose of Brazil by the Emperor in acknowledgment of his engineering works in that country.

Brussels International Exhibition, The. Was officially opened by the King of the Belgians on June 7th, '88, but had been open to the public some time before, the official day having been delayed owing to the unreadiness of all but the British section. The exhibition was attended with fair success so far as the number of visitors was concerned. The British section was well ordered, and contained a goodly show of British manufacturing exhibits. It was under the charge of W. Lee Batty, the Commissioner General for Great Britain, and Lord Vivian, the British minister at Brussels, took considerable interest in it. The exhibition would probably have been more successful had not the idea been promulgated in Brussels that M. Leon Somzée, the President of the Exhibition and member of the Chamber of Representatives, had promoted it in order to "boom" the Government during the elections. But whatever effect the suspicion that the exhibition was intended to be used in the interests of a political faction may have had, a large number of foreign visitors attended. The Lord Mayor of London visited the exhibition in state in the autumn, and he was received with enthusiasm. Many festivities were held in connection with the exhibition.

Buccaneers. Freebooters as distinguished from the piratical adventurers of 16th and 17th centuries. Degenerating into mere pirates, they disappeared at close of 17th century. See ed. '86.

Buchanan, Robert, poet, essayist, and playwright, b. 1841. Educated at Glasgow University. Some of Mr. Buchanan's poems, stories, and plays, notably the "*Shadow of the Sword*," "*A Nine Days' Queen*," and "*Sophia*," have secured for him considerable popularity. His play of "*Sophia*," founded on Fielding's "*Tom Jones*," had a run of several hundred nights at the Vaudeville. At the same theatre Mr. B.'s latest play, "*Joseph's Sweetheart*," was produced early in '88, and reproduced in Sep-

tember. His novel "*Rachel Dene*" is now running through *Bow Bells*. Mr. B. composed the inaugural ode for the Glasgow Exhibition (*q.v.*), and published in October last an epic poem entitled "*The City of Dream*."

Buckhounds, Master of the. Has control of the royal hunts, and charge of the royal inclosure at Ascot. The office is in the department of Master of the Horse. See MINISTRY.

Buckle, George Earle, son of the Rev. George Buckle, rector of Weston-super-Mare, b. near Bath 1854. He is editor of *The Times*, to which post he was appointed in '84, having previously been connected with the editorial staff of that journal. Mr. B. was educated at Honiton Grammar School, Winchester, and New Coll. Oxford, of which he was a scholar. He won the *Newdigate Prize* for *English Verse* in '75, took a First Class in *Literæ Humaniores* '76, and a First Class in Modern History in the following year. He was subsequently elected to a Fellowship of *All Souls' Coll.*, and was called to the bar at Lincoln's Inn in '80. Mr. B.'s name has recently been prominently before the public in connection with the *Farnell Commission* (*q.v.*).

Budget. See FINANCE, NATIONAL, and SESSION '88, sect. 14.

Buen Ayre, or Bonaire. An island on the coast of Venezuela, belonging to Holland. Area 95 sq. m., pop. 4,043. It is hilly, and in parts arid. Produces timber, sheep, goats, and asses, and has manufactures of salt and charcoal. See COLONIES OF EUROPEAN POWERS.

Building Societies. These societies may be divided into two sections—the Proprietary and the Mutual Societies; the latter dividing the whole of the profits amongst the members *pro rata*. Some are permanent, and others terminable. A favourite development of the latter is the *Starr-Bowkett*—named after the founders of the system—a society which allots its capital among the members, according to the number of shares they nominally hold, by ballot. The subscriptions, generally a small sum per share, are paid weekly or monthly; and on securing an "appropriation" the member repays this sum very much as he would pay his rent, over a term of ten or twelve and a half years, at the end of which the house or land becomes his own. He also maintains his small subscription, and at the winding-up of the society he is entitled to a share of the profits. A further development of the ballot system is the arrangement by which the member may sell his appropriation and his subscription book, thus realising an immediate premium. According to the annual official return up to Dec. 1886, issued '88 (latest return), there were in the United Kingdom 2,079 societies, of which 1,992 were in England and Wales, 46 in Scotland and 41 in Ireland; returns, however, were not to hand from all. The total liabilities in societies making returns amounted to £53,101,058. The liability on shares of this total was £35,355,388; to depositors and other creditors, £15,837,063; and for balance of unappropriated profit, £1,908,607. It has been decided ('88) that if a building society is being wound up, the creditors may force the borrowing members to pay up the whole of their debts to it at once instead of by instalments. The contract to pay by instalments is regarded as binding among members themselves, but as not remaining in force against creditors.

Bulgaria. By Treaty of Berlin, 1878, Bulgaria was constituted an autonomous and tributary principality under the suzerainty of the Porte, the executive power being vested in the prince, assisted by council of ministers, and the legislative power in a single chamber, the National Assembly, elected for three years by manhood suffrage in the proportion of one member to every 10,000 of population. In 1883 a second chamber was formed, and it was enacted that every law must be examined and voted by both chambers and sanctioned by the prince. In 1885 Eastern Roumelia was united to B. (For history '78 to '86 see ed. '87.) By the treaty the amount of tribute and the share of the Turkish debt to be assumed by Bulgaria was to be fixed by agreement between the Powers, '87. Area (including Eastern Roumelia, now also known as Southern Bulgaria: area 135,500 sq. m., pop. about 975,000, former capital Philippopolis, pop. 33,500), 37,860 sq. m.; pop. about 3,000,000. Capital, *Sofia*, pop. 205,501. Budget for '88; revenue, £2,148,000; expenditure, £2,761,000. Imports for '86, £2,500,000; exports, £1,500,000. Chief imports, textile manufactures, iron, coals; chief exports, corn, wool, tallow, and other agricultural and pastoral produce. The bulk of the trade is with Turkey, Great Britain, and Austria. Railways connect Sofia with Constantinople and Belgrade, and Rustchuk with Varna. Of the population over two-thirds are of the Greek Church, and less than one-third Mohammedans, Jews, Gipsies, Armenians, etc. —Political. The year '88 has been marked by many incidents in the history of the Principality. The efforts of Russia to obtain the assistance of the Great Powers to depose Prince Ferdinand (*q.v.*) proved unsuccessful. —Austria, Italy, and England not being in favour of disturbing the Prince. German sympathy with Russia, however, manifested itself in the speech of Prince Bismarck (March) on the Army Bill (see GERMANY), who uttered the memorable words, "Bulgaria, that bit of land between the Danube and the Balkans, is not of sufficient size to hurl Europe—from Moscow to the Pyrenees, from the German Ocean to Palermo—into a war for its sake, the consequences of which no mortal man can foretell." This ill-will of Germany also manifested itself in the prohibition within Germany of the coinage of the new Bulgarian nickel money. In respect of the note of the Porte, conveying its notification (March 5th) that the Porte maintained its declaration of Aug. 2nd, '87, that the presence of Prince Ferdinand in Bulgaria was illegal, the Government at Sofia decided to send no reply; but its efforts (April) to get the Prince formally acknowledged by the Powers were not rewarded with success. Disputes with Turkey occurred continually during the year—the more noticeable being a protest (April) to the Porte concerning the treatment of certain Mussulman subjects; the quarrel (May) as to *ad valorem* duties on merchandise passing the Eastern Roumelian frontier into Turkey; the refusal of the Porte to acknowledge Bulgarian postage stamps or passports; and the neglect of the suzerain power to seriously repress brigandage. Bulgaria having, in retaliation, levied a similar duty on goods from Turkey, the matter was decided later in the year by the Porte's agreement to Bulgarian demands on this point, and also on the question of postage. The *Vakarel Railway* formed a subject of contention between the two powers specified (July). The claim of

the Bulgarian *Exarch* for the appointment of metropolitan archbishops in Macedonia caused religious excitement in the two countries. The difficulty which arose respecting the *Postal Convention* (Aug.) was a little later on (Sept.) settled amicably. —Home Political. The arrest of Major Popoff (March) on a charge of embezzlement of the Sofia garrison accounts was a subject of much comment, and led to a Cabinet crisis, due to the tension between its Conservative and Liberal members; Major P. having been sentenced to four years' imprisonment with hard labour (May). The matter terminated by a compromise, the sentence being confirmed by the Prince—Major P. at the same time receiving a free pardon, with ultimate restoration to his military rank and political privileges. Prince Ferdinand during the year visited various parts of Bulgaria, receiving enthusiastic receptions at Sofia and also at Tirnova on the commemoration of his election (Aug. 14th). In the case of the latter, the metropolitan, M. Clement, was deposed by the Government for his attitude of hostility to the Prince. At the opening of the *Sobranie* (Oct. 27th), Prince F.'s speech gave promise of a number of bills dealing with economic questions and the administration of justice. Brigandage during the year was more or less rife. —Social and General. During the year Count Grenaud, Marshal of the Bulgarian Court, died (Oct. 31st). The opening of a national theatre at Sofia (Sept.) is a noticeable event as a marked step towards the propagation of the Bulgarian language, which the Russians tried to supplant. M. Natchevitch, Minister of Finance, was shot at by an ex-official of the Foreign Office (Sept.) without, however, sustaining serious injury. The opening of the *Zaribod, Sofia*, and the *Vakarel Railway* (July 5th), connecting Constantinople with the Western international service, will doubtless do much to aid in the development of the resources of the Principality. The appointment of Rehid Bey (Nov. 25th) to be Acting Imperial Commissioner of the Porte at Sofia is regarded in some quarters as a possible step towards Turkey's ultimate recognition of Prince Ferdinand. For army, see ARMIES, FOREIGN; and for Ministry, etc., see DIPLOMACY.

Bulgarian Political Parties and the Sobranie. The party divisions in the Bulgarian *Sobranie* or National Assembly may be generally described as *Ministerialists* and *Opposition*. The present *Sobranie* was elected in October '87, its predecessor, which had been elected just a year previously, having been dissolved to get rid of a tangled situation. The elections resulted in a decided victory for the Government, which has some 250 supporters out of a House of less than 300. The chief members of the *Governmental party*, which is also the *anti-Russian party*, are M. Stambouloff, Premier and Minister of the Interior, Dr. Stransky and MM. Natchevitch and Stollhoff, also members of the Ministry. The chief *Opposition leaders* are MM. Karaveloff and Radoslavoff, M. Zankoff, a former leader of the *pro-Russian party*, having left Bulgaria in July '88, and gone to Russia to live and to intrigue against the Sofia Government. While M. Karaveloff is affected to Russia, and leads the *Russian faction* in Bulgaria, M. Radoslavoff is the chief of a so-called "*Alexandrist*," the object of which is to overthrow Prince Ferdinand and bring back Prince Alexander to Bulgaria. It is, consequently, except for

its desire to dethrone Prince Ferdinand, which unites it with the followers of MM. Zankoff and Karaveloff, in opposition to both the other groups.

Bülau, Hans Guido von, b. at Dresden, '30. Was originally designed for the law, but adopted music as his profession. He played before Mozart as a boy, and also took lessons from Haydn. When a student at the University of Berlin, he contributed to *Die Abendpost*, a democratic journal, in which he defended the musical doctrines of *Liszt* and *Wagner*. He became a pupil of *Liszt* in '51, and from '55 to '64 he held the post of Master of Piano-forte at the Conservatoire of Professors *Sterne* and *Marx* at Berlin. He became Director of the Conservatoire at Munich, where he organised performances of *Wagner's* principal works. In '78 he was appointed *Königlicher Hofkapellmeister* at Hanover. He has given performances with distinction in most of the European capitals, and in June, '88, gave a series of *Beethoven* recitals at *St. James's Hall*, London. He is characterised by the intellectual grasp of his subject as well as by remarkable technical skill. He has composed, among other works, music to Shakespeare's "Julius Cæsar," and to "Nirvana," "Des Sängers Fluch," "Vier Charakterstücke für Orchester," and "Il Carnovale di Milano."

Bundesrath. See GERMANY and GERMAN POLITICAL PARTIES.

Burial Laws Amendment Act, '80. This is an Act to enable the burial of Nonconformists and others in Church of England burial-grounds without the service of the Church of England, and in some cases with other services. It was long opposed by churchmen on the ground that its advocates had no real grievances, but regarded it as a stepping-stone towards Disestablishment. It provides that any one responsible for the burial of a deceased person may give forty-eight hours' notice in writing, and in the form prescribed in the first schedule to the Act, to the incumbent of any place or his substitute, that it is intended to bury the deceased in the churchyard of such place without the rites of the Church of England, and that the incumbent or his substitute shall then be free to permit such burial. The burial shall take place in accordance with such notice, and the public are to have free access to such burial, which may be carried out either with the service of any Christian Church or without any service. But the proceedings are not to be made the occasion of bringing into contempt any church or denomination. Ministers of the Church of England are empowered to use the burial service of the Church of England at a burial in unconsecrated ground. In cases where that burial service is not allowed to be used, or when requested so to do by the person responsible for the burial of the deceased, they are empowered to use such service, consisting of prayers taken from the Book of Common Prayer and portions of Scripture, as may be approved of by the Ordinary. The Act extends to the Channel Islands, but not to Scotland or Ireland. Consult, for laws relating to burial, "The Law of Burial," by J. B. Little.

Burial Reform. Much discussion has recently taken place respecting improvements for the disposal of the dead, the etiquette in connection with funerals, and the reduction of the

expense of such. These desirable objects have with some good results been advocated by the Church of England Funeral and Mourning Reform Association, whose presidents are the Archbishops of Canterbury and York, while its patrons include nearly all the bishops and a great number of the leading laymen. The reforms recommended by the Association are:—(1) The interment of the body as soon as possible in sufficient and suitable soil for burial. (2) The use of coffins which will rapidly perish after interment. (3) The disuse of vaults and bricked graves. (4) The encouragement in the interests of health of the removal of the body in crowded districts to a mortuary instead of retaining it in houses occupied by the living. (5) The exercise of simplicity and economy relating to funerals by the use of plain hearses or wheeled biers, the discontinuance of crape, hatbands, scarves, feathers, velvet trappings, and the like, the avoidance of excessive floral decoration, and the discouragement of inordinate eating and drinking at funerals. (6) The meeting in the church or cemetery instead of at the house of mourning. (7) And showing Christian fellowship in deeds as well as in words at the interment of the poorest. The Rev. F. Lawrence, Hon. Sec. to the Association, has recently gained the co-operation of the leading men and the press of every shade of opinion in Canada and the United States in favour of burial reform as recommended by the Association. Papers were read in support of the movement at the Church Congress (q.v.), at Manchester in October last, by Mr. Seymour Hayden, the Rev. H. R. Haweis, and the Bishop of Nottingham, and their remarks were discussed at the meeting. The Council of the Association propose to memorialise the Home Secretary for the appointment of a Royal Commission to inquire into the conditions of cemeteries and the modes of burial with a view to legislation. Sec. of the Association, Rev. F. Lawrence. Office, 26, King Street, Cheap-side, E.C.

Burmah comprises a vast tract of country in southern Asia, bounded on the north and west by the mountainous ranges of Tibet, Assam, and Manipur, on the east by Chinese territory, and partly on the south-east by Siam. The whole of the southern and part of the south-eastern sides form the Burmese shores of the Bay of Bengal. There are three great tribal families in the country, the chief of which is the Mran-má (from which the word Burmah is derived); and while distinct from the Aryans in India and the Chinese on the other side, the natives to some extent partake of the peculiarities of both. The origin and early history of the people are lost in obscurity, but the country is covered with the traces of a past civilisation, and it is known that from remote times the land has been the scene of prolonged internecine warfare, and at least two Chinese invasions. The country is fertile, especially in the valley of the great river Irrawaddy, which is navigable for river boats for six hundred miles from the Bay of Bengal; and many valuable minerals are found, including the rubies which excited the cupidity of early navigators, and a good supply of petroleum. Buddhism is the religion of the people, and in Burmah it is of a peculiar type, which allows perfect tolerance to all other creeds, but prevents proselytism. Every boy enters a temple or pagoda at an early age, and being taught to read and write, develops into a bonze or monk (see BONZE),

but he can leave or stay as he thinks fit. The country is covered with these temples, which, with the clergy, are all supported voluntarily. The position of the Burmese women will compare favourably with any other Eastern nation. (For a concise history of the country, including the Burmese wars, see eds. '87-8.) Here it may be stated that by the treaty of Yendabu (1826), the British annexed Aracan and Tenasserim; and at the close of the second war (1852) the remainder of the coast-line, including Rangoon and the whole province of Pegu, fell into our hands. Inland from this time an imaginary frontier divided Independent from British Burmah. The seat of government in the former was removed from time to time, till, on the outbreak of the third and last Burmese war, which occurred towards the end of '85, the capital was Mandalay, which was entered by the British forces under General Prendergast on Nov. 28th of that year. Upper Burmah was annexed by proclamation on Jan. 1st, '86. Although since that time the new possession and portions of the old have been much troubled with dacoity, and trade has been unsettled, the whole land is known to be teeming with natural wealth, Lower Burmah having already proved a rich possession. Up to the close of the year '88, the general condition of what was and still is known as Upper Burmah seemed to be in a state of gradual improvement. Dacoities were, of course, common in the remoter districts, and indeed an unsettled feeling of a spasmodic character reached the lower provinces on the seaboard, but taking it all round the country appeared to be settling down. As to the Government finances, the official report issued by the India Office stated that the cost on the Indian Treasury had been considerable. During '86-7 the revenue collection in Upper Burmah only reached Rx.220,000, but during '87-8 the receipts rose to Rx.490,000. The net charge to the Indian Treasury on account of Upper Burmah was, '86-7, Rx.2,068,700; '87-8, Rx.2,727,300; '88-9 (estimated), Rx.1,880,500. The main source of revenue appears at present to be the capitation grant, which is paid at the rate of Rx.1 per family or house, and which is distributed among the families of a village according to their circumstances. If present anticipations are realised, it is calculated that in 1896, ten years after annexation, Upper Burmah will cost about Rx.340,000 annually, against a surplus at the present from Lower Burmah. A report published in the spring of '88, giving the financial statistics for Lower Burmah, but only down to March '87, showed the total revenue to be £3,013,479, an increase of £400,000 on the previous year, leaving a surplus of £1,447,785 for military and other purposes. The military and police operations during the year can hardly be described as of a sweeping character, although it was announced in January that it had been decided to disarm the whole of Burmah, so far as the general population was concerned. This step led to much criticism, it being shown that the peaceful and law-abiding had become the helpless victims of the dacoits, so that it was reported from Rangoon, in June, that the Chief Commissioner had issued a minute materially modifying the order. It was announced early in March that Sir George White was to remain in command of the troops in Upper Burmah for another year. Under his direction the operations against the Shans in the north, the Kachyens and the Chins, were

intermittently but vigorously carried on. A formidable raid by Chins of the Tashou tribe was made into British territory on May 5th, and a loyal Shan, Tsawbwa, appointed by us, was carried off. This rising, however, was speedily suppressed, and the captive recovered. In the same month the relief movements of troops of the Burmah force ceased, the soldiery left in the country being three companies of Engineers, three batteries of Artillery, three British infantry, two native cavalry, and twelve native infantry regiments. Under date Mandalay, May 24th, it was reported that the Burmese chief priests of that city had addressed a letter to the Indian Government declaring that they were actively engaged in trying to restore peace to the country. It may be interesting here to add that in the *Times* of Sept. 1st "A Burmese Campaigner" gave an account of the adventures of Hla-oo, a notorious dacoit leader, who, after defying the whole of the British forces for a long time, was murdered by one of his own followers. In October it was reported that the Chief Commissioner had issued a minute to the effect that the general pardon granted to dacoits who surrendered would now be limited; no pardons would be given to dacoits without his permission. Later in the same month it was stated from Rangoon that it had been decided to appoint an Inspector-general of police for the whole country, with deputies in Upper and Lower Burmah; General Steadman received the appointment. The disturbances in Lower Burmah, though of a spasmodic character, were sufficiently unusual to be alarming. It was reported in February that thirty men dressed as Shans attacked the Muggoughlang police station, in Tavoy district, the most southerly portion of Lower Burmah, and looted it. They are believed to have come from the Siamese frontier. In April a report of another outbreak in the same neighbourhood came to hand, this time a body of police on the river being attacked and dispersed. Vigorous measures were required before peace was restored to the locality. Again, in the Tharrawaddy district of Lower Burmah, a gang of 300 dacoits cut the railway and the telegraph lines 200 miles south of Prome. From Rangoon, Aug. 4th, it was reported that the Government had decided to reform the police force of Lower Burmah. As to the development of the country, Major Hobday reported (*Times*, June 6th and 18th) in detail on the work of the Survey Department '87-8, which seems to have been materially assisted by the reconnaissances of military and other officers. From this it appears that a very large area of Upper Burmah had been covered, including the northern Shan states and Ruby Mines district, 3,000 sq. m.; southern Shan states, 3,000; Yemethen and Mehilla districts, 2,000; Yak country, 1,000; and Mandalay and Kyarekse districts, 2,000—in all 15,000 sq. m. of triangulation. Besides, a survey of Mandalay, on the scale of 40 ft. to the inch, had been in hand since Nov. '86. According to the Trade and Navigation returns of Burmah for the year '87-8 (ending March 31st) there was a great and unprecedented increase, the total reaching the large sum of 21 crores of rupees, the improvement on the previous year being 24 lakhs, or on the highest previous record 166 lakhs. The bulk of the increase was in imports from foreign countries, but both the coasting and the export trades showed increases. Stocks at the close of the financial

year were not large, and the exports to Upper Burma were much greater than in '86-7. Of the nationalities of the shipping engaged in the coasting trade, British and British Indian vessels represented 95 per cent. Mr. Warry, of the British Consular Service in China, published (*Times*, Aug. 30th) a report on the india-rubber trade of Upper Burma, the Mogoung district being the headquarters of the industry. Later in the year it was reported that the Chinese authorities had prohibited the export of salt from Bhamo into the country; but it subsequently transpired that salt being an Imperial monopoly, steps had only been taken to prevent smuggling. An interesting article on the outch trade of Burma, from the *Rangoon Gazette*, was given in the *Times* of Oct. 22nd. The Jade mines in the Kachyen district were visited by Captain Triscott's column early in the year, these being the first Europeans to reach them and the works were found to be of a very primitive character; the ruby mines appear to be still worked, or rather in course of development, by the Streeter Syndicate, the district, however, proving very unhealthy. On Aug. 17th, Mr. Philip Nolan, general secretary of the Government of Bengal, arrived at Rangoon to arrange for an extensive system of migration to Burma from portions of Bengal adjoining Assam. The scheme includes sea passage at low rates and the granting of land on the Mandalay railway on very favourable terms. The grantees will be bound to employ 90 per cent. of natives of India on the plantations.—**Miscellaneous.** A great fire occurred at Mandalay on April 5th, and 500 houses were burnt down. It was rumoured about the middle of the year that the papers for the creation of a Lieutenant-Governorship for Burma had been sent to England. Later on it was reported (*Times*, Oct. 4th) that the investigation of the claims against the late Burmese Government were completed with the exception of five, amounting to two lakhs. The total amount of claims was 98 lakhs, and the sum so far awarded was 83 lakhs. The only claims paid in full were those of Europeans in the employ of the late Government. In November it was announced that the Government intended to offer the concession for the working of the ruby mines to public tender, although it had been understood that the arrangement with Messrs. Streeter, who agreed to pay £40,000 a year for the monopoly, had been to all intents and purposes ratified. According to the Preliminary Administration report of Upper Burma it appears that during the last official year 5,620 pedestrian traders, and 13,300 laden bullocks arrived in Mandalay, bringing goods to the value of 4½ lakhs of rupees from the Shan hills. The export from the old Burmese capital was to the same value, all this business being conducted in spite of the disturbed nature of the country. In the eastern division the trade was greater—no less than 18,000 bullock and 2,000 pedestrian loads, valued at 10½ lakhs, entered Meiktila and Yemethen. On Nov. 13th the *Times* published an official statement as to the condition of the Tharrawaddy district since its annexation in '52. Consult Balfour's "Cyclopædia of India," Hunter's "Imperial Gazetteer of India (Rangoon)," "Encyclopædia Britannica (Burmah)," also Colquhoun's "Burma and the Burmans," Yule's "Embassy to Ava," etc., etc.; and for Chief Commissioner, etc., see DIPLOMATIC.

Burmah and Siam Railways. For history and earlier details, see ed. '88. On Feb. 24th, '87, Sir John Gorst announced in the House of Commons that work had been begun at both ends of the Tounghoo-Mandalay line, and it was carried on vigorously during that year. In '88 (Feb. 4th, Rangoon) it was reported that the progress on the new line was still satisfactory, being carried on under the direction of Mr. Buyers, engineer-in-chief of the Burmah State Railway, although considerable obstacles had to be overcome owing to the disturbed state of the country, and the difficulty in procuring labour. It was then estimated that the whole length of the line would be 220 miles, the southern half running through dense forests, and the northern through a generally well-populated country. For the whole of its length the line is parallel to, and within a few miles of the Shan Hills, crossing several streams 300 ft. to 500 ft. broad. The only important river during the "rains" is the Myitngi, lying 70 miles south of Mandalay which has been crossed by a bridge with 4 spans of 150 ft. each, and 2 of 40 ft. From Mandalay coming south the line, at the above date, had been laid for 40 miles, and going north from Tounghoo for 70 miles. As platelaying was going on at the rate of 1½ miles daily, the early opening of the line might have been looked for, but as the central portion would require solidifying by rain, it was not contemplated to open the whole railway for regular traffic till Jan. 1st, '89. On Feb. 21st, a resolution in favour of the development of the Burmah and Siam Railways scheme was adopted by the Associated Chambers of Commerce at their London meeting; and two interesting articles reviewing the whole subject appeared in the *Engineer*, on April 27th and May 4th. A further interesting incident in connection with the question was the visit of General Sir Andrew Clarke (ex-Inspector General of Fortifications) to Bangkok on behalf of an English syndicate, to arrange terms with the King of Siam for the construction of a main line from his capital to Zimme. It was reported in the spring of '88 that he had been quite successful, and later on Sir Andrew, addressing a political meeting in Kent, told the same story. Kyouurse, about thirty-five miles south of Mandalay, a military post and important station on the Tounghoo-Mandalay line, was destroyed by fire on April 9th, and it was added that about two lakhs of silver in the treasury were destroyed. Under date Aug. 18th it was reported from Rangoon that the line to Mandalay was practically complete. Towards the end of September it was reported that the Siamese Government had granted a concession for two railway lines, one of which was to connect Bangkok with the Port of Paknam. It was added that the Government had also undertaken the construction of a steam tramway in the capital.

Burnand, F. C., the editor of *Punch*, was b. 1836. Educated at Eton and Trin. Coll., Cambridge. Called to the bar (1882). Has been a voluminous dramatic writer, principally devoting himself to burlesque, of which "Lion" and "Black-eyed Susan" may be said to have inaugurated the era of "long runs." Among the travesties of the works of living novelists those on "Ouida" and Rhoda Broughton are the most popular, and "Scrapmore" is the best specimen, has also produced burlesque on "Ariane," entitled "Airey-Annie," '88. Author of "Happy Thoughts" in *Punch*. Became,

after some years' connection with *Punch*, its editor ('80).

Burne-Jones, Edward, A.R.A., b. at Birmingham 1833. Educated at King Edward's Grammar School of that town, and Exeter Coll., Oxford, of which he is an Honorary Fellow. He received his inspiration as an artist from Rossetti, and has developed his originality and power independently of the schools. He was elected President of the Royal Birmingham Society of Artists in '85, and Associate of the Royal Academy in the same year. Mr. Burne-Jones' pictures were, until recently, amongst the chief attractions at the Grosvenor Gallery (*q.v.*), but owing to a dispute with Sir Coutts Lindsay, he in '87 severed his connection with that institution, and took a prominent part in the establishment of the *New Gallery* (*q.v.*), to which he last year contributed "The Rock of Doom," "The Doom Fulfilled," and "The Tower of Brass."

Burnett, Frances Hodgson, was b. in Manchester, 1849. In '65 her parents left England, and settled in Tennessee. Mrs. B. published her first story, entitled "Suriy Tim's Trouble," in *Scribner's Magazine*, in '67. Her popular story, "That Lass o' Lowrie's," appeared subsequently in the same magazine. On her marriage with Dr. Luan M. Burnett, she removed to Washington. She has recently achieved great success with "Little Lord Fauntleroy," which was dramatised last year. In October '88 Mrs. B. was presented with a half-hoop diamond bracelet by many eminent literary comrades in token of the successful issue of the copyright law case *re* "Little Lord Fauntleroy."

Burns (Walter Scott). Professor Blackie's (*q.v.*) breezy biography of the Ayrshire ploughman is noteworthy for its courageous dealing with Burns as he was, nothing being extenuated nor ought set down in malice. No great author has suffered in this respect to anything like the same extent as the Scottish bard. Professor B. has ventured to look Burns in the face, with the result that he found him no better and no worse than the bulk of men. For this reason the work of the venerable Professor possesses great human interest, and as such is heartily to be welcomed.

Burton, Sir Richard Francis, K.C.M.G., traveller, scholar, and linguist; b. 1820. Educated abroad and at Oxford. Joined the Indian army in 1842, and became master of several native languages. He was much employed on secret service, living among the natives as one of themselves, and the information he furnished to General Napier proved of the greatest value in the conquest of Scinde and the Punjab. He was the first European who ever visited Harar; and his journey to Mecca and Medina in the disguise of a Mohammedan pilgrim is one of the most marvelous feats ever accomplished by a traveller. During the Crimean war he was Chief of Staff to General Beaton. He afterwards visited Somaliland. In 1857 he went to Zanzibar in company with Captain Speke, and made a journey into the interior, which resulted in the discovery of the great lakes Tanganyika and Victoria Nyanza. He was next consul at Fernando Po, at Santos in the Brazil, and at Damascus. He is now H.M. Consul at Trieste. He is the author of many

works, and has translated the "Lusiad" of Camoens, the "Thousand Nights and a Night," a literal translation of the "Arabian Nights" from the original Arabic—a work in twelve volumes, valuable to the scholar, but unsuitable for ordinary reading. He is also the author of "The History of the Sword," "The Gold Mines of Midian," etc. K.C.M.G. (March '86).

Bush, Rev. Joseph, President of the Wesleyan Conference, was b. at Ashley, Lincs., 1826. Educated at Spilsby Grammar School and Richmond College, which he entered as a candidate in '50, and in '53 commenced the active work of the ministry. In '71, he was appointed one of the Official Letter Writers to the Wesleyan Conference, and was subsequently Chairman of the Newcastle, Edinburgh, Aberdeen, Halifax, Bradford, and First London Districts respectively. Mr. B. has been member of the Wesleyan Legal Hundred since '73. He is a hard worker and an able administrator, and has written many works of a devotional character, and in '83, by direction of the Conference, he recast the "Liverpool Minutes," a codification of the resolutions of the Conference relating to pastoral work—the standard manual of Wesleyan pastoral duty.

Bushman, or Bosjesmen. See ed. '86.

Butler, Lady (née Miss Thompson), b. at Lausanne, Switzerland. At the age of five she began to handle the pencil, and continued her studies in Florence. In 1870 her family returned to England, and remained at Ventnor until the unprecedented success of Miss Thompson's "Roll Call" necessitated a removal to London. Her first picture, "Missing," was exhibited at the Royal Academy in 1873, "Roll Call," (1874), which was purchased by the Queen; and the artist subsequently painted "The 28th Regiment at Quatre Bras," "Balaclava," and "Inkerian." Her other pictures include "Listing for the Connaught Rangers," "The Defence of Rorke's Drift," "Floreat Etana," and "The Charge of the Scots Greys at Waterloo." Lady B. is unrivalled as a painter of military scenes.

Butler, Rev. Henry Montague, D.D., Master of Trin. Coll., Cambridge, was b. 1833. Educated at Harrow and Trin. Coll.; Bell Univ. Scholar (1852), Battie Univ. Scholar and Browne Medallist (1853), Porson Prize, Camden Medal, Members' Prize (1854), B.A. (Senior Classic), and was Fellow of his college (1855). Head master of Harrow (1859), of which school his father, the Rev. George Butler, D.D., had also been head master. Hon. Chaplain to the Queen (1875-77), Dean of Gloucester (1886), but only a few weeks after his installation resigned his Deanery to accept the *Mastership of Trinity*. Married August, '88, to Miss Ramsey, of Gilton Coll., who distinguished herself by taking the first place in the Cambridge Classical Tripos '87.

Butt, Sir Charles Parker, was born 1830, called to the bar in 1854, and created a Q.C. (1868). After unsuccessfully contesting Tamworth, he sat as M.P. for Southampton, in the Liberal interest (1880-83), when he was appointed a Judge of the Probate, Divorce, and Admiralty Division, a vacancy being caused by the resignation of Sir Robert Phillimore.

Butterline. See ed. '88.

Bye Elections. See ELECTIONS, BYE.

mediately adopted in Italy, Spain, Denmark, Holland, Flanders, and Portugal. Two months later, by an edict of Henry III., it was adopted in France, the 9th December being changed to the 20th. Germany and Switzerland adopted the new calendar in 1583, Hungary in 1587, Great Britain in 1751 (in 1752 the 3rd of September being altered to the 14th). In Russia, Greece, and throughout the East the old style is still retained. The change caused popular tumults in many countries.

Calorimeter. An instrument for measuring the actual amount of heat given out by a body. See ed. '86.

Calvinism includes a belief in such doctrines as divine predestination, original sin, and human depravity, election, effectual calling, and the final perseverance of the saints. Calvinism takes in several other points of controversy, such as that of free will, the Sonship of the Second Person of the Trinity, and other differences in doctrine, as between Calvinists and Arminians. In later times the word has come to be very loosely used in controversy, and is often applied to opinions which Calvin did not hold. See ed. '87.

Cambodia. A province of Indo-China and a French protectorate. Area 32,254 sq. m., pop. 1,500,000. Capital **Saigon**, on river of same name. Country a rich alluvial plain, watered by fine streams. People industrious agriculturists and fishers. Government a monarchy more or less under French influence. See ANNAM.

Cambridge, H.R.H. George William Frederick Charles, 2nd Duke of K.G., P.C., K.P., G.C.M.G., G.C.I.I., G.C.B., G.C.S.I. (creat. 1801), grandson to George III. and first cousin to the Queen, was b. at Hanover March 26th, 1819. He became a colonel in the British army in '37, and succeeded his father Adolphus Frederick, 1st Duke of Cambridge, in '50. Four years later ('54) he was raised to the rank of major-general, on his appointment to command the two brigades of Highlanders and Guards united to form the first division of the army sent against the Tsar Nicholas of Russia in the Crimean war of '54-6. In '56 he was promoted to the rank of General; in '61 appointed Colonel-in-chief of the Royal Artillery and Royal Engineers; and in '62 raised to the rank of Field Marshal, and subsequently appointed **Commander-in-chief** of the British army, and **appointment perpetuated** by letters patent '87. H.R.H.'s action in giving the **Volunteers** notice to quit **Wimbledon Common**, in the neighbourhood of which he owns large estates, and his opposition to the proposal that their summer outing should be held in Richmond Park, of which he is a Ranger, created much comment in '88.

"Cambridge Preliminary." See CANDIDATES FOR HOLY ORDERS.

Cambridge University. About the middle of the thirteenth century students began to collect in hostels. Its first known charter is dated 1231 (15 Henry III.). The endowed colleges gradually absorbed the hostels, the last of which was annexed to Trinity in 1540. The legislative bodies are the **Senate**, which consists of graduates, and the **Council**, a smaller body elected therefrom. Like Oxford, the University received a new code in 1882, as did also many of the colleges in both universities. The following is the list of colleges: **Funded** (1257), **Peterhouse**—**Head**, J. Porter, D.D.—**Undergraduates**, 87; (1326), **Clare Hall**,

F. Atkinson, D.D., 166; (1347), **Pembroke**, C. E. Searle, D.D., 120; (1348), **Gonville and Caius**, N. M. Ferrers, D.D., 158; (1350), **Trinity Hall**, H. Latham, M.A., 237; (1352), **Corpus Christi**, E. H. Perwone, D.D., 114; (1441), **King's**, vacant, 91; (1448), **Queens**, G. Phillips, D.D., 91; (1473), **St. Catherine's**, C. K. Robinson, D.D., 51; (1496), **Jesus**, H. A. Morgan, D.D., 160; (1505), **Christ's**, John Peile, Litt.D., 160; (1511), **St. John's**, C. Taylor, D.D., 290; (1519), **Magdalen**, Hon. and Rev. L. Neville, M.A., 67; (1546), **Trinity**, H. M. Butler, D.D., 647; (1584), **Emmanuel**, S. C. Phear, D.D., 132; (1595), **Sidney Sussex**, Robert Phelps, D.D., 58; (1800), **Downing**, Alex. Hill, M.A., D.D., 74. **Hostels** (1876), **Cavendish**, J. H. Flather, M.A., 28; (1882), **Salwyn**, Hon. A. T. Lytton, M.A., 97; (1884), **Ayerst**, W. Ayerst, M.A., 38; **Non-Collegiates**, 143: Total, 3,059. The examinations necessary for degree of **Bachelor** are the **Previous** ("Little-Go"); **General**, and **Special** examinations. Candidates for **Honours** have to pass an additional examination in Mathematics, French or German with their **Previous**. The **Tripuses**, which for Honour candidates take the place of the **General** and **Special**, are **Classical**, **Mathematical**, **History**, **Law**, **Theology**, **Moral Science**, **Natural Science**, **Indian Languages**, **Semitic Languages**, and **Medieval and Modern Languages**. **Women** are admitted to the examinations, and reside mostly in **Newnham College** and **Girton College**. Vigorous efforts have been made to secure the advantages of degrees for women by resident and non-resident members of the University, but hitherto without success. Students of not less than two years' standing at an **affiliated college**, on being admitted members of the University, may be deemed to have already kept three of the terms required for any degree, it is the same with adult students under a committee working in concert with the University in places where there is no affiliated college. **Affiliated colleges** are:—University College, Nottingham; St. David's, Lampeter; Firth, Sheffield; University of New Zealand, and University of Calcutta. **Affiliated centres**:—Hull, Derby, Scarborough, Newcastle-upon-Tyne, and Sunderland. **Degrees**.—**D.D.** (hood scarlet cloth lined with pink silk); **B.D.** (h. plain black silk); **M.A.** (h. black silk lined with white silk); **B.A.** (h. black stuff lined with white fur); **M.D.** (h. scarlet cloth lined with pink silk); **M.B.** (h. black silk lined with white silk); **M.Ch.** (h. same as M.A.); **LL.D.** (h. scarlet cloth lined with pink silk); **LL.B.** (h. black stuff lined with fur); **LL.M.** (h. black silk lined with white silk); **Mus.D.** (h. puce silk lined with white silk); **Mus.B.** (h. black stuff lined with fur). **Chancellor**, His Grace the Duke of Devonshire, K.G. **Vice-Chancellor**, Rev. E. Searle, D.D. (Pembroke). **Parliamentary representatives**, Rt. Hon. H. C. Raikes, and Prof. G. G. Stokes (q.v.).

Camden Society, The. Founded (1838) for the publication of documents relating to English history. Its publications number some 150 volumes. **Pres.**, the Earl of Crawford; **Hon. Sec.**, Mr. J. Gardner, 25, Parliament Street, S.W.

Camel Corps, raised for fighting in the Sudan campaigns of '84-85. Consisted of the British infantry or sailors mounted on camels.

Camera Lucida. See ed. '86.

Cameron, Commander Verney Lovett, C.B., D.C.L., a distinguished naval officer and African traveller, was b. 1844. Entered the Royal Navy ('57); lieutenant ('65); com

mander ('76); retired ('83). Took part in the Abyssinian campaign; served on the East Coast of Africa; accompanied Sir Bartle Frere's special mission to Zanzibar; went to the relief of Livingstone; and has made important explorations in Central Africa, laid down the watersheds between the Nile, the Congo, and the Zambesi, etc., and was the first European who had ever succeeded in crossing tropical Africa from east to west. Has also visited Syria and Mesopotamia. Commander Cameron is a gold medalist of the Royal Geographical Societies of London, Paris, and Lisbon, and has received a gold medal from King Victor Emmanuel. Created C.B. ('76), is Hon. D.C.L. of Oxford, and possesses several foreign decorations. Is the author of "Across Africa," a work on Steam Tactics; "The History of Arthur Penreath" ('88), etc.

Cameroons. A territory on the Bight of Biafra, West Africa, annexed by Germany in 1884, and comprising perhaps 10,000 sq. m.; including country claimed in interior, 115,000 sq. m. It consists of the district of Bimbia, Nikol Island, the Cameroons or Cameroos River, and the districts of Malimba, Plantation, and Criby. Capital **Aqua Town**. The volcanic Cameroons mountains (13,120 feet high) afford extensive areas suited for coffee-growing, etc., with a climate better adapted to European constitutions than any other part of Guinea. Trade in palm-oil. See GERMAN COLONISATION, etc.

Canada, Dominion of (from the Indian *Kanata*—i.e., "Place of Huts"), British North America. Consists of the Provinces of Ontario, Quebec,—formerly styled Upper and Lower Canada,—Nova Scotia, New Brunswick, Prince Edward Island, Manitoba, the North-West Territories, and British Columbia. The four first-mentioned provinces were united under one federal government in 1867; in 1870 Manitoba and the Territories were formed and admitted; British Columbia and its appanage Vancouver Island joined in 1871; Prince Edward Island in 1873. Newfoundland remains independent. Dominion capital **Ottawa**, pop. 30,344, a handsome city on the river of the same name. Largest city Montreal, Quebec, pop. 200,000; the next, Toronto, Ontario, 140,000; Quebec, 65,000; Halifax, Nova Scotia, 40,000; Hamilton, Ont., 35,000; the capital, Ottawa, Ont., 30,344; Winnipeg, Manitoba, 30,000; St. John, New Brunswick, 30,000. Having from 10,000 to 20,000 are London, Ont.; Portland, New Br.; Kingston, Ont.; Charlotte-town, Prince Edward Island; having from 8,000 to 10,000 are Guelph, Ont.; St. Catherine's, Ont.; Brantford, Ont.; Belleville, Ont.; Trois-Rivières, Qu.; St. Thomas, Ont.; Stratford, Ont.; having between 7,000 and 8,000 are Chatham, Ont.; Brockville, Ont.; Lewis, Qu.; Sherbrooke, Qu.; having between 6,000 and 7,000 are Hull, Qu.; Peterborough, Ont.; Windsor, Ont.; St. Henri, Qu.; Fredericton, New Br.; having between 5,000 and 6,000 are Victoria, British Columbia; St. Jean Baptiste, Qu.; Sorel, Qu.; Port Hope, Ont.; Woodstock, Ont.; St. Hyacinthe, Qu.; Galt, Ont.; Lindsay, Ont.; Moncton, New Br.—Chief natural features of Eastern Canada are the river St. Lawrence and the great lakes Ontario, Erie, Huron, Superior, with the various affluents and smaller lakes forming an immense extent of waterway. The Laurentian basin is narrow in proportion to its length, and remarkably low. The land presents glorious scenery, rich forest, and an

amazingly fertile soil. Summer begins in April and lasts into November; characterised by great heat, causing luxuriant vegetation. Seasons sharply divided. Winter severe, but surprisingly healthy. To the north is **Hudson Bay** (*q.v.*), a great inland sea nearly as large as the Mediterranean. Ice stops navigation the greater part of the year, but experiments are being made with a view to find out the duration of the open passage. Around it, eastward through Labrador to Atlantic, northward to Arctic regions, and westward to Alaska, extends a more or less frozen region, profitable as yet only to the hunter, though not without wealth for the woodsman and the miner. Westward of Lake Superior is the rugged district of **Kewatin**, and beyond it the great fertile belt of prairie lands interposing between the frozen north and the desert of the north-central United States. Here are Manitoba, and the North-West Territories, regions that may be termed a farmer's paradise. The dominion of frost recedes farther and farther to the north as we go west. This country is watered by noble navigable streams—Red River, Assiniboine, Saskatchewan, Athabasca, and studded with lakes—Winnipeg, Manitoba, etc. The great chain of the Rocky Mountains shuts off **British Columbia**, a region enjoying a mild climate, rich in minerals, and of abundant fertility. The Pacific coast is broken and indented, fringed with islands, among these **Vancouver** and **Queen Charlotte Islands**. The flora and fauna of Canada are far too extensive for detail in this place, and the mineral kingdom includes the precious metals, iron, coal, and almost all necessary and useful minerals.—The Executive is in the hands of a Governor-General, appointed by the Crown, and assisted by a Privy Council, composed of heads of departments, similarly to the Imperial Ministry. Parliament consists of a Senate and House of Commons. Senators are called from the various provinces by the Governor-General, and sit for life; there are 78. Members of the House of Commons, at present 215, are elected quinquennially on a low suffrage. Both senators and members are salaried, and receive travelling expenses. Ontario seats 24 senators and 93 members; Quebec, 24 and 65; Nova Scotia, 10 and 21; New Brunswick, 10 and 16; Prince Edward Island, 4 and 7; Manitoba, 3 and 5; British Columbia, 3 and 6; North-West Territories, 2 and 4. An Act was passed in '86 giving representation to the North-West Territories. The several provinces have each a local parliament and administration under a Lieutenant-Governor. They dispose of their own revenues, and legislate for internal affairs, but are restricted from interference with the action or policy of the central government. There is no state church. Roman Catholics are the prevailing sect, numbering about 40 per cent. of the population; Anglicans are about 12 per cent.; Presbyterians and Methodists each rather more; Baptists, 6 per cent. In each of the old provinces are one or two universities, with colleges, medical schools, high schools, public elementary schools, normal schools, etc. Government support and compulsion vary in the provinces.—The Imperial army in Canada consists of a force of 2,000 men, stationed at **Halifax**, Nova Scotia, which, as also **Esquimaux**, British Columbia, is strongly fortified. The two places are Imperial naval and military stations, with arsenals and dockyards. The Dominion

militia numbers about 40,000 men, who are volunteers, are called out for drill a few days every year, and are paid. There is legislative power to keep up its strength by ballot if necessary, but this has never been required. The whole of the male population, between the ages of 18 and 60, may be called to arms in case of emergency.—For latest financial statistics see *BRITISH EMPIRE*, etc. (table). Shipping cleared ('86), 13,969,239 tons. Capital invested in manufacturing industries, £33,000,000 (in '81); annual value of resulting manufactures, £62,000,000. The Dominion has about 12,000 miles of railway and 30,000 miles of telegraph. The natural waterways and constructed canals are of immense extent. The river and lake communications in Manitoba and the Northwest are also extensive. A railway is now in course of construction from Winnipeg to Hudson Bay (*q.v.*). The staple exports are grain and flour, timber, cheese, butter, cattle and sheep, minerals, coal, furs, etc. Export of gold, 1886, was 65,000 oz., valued at £246,000. The farming industry includes the raising of wheat in immense quantities, much pastoral and dairy farming, and general agriculture. Agricultural exports ('86), £4,402,406; animals and their products, £4,469,216. Apples and other fruit grown largely for export. A little wine is made. The fisheries are of vast importance, the yield being about £3,425,000. The timber trade employs 100,000 hands: export ('86) £4,718,000. Mining exports £900,000. The collection of furs is also large. Manufacture is rapidly attaining a high standpoint. Land is to be had on almost nominal terms, but these vary in the several provinces. Remnants of aboriginal Indian tribes are mostly gathered into reserves, are under surveillance, are loyal and peaceable, and under civilising influences. —Canada, limited then to Quebec and Ontario, was a French possession until 1763, when it was ceded to England, the fortress of Quebec having been stormed and taken by Wolfe in 1759. The history of the "Dominion," as such, begins in 1867, when its present constitution was created by the "British North America Act" of the Imperial Parliament. Canada has loyally offered troops to the mother-country on several occasions. Recently troops were employed in suppressing a revolt of Indians and half-breeds, known as Riel's insurrection, '85. Principal historic event since federation has been the construction of the *Canadian Pacific Railway* (*q.v.*) across the continent (open '86), and the consequent opening up of the immense North-West Territory. There have been continual differences between the United States and Canada about the Fisheries, due to disputed interpretations of the Treaty of 1818. During '88, among topics which have excited attention in the Dominion, the most important were the *Fisheries Question* (see *FISHERIES AND UNITED STATES*); Imperial Trade Reciprocity; Commercial Union; the Immigration question; and the Manitoban Railway dispute (see *CANADIAN PACIFIC RAILWAY*). Great and destructive tornadoes devastated the province of Ontario (June). A report was made to the Canadian Government upon the resources and capability of the Great Mackenzie Basin by Senator Schultz's committee. Lord Lansdowne (*q.v.*) resigned the Governor-Generalship of Canada on his becoming Viceroy of India, and was succeeded by Lord Stanley of Preston. (See also under various

heads of provinces, etc.; and for Dominion Ministry, etc., see *DIPLOMATIC*.) Consult current pamphlets obtainable from the High Commissioner in London, 9, Victoria Chambers, S.W.; the Emigrants' Information Office, 31, Broadway, Westminster; "The Canadian Almanac" for 1889; Hayden and Selwyn's "North America"; Fleming's "England and Canada"; Grant's "Picturesque Canada"; Tuttle's "Our North Land"; Selwyn and Dawson's "Physical Geography and Geology of Canada"; "Statistical Abstract and Record of Canada"; etc.

Canada Temperance Act. A form of local option in Canada passed by Dominion Parliament in '78, and providing that on receipt of petition from at least one-fourth of the electors of any county or city a vote may be taken on the measure. A majority of votes adopts the Act. It provides that no liquor may be sold in city or county adopting the Act, except (1) wine for sacramental purposes; (2) liquor for medicinal purposes or for use in the arts, trades, and manufactures. *Certificates* in both cases have to be presented to the licensed vendors, who are generally druggists. *Penalties* for violation are 50 dollars for first offence, 100 dollars for second offence, and imprisonment for third offence. After the Act has been in force for three years a test vote as to its repeal may be demanded. After a trial it has been repealed in a number of counties in Canada, as its provisions are found difficult to enforce.

Canadian Pacific Railway. This line (for detailed description of which see ed. '87, and the further history in ed. '88) extends from Montreal on the east to the Vancouver Ocean terminus on the west, a distance of 2,909 miles, and from Liverpool to Vancouver by this road is a distance of 5,160, 720 miles less than from Liverpool to San Francisco *via* New York; and extending the comparison to Yokohama, the distance *via* the Canadian route is 9,546 miles, a saving of 880 miles. On May 24th, '87, the first train reached the Vancouver Ocean terminus, the general stoppage hitherto having been at New Westminster; while on June 14th it was reported that the *Abyssinia*, the first steamer of the new line from Yokohama, had arrived, the voyage (with foggy weather) having occupied 13 days 14 hours; the vessel brought 22 passengers and 2,830 tons of cargo. In September Sir George Stephen, the President, issued a circular to the stockholders pointing out the position of the Company in regard to what had become known as the *Red River Railway* or *Manitoban Railway* difficulty. So far as the Canadian Pacific Company was concerned, he pointed out, they were bound to make and take over expensive railways in what were thought to be unproductive wildernesses, and now they required protection. The Red River scheme, it may be explained, was to open up connection with certain American lines, and it was vetoed by the Canadian Government. A cablegram, dated Oct. 23rd (Philadelphia), stated that, according to a despatch from Ottawa, the Dominion Government had completed an arrangement for the transportation of the mails between Great Britain and Japan *via* the Canadian Pacific line, Vancouver to be the distributing centre for all mails coming east for either the United States or Canada. The extension of the Canadian Pacific Railway to Sault Ste. Marie, in Michigan, having now been completed, the first through freight train, consisting of nineteen cars laden with flour, passed

through Canada for Boston, Jan. 9th, '88. This extension opens up the quickest freight and passenger route from the Mississippi River to New England and Great Britain. On Feb. 7th the board of directors decided upon the construction of a line from **Sudbury junction to Clarendon, Ontario**, practically an extension of the main line to Toronto by a direct route, and effecting a saving in distance between Toronto and other points of Ontario and the western section of the Canadian Pacific railway of 70 miles and a corresponding saving to Sault Ste. Marie. A preliminary survey having been made a year before, work was to be commenced at once. It was reported from Winnipeg, at Toronto (Feb. 15th), that the Hon. Thos. Greenway, premier, etc., had stated that a new contract had been entered into for the construction of the **Red River railway to the United States frontier**, that the finances had been arranged, and that the line would be in running order by October. It was reported from Ottawa (March 30th) that after long negotiation the **Manitoban railway difficulty** had been settled, on terms believed to be satisfactory to all parties. On April 6th it was stated that the basis of the arrangement with the company for the surrender of its monopoly privileges was a government guarantee of 15,000,000 dollars of 3 per cent bonds, portion of the security being the 30,000,000 acres unsold land grant of the company. Under date Montreal, April 19th, the secretary issued a circular setting forth the terms of the agreement (*Times*, April 24th). A Philadelphia telegram of May 9th says that at the annual meeting of the company the monopoly agreement was unanimously approved. Very sanguine hopes were expressed as to the future of the line. Subsequently the **Canadian House of Commons** accepted the agreement by 111 votes to 68. It transpired in the report presented at the above meeting at Montreal, that the company controlled 4,960 miles of railway, and had a total rolling stock of 17,500. About the same time there was a statement afloat that the company would extend the line between Toronto and St. Thomas to Detroit, Michigan, to connect with the Wabash. At a meeting of the directors at Montreal, Aug. 7th, Sir G. Stephens resigned the presidency, expressing his intention of residing in England. In October a serious dispute arose owing to an attempt of the promoters of the **Red River Valley Railway Extension** to cross the Canadian Pacific line. The Manitoban Provincial Government, who sat all day on Sunday, Oct. 21st, decided to take strong measures to enforce the claims of the Red River people, but matters became so threatening that the militia were called out. It appeared that the Canadian took their stand on the Railway Act of '83, which provides that every railway company shall apply to the Federal Government for provision to cross existing railways. Manitoba neglected to do this till October, when the application was opposed, and the case was referred to the Supreme Court of Canada. On Oct. 25th, under the cover of darkness, the Manitoban party succeeded in making a crossing at Headingly, but the Canadians immediately removed it. Under date Philadelphia Nov. 1st, it was reported that the crossing had been again made, and a locomotive had passed over. There was much excitement in the district.

Canal Boats Acts, '77, '84. The object of these Acts is to insure the proper condition of canal boats used as dwellings, and the edu-

cation of children who live on board such boats. See ed. '88, and further ed. '87.

Canals in the United Kingdom. The length of the navigable canals in the United Kingdom is 3,931 miles, of which 927 miles belong to public trusts, 1,445 miles to independent companies, 1,333 miles are guaranteed and owned by railway companies, 188½ miles are derelict, and 37 miles belong to owners of whom nothing appears to be known. The London and North-Western Railway Co. have the largest share of the canal property, 488½ miles, including the Birmingham canals and the Shropshire Union canal. The Great Western Co. own 257½ miles, the Manchester, Sheffield and Lincolnshire 183½, the Great Northern 104½, and other companies shorter lengths. The canals have been constructed on no uniform lines as to their width and the size of their locks, and in only a few cases has through communication been provided for. For further details see ed. '87.

Canary Islands. Off N.W. African coast. Belong to Spain, and ruled as an integral province of the kingdom. Area 2,608 sq. m., pop. 397,743. Capital **Santa Cruz**, in Tenerife; second town Las Palmas, in Grand Canary. Islands volcanic, elevated, lofty peaks, splendid scenery, rich fertility, delightful climate, producing corn, dates, figs, lemons, wine, sugar, tobacco, cotton, silk, honey, and wax, orchilla cochineal, barilla, etc. People are a mixed race, descendants of the Spaniards and the native Guanches (believed to be of Vandal origin), mingled also with Norman, Flemish, and Moorish blood. Leading occupations are agriculture, cattle-breeding, the cultivation of cochineal, and shipping. The **Peak of Tenerife** is 12,182 feet high. The Canaries (the "Fortunate Islands" of the ancients) have belonged to Spain since 1493. Consult Keith Johnston's "Africa," and Stone's "Teneriffe."

Candahar. It has become an established principle of Indian defence that if the Russians advance to attack India a stand shall be made at Candahar, or rather along the line of the Helmund river, 70 or 80 miles to the west of it. To prepare for this, the **Indian railway system** has been completed to the **Quetta side of the Kwaja Aman range**, and a tunnel, two miles long, is being pushed through it to the Candahar side. Here there are no more engineering obstacles, and the 80 miles of rails (already stored at Quetta) can be laid down at leisure. Candahar contains 60,000 people, and does an increasing trade with India. Is distant about 300 miles from Cabul, 369 from Herat, and 145 from Quetta.

Candia. See CRETE.
Candidates for Holy Orders, Preliminary Examination of. Was established in '74, chiefly with a view to aid in promoting a more systematic and better distributed course of preparation for Holy Orders. It is conducted under the control of a council consisting of the Divinity Professors of Oxford and Cambridge, two Graduates in Divinity from each University nominated by the two Archbishops, and Examining Chaplains, one being nominated by each of the Bishops who accept the results of the examination. The **Examiners**, who must be either Graduates in Theology or Masters of Arts in Priests' Orders, are appointed annually by the council. **Examinations** are held twice every year, about **Easter** and in **October**, at such different centres as the council from time to

time determines, with a view to suit as far as possible the convenience of candidates. Due notice is given beforehand of the times and places of examination. The Examinations are open
(1) To graduates of the English Universities.
(2) To members of Theological Colleges in connection with the Church of England, who have at least entered on the last term of the complete course and are recommended by the principal.
(3) To any other person who may be nominated by a bishop with a view to ordination in his own diocese. Every candidate is required to declare himself a member of the Church of England, and to produce a satisfactory certificate of moral character. Information respecting the Examination may be obtained from Rev. E. King, Maddingly, Cambridge.

"C. and S." See LLOYD'S CLAUSES.

Canonical Hours. A term usually applied to the hours within which marriages may be legally solemnised.

Canonisation. The ceremony whereby a deceased person is raised to the order of the saints—a privilege now exclusively vested in the see of Rome. It cannot be made until at least fifty years have elapsed from the date of death.

Canon Law. The year '88 was marked by an event which had not occurred for more than two hundred years. Parliament having, with the consent of the Church, extended the canonical hours of marriage, it was necessary to promulge in Convocation two new canons, supplementary to the canons recognised by statute, in order to bring the ecclesiastical and civil law into conformity with each other. It is of the essence of canon law that it may never be abrogated, and in some cases custom acquires the sanction of canon law. Learned canonists, therefore, appeal for authority in matters ecclesiastical to a whole literature of canonical lore, from the so-called Apostolical Canons to those of last year's Convocation. The most ancient repositories of ecclesiastical law are the three volumes of "Decrees" (now known as the "Decrees of Gratian," who edited them), by Ivo, Bishop of Chartres, comprising, besides decrees of councils, provincial constitutions, synodals, glosses, sentences of Popes, summaries, and rescripts. Besides these, the *jus canonicum* included many foreign canons and decretals, together with particular laws and constitutions made in England for the government of the Church—all which are, in a sense, now in force. But even from the Conquest to the Reformation no canons or constitutions made in any synods here were suffered to be executed, if they had not the royal assent. These canons were all collected and explained by Lyndwood, Dean of the Arches, in the reign of Henry VI., and by him divided into sixteen historical sections, ranging from the canons of Stephen Langton, at the Council of Oxford, 6 Henry III., to the *Reformatio Legum*. The authority to make canons, and to promulge them with the royal assent, is vested in the clergy by the statute 25 Henry VIII., commonly called the "Act of Submission." The canons of 1534 alone bear the sanction of statute law in England, and are of equal authority with the Book of Common Prayer. These canons were, for the most part, collected out of ordinances dispersed in several injunctions published in former reigns. An Act of Parliament may nullify any canon, unless it enjoins some moral duty; but a canon not confirmed by an Act of

Parliament cannot alter any other law. Unestablished branches of the Anglican Church (*q.v.*), being autonomous Churches, make their own canons irrespective of statute law, but these are binding only within their own spiritual jurisdictions, and bear only the same relation to the canon law of the Church as is borne by, say, the "Decrees of Gratian." Consult "Wilkin's Concilia;" "Landon's Councils;" "Owen's Institutes of Canon Law;" "Councils and Ecclesiastical Documents Relating to Great Britain and Ireland" ('69).

Canon of Scripture. The Book of Holy Scripture as received by the Church and incorporated in the canon law. Consult Wordsworth "On the Canon of Scripture" ('48).

Canons, Various Kinds of. **Canon Capitular** (*v. infra*, *Canon Residentiary*). **Canon Honorary**, appointed in some cathedrals. He keeps no residence, and receives no emolument. **Canon Penitentiary**, a canon of a cathedral invested by the bishop with the duties of penitentiary to the diocese. **Canon Regular**, a regular conventual canon. **Canons Residentiary**, also termed **Canons Capitular**. The senior canons who keep residence and receive emolument from their stalls. **Canons Secular** were not conventual, but kept the Hours.

Canterbury, Right Hon. and Most Rev. Edward White Benson, P.C., D.D., 93rd Archbishop of (founded 596); b. 1829. Educated at King Edward's School, Birmingham, and at Trin. Coll., Cambridge (B.A., 1st class classics, senior Chancellor's medalist and senior optime '52); Fellow of Trin. Coll. ('53). Ordained deacon ('53), priest ('57). Formerly one of the masters of Rugby School; and head master of Wellington Coll. ('58-72). A prebendary in Lincoln Cathedral ('69), and chancellor and canon residentiary ('72). Hon. chaplain to the Queen ('73-75), and chaplain ('75-77). Examining chaplain to Bishop of Lincoln ('873-77). Consecrated 1st Bishop of Truro ('77). Translated to Canterbury ('83). Is Patriarch of All England and Metropolitan. Patron of 187 livings. Presided at the Lambeth Pan-Anglican Synod (*q.v.*) July '88.

Cantor Lectures. These Lectures are named after their founder, the late Theodore Edward Cantor, M.D., of Her Majesty's Indian Medical Service, who by his will dated May 3rd, '59, bequeathed his property, of the value of over £10,000, in equal shares to the Wellington College, Wokingham, and the Society for the Encouragement of Arts, Manufactures, and Commerce, with the expression of a wish that the moneys so given should be applied severally by the Governors of the College and the President of the Society of Arts in such manner as they might deem most conducive to the promotion of the interests of the institutions with which they were officially connected. The moiety of the Cantor bequest which fell to the Society of Arts amounted to £5,042, which it became the duty of the Council to appropriate to the spread and encouragement of arts, manufactures, and commerce; and they accordingly determined to apply a portion of the interest of the fund for the Society's session of '63-4 to the provision, at an estimated cost of £150, of three courses of lectures by eminent men on the subjects respectively of International Commerce, Chemistry applied to Manufactures, and Industrial Art. The introductory lecture of the first course of four on "The Operation of the Present Laws of Naval Warfare on International

Commerce," was delivered by **Mr. G. W. Hastings**, a barrister of the Middle Temple, and now M.P. for E. Worcestershire, on Dec. 7th, '63; the first of a course of seven lectures, on "Fine Arts applied to Industry," was given by **Mr. W. Burgess**, on Feb. 8th, '64; and the last of a third course of six lectures, which were given weekly by **Dr. F. Grace Calvert**, F.R.S., F.C.S., on "Chemistry applied to the Arts," was delivered on the 5th of May following. Thus the total aggregate of Cantor Lectures delivered during the first session of their institution was seventeen; and it still remains that the average number of lectures is estimated at about eighteen for the entire session—a session which, beginning in November in each year, runs on to May of the year following. From the first session of their institution the Cantor Lectures have been characterised by the same diversity and catholicity of interest.

Cape Breton Island. A portion of *Nova Scotia* (*q.v.*), once itself a distinct colony. Area 3,125 sq. m., pop. 75,483. Chief town Sydney, at entrance of a deep gulf called Bras d'Or. Contains valuable coal mines, rich deposits of iron ore, and forests which furnish valuable ship-timber. Fisheries very productive.

Cape Colony. The Cape of Good Hope is a promontory on the extreme south of Africa, and has given its name to the Cape Colony, whose boundaries now are: West, the Atlantic Ocean; north, the Orange River and Bechuanaland; east, the Orange Free State, Basutoland, and Natal; south, the Indian Ocean. The area of the whole colony is 213,636 sq. miles, with pop. 1,250,000. Capital **Cape Town**, pop. 60,000; other chief towns, Port Elizabeth, pop. 18,000, the chief commercial port; Grahamstown, pop. 10,000, the capital of the eastern province; **Kimberley**, pop. 25,000, the seat of the diamond trade; Queenstown, King Williamstown, and Panmaze, or East London. Simon's Bay is an Imperial naval station 22 miles south of Cape Town. Divided into two great districts, Eastern and Western, which are subdivided into a number of provinces, fiscal districts, and magisterial divisions. **Grigqualand West**, the **Transkeian Territories**, and **Walfisch Bay** (*q.v.*), have some separate provincial status.—The **Nieuveltdt Mountains** divide the colony, running east and west. To north and west the country consists of open plains, more or less sterile. To the south and east are fertile plateaux, the **Karroos**, and regions of great fertility. In these parts is much splendid forest. Both flora and fauna are extremely rich and varied. Minerals worked in the colony comprise copper, coal, gold (on the Knysna), lead, manganese, alum, salt, nitre, crocidolite, and diamonds. Rivers, including the Orange, the largest, are not navigable. The climate of the Cape is noted for its beneficial effect upon consumptive, asthmatic, and rheumatic patients. The eastern districts are dry, the winter season fine, rains falling in summer; while in the western districts the reverse is the case. The scenery among the mountain ranges, Lower Albany, British Kaffraria, and in the Transkei, is exceedingly grand. The principal exports are wool, Angora hair, ostrich feathers, sheep and goat skins, diamonds, wines, spirits, hides and skins, copper ore, and aloes. Executive in hands of a Governor and responsible Ministry of five principal ministers. Parliament consists of a Legislative Council of twenty-two members, and a House of Assembly of seventy-

six members. Members of the Legislative Council are elected for seven years, and of the Assembly for five years. The electors are the same in each case, and are qualified as occupiers of property worth £50, or receiving £50 salary, or £25 with board and lodging. The laws are founded on a modification of the Roman-Dutch Law. Both English and Dutch languages are used in Parliament and the Courts. There is a University at Cape Town (Royal Charter, 1877), and there are a large number of state-aided elementary schools, besides private and religious institutions. The principal denominations are Dutch Reformed, Episcopalian, Presbyterian, and Roman Catholic, which, until recently, received some State aid. For defence there is a force of Cape Mounted Rifles, 760; Volunteers, 4,000; and every able-bodied man between 18 and 50 is liable to be called out for military service. Whites number about a third of the entire population, and the greater number of them are of Dutch descent. The **Transkeian Territories** are ruled by resident magistrates under the Governor of the Cape Colony, **Walfisch Bay**, an isolated port on the coast of **Damaraland**, is administered by a Resident.—For latest financial statistics see **BRITISH EMPIRE**, etc. (table). The most valuable exports are wool, £1,580,609, and diamonds, over £4,000,000. The colony possesses 1,693 miles of railway open, and extensions are being laid. Kimberley now has railway communication with Port Elizabeth and Cape Town. The lines are Government property. There are 8,981 miles of telegraph wires in operation. About 84,000,000 acres are in occupation, of which 600,000 under cultivation. Vineyards occupy 20,000 acres, producing 4,500,000 gallons of wine and 1,000,000 gallons of brandy. Ostriches number some 25,000; sheep 11,000,000; cattle 1,112,000; goats 3,000,000. Wheat crop about 1,700,000 bushels, other grain 3,000,000 bushels, tobacco 3,000,000 lb., aloes 340,000 lb., dried fruit 2,500,000 lb. Cotton and rice are grown in certain regions. Government lands are granted, leased, or may be rented on easy terms. Natives, Hottentots and Kaffirs, number over two-thirds of the population. Where they are not in a position of equal citizenship with whites their affairs are controlled by a Minister for Native Affairs.—The Cape was first settled in 1652 by the Dutch, and in 1814 became an English colony. The Hottentot and other slaves of the Dutch settlers or "Boers" were liberated in '33 by the general Emancipation Act of the Imperial Parliament. This, and other things, caused much dissatisfaction among the Dutch, and large bodies from time to time *trekked* (*i.e.* migrated) northward, and formed what have since become the Orange Free State, the Transvaal, and Natal. In 1820 England sent out the first body of British settlers. There have been five great Kaffir wars on the eastern frontier—in 1811, '18, '35, '46-53, and '57-63—devastating and laying waste whole regions of land; but the last of these was concluded in '63. Since then, in 1879-80, the Basuto rebellion occurred, which spread also to the Transkei. The civilising influence of schools, industrial institutions, frequent intercourse between the races, the construction of railways and other public works, are producing admirable changes for the better among the tribes. The colony has been gradually enlarged by annexations, the

latest of which are Griqualand West, annexed '80; the various Transkeian Territories, '75-'87; and Walvisch Bay, '84. In '88 the question of the annexation of Bechuanaland was much discussed. The terrible fire at the *De Boer's Mines* (July) resulted in great loss of life. See *GRIQUALAND WEST, KIMBERLEY, WALFISCH BAY, TRANSKEIAN TERRITORIES, DIAMOND FIELDS, OTSTRICH FARMING, COLONIAL WINES*, etc., etc. For Ministry, etc., see *DIPLOMATIC*. Consult "The Cape of Good Hope General Directory and Guide Book," '87; Gresswell's "Our South African Empire"; Noble's "Cape and South Africa"; Theal's "South African History and Geography," and "History of the Boers in South Africa"; *The Torch*; etc.

Cape Verde Islands. Lie 350 miles from Cape Verde, the westernmost point of Africa. Belong to Portugal, and form her most valuable dependency. Area, 1,650 sq. m., pop. 110,026. Capital Mindello, but principal town Cidade de Santiago. Coaling station, St. Vincent. Imports about £300,000; exports about £50,000. Volcanic formation, very fertile; climate sub-tropical; cotton, sugar, indigo, raised and manufactured; tamarinds, cocoanuts, fruits, salt, red coral, also exported. People, Portuguese and Negro. Consult "Reports of H.M.'s Consuls, 1882, Part vii. (Cape Verde Islands)."

Cape Wines. See *COLONIAL WINES AND VINEYARDS*, ed. '87.

Capital and Labour. These may be roughly defined thus:—*Capital* is, in its origin, the accumulation of the result of labour—the excess of production over immediate wants, and is capable of being used in the production of fresh wealth, and facilitating that production in an increasing ratio; and *Labour*, human exertion for a human end. Only the rudest and most elementary kind of labour can exist on its immediate produce; for any elaboration a reserved store of wealth is necessary—the produce of past labour, from which the labourer may subsist and provide himself with tools and materials, while his present labour is in process of completion. In highly organised communities capital and labour are as a rule in the hands of separate persons, not indeed entirely, but to a large extent. Arbitration, and Courts of Conciliation have been recommended, and tried with comparatively little effect. It may be doubted whether any remedy can be effectual which does not go to the root of the matter, and arrange for some means by which labour can become the owner of its own capital. Some form of industrial partnership would appear to be the best way of securing this end. The capital of Great Britain was estimated by Porter in 1840 at £4,100,000,000; by Levi in 1860 at £5,500,000,000; by Mulhall in 1882 at £8,750,000,000. These estimates give respectively £152, £195, and £248 of capital per head of the population. The estimates are made to consist of houses, railways, shipping, bullock, lands, cattle, etc., merchandise, foreign loans, furniture, roads, works, etc. Consult Mr. G. Howell's "Conflicts of Labour and Capital."

Capital Punishment. See ed. '87; and *EXECUTION BY ELECTRICITY*.

Cardiff (Llanishen and Cwmtaff) Water supply. The laying of about 31 miles of water conduit pipes between Llanishen and Cwmtaff, for the supply of Cardiff from the Breconshire watershed, was commenced about two years

since, and at the end of the year '87 it was stated that the work had been practically accomplished. What is called the *balancing reservoir* at Rhubina was also about finished; *Blackbrook* and *Cefn* reservoirs being nearly completed. The upper section of No. 2, or *Cwmtaff* reservoir, was being constructed 1,000 ft. above Cardiff level; Llanishen is 150 ft. above the town; and Rhubina about 100 ft. above Llanishen. The Cwmtaff will not be finished for two years, its capacity being some 300,000,000 gallons, while two others, Nos. 1 and 3, will be made at the bottom of a drainage area of 4,000 acres. The pipes above mentioned cost £120,000, and the laying over £30,000. They are 2 ft. in diameter, weigh about 1½ tons each, are each 12 ft. in length, and vary in thickness according to the pressure.

Cardinal Dean. See *DEANS*.

Carillon. This is a machine for playing tunes on a peal of bells, and is quite distinct and independent of the clock, with the exception of the discharging lever, which is released by the clock at any required time. The carillon then plays the tunes for which it has been constructed. On a peal of eight, representing an octave, as many tunes can be played as can be obtained in the compass of say E to E, or in whatever key the peal is. This, in practice, will be found to comprise a good selection of tunes. The greater the number of bells the more tunes, so that from a peal of fourteen almost any tune can be obtained. See ed. '87.

Carlisle, Right Rev. Harvey Goodwin, D.D., 58th Bishop of (founded 1132); b. 1818. Educated at Caius Coll., Cambridge; B.A. (1840); 2nd Wrangler and Smith's prizeman, and subsequently Fellow of Caius. Ordained deacon (1842), priest (1844), became incumbent of St. Edward's, Cambridge (1848); Dean of Ely (1858); consecrated Bishop of Carlisle (1866). He is the author of Goodwin's "Course of Mathematics." He was the original proposer of the scheme for establishing a "Church House" (q.v.) to commemorate H.M.'s Jubilee.

Carlos, Don, Duke of Modena, claimant of the Spanish throne as heir to his father, Don Juan, successor to Carlos VI., b. March 30th, 1848. His mother is the Archduchess Maria Teresa, Princess of Modena. He was educated in Austria. Don Carlos married the sister of the late Count of Chambord. In July '73 he instigated a rising in the north of Spain, taking the personal command. He continued the struggle during the Republic, but was defeated by Marshal Serrano after Alfonso XII. came to the throne, and retired (March '76) to England. He resided in France, but was expelled in '81.

Carlton Club. The recognised club of the Conservative party. All elections are made by the Committee, twelve being a quorum; two black balls exclude. Peers, heirs apparent to any peerage, and members of parliament, are balloted for immediately, other candidates taken in order of application. Ten members may be annually chosen by the committee from amongst the candidates, but in each case there must be not less than two-thirds voting. No special qualification for membership laid down by the rules. Entrance fee, £30; subscription, £10 to 10s. House, 94, Pall Mall.

Carlyle Society, founded in 1879, consists of "Students admiring Carlyle's works and desirous of extending his influence." Members are admitted by paying a yearly subscrip-

tion, and they meet once in every month (at present), at Anderton's Hotel, when papers "suggested by Carlyle's works" are read and discussed; some of them are also published. Number of members, 82. The society has erected a memorial tablet on Carlyle's house. It has a library and a branch at Montreal. **Pres.**, Dr. Eugene Oswald; **Sec.**, H. E. West, Park-field, Willesden, N.W.

Carnegie Andrew, the "Iron King" of America, where he owns rich mineral territory beyond the Alleghany Mountains, is a frequent visitor to England; and ('88), in company with Mr. Blaine and other friends, he made a four-in-hand coaching tour from London to Cluny Castle, Scotland, where he took up his residence for some months. Mr. C., who is an ardent politician, has assisted in floating several Radical newspapers, and in '87 published "**Triumphant Democracy**," a work which has had a large sale.

Carnot Marie François Sadi, President of the French Republic, born at Limoges August 1837. He is a grandson of Carnot "the organiser of victory" under the French convention, and is a civil engineer by profession. When only twenty years of age he entered as a student the Ecole Polytechnique, and passed with distinction to a school for special instruction in the building of roads and bridges. During the siege of Paris (Jan. '71) he was appointed **Prefect of the Seine Inférieure** and as Commissary General gave valuable assistance in organising the defences of that Department. A month later he took his seat in the National Assembly as deputy for Côte d'Or, ranging himself in line with the Republican Left, with which he consistently voted. On the 16th of May, '77, he opposed the vote of confidence in M. De Broglie. Since first elected he has sat continuously in the Chamber of Deputies, at first for the Côte d'Or, and later for Beaune. In '86 he took office in the **Brisson Cabinet** as **Finance Minister**, the duties of which he also filled when M. de Freycinet formed his Government in Jan. '87. On the resignation of M. Grévy (Dec. 2nd, '87), M. Carnot was elected President of the Republic.

Caroline Islands. This archipelago, or group of islands, in all numbering five hundred, lies to the east of the Philippines, in the Pacific Ocean, between lat. 30° and 12° N., long. 130° and 170° E. These islands, first discovered in 1543 by Lopez de Villalobos, were named after Charles V. of Spain, but they seem never to have been settled by the Spaniards. The Spaniards took formal possession of them, but appear only to have sent out missionaries. The Caroline Islands are sometimes called the **New Philippines**; they measure about 2,000 miles from east to west, but are chiefly low-lying lagoons or atolls. At Yap, which may be described as the chief of the Carolines, there are hills said to contain precious metals. The inhabitants are generally of the Papuan race, and owe what civilisation they are acquainted with chiefly to the American missionaries. The islands are prolific in tropical verdure. The cocoa-nut, the pandang, and plantain abound everywhere; on the higher islands are the areca-palm, the bamboo, clove-tree, orange, sugar-cane, betel-pepper, sweet potatoes, and several species of arum or taro; on the low islands is the bread tree. The inhabitants are docile and hospitable, and are

ruled by a number of small chiefs. A grave dispute between Germany and Spain arose in the summer of '85, as to the right of possession of these islands. The quarrel was referred to Pope Leo XIII. for arbitration, Germany acquiesced in the Pope's decision, which in effect recognised the ancient Spanish sovereignty, but on behalf of the latter Government secured to the Germans special trade privileges in the archipelago. See ed. '88, and more fully '86.

Cascade Tunnel (Washington U.S.). This great tunnel, which is on the **Northern Pacific Railroad**, was cut through on May 3rd, '88, and the track laying was completed on the 6th, ready for an immediate commencement of traffic. It is 9,850 ft. long, 20.5 ft. high, and 16 ft. wide, for a single set of rails, and was made to dispense with the Switchback railway, or series of inclined planes, over the mountains which had been worked by engines of the "decapod" type—10 driving wheels, and a two-wheeled leading truck. The contract for the tunnel was for 2,000,000 dollars. On the opening of the tunnel arrangements were made to light it by electricity, the power being obtained from a large waterfall at the east portal.

Cascarilloes. The Indians of South America employed in stripping the bark from the cinchona trees.

Cassagnac, Paul Granier de, was b. at Paris Dec. 2nd, 1843. Journalist and politician; is a chief supporter of the Victorien Bonapartist group. His rhetoric is of the intemperate order, and has frequently involved him in duels. He fought in the Franco-German war, and was present at Sedan, where he was taken prisoner. He sits in the Chamber for the department of Gers.

Castelar y Rissoll, Emilio. Spanish statesman and orator, b. in 1832; one of the most eloquent living public men of Europe. In the revolutionary movement of '68 Castelar joined the Republicans. Serrano quelled the rebellion, and Señor Castelar narrowly escaped with his life, taking refuge in Geneva. At the elections of '68 Señor Castelar found himself in a hopeless minority in the Constituent Cortes. He opposed a return of the monarchical government. On the abdication of King Amadeo he became Minister for Foreign Affairs, and in '73 he was chosen President of the Cortes, and subsequently **President of the Executive Power**. At this time war was raging in the Biscayan provinces of Spain, and Castelar provoked the Cortes, and constituted himself a sort of dictator. The Cortes, when it reassembled, declined to pass a vote of confidence in him, and he withdrew. At the accession of Alfonso XII. Castelar left Spain for a time; but in '76 he obtained a seat in the Cortes as deputy for Madrid, though he has not held office since. Señor Castelar is a writer on historical, literary, and political subjects.

Castletown. Capital of the **Isle of Man** (q.v.).

Castries. Capital of **St. Lucia** (q.v.), pop. 4,550.

Casual Wards are attached to the work-houses of every parish in London. They are intended for the relief of the casual poor—that is to say, those persons who are for the moment in need of a night's shelter, and who are theoretically to be distinguished from the pauper proper. 45 & 46 Vict. c. 58, s. 14, says:—"The guardians of every union shall provide within their respective unions such casual wards, with such fittings and furniture as the

Local Government Board in their judgment, regard being had to the number of casual paupers likely to require relief thereon, shall consider necessary." Further, by the **Casual Poor Act, 82** (45 & 46 Vict. c. 36, s. 4), "a casual pauper shall not be entitled to discharge himself from a casual ward before nine o'clock in the morning of the second day following his admission, nor before he has performed the work prescribed for him as in the said Act mentioned; and where a casual pauper has been admitted on more than one occasion during one month into any casual ward of the same union, he shall not be entitled to discharge himself before nine o'clock in the morning of the fourth day after his admission; and he may at any time during that interval be removed by any officer of the guardians, or by a police-constable to the workhouse of the union, and be required to remain in such workhouse for the remainder of the period of his detention." As a typical **Casual Ward**, that of **Shoreditch** may be taken. The casual poor on entering the ward at night have to undergo a bath. The bathrooms are fitted up as completely almost as in a gentleman's house. Hot and cold water are laid on, and a lift conveys the clothing downstairs to a bakery, where all the very small forms of life which bask in the garments of the casual suffer euthanasia. Upstairs there are two floors—one for males, the other for females. Along each floor a passage runs, upon which the cells open on either side. Each cell is a long, lofty, narrow apartment, provided with a plank bed, a clean straw mattress and straw pillow, while two rugs are provided for bed coverings. At the end of the cell projects a recess lighted by a barred window. In this recess is piled the ten hundredweight of stone which the casual has to break in order to pay for the food, lodging, and bathing he receives. In a stoneyard thirty hundredweight, is a day's work, while in the casual ward the occupant of a cell is frequently let off with seven hundredweight. If the casuals are weak or in ill-health, or women, they are given a small quantity of oakum to pick. It is a mistake to suppose that the work is at all harsh or cruel for any one but the lazy man. The casuals are allowed to leave the ward on the second day after their entry as early as six in the morning, so as to allow them a better chance of getting work. Those practically familiar with the present system hold that the work test is insufficient. The occupants of the casual ward are not, as a rule, from the ranks of the deserving poor. The casual ward is under the special charge of a committee of the vestry.

Cathedral Statutes Bill, 1884. See ed. '86.

Cathedrals. The cathedral is the chief church of the diocese, in which the bishop's seat is fixed. In many cases English cathedrals were originally monastic churches, over which a bishop was set; in others, the bishop having been set over a district, chose his own church. English cathedrals were of two classes—(1) Where the clergy were monks; (2) where the clergy were secular canons. Gradually the dean grew to exercise greater power in his cathedral than the bishop, and many quarrels ensued in consequence. After the suppression of the monasteries by Henry VIII., the monastic cathedrals (Canterbury, Carlisle, Durham, Ely, Norwich, Rochester, Winchester, and Worcester), were remodelled, and the bishoprics founded by

Henry (Bristol, Chester, Gloucester, Oxford, Peterboro', and Westminster) were provided with cathedrals. The last lost its bishop, but kept its dean and its position as a cathedral. The cathedrals of Liverpool, Manchester, Newcastle, Ripon, and St. Albans are of recent translation, and like other new bishoprics, notably Southwell and Wakefield (the latter constituted in '88), take as their cathedrals ancient parish or collegiate churches.

Catholic Emancipation. See ed. 88.

Caucus, The, is a nickname applied in the first instance by Lord Beaconsfield to the system of political organisation of which the **Birmingham Liberal Association** is a type, and in particular to the organisation called the **National Liberal Federation** (q.v.).

Cave, Sir Lewis William, b. 1832. Called to the bar ('59), Q.C. ('75). After a successful professional career, he was appointed a judge of the High Court ('81). He was joint editor of the reports of the Court for the consideration of Crown cases reserved ('61-65), and of Stone's "Practice of Petty Sessions." He also edited the editions of Addison on "Contracts," and the same author's "Law of Torts."

Cayenne. A French colony in Guiana, South America. Area 46,697 sq. m., pop. 26,502. Capital **Cayenne**, on an island. Separated from **Surinam** by river Maroni. Chief products sugar, coffee, cotton, cloves, nutmegs, cinnamon, red pepper, etc. Gold is worked in some quantity. Administered by a Governor and Council. It is a penal colony. Exports to France about £750,000 annually. The capital, Cayenne, is much dreaded by convicts on account of its deadly climate, but the other penal settlements on the Maroni river are more favourably situated in that respect. Cayenne (or French Guiana) was first settled in 1604.

Caymans, The, a group of three islands in the British West Indies, 150 miles north-west of Jamaica, of which they are politically a dependency. The islands (Grand Cayman, Little Cayman, and Cayman Brac) are well wooded and produce much turtle. Area 225 sq. m., pop. 2,500, mostly on Grand Cayman.

Celebes. A large island of the Asiatic archipelago. Area 72,000 sq. m.; pop. about 2,000,000. Part of the island is an "Outpost" of Dutch India, containing the towns of Menado, Port Rotterdam, and Vlaardingen or Macassar. The remainder broken up into native states. The native princes recognise the authority of the Dutch, who expelled the Portuguese from Celebes in 1660. Consult Wallace's "Malay Archipelago," Penny's "Ten Years in Melanesia."

Cell. A microscopically small, semi-fluid, semi-solid, primarily spheroidal body, which often assumes other forms, and which consists of a soft mass of living, contractile, colloidal matter (cell substance, protoplasm) and a central structure, consisting of a small, roundish body, generally more solid than the rest of the cell—the nucleus. A cell-membrane or cell-wall may exist, as in most vegetable cells, or may be wanting, as in most animal cells. It is the earliest anatomical and physiological unit, or as Haeckel defines it, "the organic unit of form, an individual of the first order." The size of cells varies from .006 or .007 to .23 micro-mill. Their shape is very variable. See ed. '87.

Cellulose. The chief constituent of the walls of the cells of plants. In the walls cellulose is associated with water and with certain mineral salts. This chief substance of the cell-wall is secreted or separated from the chief substance of the cell contents, protoplasm. In chemical composition cellulose is closely allied to sugar, dextrin, or gum and starch. All these and certain other bodies belong to the group of *carbo-hydrates*. The carbo-hydrates are organic compounds made up of carbon (*carbo-hydrates*), and of hydrogen and oxygen in the proportion 2 to 1: *i.e.*, the proportion in which these two elements occur in water (*carbo-hydrates*). Cellulose presents differences in different plants and in different organs. See ed. '87.

Centigrade (from *centum* = a hundred, and *gradus* = a degree). The name of one of the three scales used in thermometers. The freezing-point of water is on this scale denoted by 0°, the boiling-point by 100°. The space on the scale between freezing-point (0°) and boiling-point (100°), is divided into 100 equal parts, each of which is called a *degree*. This thermometric scale was invented by Anders Celsius, a Swede (b. at Upsala 1761, d. 1744). It is in use among almost all Continental nations, and is the only thermometric scale used in scientific investigations. To turn the *Centigrade* record into the corresponding *Réaumur* record, the number on the former scale is multiplied by 4, and divided by 5: *e.g.*, 100° C. are equivalent to $100 \times 4 \div 5 = 80^\circ$ R. To turn *Centigrade* into *Fahrenheit*, multiply by 9, divide by 5, and add 32: *e.g.*, 100° C. are equivalent to $100 \times 9 \div 5 = 180 + 32 = 212^\circ$ F.

Central America. Under this head are included the republics of Costa Rica, Guatemala, Honduras, Nicaragua, and San Salvador. (For Ministry, etc., of each, see *DIPLOMATIC*.) —**Costa Rica** is governed by a President, a Senate, and a Chamber of Representatives, each elected for four years by the "respectable" inhabitants. Constitution promulgated in '59, but frequently interrupted by pronunciamientos, and practically suspended from '70 to '82. Area 23,000 sq. m.; estimated pop. in '86, 196,270. *Estimated revenue* in '87, £541,523; *expenditure*, £525,994. Foreign debt, £2,000,000. *Imports* in '86, £707,530; *exports*, £641,160. *Chief exports*, coffee and bananas. Valuable metals exist in various parts of the country, and mining industry is making progress. In '87 there were 176 miles of railway and 390 miles of telegraph. History presents no facts of interest. —**Guatemala**, governed by President and Assembly, each elected for six years by universal suffrage. Area 46,800 sq. m.; estimated pop. in '87, 1,357,000. Capital, *Santiago de Guatemala* (or *Guatemala la Nueva*), pop. 59,039. *Revenue* '87, \$4,047,456 (dollar = 28.9d.); *expenditure*, \$4,633,285. *External debt*, £908,290; *internal debt*, £678,400. *Estimated value of imports* in '86, £1,347,300; of *exports*, £647,160. *Chief exports*, coffee, sugar, and hides. The first line of railway, from San José to the capital (69 miles), was opened in '84. Army nominally 2,000, with reserves about 33,000. In 1872 a war took place with Honduras. In 1874 the Commandant of Guatemala having imprisoned and flogged the British consul nearly to death, was imprisoned for five years and compensation paid. In April 1885 the President Barrios was killed in battle, in an unsuccessful attempt to unite the Central American States under his dictatorship. —**Honduras** is governed by a President and

Congress, elected for four years. Present President was elected in '83, and re-elected in '87. Area, 46,400 sq. m.; pop. 458,000. Capital, *Tegucigalpa*, pop. 12,000. *Estimated revenue* for '87-8, £226,820; *expenditure*, £246,980. *Imports*, about £230,000; *exports* considerably in excess of imports, as a number of gold and silver mines are exporting a considerable quantity of bullion. *Foreign debt*, about £5,400,000. The loans were raised for the purpose of constructing an inter-oceanic railway, but a small proportion only was expended for this purpose. Army nominally about 32,000, including reserves. Prolonged civil strife, aggravated by wars with San Salvador and Guatemala, from '70 to '76, when exhaustion brought peace. Since '80 affairs more peaceable. In '73 Omoa was bombarded by the British, to obtain redress for injuries inflicted on their subjects. In '81 similar complications with France were settled by compensation, etc. —**Nicaragua** is governed by President, Senate, and House of Representatives, elected by universal suffrage. Area 49,500 sq. m.; pop. estimated at from 270,000 to 400,000. *Estimated revenue* in '87 £678,659; *expenditure* £656,000. Public internal debt about £190,000; foreign debt, £285,000, contracted in '87. Army about 10,000, including police and militia. Exports, coffee, india-rubber, and cattle. Railways and telegraphs have been constructed. Scheme for inter-oceanic canal revived in '79. The treaty by which the United States took power to construct the same, objected to by England in '84. United States legislature finally refused ratification (Jan. '85). —**San Salvador** is governed by a President, Senate, and House of Representatives, elected respectively for four years, three years, and one year, by married men, or those who can read and write and support themselves. The elections are, however, frequently interrupted by pronunciamientos (*g.v.*) or military nominations. Area, 7,225 sq. m.; pop. ('86) 651,130. Capital, *San Salvador*, pop. 13,274. *Estimated revenue* in '88 £546,104; *expenditure* £505,887. No foreign debt; internal debt about £1,430,000. Army, including militia, about 14,000. War with Honduras in '72 and '73. Since then little worthy of note has occurred. See also *PANAMA CANAL*.

Central Asia. An almost obsolete general political designation for the Kirghiz, Bokharan, Khivan, and Turcoman regions which Russia conquered and annexed between '58 and '85. Previously it had been known as *Independent Tartary*. Russia has divided it into two large provinces: *Turkestan* and *Transcaspia*, and a small one called the *Government of the Steppe*, embracing the Semiretchinsk district, on the Chinese frontier. The former comprises the Kirghiz deserts, the old Khanate of Khokand, the country conquered from Bokhara, and, in addition, it controls the vassal states of Bokhara and Khiva. *Administrative centre*, Tashkent. The latter consists of the Turkoman region between the Caspian and Oxus; *administrative centre*, Askabad. *Turkestan* was conquered from the Orenburg base, and until the completion of the Transcaspian railway (*g.v.*) in '88 maintained communications with Russia solely by means of the Orenburg-Aral caravan route, 1,700 miles from the Orenburg railway terminus to Samarcand. *Transcaspia* (Russian *Zakaspie*) or the "country beyond the Caspian," was conquered from the Caspian Sea base, and the whole of it is now traversed by the Trans-

caspiian railway, which connects Samarcand with that sea, thereby superseding the Orenburg route altogether.

Central Provinces (India). For Ministry, etc., see DIPLOMATIC.

"Century Magazine, The," originated Nov. 1881, previously existed under the name of *Scribner's Monthly*, which was edited by Dr. H. Rolland. Present editor, Mr. Richard Watson Gilder. The magazine, which has a large circulation in America and England, contains one or more serial tales, with articles on travels and subjects of general interest by eminent writers, profusely illustrated with excellent engravings (price 1s. 4d.). **"St. Nicholas,"** an illustrated magazine for the young (monthly 1s.), is published in connection with the above, and is edited by Mrs. Mary Mapes Dodge. London office: 26, Paternoster Square, E.C.

Cesarwitch Stakes. See TURF.

Ceylon. An island almost joined to the southern extremity of India by a chain of reefs and sandbanks called Adam's Bridge. It is a British Crown colony. Area 25,365 sq. m., pop. 2,850,000. Divided into seven administrative provinces. Capital Colombo, pop. about 120,000. Other principal ports and harbours are Point de Galle (a port of call for all the large lines of steamers plying in the Eastern waters) and Trincomalee. In the mountains is Nuwara Elyia, the favourite residence of Europeans. There are numerous other towns. In the centre of the southern part of Ceylon is an elevated region, about 4,000 sq. m. in extent, consisting of tableland, terraces, and lofty peaks, the highest, Pedrotallagalla, attaining 8,280 feet. Here was the last stronghold of Sinhalese independence, **Kandy**. It is now the seat of much European enterprise in coffee and cinchona planting, etc. Hence the rivers of Ceylon descend. None are navigable except for boats. The largest is Mahavilla Ganga, which reaches the sea at Trincomalee. The remainder of the island is low, thickly clothed with forest and jungle, hot, and unhealthy for Europeans. The climate of the mountains is delicious and bracing. Vegetation throughout Ceylon is luxuriant. Valuable timbers abound; teak, ironwood, satinwood, rosewood, and many others. Three notable palms, the cocoanut, areca, and palmyra, are naturally plentiful, and are largely cultivated. They yield almost all necessities of life to the natives. The palmyra gives timber, fibre, and juice, which when fermented becomes "toddy," from which arrack is distilled. The sugar called "jaggeree" is prepared from the fresh juice. The fauna, akin to that of India, comprises elephants, tigers, bears, buffaloes, goats, swine, deer, hares, dogs, jackals, monkeys, a multitude of beautiful birds, prodigious serpents and other reptiles, and a profusion of insects. The pearl-fisheries of Manaar Gulf are celebrated. Ceylon has several valuable minerals—plumbago, iron, manganese, nitre, alum, and salt, besides a great variety of precious stones—rubies, sapphires, amethysts, garnets, and the cat's-eye. The Chinese formerly obtained kaolin from Ceylon. **Administration** is in the hands of a Governor, who is assisted by an Executive council of five members and a Legislative council of fifteen. Religion is mainly Buddhist, after which come Hindu sects, Mohammedans, and Christians. There are 1,821 government and aided schools. There is a medical college. Singalese almost monopolise the legal profession. For defence

there is a garrison of some 1,400 troops and a volunteer force of 760, with a strong police. The port defences are being strengthened. — **Chief production** for export has been coffee till recently; now more attention is paid to tea, cinchona, cocoanut and other palms. Grain and rice are cultivated, with cacao, cinnamon, caoutchouc, etc. Manufactures limited to native requirements, including ironware, cordage, etc. For latest financial statistics see **BRITISH EMPIRE**, etc. (table). Railways 182 miles. Crown lands are sold at an upset price of Rs. 10 per acre, but often realise much more. Bulk of population Singalese, then Tamils, Moormen (Arabs), Eurasians, and Malays. Europeans about 5,000. A degraded race, the Veddahs, occupies the interior, but is not numerous. **History** commences about 500 B.C., when the Singalese, an Aryan race, first migrated to Ceylon from the Ganges valley. They were followed by the Tamils later. Buddhism introduced 300 B.C. Portuguese factories established in 1505, seized by the Dutch 1656, who were dispossessed by the British in 1795. In 1815 the Singalese kingdom of Kandy was overthrown, and the whole island formed into a Crown colony. Ceylon is crammed with antiquities. Consult Tennent's "Ceylon," Haeckel's "Ceylon," Ferguson's "Ceylon," "Ceylon Handbook and Directory" (Haddon & Co., London), etc.

Chadwick, Edwin, C.B., b. 1801, early devoted himself to the study of economic and sanitary questions. Has been engaged on a number of **Royal Commissions** in connection with the administration of the **Poor Law**, and the improvement of the **sanitary condition of the people**. Throughout a long and laborious life he has devoted himself to hygienic science, in its application to local administration. He was **secretary** to the old **Poor Law Commission**, from which he retired on the reconstruction of that body in '54. **Author** of works collected under title "Wealth of Nations," edited by Dr. B. W. Richardson (q.v.).

Chagos Archipelago. A large scattered group of coral islands in the Indian Ocean, being a southward extension of the Maldivé group, 1,200 miles from Mauritius, and 800 from Ceylon. A dependency of the former, which supplies a Resident Magistrate and police force. Chief of the group are the **Oil Islands**, of which **Diego Garcia** is the largest and most important. It possesses a spacious harbour, now used as a watering station for Australian and Red Sea steamers. Whole group fertile, abounding in cocoanuts, fruit, pigs, poultry, and vegetables. Chief product, cocoa-nut oil.

Challu. See DU CHAILLU.

Chairman, Duties of. Though there is no essential difference between them, it will be convenient to discuss separately the duties of the chairman of an ordinary committee and those of the chairman of a public meeting. **Chairman of Committee.** It is best to select for this post a shrewd, methodical, clear-headed man, who will not talk much himself nor allow others to talk much either. His temper will, of course, be good, and he will show no bias. He possesses a double vote,—one in his individual capacity, and one in the case of even voting, called the "casting vote." He had, however, better refrain from exercising his own vote, as a rule; for it is not desirable that he should be open to the charge of favouritism. He must be a model of punctuality, beginning to the minute if the quorum of members be

made up. Should a quorum not be present, he will have to wait till it is completed, although the example of punctuality and regularity of attendance set by himself, cannot fail to have a beneficial effect in these respects upon his fellow-members. His first duty will be to call on the Secretary to read the minutes, and then to confirm them, the customary formula being put by himself as follows: "Those who approve of these minutes as a correct record of the committee's last proceedings signify so in the usual way;" and then, "On the contrary." The minutes having been confirmed, the chairman's next duty will be to see that all matters arising out of them are dealt with. After this has been disposed of, he will take the points of the agenda paper, previously drawn up by the secretary, *seriatim*. If he has a clear distinction between a business meeting and a discussion forum, he will not allow the members to talk at large. If the subject under debate be of special importance, he may at the outset fix a time limit for speakers—say three minutes each,—and also intimate that he will not allow members to speak more than once to the same proposition. It is desirable that all speaking should be addressed to a resolution of some sort, though this will often be a mere matter of form. When an amendment has been proposed, the method of voting is peculiar, as will be more usefully explained when describing the duties of the chairman of a public meeting. After all the business on the agenda paper has been concluded, the chairman may, with the sanction of the committee, discuss matters which may crop up on emergency; but if this sanction to discuss them without previous notice be withheld, then the chairman has no alternative but to refuse permission to the member who has asked for this necessary leave. The members of a committee must stand by their chairman, and should promptly put down any want of proper respect to the chair, from whatever source it may arise. If the chairman be a man of tact and urbanity, disrespect will seldom or never be shown to him, and he can control the course of business without unduly "rushing" it or without seeming to interfere with members' just rights. The chairman of a committee usually holds office for a year. He will be eligible or not for reelection according to the rule adopted by the committee. Whether or not he should be paid for his services is a moot point, though there is good reason to believe that all workers should be remunerated and that paid work is best. This consideration, of course, applies only in the case of committees which meet constantly—say once a week,—and for several hours at a time. **Chairman of Public Meeting.** The promoters of a public meeting should endeavour to secure a man of good social position and of local influence to preside; but exceptions are sufficiently numerous to forbid the laying down of any hard-and-fast rule. In ordinary circumstances the chairman must not himself speak much. He has rather to control the speaking of others, to keep them to the point, and to prevent them from speaking at needless length. He will take the chair by the vote of the meeting—though this is simply a form,—and get to business at once by briefly explaining the objects for which the meeting has been summoned, and, should he feel so disposed, by stating in half a dozen sentences his own views on the matter—the presumption, of course, being that he is favourable to the purpose of the as-

sembly. Then he will request the secretary, or, in the absence of such an officer, will himself read letters of regret and apology from important persons, but only those likely to interest the audience. Then he will call upon Mr. Blank to propose the first resolution. This having been done, he will get it seconded. [These matters are all arranged beforehand, including the terms of the various resolutions.] This is the time when an amendment, if any, should be proposed; and the chairman should make a point of calling for one, should there be any hostility in the meeting. This conduct is only what is due to opponents, and will impress the audience with a favourable sense of their president's fairness. Should no amendment be forthcoming, he will ask other speakers to support the motion, and he will then put it to the vote. If a count of hands be requested, the chairman must appoint two scrutineers for each side from the meeting. If the chairman finds that a speaker is not "holding" his audience, he should give him a hint as to time; but it is far safer to settle beforehand how long each speaker is to orate. It need not be added that all "big guns"—like Cabinet Ministers, for example—are privileged folk, and must not be interfered with. Should there be more than one resolution to submit to the meeting, the same procedure will apply. But what must be done in the event of an amendment being proposed? The chairman must, in the first place, see that it is relevant. For instance, a mere negative to a proposition is not an amendment, and should be ruled out of order. But suppose that the amendment—the terms of which should be previously handed to the chairman—is valid, it will be proposed with a speech in support. The chairman will then demand that it be seconded. Should no seconder put in an appearance, it will fall to the ground. An unseconded amendment lapses *ipso facto*. But if it be seconded, the vote should be taken without further speaking if possible; for future speeches would have to range, as far as was practicable, one for and the other against, and this would open up an endless opportunity for talk, and throw a meeting out of gear. In voting, the chairman must put the amendment first. If it be rejected, it will then be competent for another amendment to be proposed, though this is unusual and savours somewhat of obstruction. But should it be carried, the original motion drops, and the amendment becomes the substantive resolution, and, as such, must be put again. It would now be in order to propose another amendment, but this is a contingency which seldom arises. In the event of two or more amendments being offered in the first instance, the chairman must get rid of the first before he takes the second; on no account must he allow them to be proposed and seconded and then voted upon, otherwise confusion will speedily become worse confounded. Another matter of first rate importance is the keeping of order in a public meeting. Though the law of public meetings seems to need definition by an authority of repute, substantially the chairman is vested with full powers, the supposition being that he is the tenant for the time of the hall, and any disorderly person or persons are intruders and trespassers. Fortunately, the vast majority of meetings are passably harmonious; but should the chairman know, or have reason to believe, that mischief is meant,

he should explicitly state in his opening remarks that, while he will give every opportunity to legitimate opposition making itself heard by argument, he will not allow the peace of the meeting to be broken; that any one disturbing the meeting will be named by him; and that should they, in spite of that warning, pursue their unruly practices, he will have them ejected as trespassers. This intimation, firmly but unostentatiously delivered, will probably have a salutary effect. Should it fail to do so, however, the chairman will have to keep a sharp watch on the disorderly persons, and, at the proper pass, caution them from the chair that if they do not cease from troubling they will be turned out. On the next display of unruliness he should direct the stewards to take the persons guilty of it out of the hall, using as much force as may be necessary, but no more, and give them into the custody of the police. It may be confidently predicted that only one such exhibition of rigour will be required. Moreover, depend upon it the meeting will heartily support the chair in his efforts to keep the peace. As the position of chairman of a public meeting is a purely honorary post, it is customary to wind up proceedings with a vote of thanks to him. This is a matter with which he has nothing to do. The vote will be moved and seconded in the usual way, and will then be put to the meeting by the proposer of it. The chairman will acknowledge the vote in a word or two.

Chairman of the Committee of Ways and Means. A member of the House of Commons who performs important functions in connection with both the public and private business of parliament. He is elected when the House goes into Committee of Ways and Means, or Supply, for the first time in a new parliament, and he holds office until the dissolution of that parliament. Although he is nominated by the Government, he is not a member of the Government, any more than the Speaker, but an officer of the House. The salary of the office is £2,500 a year. The Chairman of Ways and Means usually presides when the house is in committee, whether on financial business or on a bill, but he may request a temporary chairman to act for him (see PARLIAMENTARY PROCEDURE). His place is not in the chair of the Speaker, but at the table where the Clerk, who retires with the Speaker, has sat. When the House is informed of the unavoidable absence of the Speaker, the Chairman of Ways and Means performs his duties, and exercises his authority in relation to all proceedings of the House as Deputy Speaker until the next meeting of the house, and so on from day to day on the like information being given to the house. He may also take the chair as Deputy-Speaker, when requested to do so by the Speaker, without any formal communication to the House. Among the recent holders of the office are Mr. Raikes (now Postmaster-General), '74-80; Sir Lyon Playfair, '80-83; Sir A. Otway, '83-85; Mr. Courtney, since '85. The Chairman of Committees in the House of Lords is elected at the commencement of every session. The late Lord Redesdale was first appointed to the office in '57, and re-elected every subsequent session until his death in '86, since which time the Duke of Buckingham and Chandos has year by year been chosen to succeed him. The appointment is worth £2,500 a year.

Chamberlain, Lord Great. A State office of great antiquity entirely distinct from that of Lord Chamberlain of the Household. The Lord Gt. Chamberlain assists, in company with the Earl Marshal, at the introduction of new peers, issues tickets for the opening and prorogation of Parliament, and orders of admission to view the House of Lords when Parliament is not sitting, and sees to the fitting up of Westminster Hall for a coronation, the trial of a peer, or for any other great public ceremony. He walks on the right of Her Majesty when she opens Parliament in person. The office is hereditary, and the duties are at present performed by Lord Willoughby de Eresby.

Chamberlain, The Lord. In mediæval times offices in the household of the sovereign ranked in dignity with offices of state, and were held by persons of the highest rank. The chamberlain was one of the most important of these domestic officers, having the general supervision of the royal household above stairs. The Lord Chamberlain of England still exercises this supervision, and has the control of the establishment attached to the chapels royal, and of officers and servants attached to the royal chambers, except those of the bed-chamber, over the medical men of the household; and he appoints the royal tradesmen. He directs all great royal ceremonies, hands the Queen to and from her carriage; all applications to attend drawing-rooms and levees must be sent to him; he superintends the royal wardrobe and the jewel house at the Tower. But he is oftener heard of as a licenser of theatres and plays. His power of licensing theatres extends only to the cities of London and Westminster, the metropolitan boroughs of Finsbury, Marylebone, the Tower Hamlets, Lambeth and Southwark, and those other places within which the sovereign may occasionally reside. Elsewhere the power of licensing theatres belongs to the justices. But the patent theatres (that is, theatres licensed by letters patent from the Crown) do not, even in the above places, require a licence from the Lord Chamberlain. One copy of every new play, prologue or epilogue, or new addition to an old play, prologue or epilogue, intended to be produced at any theatre in Great Britain must be sent to the Lord Chamberlain at least seven days before it is first acted or produced, with an account of the theatre where and the time when it is to be acted or produced, signed by the manager. Should it, either before or after the expiry of the seven days, be disallowed by the Lord Chamberlain, it must not be presented. It is lawful for him to disallow it, if he thinks fitting "for the preservation of good manners, decorum, or the public peace" so to do. Every person engaged in presenting any piece before it has been allowed or after it has been disallowed makes himself liable to a fine of £50; and the licence of the theatre in which the offence is committed becomes void.

Chamberlain, The Rt. Hon. Joseph, P.C., M.P. for West Birmingham, b. in London, July '36. Educated at University College; and in '54 his father joined the firm of Nettlefold, the well-known screw makers of Birmingham. He also, in course of time, joined the firm, and for many years devoted himself almost exclusively to business, his spare time being given up to the study of politics. His first introduction to public life

was in '70, as one of the leaders of the defeated secular candidates for the School Board of Birmingham. But in '73 Mr. Chamberlain was elected chairman of the Board. During this period he was also a member of the Town Council, and was elected Mayor ('73). His tenure of office was remarkable for the expeditious despatch of the corporate business. On the death of his father he retired from the firm, in order to devote all his energies to public life. To him also was due the transfer of the gas and water works to the borough authorities. He opened a sanitary exhibition in the town, and was the author of the improvement scheme which has entirely transformed the face of central Birmingham. He was re-elected Mayor in '74, and again in '75. In '74 he opposed Mr. Roebuck in Sheffield, but was defeated by a large majority. About this period his name was brought prominently before the public by several articles he wrote for the *Fortnightly Review*, promulgating very advanced political and educational views. He was chairman of the Education League, and a member of the famous Liberal Association nicknamed later on "The Caucus" (*q.v.*), though not so closely identified with its origin and growth as is popularly supposed. In 1876, on the retirement of Mr. Geo. Dixon from parliament, Mr. Chamberlain was elected for Birmingham without opposition, and has represented the town ever since. From 1876 his career is to be traced in parliament and on the public platform. In 1877 he laid before the house an exposition of the Gothenburg licensing system (*q.v.*), which he had personally seen in operation in Sweden. His advocacy of the scheme, however, produced no impression upon members, and Mr. Chamberlain never revived the subject. At this period he sat below the gangway, among the Home Rulers, with whose aspirations he was supposed to have some sympathy. Mr. Chamberlain's career in opposition was not a marked success, but he was acknowledged as the leader of the Radical party, and much of the Liberal success at the general election of 1880 was due to the organisations established all over the country on the model of that in Birmingham; and when the Liberals returned to power at the head of a large majority, it was felt that ministerial distinction should reward the man whose influence had not a little aided the victory. Mr. Gladstone offered Mr. Chamberlain the *Presidency* of the Board of Trade, with cabinet rank. Mr. Chamberlain worked hard at this department of work. He passed a Patents Bill, and a Bankruptcy Bill, but an attempt to grapple with the question of merchant shipping was met by a formidable and successful opposition. Mr. Chamberlain, during the land agitation in Ireland, did not take such a prominent part in the debates as was expected from a man who was believed to have strong sympathies with the minor objects of the Irish members. Nor when great foreign questions were being discussed did he often enter the arena of debate. But whenever he spoke he went straight to the point, and early acquired a reputation as a hard bitter, and stands in the front rank of public speakers. On his exit from office (1885) he increased his reputation as a political leader considerably more than during the three previous years, his freedom from office giving him greater latitude; and he attacked Conservatives and Whigs with almost equal bitterness. He made a political

tour in Scotland, and by his remarks on disestablishment there raised a storm which had doubtless much influence on the general election. At Victoria Hall, in London, he declared that he would take no post in any government which did not include in its programme free schools and the creation of small tenants and yeomen farmers. This speech created a great sensation, and was looked upon as a direct challenge to the Whig element of the Liberal party. Mr. Chamberlain was elected for Birmingham at the general election of 1885, along with six Liberal colleagues. He held the office of President of the Local Government Board until his divergence of views on the Irish policy of Mr. Gladstone caused his resignation (March 27th, 1886). He has since been a steady member of the party of Liberal Unionists. Mr. Chamberlain was the originator of the Round Table Conference. His speeches on the Irish Question were published in '87 under the auspices of the National Radical Union, Birmingham. On the occasion of the Queen's visit to the Prime Minister at Hatfield House in '87, Mr. Chamberlain was amongst the distinguished guests invited by Lord Salisbury to meet Her Majesty. He was subsequently appointed British Commissioner to the Conference at Washington for the settlement of the dispute between the United States and Canada on the Fisheries Question, and agreed to the terms of the treaty, which has been rejected by the American Senate. Previous to his departure for America he visited Ulster, and delivered a series of speeches on the Home Rule problem, and since his return he has addressed large gatherings at Bradford, Birmingham, and Nottingham. In April '88 Mr. C. was entertained at a house dinner at the Devonshire Club. He also spoke at Birmingham in the same month. In September Mr. C. delivered speeches at Bradford and Nottingham. Revisited United States on the occasion of his marriage with Miss Endicott (Nov. 15th).

"Chambers' Encyclopædia," begun in '59 and completed '68, under the editorship of the late Dr. Findlater, is to appear in a new edition (which will comprise ten volumes), Vol. I. being published in March, and Vol. II. in Sept., '88. The high reputation of this well-known work will be enhanced by the revision and rewriting of its existing articles, and its scope extended by the addition of many fresh subjects, contributed by men eminent in various branches of knowledge. Special attention will be paid to Colonial and American subjects. Physical maps and new illustrations are also to be included. It is stated that the primary idea of the original work—information imparted in non-professional language—is to be strictly adhered to. Editor, Mr. D. Patrick, M.A. Office, 339, High Street, Edinburgh.

"Chambers' Journal" was established in '32 by the brothers William and Robert Chambers, and is now conducted by Charles E. Chambers, a grandson of Robert Chambers. It publishes papers on literature, science, applied art, travel and adventure, and works of fiction; but political and religious subjects are excluded. Office, 339, High Street, Edinburgh.

Championship of England, The, is a very ancient office, said to have been instituted by William I. It has been in the family of Sir John Dymoke from the coronation of Richard II. (1377), when it was decided against another claimant of the post in favour of him as lord

of the manor. The duties of the Champion consist only in appearing at a coronation, openly challenging a denial of the monarch's right and title to the throne, and holding combat with the denier of such right.

Chancellor, Lord High, who is appointed by mere delivery of the Great Seal to him by the sovereign, is principal legal adviser of the Crown, is by prescription Speaker of the House of Lords, and may act in that capacity even though he be not a peer; he is by virtue of his office a privy councillor, and as the first existing great officer of state he takes precedence of all but royal dukes and the Archbishop of Canterbury. He presides, if present, when the House of Lords is sitting as an appellate court. He is president of the Chancery Division of the High Court and of the Court of Appeal, and is one of the Judicial Committee of the Privy Council. In the absence of the sovereign he reads the Queen's Speech at the opening and prorogation of parliament, and he is always one of the Commission for giving the royal assent to bills. He is visitor of all hospitals of royal foundation, the general guardian of all infants, idiots, and lunatics, and has the general supervision of all charitable trusts. His patronage is very extensive. He nominates the puisne judges and county court judges; and, except for Lancashire, he appoints the county magistrates, generally accepting the nominations of the lords-lieutenant and the borough justices. He is the patron of twelve canonries and over six hundred livings. On retiring from office he receives a pension of £5,000 a year, but in such case he commonly assists the Lord Chancellor and the Lords of Appeal in Ordinary in the transaction of the judicial business of the House of Lords.

Chancellor of Exchequer. See TREASURY.
Chancellor of Ireland, Lord, is head of the Irish judicial establishment, principal legal adviser of the Lord Lieutenant, and exercises in Ireland many of the powers which in England are vested in the Lord High Chancellor. The office may be held by a Roman Catholic. See MINISTRY.

Chancellor of the Duchy of Lancaster is head of the office by which the Duchy estates, the revenues of which are paid over to the privy purse (see footnote ROYAL FAMILY) are managed. He appoints the magistrates for Lancashire, and is vice-president of the Committee of Council on Agriculture (q.v.).

Channel Bridge Scheme. The *Temps* (Paris), of May 17th, '88, stated that a scheme "for constructing a bridge over the English Channel" had just been completed, having been worked out by the Creusot engineers and M. Hersent, ex-president of the Society of Civil Engineers. It continued,—"The progress of metallurgy makes the construction possible of an immense bridge, thirty kilometres long, with a platform at a height of fifty metres above the sea at full tide, and supported by piles at distances of 500 metres. The design, it seems, includes four railway lines besides a road for carriages and footpaths, while places of refuge, watch houses, and alarm bells, would be placed on each pile with a powerful light. The authors propose to construct the foundations by means of compressed air diving bells, the depth of the Strait between Calais and Dover not being on an average more than from twenty-five to thirty-nine metres, and in few places exceeding fifty metres. The bridge would cost 800,000,000

francs, its metallic weight would amount to 2,000,000 tons, and it might be constructed in six years. The *Temps* added that the scheme was to be submitted for examination to an international technical committee, and afterwards the Channel Bridge Society would apply for a concession to the French and English Governments, from which, however, no subsidy would be asked.

Channel Islands lie in the southern part of the English Channel, 10 to 30 miles from the French coast. Anciently an appanage of the Duchy of Normandy, they have belonged to England since the Conquest. Total area about 76 sq. m.; pop. 87,702.—Divided into two separate governments, called **Bailiwicks**, that of Jersey, and that of Guernsey.—Granitic rock is the foundation of the islands. They are extremely fertile and picturesque. Agriculture is largely carried on, fruit and vegetables being raised for export. Industries are farming, market gardening, and fishing. Much cider is made. Dairy farming is a great feature, and the breed of cattle is celebrated. The fisheries are important, embracing lobster, oysters, and cod. Minor manufactures are carried on, and intermediary trade between Britain, France, and other countries is considerable, exports and imports reaching £1,500,000 in British produce alone. The climate is moist and mild.—Each **Bailiwick** enjoys a kind of autonomy. The Crown appoints a Lieutenant-Governor and a Bailiff to each, and each has its representative legislature called the **States**. The English Church is the established religion, and the islands are included in the see of Winchester. Relics of Norman custom survive in the administration. Taxation is exceedingly light.—The People are an intermixture of French and English. Both languages are spoken, but the former is official.—Jersey has no appendages. Its area is 28,777 acres, or about 45 sq. m., with pop. 52,445. It is divided into 12 parishes. The capital is **St. Helier** (30,000), situated on St. Aubyn's Bay, on the south. It is hilly, and most fertile of the group. Some shipbuilding is carried on, and syenite is quarried and exported. Iron and manganese exist.—Guernsey, 30 miles north of Jersey, has attached to it the small isles of Alderney, Sark, or Serq, Herm, Jethou, Brechon, etc. Together the area of all is 19,605 acres, about 31 sq. m.; pop. 35,257. They are divided into 20 parishes. The capital is **St. Pierre**, on the east, with a good harbour. Guernsey is level on the north, hilly to the south. It is somewhat less fertile than Jersey. Alderney is elevated on the south-west. It has no good harbour, and is separated from Cape La Hogue by the dangerous Race of Alderney. Its area is only some 1,900 acres, and its village is called **St. Anne**. The pasturage is very rich. The Channel Islands (especially Alderney) are strongly fortified, and their defence in time of war has to be wholly defrayed by Britain. Their separation from the French mainland is still going on, and it is argued that they must, in the not distant future, entirely disappear. Consult Ansted's and Inglis's "Channel Islands." For Lieut.-Governors, etc., see DIPLOMACY.

Channel Tunnel. The earlier history of this scheme has been given in previous editions. During '87 but little progress was made with it, owing to the continued opposition of the Government. On Feb. 24th the Company as now combined (see ed. '87) held an extraordinary

meeting under the presidency of Sir E. W. Watkin, M.P., and agreed to call themselves the **Channel Tunnel Co.**—a resolution which was confirmed on March 11th. The second reading of the **Channel Tunnel Experimental Works Bill** was moved in the House of Commons by Sir E. W. Watkin, who pointed out that the Government would always have the power to stop the progress of the operations. On a vote being taken, the motion was lost by 153 to 107. On Aug. 16th, when laying the first cylinder of the new Dee Bridge (*q.v.*), Mr. Gladstone expressed himself in favour of the Tunnel scheme. On Dec. 22nd, at an ordinary meeting of the Company, Sir E. W. Watkin, M.P., chairman, spoke in encouraging tones of their prospects; and, after mentioning Mr. Gladstone's public expression of opinion, pointed out that Mr. Bright had written and spoken in their favour, while Lord R. Churchill was one of their shareholders. He said the borings at Dover were proceeding, the vertical depth of the borehole being 734 feet. The directors were authorised to make a call of 1s. per share, to receive in advance the amount due on the shares, and the reintroduction of the experimental bill next session was approved. Early in '88 the Government intimated that they would oppose the bill. On Feb. 16th, '88, Col. Hozier delivered an address at the **Manchester Town Hall** (in favour of the scheme), entitled "**The Channel Tunnel from a Military and Commercial Point of View**"; at the same meeting Sir E. Watkin, M.P., told a story of the Queen's expressed sympathy with the project, when it was mentioned in the Prince Consort's time. A special general meeting of the **South Eastern Railway Co.** was held on May 3rd, and approved of the Bill to authorise experimental works at the Channel tunnel. In the House of Commons on May 4th, Sir M. Hicks Beach declined on behalf of the Government a suggestion from Sir C. Palmer that the explorations might go on to test the possibilities of making the subway. In reply to Mr. R. Cooke in the House of Commons on July 5th, Sir M. Hicks Beach said that in all 600 yards of the experimental tunnel had been bored against the orders of the Board of Trade, and 36 yards of the distance in defiance of an order of Mr. Justice Day. At present he did not see the necessity of permanently disabling the works, as suggested, but an inspector of the Board of Trade would report. An interesting correspondence between Mr. W. H. Smith, First Lord of the Treasury, and Sir E. Watkin was published in the *Times* of July 20th. In the House on July 27th Sir M. Hicks Beach said that the inspector (above referred to) had reported that the works at the tunnel were practically in the same condition as they were eighteen months before. On June 27th Sir E. Watkin moved in the House of Commons the second reading of the **Tunnel (Experimental Works) Bill**, and was supported amongst others by Mr. Gladstone in the course of a lengthy debate. The Bill was rejected by 307 to 165. The full text of the report of Major Marindin, of the Board of Trade, was published in the *Times* of August 10th. From this it appeared the tunnel was about 2,103 yards long, having been increased about eight inches since December '86. The boring for coal on the Undercliff was going on, the bore hole from the bottom of a shaft being 900 feet deep and 18 in. in diameter, 500 feet of which had been lined. Statutory notice was issued in November that

next session application would be made to Parliament for leave to bring in a Bill to continue the experimental works at the tunnel.

Chantilly. Formerly the seat of the **Duc d'Aumale**, recently handed over by him to the Academy for the people of France. It is twenty-six miles from Paris, and a beautiful domain, where the great Condé received Louis XIV. in 1671. See ed. '87.

Chan Toon. Barrister-at-law, was b. at Akyal, British Burmah, in '67. He was educated at Doveton College, Calcutta, and University College, London, which he entered in '83. Two years later he became a student at the Middle Temple. He was called to the bar in '88, and received the unprecedented distinction of being publicly congratulated upon his successful career as a student by Sir Henry James on behalf of the Benchers. Mr. Chan Toon, during his studentship, competed for the eight principal prizes open to law students, and gained them all.

Chapter. See DEAN AND CHAPTER.

Charges d'Affaires. See AMBASSADORS.

Charities. The following is a list of the principal charitable and philanthropic institutions having offices in London, and being wholly or in part dependent upon voluntary contributions. The figures indicate the last reported annual receipts. The list does not include charities with an income of less than £1,000 a year, or the charities connected with the City of London (see CITY CHARITIES and CITY GUILDS).—**Aborigines Protection Society**, 6, Broadway Chambers, Westminster, S.W.; **Actors' Benevolent Fund** (£2822), C. G. Compton, 8, Adam St., Adelphi; **Additional Home Bishops' Endowment Fund**, Canon Ingram, Arundel Hse., Arundel St.; **Aged Pilgrims' Friend Society and Asylums** (£9528), Sec. Society, J. E. Hazelton, Sec. Asylums, W. Jackson, 83, Finsbury Pavement; **Aged Poor Society and Almshouses** (£1964), J. B. Corney, 70, Little Britain, E.C.; **Alexandra Orphanage**, J. Finch, 73, Cheapside; **Alexandra Hospital for Children with Hip Disease**, Mrs. H. Marsh, 17, 18, 19, Queen Sq., Bloomsbury; **Anglo-Continental Society** (£1634), Canon Meyrick, Rev. R. S. Oldham, 3, Waterloo Place, Pall Mall; **Annuity-holders' Homes**, Miss Sheppard's (£1595) Mrs. Cadman Jones, 27, Ossington St., Bayswater; **Arohitects' Benevolent Society** (£7228), W. H. White, 9, Conduit St., Hanover Sq.; **Army Scripture Readers' and Soldiers' Friend Society** (£10,530), W. A. Blake, 4, Trafalgar Sq., Charing Cross; **Arnold Fund for Widows and Orphans of Clergymen of the Established Church of England and Ireland** (£2000), 57, Coleman St.; **Artists' Benevolent Fund** (£1960), L. Young, 23, Garrick St., W.C.; **Artists' General Benevolent Institution** (£5118), D. H. Gordon, 19, St. James St., S.W.; **Association for Placing Orphans in Private Families**, W. Nassau, senr., 98, Cheyne Walk, S.W.; **Association for Promoting the General Welfare of the Blind** (£10,254), Col. H. Lewis, 28, Berners St., W.; **Asylum for Fatherless Children** (£10,702), J. R. Edwards, 35, Finsbury Circus, E.C.; **Asylum for Idiots** (£26,158), J. Downing, Earlswood, Red Hill, Surrey; **Asylum for the Support and Education of Deaf and Dumb Children** (£12,679), W. H. Warwick, 93, Cannon St., E.C.; **Baptist Missionary Society** (£66,200), Mission House, 19, Fournival Street, Holborn, E.C. (see MISSIONARY SOCIETIES). **Baptist Tract and Book Society** (£1175), Rev. G. Simmons, 22a, Fournival St., Holborn, E.C.; **Barnardo's Homes for Destitute and Orphan Children** (£108,709), 18 to 26, Stepney

Causeway, E.; **Belgrave Hospital for Children** (£2255), Secs., Rev. J. Storrs, M.A., and Capt. W. J. Stopford, 79, Gloucester St., Warwick Sq.; **Benevolent Society of Blues for the Relief of Persons Educated in Christ's Hospital, their Widows and Orphans** (£1283), G. Wilkins, 85, Tufnell Park Rd., Holloway; **Benevolent Society of St. Patrick, for Educating, Clothing, Partly Feeding, and Apprenticing Poor Children born of Irish Parents in or near London** (£7111), F. R. Stokes, 61, Stamford St., S.E.; **Benevolent or Strangers' Friend Society** (£1887), B. H. Gerrans, 52, Finsbury Pavement; **Bethlehem Hospital** (£25,000), G. H. Haydon, Lambeth S.E.; **Biggs's Charity to Frinters** (£6,424), J. S. Hodson, 20, High Holborn; **Booksellers' Provident Institution** (£2620), G. Lamer, 67, Paternoster Row; **Boys' Home Industrial School** (£8350), H. James, Regent's Park Rd., N.W.; **British and Foreign Sailors' Society** (£73,264), Rev. E. W. Matthews, Mercers' St., Shadwell; **British Home for Incurables** (£11,530), R. G. Salmond, 73, Cheapside; **British Hospital for Diseases of the Skin**, E. Morton Daniel, 61, Gt. Marlboro' St., W.; **British Lying-In Hospital** (£2030), F. Gardner, Endell St., Long Acre; **British Medical Benevolent Fund** (£2130), Sec., Dr. S. Phillips, 21, Upper Berkeley St., W.; **British Orphan Asylum** (£10,676), A. Mackenzie, 30, Finsbury Circus; **Brixton Orphanage for Three Hundred Fatherless Girls** (£1108), Mrs. E. Varco, Barrington Rd., Brixton; **Brown Institution for the Treatment and Study of the Diseases of Domestic Animals**, T. Le Marchant Douse, 11.A., Wandsworth Rd.; **Builders' Benevolent Institution** (£3079), Maj. Bruton, 4, Vernon Place, Bloomsbury Sq.; **Butchers' Charitable Institution** (£5476), H. J. V. Philpott, Butchers' Hall, Bartholomew Close; **Cabdrivers' Benevolent Association** (£2449), G. S. Murphy, 15, Foho Sq.; **Cabman's Shelter Fund** (£1184), W. H. Macnamara, 13, Victoria Buildings, S.W.; **Cancer Hospital** (£11,630), W. H. Hughes, Brompton, S.W.; **Cass's School**, 26, Jewry St., Aldgate; **Central African Mission** (£13,908), Rev. W. H. Penney, 14, Delahav St., Westminster; **Central London Ophthalmic Hospital** (£61479), W. Abrams, 238, Gray's Inn Rd., W.C.; **Central London Throat and Ear Hospital** (£1966), R. Kershaw, Gray's Inn Rd.; **Charing Cross Hospital** (£13,696), A. E. Reade, West Strand, Charing Cross; **Cheese mongers' Benevolent Institution** (£1239), E. Kent, 16, Borough High St., S.E.; **Chelsea Hospital for Women** (£5878), A. C. Davies, Fulham Rd., S.W.; **Chelsea Royal Hospital, Asst.-Sec.**, J. Dowling; **Cheyne Hospital for Sick and Incurable Children** (£4312), H. White, 46 & 47, Cheyne Walk, Chelsea; **Children's Aid and Refuge Fund** (£1057), A. J. S. Maddison, 32, Charing Cross, S.W.; **Children's Country Holiday Fund** (£9430), Miss Neuman, 10, Buckingham St., Strand, W.C.; **China Inland Mission** (£20,121), B. Broomhall, 2, 4 & 6, Pyrland Rd., Midway, N.; **Christian Colportage Association for England** (£7631), H. D. Brown, 37, Farringdon St., E.C.; **Christian Community** (£2456), J. Atkinson, 28, Enfield Rd., Kingsland, N.; **Christian Evidence Society** (£1004), Rev. T. T. Waterman and Rev. C. L. Engström, M.A., 13, Buckingham St., Strand; **Christian Vernacular Education Society for India** (£9046), H. Morris, 7, Adam St., Strand; **Christ's Hospital** (£60,000), Newgate St., Mr. S. S. Dippall; **Church Army** (£6588), Rev. W. Carille, 128 & 130, Edgware Rd.; **Church Association** (£2725), H. Miller, 14, Buckingham St., Strand; **Church Defense Institution** (£8964),

Secs., Rev. H. G. Dickson, G. H. F. Nye, and Rev. C. A. Wells, St. Stephen's Palace Chambers, 9, Bridge St., Westminster; **Church Extension Foreign Missions** (£1241), Miss E. Ayckbom, 27, Kilburn Park Rd., N.W.; **Church Extension Ragged Schools** (£25,315), Miss E. Ayckbom, 27, Kilburn Park Rd.; **Church Extension Winter Relief Fund** (£6610), Miss E. Ayckbom, 27, Kilburn Park Rd., N.W.; **Church Missionary Society for Africa and the East** (£221,330), Rev. F. E. Wigram, M.A., Salisbury Sq.; **Church of England Central Society for Providing Homes for Waifs and Strays** (£15,827), E. de M. Rudolf, 32, Charing Cross; **Church of England Parochial Mission Society** (£4010), Rev. H. A. Hall, 21, John St., Adelphi; **Church of England Scripture Readers' Association** (£9880), Clerical Sec., Rev. Marcus Rainsford, Lay Sec., T. M. Tilby, 56, Haymarket; **Church of England Sunday School Institute** (£21,002), J. Palmer, Serjeants' Inn, Fleet St.; **Church of England Temperance Society** (£6789), Rev. C. N. Keeling, 9, Bridge St., Westminster; **Church of England Temperance Benefit Society** (£1413), A. B. Harding, 112, Palace Chambers, Westminster, S.W.; **Church of England Zenana Missionary Society** (£26,672), Secs., J. Stuart and Col. G. R. S. Black, 9, Salisbury Sq., Fleet St.; **Church of Ireland Sustentation Fund** (£2397), R. Nugent, 32, Charing Cross; **Church Pastoral Aid Society** (£53,871), Secs., Rev. J. I. Cohen, M.A., and Maj.-Gen. Davidson, R.E., Falcon Court, 32, Fleet St.; **Church Penitentiary Association** (£26675), Secs., Rev. G. C. Campbell, Dr. E. L. Bukett, and Rev. T. Wodehouse, 14, York Buildings, Adelphi; **Church Schoolmasters and Mistresses' Benevolent Institution** (£7,328), G. W. Perry, 4, Little Dean's Yard, Westminster, S.W.; **City Dispensary** (£1515), F. J. L. Mooie, 98, Cannon St.; **City of London Hospital for Diseases of the Chest** (£10,640), T. Storror-Smith, 24, Finsbury Circus; **City of London Lying-in Hospital** (£3213), R. A. Othwaite, City Rd.; **City of London Truss Society** (£5686), J. Whittington, 35, Finsbury Sq.; **City Orthopaedic Hospital** (£1850), E. Derenth, 27, Hatton Garden; **Clergy Orphan Schools** (£9914), Rev. T. W. Gibson, 43, Lincoln's Inn Fields; **Colonial and Continental Church Society** (£46,034), Rev. D. L. McAnally, M.A., 9, Serjeants' Inn, Fleet St.; **Colonial Missionary Society** (£7344), Rev. W. S. H. Fielden, Memorial Hall, Farringdon St.; **Commercial Travellers' Benevolent Institution** (£11,313), J. Kaines, 47, Finsbury Circus; **Commercial Travellers' Schools** (£14,487), H. Lendon, 37, Milk St., Cheapside; **Congregational Church Aid and Home Missionary Society** (£38,712), Rev. A. Mearns, Memorial Hall, Farringdon St., E.C.; **Convalescent Hospital for Seamen** (£11,713), W. T. Evans; **Corporation of the Sons of the Clergy** (£25,707), W. P. Bowman, 2, Bloomsbury Place, Bloomsbury Sq.; **Country Towns Mission** (£2644), G. H. Mawer, 18, New Bridge St., Ludgate Circus, E.C.; **Cripples' Home** (£26294), Secs., E. Bannister and Miss E. Steinmetz, 17a, Marylebone Rd.; **Curates' Augmentation Fund** (£9285), Rev. J. R. Humble, 2, Dean's Yard, Westminster; **Dental Hospital of London** (£2262), J. F. Pink, Leicester Sq.; **East London Church Fund** (£17,955), Rev. E. S. Hilliard, 26, St. Mary Axe; **East London Hospital for Children and Dispensary for Women** (£8354), A. Warner, Shadwell, E.; **East London Industrial School** (£2888), A. J. Gilbee, Lewisham, Kent; **East London Nursing Society** (£2012), A. W. Lacey, 49, Philpot St., Commercial Rd.;

East London Provident Association (£1354), W. H. York, 495, Commercial Rd.; **Evelina Hospital** (£6766), T. S. Chapman, Southwark Bridge Rd., S.E.; **Female Mission to the Fallen** (£4189), A. V. S. Maddison, 32, Charing Cross, S.W.; **Female Orphan Asylum** (£4178), G. Booth, 32, Essex St., Strand; **Field Lane Refugees and Ragged Schools** (£7883), Peregrine Platt, Vine St., Clerkenwell Rd.; **Finsbury Dispensary** (£805), R. Moreland, Brewer St., Goswell Road, E.C.; **Foreign Missions of the Presbyterian Church of England** (£13,769), J. Bell, 13, Fenchurch Avenue, E.C.; **Foundling Hospital** (£19,339), W. S. Wintle, M.A., Guilford St.; **Friend of the Clergy Corporation** (£7905), Rev. H. Jona, 27, Bedford St., Strand; **Gardner's Trust for the Blind**, H. J. Wilson, 1, Poets' Corner, Westminster, S.W.; **General Domestic Servants' Benevolent Institution** (£1952), W. Sly, 32, Sackville St.; **George Yard Ragged Schools and Mission** (£1500), G. Holland, High St., Whitechapel; **German Hospital** (£9288), C. Feldmann, German Hospital, Dalston; **German Society of Benevolence and Concord** (£2867), G. J. Ostermoore, 14, South St., Finsbury; **Girls' Friendly Society** (£4840), Miss Wright, 3, Victoria Mansions, Victoria St., Westminster; **Girls' Home** (£1247), Mrs. B. Pearson, 22 & 41, Charlotte St., Portland Pl.; **Mrs. Gladstone's Free Convalescent Home for the Poor**, more especially of the East of London (£1316), Lieut.-Col. Neville, Thurgoland, Sheffield; **Goldsmiths' Benevolent Institution** (£2336), B. Maskell, 15, Hanover Sq., W.; **Gordon Boys' Home** (£14,243), Lieut.-Col. G. A. Beaty-Pownall, 20, Cockspur St., S.W.; **Governesses' Benevolent Institution** (£17,387), C. W. Klugh, 32, Sackville St.; **Governesses' Home and Registration Agency** (£803), F. S. Warren, 9, St. Stephen's Sq., W.; **Great Northern Central Hospital** (£3608), W. T. Grant, Caledonian Rd., Islington; **Grocers' and Tea Dealers' Benevolent Protection Society** (£5792), G. Powell, 76, Finsbury Pavé; **Guy's Hospital** (£35,062), H. Williams, Southwark; **Ham Yard Soup Kitchen and Hospice** (£2218), H. S. Trower, Ham Yard, Great Windmill St., W.; **Hampstead Home Hospital and Nursing Institute** (£1199), R. A. Othwaite, 2, 3, & 4, Parliament Hill Rd., Hampstead; **Etherington's Charity to the Blind** (£7180), M. S. S. Dipnall, Christ's Hospital; **Home and Colonial School Society** (£9735), W. S. Glover, Gray's Inn Road; **Homes for Deaf and Dumb Children** (£1000 about), Miss H. Ball, Stainer House, Paddington Green, W.; **Homes for Incurable Children** (£1448), Miss Coleman, 2, Maids Vale; **Homes for Inebriates Association** (£809), Dr. N. Kerr, 42, Grove Rd., Regent's Pk., N.W.; **Homes for Little Boys** (£16,018), Benjamin Clarke, Ludgate Circus, E.C.; **Home Teaching Society for the Blind** (£2344), Mr. Ralph, 31, New Bridge St.; **Homes of Hope** (£2414), W. Hornibrook, 4, Regent Sq., Gray's Inn Rd.; **Homes for Working Boys in London** (£4801), H. B. Wallen, 8, Duke St., Adelphi, W.C.; **Homes for Working Girls in London** (£12,425), J. Shrimpton, 2, Westminster Chambers, S.W.; **Hospital for Consumption and Diseases of the Chest** (£30,982), H. Dobbin, Brompton; **Hospital for Diseases of the Throat** (£3026), G. C. Witherby, Golden Sq., Regent St.; **Hospital for Epilepsy, Paralysis, and other Diseases of the Nervous System** (£2601), H. H. Graham, Portland Terrace, Regent's Park; **Hospital for Sick Children** (£1366), A. Hope, 49, St. Ormond St., Queen's Sq.; **Hospital for Women** (£883), D. Cannon, Soho Sq., W.; **House of Charity for Distressed**

Persons in London (£1825), F. Graves, Greek St., Soho Sq.; **House-boy Brigade** (£4923), C. H. Chevens, 146, Marylebone Rd., N.W.; **Hovelesea Poor Asylum** (£1474), E. Gower, 6, St. Benet's Place, Gracechurch St., E.C.; **Incorporated Free and Open Church Association** (£1097), T. B. Vernon, 24, Bedford St., Strand; **Indian Female Normal School and Instruction Society, or Zenana, Bible, and Medical Mission** (£10,446), Miss Hamilton, 2, Adelphi Terrace, Strand, W.C.; **Indigent Blind Visiting Society** (£6330), W. C. Lester, 27, Red Lion Sq.; **Industrial Home for Girls** (£1446), Mrs. Hervey Hopwood, 11, Cadogan Place, S.W.; **Infant Orphan Asylum** (£16,538), H. W. Green, 100, Fleet St.; **Invalidd Asylum, Stoke Newington** (£1513), Miss L. Moline, 187, High St.; **Irish Society** (£6667), Rev. T. Keane, 32, Sackville St., W.; **Islington Industrial Home**, J. J. Mignon, 119, Copenhagen St., N.; **Italian Benevolent Society** (£950), P. F. Consult, for further and fuller information, Low's "Handbook to the Charities of London" (Simpson, Low & Co.), or "The Classified Directory to the Metropolitan Charities" (Longmans).

Charity Commissioners for England and Wales, The. The Charity Commission was created by the **Charitable Trusts Act 1853** (16 & 17 Vict. c. 137). Four commissioners were appointed, three of them being paid; and two at least of these three (one of the two being the Chief Commissioner) must be barristers-at-law of not less than twelve years' standing at appointment. No paid commissioner can sit in the House of Commons during tenure of office. The Board are empowered, "from time to time, as they may see fit, to examine and inquire into all or any charities in England and Wales, and the nature and objects, administration, management, and results thereof, and the value, condition, management, and application of the estates, funds, property, and income belonging thereto." Certain large exceptions, however, are specified: the Universities of Oxford, Cambridge, London, Durham, and all colleges or halls of any of them; all cathedral or collegiate churches, all buildings registered as places of worship, with the Registrar-General of Births, etc., and *bona fide* used as places of meeting for religious worship; Queen Anne's Bounty, the British Museum, friendly or benefit societies, savings banks, institutions or societies for religious or other charitable purposes, funds or property of missionary or similar societies, and generally all undertakings (independent or dependent) wholly maintained or carried on by voluntary contributions. But this exemption "shall not extend to any cathedral, collegiate, chapter, or other schools"; the colleges of Eton and Winchester, however, were exempted by the amending Act of 1855. The secretary to the Commission for the time being is a corporation sole, by the name of "The Official Trustee of Charity Lands," for taking and holding charity lands; and the Lord Chancellor may appoint any persons to be jointly with the secretary "The Official Trustees of Charitable Funds," who must lay

their accounts before parliament yearly. The original jurisdiction of the Commissioners has been greatly extended. In 1874 the Endowed Schools Act transferred to them (as from Dec. 31st, 1874) all the powers and duties vested in or imposed upon the Endowed Schools Commissioners. In 1882 the Prison Charities Act (45 & 46 Vict. c. 65) empowered the Charity Commissioners, on application of the Secretary of State, to make schemes respecting prison charities. In 1883 the Municipal Corporations Act (46 & 47 Vict. c. 18, sect. 3) empowered them to hold, manage, and enjoy the property of certain dissolved corporations until they should make schemes for its administration. In 1883, also, the City of London Parochial Charities' Act (46 & 47 Vict. c. 36) empowered them to inquire into the nature, tenure, and value of all the property and endowments belonging to the charities mentioned in the "Digest of Parochial Charities of the City of London," referred to in the thirteenth report of the Charity Commissioners for England and Wales, and every one of them, and every other charity the property or income of which is applicable or applied to, or for the benefit of, any parish or part of a parish within the City of London, or of any inhabitant or inhabitants thereof, and the purposes and trusts for or upon which the same have heretofore been or are now held or enjoyed, and to which the income thereof has been or is now applied, and to classify the said property in two schedules—"Ecclesiastical Charity Property" and "General Charity Property"; and to frame schemes for the future application and management of the charity property and endowments, under prescribed directions. **Christ's Hospital** is expressly excepted. The Charity Commissioners make an annual report, which is laid before parliament. The present **Chief Commissioner** is Henry Longley, Esq., C.B.; the second, C. H. Alderson, Esq.; the third, Edward Stanley Hope, Esq.; the fourth (unpaid), James William Lowther, Esq., M.P. **Sec.**, Daniel K. Fearon, Gwydyr House, Whitehall, S.W. See more fully for functions of the Charity Comrs. ed. '87.

Charity Organisation Society, The, was established with the object of improving the condition of the poor—(1) by promoting co-operation among existing charities and between charities and the poor law; (2) by securing due investigation and fitting action in all cases; and (3) by repressing mendicancy. The Bishop of London is **president** of the Society, and there is a very influential list of **vice-presidents**, which includes H.R.H. the Princess Louise (Marchioness of Lorne), the Dukes of Norfolk, Northumberland, and Westminster, the Marquis of Salisbury, the Earl of Derby, Mr. Gladstone, and other leading members of both political parties. The Society consists of a federation of district committees, one or more in each of the poor-law divisions of the Metropolis, and of a central council at which every committee is represented. The primary objects of the local committees are to afford to charitable institutions and individuals an easy means of exchanging information and of working together, to prevent overlapping in relief, and to secure the investigation of cases with a view to referring them to the proper quarter for assistance. In suitable cases assistance is given in the form of loans supplies information in regard to charitable institutions and questions connected

with the administration of relief. Special committees appointed by it report on such subjects as "Charity and Food," "Exceptional Distress," "Medical Relief," etc. It also investigates cases of begging-letter writing. **Organ of the Society, Charity Organisation Review**, and other papers are issued. **Central Office**, 15, Buckingham Street, Adelphi, W.C.

Charles I. (Charles Eitel Frederick Zepherin Louis), **King of Roumania**, b. 1839. When (1866) Prince Alexander John had been expelled from the sovereignty of Roumania, King Charles ascended the throne. He had formerly served as an officer in a regiment of Prussian dragoons. In 1881 the Roumanian representatives unanimously proclaimed him King of Roumania; he had previously borne the title of Prince. His Majesty wears the Russian cross of St. George, which he received from the Emperor Alexander II. In 1869 he married the Princess Pauline Attilie Louise of Wied, a lady of literary capacity, who writes under the *nom de plume* of "Carmen Silva."

Charles I. (Charles Frederick Alexander), **King of Wurtemberg**, b. 1823. He succeeded his father William I., and ascended the throne in 1864. In the Austro-Prussian war, he fought on the side of Austria. In 1866 he acknowledged Prussia as the head of the North German Confederation, and signed a treaty of offensive and defensive alliance with that power. In the Franco-German war (1870-71) King Charles joined the other German armies, and played an active part in the struggle. He is connected with the Russian Imperial family by his marriage (1846) with the Grand Duchess Olga Nicolajewna, daughter of the Czar Nicholas I. He is an officer in the Russian army holding the rank of Colonel of dragoons.

Charlestown. Capital of **Nevis (q.v.)**.

Charlotte Amalia. Cap. of **St. Thomas (q.v.)**.

Charlotte Town. Capital of **Prinos Edward Island (q.v.)**, pop. 11,500.

Charterhouse School, Godalming. Founded 1611 and until 1872 situated near Smithfield, London, on ground that belonged to the Carthusian Monastery. One of the nine great public schools of the Public Schools Commission. Twenty exhibitions to the Universities, each of the annual value of £80, tenable for four years. **Chairman**, Archbishop of Canterbury. Pupils, 500. **Head Master**, Rev. W. Haig Brown, LL.D. Motto, *Dvo dante ddi*. **Alumni** (some), Thackeray, Grote, Blackstone, Wesley, Addison, John Leech, Havelock, Thirlwall, Lord Liverpool, Ellenborough, Steele, Milner Gibson.

Cheese. See ed. '88.

Cheltenham College, Gloucester. Founded 1841. It is a proprietary college of six hundred and fifty shares, each share entitling the holder to nominate one pupil. There are three departments—the classical, the military and civil, and the junior. The **Wyllie scholarship** of £50 for three years at Trinity College, Cambridge, is in the gift of Cheltenham. The pupils number about 500. **Head Master**, the Rev. H. A. James, B.D. (Jan. 89). Among the alumni of Cheltenham College are Sir Henry James, Q.C., M.P., and the Rt. Hon. John Morley, M.P.

Chemistry, '88. A few leading features connected with the progress of this science are given. A new base has been mentioned in tea by Dr. Kossel, of Berlin. It has received the name *theophylline*. Analyses indicate the same formula as theobromine, but the substances are

not identical. Prof. Thorpe and Mr. Rodger, of the South Kensington Science Schools, have discovered a new gas possessing remarkable properties. They have called it **thiophosphoryl fluoride**. The best method for preparation consists in heating pentasulphide of phosphorus with lead fluoride in a leaden tube. It is **spontaneously inflammable**. Three new sulphochlorides of mercury have been isolated by Drs. Poleck and Goerck, of Breslau, whereby the action of sulphuretted hydrogen upon mercuric chloride may be considered settled. "**A new Commercial Application of Oxygen**" was the title of a paper read before the Society of Chemical Industry by Mr. Thos. Fletcher, of Warrington, in which he described the uses of his **compressed oxygen furnace**. It is a special and powerful form of blowpipe, with which compressed oxygen and ordinary coal-gas is used, the oxygen being obtained by Brin's process. The blowpipe satisfactorily supplies the need hitherto felt for a powerful source of heat under control. It is possible to braze and make repairs in parts of complicated machinery without removal where a man's hand can be got in. Experiments have shown the capability of the furnace to fuse a hole in iron plates of considerable thickness; and it has been pointed out that a very serious aid to safe burglars has been thus offered, apart from industrial advantages. Before the same Society Mr. A. M. Chance read an important paper on the **recovery of sulphur from alkali waste**. Mr. C. has brought forward a process by which alkali makers can recover the whole of the waste sulphur of their vats, the only waste product being carbonate of lime. During the year the first official report, by Dr. W. J. Russell and Capt. Abney, on the effect of **light on water-colours**, was issued. At the Bath meeting of the **British Association** (*q.v.*) an important paper was read by Prof. M. Foster on "**Chemical Problems presented by Living Bodies**," in which he suggested several points for chemical investigation, which may yield fruit. Prof. Emerson Reynolds also exhibited there a new crystalline substance, the first well-defined compound in which silicon is exclusively united with the nitrogen of amidic groups. He also showed a number of new **silicon compounds** of a new type. The position occupied by chemical science in relation to the State has attracted attention from those interested in the question, and it has been much discussed. Prof. Dunstan, at the British Association, presented a report of the committee on the **teaching of chemistry**. Among important papers published have been:—"Conditions of the Evolution of Gases from Homogeneous Liquids," by Mr. V. H. Veley; "On the Specific Resistance of Mercury," by Messrs. Glazebrook and Fitzpatrick; "Combustion in Dried Oxygen," by Mr. H. B. Baker; while Profs. Liveing and Dewar, and Profs. Ramsay and Young, have respectively continued and published accounts of further researches on the ultra-violet spectra, and on evaporation and dissociation.

Cherif Pasha, statesman, b. at Constantinople, of an old and noble Mussulman family. He studied at Paris as a pupil of the Egyptian Mission maintained in France by the Egyptian Government, and passed through the Military School of Saint-Cyr. He returned to Egypt in 1844. At the accession of Said Pasha he entered the army, and was successively promoted to the rank of Pasha. In '57 he entered the administration, and became Minister of Foreign

Affairs. Under the Government of Ismail Pasha he filled the posts of Minister of the Interior, Foreign Affairs, and Public Instruction. In '67 he was raised to the post of **President of the Grand Council of Justice**. In '68 he took the portfolio of the Interior, with the Presidency of the Council of Ministers. In '65, '67, '68, he was made **Regent of Egypt** by Ismail Pasha, when this Prince went abroad. Under the government of Tewfik Pasha, Cherif Pasha became **Prime Minister of Egypt**, but resigned ('84), in consequence of his disapproval of the abandonment of the Soudan. He is a Grand Officer of the Legion of Honour.

Chess. Some doubt exists as to the **origin** of this ingenious game; and whilst several authorities attribute its invention to the Chinese, others ascribe it to the **Hindoo**s; and Sir William Jones says, "We may be satisfied with the testimony of the **Persians**, who unanimously agree that it was imported from the west of India in the sixth century. It seems to have been immemorially known in Hindostan by the name of **chaturanga**," i.e., "the four angas, or members of an army." It was introduced into Spain by the **Saracens** in the eighth century, and gradually came into play throughout Europe; but the date of its introduction into England is not precisely known, although it is recorded that Canute took part in a game in 1028. Tamerlane is said to have greatly improved it in or about the year 1400; and in 1474 Caxton published "**The Game and Playe of the Chesse**." For the promotion of Chess, clubs are in existence all over the three kingdoms, the parent society being the **British Chess Association**, which was originally formed under the title of the **Yorkshire Chess Association**, and took its present name on Aug. 5th, 1857. The first congress under its auspices was held at St. James' Hall in June '62, and the laws of the game were revised in the following July. Dr. Zukertort won the first prize at the **International Congress** held at Paris in '78. Mr. Blackburne gained a similar honour at Berlin in '81, and Dr. Zukertort was equally successful at London in '83; but in his great match with Mr. Steinitz, in America, in '86, for the **championship of the world** and a stake of 2,000 dollars, he was beaten by ten games to five, the remaining five of the contest being drawn. In the **Masters' Tournament of the British Chess Club**, which followed in the same year, Mr. Blackburne was victorious with a total of 54 games, Mr. H. E. Bird and Mr. Gunsberg coming next with five games each. Captain Mackenzie, New York, was awarded first prize of 1,000 marks at the **International Chess Congress**, at Frankfort-on-the-Main, in August '87; and Mr. Burn and Mr. Gunsberg shared first and second prizes at the **Master's Tournament** in December of the same year. In the '88 competition for the **Newnes Cup**, Mr. A. Guest was successful, with a score of ten games out of a possible twelve, his most dangerous opponent being Mr. Schott, captain of the Oxford team in the **Universities' Match**, at the British Club in '87. Mr. Gunsberg won the first prize in the **Masters' Tournament** at Bradford last August, his total being 144 games; Captain Mackenzie was second with thirteen games, and Messrs. Mason and Bardeleben tied for third honours with twelve games each. Play in the **British Chess Club Handicap** occupied a considerable time, owing to various causes, and Messrs. Blackburne and Gunsberg eventually divided

first and second prizes, whilst Messrs. Bird and Wainwright shared third and fourth. This handicap will long be remembered as associated with the sudden death of Dr. J. H. Zukertort, who at the time of the sad event occupied a prominent position in the match. On the evening of the 19th of June, whilst playing a game of chess at Simpson's, in the Strand, he was seized with faintness, and showing no signs of improvement, he was conveyed to the British Chess Club, and later in the evening to Charing Cross Hospital, where he died next morning, without once recovering consciousness, of cerebral hæmorrhage. This brilliant chess player and accomplished scholar was born in Riga in 1842, and served in his medical capacity through the Schleswig-Holstein, Austro-Prussian, and Franco-German campaigns.

Chester, Rt. Rev. Francis John Jayne, D.D., Lord Bishop of. The see, anciently part of Lichfield, was made a separate diocese by Henry VIII. in 1541, and has an income of £4,500. His lordship, the 33rd Bishop, was b. 1844, and educated at Wadham College, Oxon. Was a Double First in the Final Schools in '68, when he was elected Fellow of Jesus College. Ordained '70. Curate of St. Clement, Oxford. Subsequently Tutor of Keble College, and in '79 appointed Principal of St. David's College, Lampeter. In '86 he was presented to the Vicarage of Leeds, which he held until his elevation to the episcopal bench, '88.

Cheyne, Rev. Thomas Kelly, D.D., b. in London 1841. Educated at Merchant Taylors' School and Worcester Coll., Oxford. Elected ('69) Fellow of Balliol Coll., and in '31 was appointed rector of Tendring, Essex. In '84 the University of Edinburgh conferred upon him the degree of D.D., and ('85) he became Oriel Professor of the Interpretation of Holy Scripture at Oxford, and a Canon of Rochester. Professor C. is one of the most eminent authorities on Biblical exegesis, the most important of his works being devoted to the prophecies and Psalms.

Chichester, Rt. Rev. Richard Durnford, Lord Bishop of. The see was founded in 1070, but had existence previously as far back as 681, under the name of Selsey. The present income is £4,200. His lordship, the 71st bishop, was born at Sandleford, Berks, in 1802, and is the son of Richard Durnford, Esq. He was educated at Eton and at Magdalen Coll., Oxford, where he graduated first class in classics '26, proceeded M.A. '29, and gained a fellowship '30, in which year he was ordained deacon, and the year following priest. His lordship was formerly rector of Middleton, Lancashire, '35-'70; Hon. Canon of Manchester '54-'6; Archdeacon of Manchester '67-'70; Canon of Manchester, '68-'70; and consecrated Bishop of Chichester, '70, the same year receiving the degree of D.D. from his university.

Chili. A republic governed by a President elected for five years, to whom the executive power is confided, and a Senate and Chamber of Deputies, who form the legislature. The Senate, of 37 members, is elected by the provinces for six years; the Chamber, of 100 members, by the departments for three years, by electors possessing a small property qualification. The Roman Catholic is the state religion, but all others are tolerated; universal and gratuitous education is given at the national charge. Area 293,970 sq. m.; pop. in '85 about

2,527,000; capital, Santiago (pop. 236,412); estimated revenue in '88 £7,800,000; expenditure, £7,923,000; debt (latest returns) £18,413,781. Imports in '86, £9,956,000; exports, £10,925,000. Tobacco growing and the production of raw silk have been attempted of late years, but only with indifferent success. Cattle breeding and sheep raising might both be profitably carried on in Chili. By law the army is not to exceed 12,400, but in 1885 about 17,000 of the national guard were on duty to assist the regulars. The army now consists, including the national guard, of 54,401 men. (For navy see NAVIES, FOREIGN.) In May 1880 the Peruvians were totally routed by the Chilean army at Tacna, and in June the southern army of Peru was exterminated at Arica. The Chileans then threatened Lima by sea, and a *levée en masse* took place. Negotiations were attempted, but without result, owing to the exorbitant terms of peace demanded by Chili. In Nov. 1880 the Chilean army landed at Pisco, and in Jan. 1881 the Peruvians were totally defeated near Lima, which was shortly afterwards occupied without resistance. After their defeat, and before the arrival of the Chilean troops, the state of anarchy was so great that the foreign residents, to the number of 5,000, took arms to restore order. The country relapsed into a state of anarchy, and a guerrilla war dragged on in 1881 and 1882, always to the disadvantage of the Peruvians. After various unsuccessful attempts at negotiation, in 1883 the invaders recognised Iglesias, who had been elected provisional president by the northern states, and a treaty involving the absolute cession of Tarapaca, with its nitrate deposits, and the occupation of Arica and Tacna for ten years, etc., was provisionally agreed to in June. About this time also, after seventeen years of interrupted relations, a treaty of peace between Spain and Chili was signed. After a considerable period of civil war and anarchy, a constituent assembly was convened, which confirmed Iglesias in the presidency, ratified the above-mentioned treaty, and established a government, which was recognised by England, France, Spain, etc. In spite of insurrections against the new government, which rendered the prolongation of the Chilean occupation necessary, internal peace seems likely to be restored in Peru. In Chili proper since the close of the war nothing of especial note has occurred. A disastrous flood occurred (Aug.) in '88, at Valparaiso, causing damage to property amounting, it was estimated, to almost a million dollars.

"Chiltern Hundreds." See PARLIAMENTARY PROCEDURE.

China. The most populous, and, excluding Siberia, the largest empire in Asia. China Proper still more remarkable as the most compact nationality in the world: area 1,298,000 sq. m., with a pop. of 383,000,000—the higher figures being a moderate computation, and 30,000,000 less than the returns for 1842. The rest of the empire (Manchuria, Mongolia, Tibet (*q.v.*), Jungaria, East Turkestan), covering 2,881,560 sq. m., contains about 21,000,000 souls. China has other claims to rank high in the family of nations besides her extent of territory and the multitude of her people. The industry of the latter and the antiquity of her history afford valid reasons for placing this country high among the nations of the earth. The government of China is most carefully organised. A number

of boards or councils conduct business at the capital, Pekin; while the eighteen provinces are divided among a certain number of governors-generals, who are assisted by governors of provinces and the "taotais" of the cities. A nineteenth province has been recently formed, out of the Central Asian territory, having its seat of government at Suidum, near the Russian frontier, in Semiretchia. The Manchu, or Tartar garrison, allotted to each important town, has a separate organisation, while the Green Flag Chinese army corresponds to our militia or the Turkish *redif*. The Manchu army is computed to number 324,000 men, and the Chinese as many as 650,000. The most efficient force is, however, Li Hung Chang's garrison of Peohihli, the nucleus of which was formed by the men who served under General Gordon against the Taepings. There are arsenals at Nankin, Shanghai, Tientsin, and other places, besides a dockyard at Kiangnan. The marine of China consists of a number of powerful gunboats named after the letters of the Greek alphabet (see NAVIES, FOREIGN). The greater part of China is only very partially developed, and much benefit is anticipated to native and foreign trade by the introduction of railways, to which the Chinese government seems at last to have reconciled itself. (For history '86-'87, see ed. '88.) In summarising the leading events of '88 it is necessary to point out that facts and figures as to the political and material developments of this vast empire are necessarily of a fragmentary and disjointed character. Such fiscal returns as are obtainable are incomplete, and the bulk of them out of date for all practical purposes. It may be stated briefly that, taking the year as a whole, the leading item of interest to the world outside China (see TURKEY) has been the emigration question, which still to some extent remains open, as will be seen below.—**Imperial and Political.** On Jan. 28th a mission of inquiry, consisting of ten members, sent to Europe to investigate recent improvements in naval and military science, reached Southampton, the places to be visited being London, Paris, Berlin, Vienna, and St. Petersburg. It was reported on May 1st that a treaty with Portugal (apparently referring to the settlement of Macao) had been ratified. In August the *Russian Official Messenger* (*Times*, Aug. 26th) printed a letter from Kuldja, stating that a plot to murder the Governor of the New Dominion had been planned by the soldiery, who had been kept six months without their pay. Lin Tsin lan, the personage in question, was warned in time, and as a result 30 soldiers were executed and 100 imprisoned. In November it was reported that arrangements had been made by which Italian travellers and missionaries in China will not be required to have their passports stamped by the French Embassy at Pekin, but may obtain the necessary *visa* at the Italian Embassy and Consulates. This was looked upon at Rome as a rebuff to France, which country had exercised in China an undivided protectorate over Roman Catholic missionaries of all nationalities. As to the Imperial family itself, earlier in the year the *Pekin Gazette* published a decree of the Emperor announcing the arrangements he had made for the future residence of the Empress Dowager, on her laying aside her regency. By the mail arriving early in August we learn that the Empress will formally depart from the administration in March '89. By a further decree published in the

Pekin Gazette the date for the celebration of the Emperor's marriage is fixed for Feb. 26th next, the formal betrothal was fixed for Dec. 4th, and the final arrangements to be settled on Jan. 5th. With regard to the question of emigration, which may be said to have assumed a semi-political character, a determined effort has been made by the United States and the Australian colonies to place severe restrictions upon the influx of natives of the Celestial Empire. Without going into the question, it may be stated that the opposition to this class of immigration is urged on moral grounds as well as by those working men's societies who have their labour and their wages to consider. It was reported from Philadelphia, May 8th, that the United States Senate had ratified what was described as the Chinese-American treaty, prohibiting Chinese immigration. The *Times* on May 19th published a summary of the treaty giving all the five clauses. From this it appears that the immigration of Chinese labourers is prohibited for twenty years; there are a number of exceptions in favour of those returning having near relatives or property in the States, also as to merchants, students, etc. The question of indemnity for those natives of China who had been the victims of outrage is dealt with, and the United States agreed to pay before March 1st '89, the sum of 276,619.75 dollars in satisfaction of all claims. Some hitch, however, occurred, for it was reported from Tientsin, Aug. 30th, that the Chinese Government refused to ratify the treaty. A Shanghai telegram (Philadelphia, Sept. 7th), stated that the discussion of the treaty had caused disturbances, and the American official residence at Canton had been attacked. The American Minister at Pekin telegraphed on Sept. 6th to the effect that the treaty had been postponed for further deliberation. On Sept. 7th the Senate passed by 37 to 3 votes a Bill restricting the immigration. As to Chinese immigration in the Australian Colonies, although for several months during the year much excitement was caused at the principal ports, the matter, so far as the British Government is concerned, may be described as being in the correspondence stage. New South Wales led the van in the movement, the Premier (Sir Henry Parkes) advocating a stringent policy, and introducing a Chinese Restriction Bill in the Legislative Assembly at Sydney on May 16th, the third reading taking place with only verbal amendments at seven o'clock the following morning. The Bill was retrospective, taking effect from the previous May; it indemnified the Government for past acts, prohibited the naturalisation of the Chinese, raised the poll tax from £10 to £100, and imposed other penalties and disabilities. This extreme action, however, did not commend itself to the Legislative Council, who declined to suspend the standing orders to facilitate the ultimate passing of the Bill, the opinion apparently being that it amounted to a defiance of the Imperial prerogative. A special Bill dealing with Chinese immigration was adopted toward the end of May by the House of Representatives at Wellington, N.Z. The whole question, however, was more systematically dealt with by a general Australasian Conference, which sat at Sydney at the beginning of June, the session lasting three days. As a result it was agreed to apply to the Secretary for the Colonies to urge the Imperial Government to enter into a treaty with China; in the meantime a draft bill was

decided upon, limiting the immigration of Chinese to one for every 500 tons of shipping, abolishing the poll tax altogether, and preventing the movements of these people from one colony to another. New South Wales entered into a separate agreement, that as soon as two colonies shall pass the Bill it will make its law uniform with theirs. At Sydney, on July 17th, Lord Carrington, the Governor, gave the *Royal Assent* to the New South Wales Act above mentioned, there having been amendments as to residence, registration, licences, and mining; the £100 poll tax was, however, retained. The correspondence on the matter was published from the Government offices on Aug. 31st. Russia seems also to have had some interest in this immigration question; for according to a journal published at Vladivostock (*Times*, Nov. 9th) the Governor-General of the Russian provinces in the Amoor made proposals to restrict the influx of Chinese, and to levy a capitation and income tax on all Chinese and Koreans in the region. The mail from Shanghai which arrived in London early in September brought statistics of emigration from Hong Kong—the chief if not the only port used for the purpose—from which it appeared that in '87 no less than 82,897 Chinese emigrants sailed, being an increase of 18,000 over the previous year; of the increase 9,000 went to the Straits Settlements, 5,000 to the United States, and 3,500 to the Australian Colonies. The *Times* of May 7th published particulars of an interesting report on the condition of Chinese emigrants abroad, drawn up by a special commission of three high Chinese officials.—**Trade and Commerce.** According to the report of the Statistical Secretary of Shanghai for '87, the last issued, the foreign tonnage entered and cleared at Chinese ports during the year was the largest ever known in the history of the country—viz., 22,109,667 tons, of which, in round numbers, two-thirds was British, one-fourth Chinese, and one-sixteenth German. In '86 the total tonnage was 21,755,761, and in '85 it was 21,068,177. In cotton goods, while the imports of English and American drills fell off, that of cotton lastings nearly trebled, being 636,649 pieces in '87 against 214,528 in '86. Cotton yarns formed about 30 per cent. of all the cotton goods imported, and the development of this trade has been extraordinary: 523,114 piculs in '87 against 108,360 piculs in '87, besides the large quantities that reach the mainland from Hong Kong and Macao in junks. The total value of the cotton yarn trade is put down at over three millions sterling—about one-eighth of the total foreign import trade of the country. According to some of the Commissioners' reports, the yarn from Bombay is gradually displacing that from Manchester. The imports of iron and steel largely fell off, but unmanufactured copper increased fourfold, probably in view of the new mint requirements. The increase in matches was very great, being 2,276,863 gross in '87 against 559,117 gross in '77; while kerosene oil fell from 23,028,101 gallons in '86 to 12,015,135 gallons in '87. The two chief exports were silk and tea. The export of the former in '87 was about the same as in '86 as to quantity, but 5 per cent. higher in value, being about £4,400,000. There was a marked decline in tea, for although the quantity was unprecedently small in '86, yet 5 per cent. less left China in '87, and the prices fell further. Thus, in '86 the value was about £8,250,000, but in '87 it was not more than £7,250,000—a reduction in value

of 12 per cent. on a diminished export of 5 per cent. Straw braid, on the other hand, sprang up from an export value of £150,000 in '77 to no less than £900,000 in '87. The total trade in '87 amounted in value to £47,000,000, of which net imports represent £25,500,000, and exports £21,500,000. This is the largest total ever reached by China, the next year in value being '86 with £41,000,000. The customs revenue was £5,000,000, but this included nearly £1,000,000 for opium likin duty, for the first time collected by the foreign customs. The relative importance of the principal ports will appear from the following:—In customs revenue Shanghai contributed £1,300,000, Foo-chow £560,000, Han-Kow £500,000, Canton £475,000, Swa-tow £310,000, Kin-Ki-ang £260,000, Amoy £250,000. Early in the year a special committee of experts of the Shanghai Chamber of Commerce issued their report on the decline of the tea trade, and recommended the despatch of intelligent Chinese to India and Ceylon to study the methods of cultivation. Later on the Canton Chamber also issued a report with a number of recommendations. Under date Aug. 4th, the Canton Chamber of Commerce appealed to the various consuls with regard to the interference with trade practised by the likin officials; in the *Times* of Aug. 15th will be found an interesting article on the incidence of this tax, and on Aug. 18th another on the Bonded Warehouse Monopoly. The question of the navigation of the upper Yang-tse remained an open one till towards the end of the year, but on Nov. 10th it was reported that the Government had granted the permit to the special steamer of Mr. Little to ascend the river to Chung-King. As to railways, the first annual report of the first line in China was issued about the middle of the year. The railway runs from Tong-San to Yung-chong, and owes its existence to the Kai-ping coal mines. It is about 27 miles long; the gross receipts were about £13,000, the net profits £4,900, and a dividend of 6 per cent. was declared on the paid-up capital; the nominal capital is £250,000, about a quarter of which is paid up. There were 1,166 first class and 149,333 second class passengers carried, besides 170,588 tons of coal, 81,543 tons of bricks, 15,566 packages of merchandise, and 4,000,000 lb. of lime. The railway has since been extended from Yung-chong to Tientsin. Details of a new Telegraph Convention between China and the Great Northern Company of Copenhagen and the Eastern Extension Company of London, will be found in the *Times* of April 9th. Space forbids our going into any detail as to the Internal affairs of this vast empire. With regard to the awful disaster caused in '87 by the Hoang-ho or Yellow River bursting its embankment, and swamping the whole of the neighbouring country, in spite of the strenuous efforts made to repair the breach, and the outlay, calculated at £2,000,000, the summer floods of '88 swept everything away, including about 1,000 labourers and 8,000 ft. of river wall. It is difficult to say where the disaster will end. In the meantime the Government have thought proper to severely punish the local officials.—As to Travel and Exploration, consult the *Times* of Oct. 10th, 17th, and 27th, under the title "Recent Explorations in External China." The mail delivered in London on Nov. 10th brought a report that the Chinese Government had entered into a contract with a foreign syndicate, which undertook to restore and keep

the Hoang-ho embankment in order for a term of years for £1,250,000. According to a missionary, no less than 40,000 families at Chow-Kia-Kow were in receipt of official relief. For Ministry, etc., see **DIPLOMATIC. Consul** "The History of China," by Demetrius Boulger (3 vols.); Archibald Little's "Through the Yang-tse Gorges" ('88).

Chinese Loan. See ed. '88.

Chitty, Sir Joseph William, is the second son of the late Mr. Thomas Chitty, well known as a legal author. Born in 1828, he was a distinguished athlete when at Oxford, rowing for his university, and acting as umpire at the annual contest until his elevation to the judicial bench. He was called to the bar in 1856, and, devoting himself to Chancery work, soon acquired a large practice. Q.C. (1874), and was the acknowledged leader of the Rolls Court. At the general election of 1880 he was returned for Oxford City with Sir W. Harcourt, but was elevated to the bench in 1881. As a judge, Mr. Justice Chitty is deservedly popular with the bar.

Cholera. An exhaustive article on this was given in our edition of 1886 (q.v.).

Christian Era, The. This dates from the year in which Christ was born. According to Greek chronology, it was the fourth year of the 194th Olympiad; by the Roman Calendar it was 753 A.U.C.

Christian Evidence Society. Founded in 1870 by the Bishop of London, Earl of Harrowby, and others, with the conviction that it was necessary to do something to counteract the progress of unbelief amongst various classes. With this view sermons and lectures are delivered in various parts of the country, tracts are circulated, classes and examinations on Christian Evidences are held, and grants of books are given. **Secs.,** Rev. T. T. Waterman, C.L. Engström; **offices,** 13, Buckingham St., W.C.

Christian IX., King of Denmark. was b. 1818. He is the son of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, and father of the Princess of Wales, the Empress of Russia, and the King of Greece. He ascended the throne in 1863, and succeeded his brother Ferdinand VII. In the beginning of his reign arose the famous dispute about the duchies of Schleswig, which by the Treaty of Peace of Vienna (1864) he had to surrender. The attempts on the part of His Majesty to act in defiance to the popular party in the Danish Parliament, in '87, seriously strained his relationship with that body. He visited the Emperor William II. at Berlin, in August, '88.

Christiansdatt. Capital of Santa Cruz (q.v.).

Christie, William Henry Mahony, F.R.S., Astronomer Royal, b. at Woolwich 1845, is a younger son of the late Professor S. H. Christie, of the Royal Military Academy, Woolwich, and formerly secretary to the Royal Society. Educated at King's Coll. School, London, and Trinity Coll., Camb., and became a Fellow of his college. Graduated B.A. (1868) as fourth wrangler. Appointed (1870) chief assistant at the Royal Observatory, Greenwich. He contrived and introduced several valuable improvements in the scientific apparatus there in use, including a new form of spectroscope. On Sir G. B. Airy's retirement (1884), Mr. Christie was appointed **Astronomer Royal.** He is the author of the "Manual of Elementary Astronomy," and has contributed valuable papers to the Proceedings of the Royal Society and the Royal Astronomical Society.

Christmas Island. A small island, lat. 11° S., long. 106° E. Situated midway between the Sandwich Islands (N.) and the Society Islands (S.). On June 6th, '88, Captain May, H.M. *Imperieuse*, annexed, by authority from the Admiralty, this island.

Christ's Hospital (Blue Coat School), London. Founded 1547. Gross income over £70,000, about £45,000 of which is devoted to education. At Hertford there is a junior school and a girls' school. Admitted at age of from eight to ten. Pupils in all 1,200. They are fed, clothed, lodged, and educated free, and as a condition of admission it is required "that their parents (if one or both be living) have not adequate means of educating and maintaining them." Hospital exhibition funds provide exhibitions to universities; there are also the *Times* scholarship, the "Moses," Thomson, "Rowed," and "Pitt Club" exhibitions. **Head Master,** the Rev. Richard Lee, M.A. **Alumni,** among a numerous list may be noted Bishop Stillingfleet, Coleridge, the poet; Leigh Hunt, Charles Lamb, Thomas Barnes, a late editor of the *Times*. See also **CITY CHARITIES.**

Chromo-Lithography. See ed. '87, and consult "Lithography" (*Wyman & Sons*).

Church and Stage Guild, The (founded 1879), is a society of members of the dramatic profession, clergymen, and others, who feel it their duty to endeavour, as far as possible, to remove the prejudices widely felt by religious people against the stage, and by theatrical people against the Church. It seeks to promote religious and social sympathy between members of the Guild and others, and to assert and vindicate the right of religious people to take part in theatrical amusements, whether as performers or spectators. **Organ, Church Reformer.** **Sec.,** Rev. S. D. Headlam, 26, Alfred Place, Bedford Square, W.C.

Church, Anglican. See **ANGLICAN CHURCH.**
Church Army. A working-man's Church Mission to working-men, founded in 1883, directed by a committee acting under the Council, amongst whom are the two archbishops and fourteen other English bishops. There are 150 officer evangelists continually labouring for the Society, and four parochial missionaries. The C. A. has 20,000 regular communicant members. Over 70,000 meetings are held annually, attended by over 5,000,000 persons; 4,000 adult converts have been confirmed, and over 1,000 are waiting to be confirmed; over £4,000 has been received in subscriptions and donations, and over £1,000 locally, mostly in working-people's pence. Officer evangelists are sent to any parish for a period of not less than one week nor more than one year; the usual stay being six months. **Organ of the Society, Church Army Gazette.** **Hon. Sec.,** Rev. W. Carlisle. **Headquarters and Training Home,** 128 and 130, Edgware Road, W.; **Mission-houses Homes,** 118, Edgware Road. **Central Sec.,** Rev. J. J. Chambers.

Church Association, The. Instituted in 1865, to maintain the principles and doctrines established at the Reformation, and to preserve the purity of Protestant worship in the Church of England; to resist all innovations on the order of the service as prescribed by the joint authority of the Church and State, whether these innovations consist in vestments, ornaments, gestures, or practices borrowed from the Church of Rome; and especially to prevent "the idolatrous adoration of the elements in

the Lord's Supper"; to resist all attempts to restore the use of the confessional, and every exercise of that priestly authority which was put down at the Reformation. The C. A. also seeks to vindicate for the laity their rightful share in all departments of Church life, and aims at the restoration to the parishioners of the election of churchwardens, giving to them a veto upon the appointment of incumbents by patrons, and the absorption of the ecclesiastical courts into the general judicature of the country. During '88 the C. A. has given its support to the prosecution instituted with regard to the erection of the *reareds* in St. Paul's Cathedral, and the alleged illegal ritualistic practices of the Bishop of Lincoln. There is no permanent President, but among the Vice-Presidents are the Marquis of Abergavenny, the Earl of Bandon, Lord Ebury, Sir Thomas Chambers, Q.C., the Dean of Bristol, the Dean of Ripon, the Rt. Hon. Lord Robert Montagu, J. D. Allcroft, Esq., etc. *Organ of the Association, The Church Intelligence.* *Chairman,* Capt. Cobham. *Sec.,* Henry Miller. *Offices,* 14, Buckingham Street, Strand.

Church Clocks. See ed. '87.

Church Congress, The '88. This, the twenty-eighth annual meeting, was opened on Oct. 1st at Manchester. In point of numbers this Congress has surpassed all others: 4,300 full members' tickets were sold. The audiences in the aggregate reached the enormous total of 80,000. *President,* the Lord Bishop of Manchester. The C. C. was established in 1860, as the outcome of the revival of the meeting of Convocation (*q.v.*), which being prorogued in 1717, had remained silent for 135 years. It is a great Council of the Church of England, but differs from Convocation by its members being non-elective, as any one may become a member by payment of subscription. It includes lay as well as clerical representatives. The session was opened by a sermon by His Grace the Archbishop of York. The President delivered his opening address on the day following. The main topics discussed related to Biblical Criticism, the Main Object of Revelation, Evolution, and the Manner in which Perplexing Questions are to be regarded. The Rev. J. M. Wilson read an instructive paper on Historical and Scientific Criticism and the Old Testament; and the Church in Wales came in for a large share of attention. A great and conspicuous feature of this last Church Congress seems to have been the great unanimity which prevailed throughout, and the strong enunciations of distinctly catholic teaching. Amongst papers that were specially noteworthy may be named one on the Revival of the Monastic System, by Dean Gott; Canon Luckock's Catholic Doctrine of the Intermediate State; Mr. Powell's Church Hindrances to Working Men; and Canon Furse and the Bishop of Grahamstown's on Eucharistic Doctrine; as well as one on *Positivism* by the Right Hon. A. J. Balfour, M.P. (*q.v.*), Chief Secretary for Ireland, who also spoke at a working-men's meeting.

Church House. The proposal to raise a fund for building a Church House for the manifold requirements of the Church as an organic body, but more especially for Convocation, and for a Church Office, was originated early in 1886 by a few clergy meeting at Westminster, who had observed the urgent need of such a building. Subsequently the Bishop of Carlisle, in a letter to the *Times*,

suggested that the erection of such a House should be the Church's method of celebrating the Queen's Jubilee. It was urged that the enormous growth of the Church at home and in the Colonies during Her Majesty's reign, her great efforts in meeting the wants of the people, and in fighting intemperance, and the remarkable revival of zeal and efficiency among the clergy, render such a thanksgiving memorial singularly appropriate. An executive committee was appointed and funds have been collected to the amount of £55,000. On Feb. 23rd, '88, a charter of incorporation was granted. The committee acquired in July, for a sum of £26,500, as a site the freehold of a block of buildings, about an acre in extent, which is bounded by the south side of Dean's Yard, Westminster, by Tufton Street, Little Smith Street, and to a large extent by Great Smith Street. They have also expended or agreed to pay a further sum of £15,431 (making a total of £42,431), in buying up leasehold and other interests; the result being to give the corporation possession of Nos. 10 and 11 Dean's Yard, and a rental of £963 per annum for eight years and a half, and of £400 for the seven subsequent years. As regards Nos. 12-15, Dean's Yard, and 2, 4 and 4A Tufton Street, the leases of which expire at Christmas 1932, no steps have been yet taken to acquire the property. In No. 10 rooms have been furnished as *secretary's offices* (Rev. R. Milburn Blakiston, *hon. sec. pro tem.*), and three large rooms were used as committee rooms for the Lambeth Conference, '88. *Membership* of the corporation (open to all members of the Church of England) may be obtained by the annual subscription of one guinea. The Rev. J. Julian, vicar of Winco-bank, Sheffield, has offered to the council of the C. H. his very valuable collection of books and MSS., accumulated during the preparation of the "Dictionary of Hymnology."

Church of England, The Established. By "established" is meant the group of legal privileges and restraints imposed upon the Church of England by its connection with the State. The word *Established*, however, is somewhat misleading. The Church, which from its relation to the State is called National, and from its doctrines (*vide* the Creeds), Catholic and Apostolic, recognises no establishment by legislative enactment. It is in no sense a creation of parliament, having existed long before parliament. It is established simply by its antiquity, and as being the accepted Church of the nation.—Its *History and Constitution*. It claims an apostolic foundation, asserting for its bishops an unbroken line of descent, in the laying-on of hands, from the Apostles themselves. Tertullian speaks of Christianity being widely disseminated in England as early as A.D. 202; and that the Church was from the first under episcopal supervision we find by the fact of three English bishops being present at the great Council of Arles in A.D. 314. Moreover, as the Roman missionaries under Augustine did not come over until A.D. 596, the English Church has always maintained its independent origin. Its *Government* is by its three Orders of Bishops, Priests, and Deacons. Its *Doctrine* is embodied in the three Creeds of Western Christendom—the Apostles', the Nicene, and the Athanasian. The Apostles' Creed is required of candidates for Baptism; the Nicene is recited at Holy Communion; and the Athanasian at certain special services. The

clergy are also required to subscribe the Thirty-nine Articles. The form of worship of the Church is set forth in the Book of Common Prayer. Its **Clergy** number, in round figures, a total of about 24,000, divided as follows:—Archbishops, 2; Bishops, 32; Suffragan Bishops, 10; Deans, 30; Archdeacons, 85; Residential Canons, 131; Rural Deans, 613; Beneficed Clergy, 13,600; Unbeneficed, 9,000. The Archbishops and 24 of the Bishops have seats in the House of Lords.—**Progress.** No. of Dioceses in '76, 28; in '88, 34, with two more Sees (Bristol and Beverley) in course of endowment. The endowment for the new See of Wakefield has been completed, and 1888 witnessed its formation and the appointment of the Bishop (Dr. Walsham How) and other diocesan officers. The six new bishoprics are Truro, St. Albans, Liverpool, Newcastle, Southwell, and Wakefield. No. of Benefices in '37, 10,718; in '86, 13,600. No. of Parsonages in '37, 5,947; in '86, 11,000. No. of Clergy in '01, 10,307; in '41, 14,613; in '87, some 25,500. **Money raised for Church Building** alone, from '40 to '87 (purely by voluntary subscriptions, with the exception of one State grant of £1,500,000—*vide* Lord Hampton's Parliamentary Report '74)—£46,000,000; for Endowments, £3,771,000. **Amount annually raised**, by purely voluntary means: for Church Building and Restoration, £1,000,000; for Foreign Missions, £500,000; for Elementary Education, £500,000; for Home Missions, Temperance Work, Clubs and Charities, at least another £500,000. Last year a large sum was raised for the erection of a Church House (*q.v.*), as a memorial of the Jubilee of the Queen's reign. The **Revenues** of the Church, from endowments in tithes, land, etc., amount to between four and six millions sterling. The exact amount is not known. In '87 the tithe average reached a lower point than it has ever done for some fifty years. Every £100 of rent-charge is worth now only about £84, and it is expected that it will reach a still lower average (see **TITHES**). The **Church population** also is not accurately known, but the Church claims over 60 per cent. of the entire population. The Church accommodation is represented by about 6,200,000 sittings. Spiritual supervision is provided for the whole country, which is divided, first into **Provinces** (Canterbury and York), presided over by the Archbishops; which are subdivided into **Dioceses**, presided over by Bishops; these again being broken up into **Archdeaconries**, the heads of which are the Archdeacons; these again into **Rural Deaneries**; and these into **Parishes**, which are in the charge of the minor clergy. The **Educational work** of the Church is represented by (in round figures) 11,600 efficient schools, under Government inspection. These schools have been built at a cost to the Church of not less than £12,500,000. There are also, in connection with the Church of England, thirty training colleges for school teachers, erected at a cost of £105,000, towards the maintenance of which the Mother Church annually contributes £10,000.—**Parties.** The three great party divisions in the Church of England may be said to be representative of the various types of mind which will be found in any large society. The "**High Church**" or historical party attach great importance to the historical position of the Church in the succession of her clergy. They uphold her authority in matters of doctrine and discipline; and value her rites and sacraments, not only as devotional aids and

convenient symbols, but as peculiar and special means of grace, of which she is the only authorised administratrix. The "**Low Church**" or Puritan party think comparatively little of these things, but set the greatest value on conversion, justification by faith, without the works of the law. They consider themselves rather as members of the Church invisible than of the Church visible, and disregard niceties of ceremonial, as distracting the soul from true worship, and as unduly exalting the priestly office, or tending to false (chiefly Popish) doctrine. The "**Broad Church**," on the other hand, pay but little attention to either ceremony or dogma. They are for extending the liberty of belief within the Church to its utmost possible limits—as some assert even, to the borders of Unitarianism. They attach great importance to the social Christian virtues, to living a wholesome and cleanly life, adopting the precepts rather than the theology of religion. The three have been said to show forth respectively the body, the spirit, and the soul, of the Church. Consult *The Official Year Book of the Church of England*, '89.

The following is a list of the territorial prelates of the Church of England:—

Cathedral.	Archbishop or Bishop.	18--	Income.
Canterbury ..	Renson ..	83	£15,000

Church of Ireland. See **IRELAND**.
Church of Scotland. The Scots, jealous of their liberty and rights, recognised the same orders as other Christians, but never acknowledged any supremacy of jurisdiction in the Episcopal order. In the earliest times all abbots were subordinate to the successor of

St. Columba, the Abbot of Iona being Primate; but the Mediæval Church down to the fifteenth century had no Metropolitan; the chief government of the Church under the Pope devolving upon a Synod in which bishops, abbots, priests, and other ecclesiastics sat. In 1472, however, Sixtus IV. raised St. Andrews to an Archbishopric and Metropolitan see; and in 1492, Innocent VIII., Glasgow was raised to a similar rank. When the Reformation began two parties arose, the bishops and the State being opposed to all change, and a party of reformers, known as the Congregation, demanding great changes. The latter party triumphed, and in 1560 the jurisdiction of the Pope was abolished by a Parliament sitting at Edinburgh. A General Assembly then governed the Reformed Church. Doubts arose as to the desirability of abolishing the bishops, and men of tried Protestantism were elevated to the sees. A contest between Episcopacy and Presbyterianism succeeded, ending in the triumph of the latter. At the Restoration bishops were reappointed, but as they sided with James II., upon the accession of William and Mary, the bishops were abolished. Presbyterianism was then re-established, and the Westminster Confession of Faith adopted as the national standard of belief. The right of patrons to nominate to vacancies had been taken away, but was given back in 1712, and the exercise of that right led to much discussion, which resulted in 1843 by the dissentients leaving the General Assembly and forming the Free Church of Scotland. The Act of Queen Anne was repealed by Lord Beaconsfield.

Church Parties. See CHURCH OF ENGLAND.

Church Rates. Originally, like tithes (*q.v.*), a charge upon the land of a parish for the maintenance of the church fabric. In later years levied as a rate, and paid by occupiers. Nonconformists having objected to them, they were abolished in 1808. The churches and services are now provided and maintained solely by Churchmen and Church endowments, whereby all apparent injustice to Nonconformists is entirely removed, and the rights of Nonconformist parishioners in the church fabric are not impaired. The Act of 1868, however, did not abolish church rates in cases where, at the time of the passing of the Act, money had been borrowed and remained due on the security of the church rate, or where the rate was applicable to purposes other than "ecclesiastical purposes," as defined by the Act, or had been originally authorised to be levied by special legislation in consideration of the abolition of tithes or for other valuable consideration. The most important case in which church rates continue to be levied, under the two last-mentioned exceptions, is that of the parish of Saint Marylebone, London, in which church rates to the amount of £5,580 (which is nearly two-thirds of the total amount of church rates appearing in the returns as having been levied in the whole of England during the year) are annually raised by the vestry under powers conferred by two local Acts (5 Geo. III., c. cli., and 1 and 2 Geo. IV., c. xxi.). In several other parishes church rates are levied, principally for the purpose of paying the interest and principal in respect of loans raised on the security of that rate prior to the passing of the Act of 1868.

Church, Richard William. D.C.L., Dean of St. Paul's, was b. at Lisbon. Educated at Oxford, where he graduated with much dis-

tingtion ('36). Fellow of Oriel ('38); rector of Whately, Somerset ('53); appointed by Mr. Gladstone to the Deanery of St. Paul's ('71). Dean Church has contributed to *Essays and Reviews*, the *Saturday Review*, the *Guardian*, and other contemporary papers, and has also written important works on *Anselm and Dante* (50-79), besides sermons, amongst which are his well-known *Advent Sermons* ('85), etc. Dean Church is a most prominent leader of the High Church party, and his recent erection of the *rededos* (*q.v.*) in St. Paul's Cathedral has given rise to much controversy.

Churchill, Rt. Hon. Lord Randolph, M.P., second son of the sixth Duke of Marlborough and of Lady Frances, daughter of the Marquis of Londonderry, was born at Blenheim Palace, Feb. 13th, 1849; entered Merton College, Oxford, at the age of eighteen, and graduated in '71; married in '74, Jennie, daughter of the late L. Jerome, New York. In the same year he entered Parliament as Conservative member for Woodstock, and represented that borough till it was abolished by the last Reform Bill, when Lord Randolph was returned for South Paddington. The political career of the noble lord has been one of the most rapid and brilliant that recent generations have seen. He made his maiden speech the first year he sat in parliament, and was complimented by his future antagonist Sir William Harcourt. Next year he took part in the debate on unreformed boroughs. Later on he was sharply criticised by members of his own party for rebuking what he considered the somewhat stung policy of the Government regarding the visit of the Prince of Wales to India. From '75 to '79 Lord Randolph rarely addressed the House; and it is not too much to say that at the end of the latter year his position differed very little from what it was when he first took his seat. The collapse of the Conservative party at the general election of '80, and the resignation of the Beaconsfield Government which followed, acted as a spur to Lord Randolph Churchill, who soon distinguished himself as an audacious and powerful debater, almost as ready to strike at the Opposition as at the Treasury bench. He was not quite alone in the independent course he had marked out for himself. Mr. (now Sir John) Gorst and Sir Henry Drummond-Wolff acted with him. These three sat together, and soon became known as the *Fourth Party*. Mr. Arthur Balfour and Earl Percy occasionally associated themselves with the three, but they were never recognised as belonging to the party. Lord Randolph Churchill was the life and soul of this combination. In season and out of season, early and late, he never lost an opportunity of damaging the Government, or of dragging his own leaders further than they wished to go. He took a prominent part in the *Bradlaugh debates*. Lord Randolph's influence, in spite of the castigations he constantly received from his political opponents, and in spite of the cold looks he got from the leaders of his own party, steadily increased session by session. Liberal journals laughed at him. Mr. Gladstone declared that he had "smashed, pulverised and demolished" either the noble lord or his arguments; the Conservative press did not know what to say about him. He spoke of "the party with which I am associated"—that is, the party of three—with an air at once so superior and so audacious as

almost to take the breath of the House away. His persistence and ability won at last from the daily organ of the Liberal party in London the admission that Lord Randolph Churchill was a man who must in future be reckoned with. His battle, however, was by no means over. His lordship was a thorn in the side of his own party. In a letter to the *Times*, Lord Randolph fell foul of the whole party except Lord Salisbury, who was held up as the only leader. The rank and file were wroth at this manifesto, and an address was signed by two hundred Conservative members, and presented to Sir Stafford Northcote, assuring him of their fidelity. Angry letters from numerous Conservatives flooded the papers, to all of which Lord Randolph replied in the *Times* that he was happy to be "the scapegoat on which doomed mediocrities might lay the burden of their exposed incapacity." The Conservative party was by this time like a house divided against itself. Lord Randolph was frankly recognised as a new and powerful political force, which might either make or mar the party. He was elected chairman of the National Union of Conservative Associations, but resigned soon after, owing to a schism between the Union and the Central Conservative Committee, Lord Salisbury, Sir Stafford Northcote, and the recognised leaders of the party siding with the latter. The quarrel, if quarrel it could be called, only lasted a few days; and on the 9th of May, 1884, at a meeting of Conservative members of the House of Commons, held at the Carlton Club, Lord Randolph consented to withdraw his resignation, and the threatened split was averted. The result was a victory by Lord Randolph over his own leaders, who agreed to adopt the policy of party organisation recommended by the member for Woodstock. From this point Lord Randolph rose steadily to the position of a recognised leader of the Conservative party, and was specially so regarded in the country, where his popularity was great. His speeches, both in the House and on the platform, were as brilliant and aggressive, though perhaps not quite so reckless, as ever. In a few years he had risen from Parliamentary obscurity to a foremost place in the House of Commons, and was recognised as, next to Mr. Gladstone, the most formidable debater in that assembly. When the Liberal Government was overthrown on the Budget, in June '85, it resigned, and in the new Conservative administration Lord Randolph Churchill received the Indian Secretaryship, a tribute to his great ability, and a recognition of his services to the party. This entailed the resignation of his seat, to which he was re-elected by a majority of 127. The most important changes in the Government were the elevation of Sir Stafford Northcote to the House of Lords, and that of Sir Michael Hicks-Beach to the position of leader of the Lower House. The general election took place in November 1885, and though the position of the Conservatives was somewhat improved, they were in a considerable minority in the House of Commons. Lord Randolph Churchill was defeated at Birmingham, where his opponent was the Rt. Hon. John Bright (*q.v.*), but was elected for South Paddington. In the following January the Government were overthrown on the motion brought forward by Mr. Jesse Collings, and immediately resigned. Mr. Gladstone succeeded Lord Salisbury; but a

coalition between the Conservatives and the followers of Lord Hartington and Mr. Chamberlain succeeded in defeating the Government on the second reading of Mr. Gladstone's Home Rule Bill. Mr. Gladstone appealed to the country, which answered his demand by returning 315 Conservatives against less than 200 followers of Mr. Gladstone. Lord Salisbury was again called to the helm, and in the new Ministry, formed in July '86, Lord Randolph Churchill was appointed leader of the House of Commons and Chancellor of the Exchequer. His most remarkable speech during the recess was made at Dartford, where he unfolded a programme which his opponents declared to be Liberal, if not Radical, and which some of his friends felt to be anything but Conservative. He is inaugurating a new school of Conservatism, which may be equally as popular with the masses as the views of the Liberals. The resignation of Lord Randolph, on Dec. 23rd, '86, took both friends and opponents by surprise. The announcement in the *Times* gave as his lordship's reasons for taking this unexpected course differences with his colleagues on the subject of the naval and military estimates, and these reasons Lord Randolph subsequently declared to be accurate. The attitude which his lordship assumed in advocacy of financial reforms led to the appointment of a Royal Commission of Inquiry into the civil administration of the great spending departments. The report of this Commission on the expenditure by the Admiralty was issued in '87. After his retirement from office Lord Churchill travelled for some time on the Continent, and on his return delivered a speech to his constituents, in which he defended the policy of Lord Salisbury's Government in Ireland; and subsequently, in the debate in the House of Commons on the conduct of the police in firing upon the crowd at Mitchelstown, his lordship came to the assistance of Mr. Balfour in defending that proceeding. In October '87, after Mr. Gladstone had enunciated the new Liberal programme at the National Liberal Conference at Nottingham, Lord Churchill delivered a speech at Bradford which indicated an increased tendency on the part of his lordship to proceed on democratic lines. In Jan. '88 Lord Randolph visited St. Petersburg, where his presence gave rise in the foreign press to many wild *canards*, imputing political significance to his journey. In April '88 his lordship addressed a meeting at Birmingham; and delivered a speech in the House of Commons on the motion of Mr. Jennings with respect to the *Estimates* (Nov.). Created Hon. LL.D. of Cambridge (June).

Cilia (*cilia*, eyelashes), microscopic threads, which constantly and regularly wave to and fro, and sweep along in a definite direction any fluid in contact with them. See ed. '88; more fully, ed. '86.

Cinchona, a genus of plants belonging to the order *cinchonaceae*, of which the coffee and the madder plant are also members. The bark of certain species of *C.* contains *quinine*, used principally for the treatment of intermittent fevers or as a tonic. Called *Peruvian bark* from its original habitat. (For concise history and description see ed. '86.) Consult Reports, such as King's (U.S.), Morris' (Jamaica), T. C. Owen's "*Cinchona Planter's Manual*," published at Colombo (Ceylon), King's "*Manual of Cinchona Cultivation*"; Van Gorkom's

"Handbook of Cinchona Cultivation," trans. by B. D. Jackson (Van Gorkom is the director of the Dutch cinchona plantations in Java); Clements R. Markham's "Peruvian Bark."

Cinque Ports. The, a group of seven ports (originally five, whence the name) situated on the south coast of England (in Sussex and Kent). **Hastings, Romney, Hythe, Dover and Sandwich** were the original ports; **Winchelsea and Eynsford** being added afterwards. The original Cinque Ports were created by William the Conqueror and were endowed with various important privileges in consideration of their furnishing a certain quota of ships of war, for the king's use, when demanded. The Lord Warden-ship is now only an honorary dignity. Its holders have no special jurisdiction. **Earl Granville** was nominated in '65.

Circumstantial Evidence. A fact is said to be proved by means of circumstantial evidence when, instead of being attested directly by one's own senses, or by those of other persons, it is inferred from some other fact or facts so directly attested. But it rarely is quite satisfactory, for it is only in abstract science that we can find quite trustworthy inferences. The inferences which have to be made in business and the administration of justice seldom afford more than a strong probability. There being still a doubt, the prisoner is bound to have the benefit of it. See ed. '87.

City and Guilds Institute. See TECHNICAL EDUCATION.

City and Southwark Subway. This is a scheme promoted by a company early in 1886 (under an Act granted in 1884) to construct a subway from **King William Street, City**, adjoining the Monument station of the Metropolitan and Metropolitan District railways, under the river Thames to the **Elephant and Castle**, and to work a railway between the points mentioned on the endless cable system. Two tunnels were to be formed, one for the up and the other for the down lines; and there were to be three stations—at **King William Street, Borough High Street and Dover Street**, and at the **Elephant**—and lifts would be provided for the convenience of passengers. (For further details see ed. '88.) A bill was lodged for the session of '87 to enable the Company to extend the subway from the **Elephant to Kennington and Stockwell**, the suggested gauge of the lines being 4 ft. 8 in. In July it was read a third time in the Lords and passed. At the half-yearly meeting of the Company in Feb. '88, it was stated that the first tunnel had been completed to **St. George's Church, Southwark**, where the station was being made, and the second tunnel was only short of that point by 160 yards, while the **Elephant and Castle Station** had been begun. In the half-year 6,545 original shares had been allotted, completing the whole of the £300,000 capital authorised by the Act of '84, while £125,000 of the additional capital authorised by the Act of '87 had been subscribed. This brought up the total subscribed to £425,000 out of £600,000 authorised share capital. Of the £100,000 debentures arranged for issue the previous August £38,000 had been disposed of. In July 19th the members of the Society of Architects visited the works at the Kennington portion of the subway, which were in rapid progress. At the half-yearly meeting of the Company on Aug. 14th it was announced that

the works were so far advanced that the directors hoped the tunnels would be completed by the end of the year, but of course the stations, rolling stock, etc., would have to be provided. The board had been pressed very much to try electricity as the motive power, and arrangements had been entered into with certain large firms to try experiments at their own expense.

City Charities. The charities of the City of London, excluding Christ's Hospital and the medical hospitals connected with the Corporation, may be divided into two sections: firstly, the parochial charities; and secondly, the charities under the trust of the guilds or companies of the City of London. In 1878 the Government appointed a **Royal Commission**, which was presided over by the Duke of Northumberland, to inquire into the City Parochial Charities. These charities comprised 1,330 trusts, in 211 parishes; and the income at the present time is estimated at about £110,000 or £115,000 a year. In 1879 the estimate by the London School Board was £104,000. The estimate of the Royal Commission for the year 1876 was £101,000; in 1870 the income was £85,000; and in 1865, £67,000. The objects for which the trust income was left included payments to clergymen for preaching anniversary sermons in commemoration of the founders, masses for the repose of the soul, commemorations of thankfulness for the nation being saved from the Spanish Armada, and for the failure of the Gunpowder Plot, and gratitude for the accession of Queen Elizabeth. Funds have been left for such obsolete purposes as the purchase of faggots for the burning of heretics. About £19,000 a year has been left for educational purposes, and considerably over £2,000 a year for apprenticeships. But the most marvellous revelation of the School Board inquiry was that some of the trustees of these charities actually paid out of the income of the trusts no less than £10,000 a year towards the poor rates of the City. The outcome of the Royal Commission was the City of London Parochial Charities Act, 1883, under which Sir Francis Sandford and other Commissioners were appointed to make an investigation of the property and effects belonging to the several trusts, and to provide a scheme for the future application and management of the charity property and endowments. The trusts possessed by the existing guilds or City companies number 1,028. The total income amounts to about £185,820.—In connection with the City charities must also be mentioned Christ's Hospital (q.v.), which was founded in 1547 for the reception of destitute children. In 1552, in the reign of Edward VI., 300 children were received. At present the Hospital consists of two institutions—one at Hertford, being a preparatory school for boys before they are sent to London; and also a school, not preparatory, for girls. The boys after leaving the preparatory school are transferred to London. In March '85 a new scheme was issued by the Charity Commission, under which it is proposed to sell the existing site, which will realise £600,000. This scheme has been revised by the Education Department and referred to the Judicial Committee of the Privy Council. At the opening of the Apprentices' Exhibition at the **People's Palace**, on Dec. 12th, '87, the Prince of Wales announced that, in addition to munificent contributions from other sources, the Charity Commissioners would subscribe £4,500

a year out of the fund of the parochial charities towards the maintenance of that institution, and that they would also endow the **Polytechnic Institution in Regent Street** with a similar income from the same source. Sir F. Sandford retired in order to occupy the position of Under-Secretary for Scotland. The chief Commissioner at the present time is Mr. J. Anstie, Q.C.; Mr. H. H. Cunynghame (Secretary to the Farnell Commission) and Mr. Edward Bond being Assistant Commissioners. The recent grants made by this body for public purposes include £50,000 towards the **Hampstead Heath extension**, £47,000 for the purchase of **Chiswick Park**, and about £30,000 towards the acquisition of other open spaces, including **Raleigh Park, Brixton, and Vauxhall Parks, and North Woolwich Gardens**. They have also promised sums to the extent of £150,000 towards the **South London Polytechnic Institutes**, £150,000 for similar institutions for **North London**, £50,000 for **Chelsea**, the actual sums granted to be found for pound subscribed up to the maximum amounts mentioned.

City Guilds. See CITY GUILDS.

City Guilds, The. There have been 109 companies founded, but the latest return only gives a total of 75, as follows:—The Worshipful Companies of Apothecaries, Armourers and Brasiers, Bakers, Barbers, Basketmakers, Blacksmiths, Bowyers, Brewers, Broderers, Butchers, Cai men Carpenters, Clockmakers, Clothworkers, Coach-makers, Cooks, Coopers, Cordwainers, Curriers, Cutlers, Distillers, Drapers, Dyers, Fanmakers, Farriers, Feltmakers, Fishmongers, Fletchers, Founders, Framework Knitters, Fruiteers, Girdlers, Glass-sellers, Glaziers, Glovers, Gold and Silver Wyre Drawers, Goldsmiths, Grocers, Gunmakers, Haberdashers, Horners, Inn-holders, Ironmongers, Joiners, Leather-sellers, Loriners, Makers of Playing Cards, Masons, Mercers, Merchant Taylors, Musicians, Needle-makers, Painters, Patten-makers, Pewterers, Plasterers, Plumbers, Poulterers, Saddlers, Salters, Scriveners, Shipwrights, Skinners, Spectacle-makers, Stationers, Tallow-chandlers, Tylers and Bricklayers, Tinsplate-workers, Turners, Upholders, Vintners, Wax-chandlers, Weavers, Wheelwrights, and Woolmen. The twelve principal companies are those of the Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Taylors, Haberdashers, Salters, Ironmongers, Vintners, and Clothworkers; but two of the largest livery companies are those of the Loriners and Spectacle-makers, both of which, however, live several of the minor companies, have scarcely any income except such as arises from the fees and fines paid by the members. In '80 it was estimated that the trust and corporate income of the livery companies of London was between £750,000 and £800,000, and the capital value of their property £15,000,000. The value of their plate and furniture was returned at about £270,000. On the whole it is estimated that the trust income is about £200,000 a year, and the corporate income from £550,000 to £600,000. Several of the companies possess a considerable amount of real property in the county of Londonderry. The total rent of the real property is above £600,000, and there is a further source of income exceeding £100,000 a year from investments. The contributions of existing members are from £15,000 to £20,000 a year. Of the

£200,000 which forms the charitable or trust income, about £75,000 a year is expended on the support of almshouses and the relief of poor members, another £75,000 on education, and about £50,000 on charitable objects of a general character. Many of the charities of the companies are for the benefit of the inhabitants of provincial towns and villages where they possess land. The cost of the hospitality annually given by the companies is estimated at £100,000. Technical education (q.v.) has within the last few years been taken up by the Guilds. The Clothworkers' Company has promoted the establishment of **Yorkshire College**, at Leeds, where instruction is given in the manufacture of woollen goods, and similar institutions at Bradford, Huddersfield, and other places. The **City and Guilds of London Institute**, for the advancement of technical education, has also been formed. There is a technical college at Finsbury and a central institution at South Kensington. On July 20th, 1880, a **Royal Commission** was appointed to inquire into the circumstances and dates of the foundation of the **City Livery Companies**, the objects for which they were founded, and how far those objects are now being carried out. On May 28th, '84, the Commission issued its report, in which it recommended that the companies should be placed by act of parliament under such restrictions as regards the alienation of their real and personal estate as would remove all danger of the loss of any portion of their property; that the accounts of the companies should be open to public inspection; that no future admission to the livery of a company should confer the parliamentary franchise; the appointment of a commission which should undertake the allocation of a portion of the corporate incomes of the companies to objects of acknowledged public utility, the better application of the trust incomes, and should it prove practicable, the reorganisation of the constitution of the companies. A dissenting report was, however, issued by three members of the Commission. The Guilds in '88 voted £1,000 for an experiment in manual training in certain schools of the **London School Board**; and although nothing has been done in the way of legislation to carry out the report of the above Commission, the Companies have voluntarily voted large sums towards "objects of acknowledged public utility." The **Drapers' Company** have given munificent amounts for the general objects of the People's Palace and for the promotion of technical instruction at that institution. On Oct. 8th, '88, Mr. Evan Spicer, chairman of the executive committee of the **South London Polytechnic Institutions**, received a letter from Mr. Walter S. Prideaux, on behalf of the **Goldsmiths' Company**, offering a magnificent gift equal to £85,000 in aid of the proposed technical and recreative institutes for South London. The letter stated that the Company had made a proposal to the Charity Commissioners whereby the buildings with seven acres of land at present occupied by the Royal Naval School at New Cross would be acquired by the Commissioners out of the surplus funds of the **City Parochial Charities**. From the same source the Commissioners will set apart an endowment of £2,500 per annum, which will be met by the Goldsmiths' Company by the appropriation out of their corporate funds of an annual endowment of a similar amount. The institute will be called "The

Goldsmiths' Company's (New Cross) Institute.

This proposal has been accepted by the Charity Commissioners, subject to the approval of Parliament. The Mercers' Company are considering a proposal to devote £60,000 to the establishment of an agricultural college in Wiltshire, to which shall be attached a farm of considerable extent, the institution being intended to benefit the sons of farmers and others who may be dependent on the successful cultivation of land for their future livelihood. The Mercers' Company have also propounded a plan for the extension of their schools at **Horsham**, at a cost of £40,000; and it is stated further that they intend to take part in the extension of university teaching in London. The Clothmakers' Company have contributed £2,500 towards the North London Technical Institutes.

City of London School, Thames Embankment. Established by the Corporation of London in 1834. Tenable at the Universities or other places of higher education are 26 scholarships, varying from £80 to £20; and about 20 others tenable at the school. Pupils are admitted between the ages of 7 and 15. **Head Master**, Rev. E. A. Abbott, D.D.

Civil Law. The word "civil" in this connection is highly ambiguous. Civil law is opposed sometimes to criminal, sometimes to martial, and sometimes to ecclesiastical law. But the epithet "civil law" is commonly used to describe the Roman law and the various modern systems of law based thereupon, as contrasted with the English common law.

Civil List. The is the annual grant of parliament to the monarch, the yearly sum now being £385,000, the whole of which is devoted to Her Majesty's household and personal expenses, with the exception of £1,200, which may be granted in pensions (*v. i.*). The grant originated in the reign of William and Mary, and covered the payment of civil offices and pensions, when the amount was £700,000 (£400,000 being derived from the Crown revenues and £300,000 from excise duties). Since this resulted in debt on the part of the king, the Court of Exchequer decided that, if he chose, the king could alienate his whole revenue. The List, after having reached £800,000, and in 1777 (George II.) £900,000, was, on the accession of William IV., cleared of all salaries, etc., upon it, and placed at £510,000, including a pension list of £75,000. The purposes to which the pensions were applied were, in 1834, limited to the deserving and needy; and in 1838, the year of Queen Victoria's coronation, it was provided that, in place of a grant of £75,000 for civil list pensions, "Her Majesty should be empowered to grant in every year new pensions on the civil list to the amount of £1,200, all such pensions to be in strict conformity with the House of Commons' resolutions of 18th February, 1834." (1 Vict., c. 2).

Civil List Pensions Grants 1886—Nov. 1888.—1886. Tulloch, Mrs. Janeanne Sophia, widow of the late Dr. Tulloch, Senior Principal in the University of St. Andrews, in connection with Theology, Philosophy, and Literature (£150); Gibbons, Mrs. Grace, widow of the late Mr. James Robert Gibbons, Royal Irish Constabulary, County Inspector (45); Schmitz, Dr. Leonard (in addition to the Civil List Pension of £50 per annum which he already receives) (50); Bolton, Mr. T., in recognition of his services as a naturalist and microscopist (50); Farnborough, Lady, for

distinguished parliamentary and literary services of her late husband (250); Mongredien, Mr. Augustus, for the merits and public utility of his literary work (100); Brett, Mr. Jacob, in recognition of his services in connection with the introduction of submarine telegraphy (100); Trollope, Mr. Thomas Adolphus, in consideration of the value of his literary work, his straitened means, and his advanced age (200); Waters, Mr. Edmond Chester, for his long and arduous labours as a writer on genealogy (100); Bolton, Mr. Thomas, for services which he has rendered to science by his investigations in connection with microscopic fauna (50). 1887. Kent, Mr. Charles, for his contributions to biographical and other literature (£100). Massey, Mr. Gerald, in consideration of his literary merit, and of the smallness of his means of support (30); Palliser, Lady (additional), for services of her late husband, Sir William Palliser, as an inventor of munitions of war, etc., and of her destitute condition, and to enable her to provide for her daughters (150); Clerk, Mrs. Jessie, in consideration of the literary merits of her late husband, the Rev. Archibald Clerk, LL.D., as a Celtic scholar, and of her destitute condition (120). 1888. Neild, Mrs. Mary L., in consideration of the death of her husband, Major Neild, R.M., from the effects of a wound received while on duty at Charlestown, and of her destitute condition (£100); Tulloch, Miss Frances, Miss Blanche, and Miss Amy, in consideration of the distinguished services of their late father, Principal Tulloch, of St. Andrews University, in connection with theology, philosophy, and literature, and of their destitute condition (25 each); Jefferies, Mrs. Jessie, in consideration of the literary attainments of her late husband, Mr. Richard Jefferies, and of her destitute condition (100); Sheill, Sir John, in consideration of his merits as a sculptor, and of his destitute condition (100); Hutchinson, Mrs. Mary, in consideration of the services of her late husband, Mr. Thomas J. Hutchinson, M.D., of H.M. Consular Service, and of his literary attainments; Leech, Miss Mary, Miss Rose Jane, and Miss Adeline Amy, in consideration of the eminence of their brother, the late John Leech, as an artist, and of their destitute condition (10 each); Pinkett, Mrs. Kate, in recognition of the services of her late husband as Crown Solicitor, Chief Justice, and Acting Governor of Sierra Leone, and of her destitute condition (50); McClatchie, Mrs. Isabella Sarah, in consideration of the long and valuable services of her late brother, Sir H. Parke, and of her destitute condition (75); Morris, Rev. F. O., in recognition of his merits as a naturalist, and of his inadequate means of support (100); Gunning, Miss Constance Frederica Gordon, in consideration of her merits as an author, and of her destitute condition (50); Moira, Mrs. Eugenia, in recognition of the eminence of her late husband as a miniature painter, and of her destitute condition (25); Hughes, Mrs. Ceiriog, in recognition of the merits of her late husband, Mr. J. C. Hughes, as a Welsh poet, and in consideration of her destitute condition (50); Barnes, Miss Laura Liebe, in consideration of the merits of her late father, the Rev. W. Barnes, as an author and linguist, and on account of her destitute condition (50); Baynes, Mrs. Spencer, in consideration of the eminence of her late husband, Professor T. S. Baynes, as an author and scholar, and of her destitute

condition (75); **Parker**, Mr. William Kitchen, F.R.S., in recognition of his services to science as an investigator, of his old age, and of his inadequate means of support (100); **Seldon**, Mrs. Barbara, in consideration of the services of her late husband, Mr. Samuel Seldon, principal of the statistical department of H.M. Customs, and of her destitute condition (100); **Stewart**, Mrs. Balfour, in recognition of the services rendered to science by her late husband, Professor Balfour Stewart, and of her destitute condition (50); **Bell**, Mr. John, in recognition of his merits as a sculptor, and of his destitute condition (50).

Civil Service. One of the oldest institutions of the country, and probably dates from the earliest monarchical times. It is only within perhaps the last hundred years that the English Civil Service has assumed its present vast proportions. The Civil Service comprises all persons who serve the Queen in a civil capacity, as opposed to those employed in the military and naval services. The total number of persons so employed cannot be far short of half a million. The chief department of the Civil Service is the **Treasury**, which exercises a control over all other departments, and from whom alone authority is obtained for all expenditure. Perhaps next in importance is the **Exchequer and Audit Department**, which is charged with the audit of the accounts of all other departments, and is required to see that the expenditure of each is in accordance with the authorities received from the Treasury. The **Foreign Office** (including the diplomatic service), the **India Office** and the **Colonial Office**, together with the **Home Office**, probably rank next amongst the numerous departments of the Home Civil Service. The three revenue departments—namely, the **Post Office**, **Inland Revenue**, and **Customs**—are of course important branches of the service; there are also, among what is known as the spending departments, the **War Office**, **Admiralty**, **Board of Trade**, **Office of Works**, **Education Office**, **Privy Council Office**, the **Stationery Office**, and many other smaller offices.—Most of the clerkships in the Civil Service are now thrown open to public competition, and the various offices are grouped into two grades. The recommendation of the **Playfair Commission** which sat in 1874 to inquire into the Civil Service—namely, that the Service should be divided into a **Higher** and a **Lower Division**, with a specified scale of salaries irrespective of office for each division—has never been fully carried out. Most of the better-class offices are grouped under Grade I., and the remainder under what was formerly known as Grade II.; in these latter, however, most of the vacancies are being filled up by the appointment of Lower Division clerks under the Playfair scheme. The scale of salaries for these clerks is uniformly throughout the service £80 rising by £15 triennially to £100; while duty-pay not exceeding £100 may be paid to clerks of the Lower Division who are performing superior duties. In those offices where the hours of attendance are seven instead of six the salaries of the Lower Division clerks are increased by about one-sixth. Although it was one of the objects of the Playfair scheme to abolish a numerous class of civil servants known as **writers**, who receive tennence an hour, and whose appointments are of a purely temporary character, there still exists a considerable body of these men in the Civil Service. A Royal Commission has recently

been appointed to inquire into the present state of the Civil Service. The first sitting took place last November, and it will probably take a considerable time before the inquiry closes. There is of course a considerable difference in the examinations for the two grades of the Service; and that for the higher grade is what is popularly termed a "stiff" one. Very good prizes are offered to the successful candidates in this examination, which therefore attracts candidates from amongst university men. The Lower Division examination is of a simpler character, and at the prizes offered are not so great, a different class of men is attracted. Full particulars of all examinations for the Civil Services, and of the situations to be competed for, can always be obtained on application to the **Civil Service Commission**, at Cannon Row, S.W. For details see **FINANCE, NATIONAL**.

Civil Service Commission. A Royal Commission to inquire into the administration of the civil establishments at home and abroad was appointed in '86, as the result of a resolution moved by Lord Randolph Churchill, then Chancellor of the Exchequer. In a Treasury minute, which disclosed the grounds for the initiation of this comprehensive inquiry, it was stated that the duty of the Commissioners would be to examine into the numbers, salaries, hours of labour, superannuation, cost of staff, as well as the administration, regulation, and organisation; and to report whether, in their opinion, the work of the different offices is effectually and economically performed; whether it can be simplified; whether the matter of procedure can be improved; and whether it is deficient or unnecessarily elaborate. The Commissioners have published two reports, one in '87, and the other in '88, but their labours are not yet completed. The following are the names of the Commissioners:—Sir M. W. Ridley, Bart., chairman; Earl Brownlow; Lord Lingen; Lord Rothschild; the Right Hon. Lord Basing; Right Hon. H. H. Fowler, M.P.; Sir C. E. Lewis, M.P.; Mr. R. W. Hanbury, M.P.; Mr. H. L. W. Lawson, M.P.; Mr. J. W. Maclean, M.P.; Mr. J. Cleghorn, director of the North-Eastern Railway Company; Mr. A. S. Harvey, secretary to Glyn, Mills, & Co.; and Mr. A. B. Milford, C.B., late Assistant Commissioner of Public Works, Mr. Walpole, Permanent Under-Secretary for India, is the secretary to the Commission. The first report of the Commission, dealing with the civil departments of the War Office and the Admiralty, and pointing out some old standing abuses, with suggestions for remedying them, was issued in '87.

Civil Service Supply Association. The (see ed. '86). Headquarters: Queen Victoria St., E.C., and Bedford St., Covent Garden, W.C.

Clark, Sir Andrew, Bart., M.D., b. 1826. Educated at Aberdeen and at Edinburgh. In the extra-academical medical school of this city he gained the first medals in anatomy, physiology, chemistry, botany, materia medica, surgery, pathology, and practice of physic. For four years Dr. Clark had charge of the pathological department of the **Royal Naval Hospital at Haslar**, M.D. Aberdeen (1884). Became a member of the Royal College of Physicians. Elected on the staff of the London Hospital. Appointed a Fellow of the College of Physicians (1859). Dr. Clark is the author of numerous essays, lectures and reviews,

and has for some time been Mr. Gladstone's medical attendant. Baronet ('83). In Nov. '88 a somewhat novel medical consultation was held between Sir A. C. and Lord Ennismore's physicians at Vancouver, by means of the electric cable, the consultation lasting three hours.

Clarke, Sir Edward, Q.C., M.P., was b. 1841. Educated at the City Commercial Schools, Lombard Street, and Crosby Hall. Gained the Society of Arts prize for English Literature (1856), History (1857). Called to the bar at Lincoln's Inn (1864); created Q.C. (1880). Elected a bencher of his Inn (1882). Returned as Conservative member for Southwark (Feb. 1880); Plymouth (1880-85); re-elected 1885 and 1886, when he was made **Solicitor-General** in Lord Salisbury's administration, and received the honour of knighthood. Sir E. C. is a man who sprang from the ranks, and in his earlier days relied upon journalism for his support. He was for some time a reporter in the House of Commons for the *Morning Post*. He made his mark in the celebrated *Penge case*, and successfully defended Mrs. Bartlett in the celebrated *Pimlico poisoning case*. On the question of the Government's proposed compensation to the publicans he made a speech in which he attempted to shew that a legal right to compensation was well established. In a letter addressed to the public press on this question he also contended that the justices had no right to refuse to renew a license provided the applicant's house had been well conducted, an opinion which was subsequently upset by a judgment delivered by Mr. Justice Field, against which, however, an appeal was entered.

Clavicharp. This is a new musical instrument, and, as its name implies, consists of a combination of the harp strings and of the ordinary keyboard, the method of playing being as upon a pianoforte, the strings, however, being pulled and not struck, according to the practice of the harpist. It has two pedals, one for increasing and sustaining the volume of sound, the other for producing harmonics. The instrument is the invention of M. Dietz, of Brussels, and it was first introduced to public notice by Mr. W. H. Cummings, who invited a number of professors and amateurs to witness a performance at Princes Hall. It is conceded that the clavicharp will be a valuable addition to the concert-room, especially now that it is so difficult to obtain really skilled harpists; for, as M. Dietz remarks, "the difficulty of learning the ordinary harp, which is furnished with catgut strings affected by all the influences of temperature and requiring to be frequently tuned, and the necessity of playing the strings with the fingers, renders it hard to obtain equality in the sounds. It gives only the natural sounds of the diatonic scale, and in order to obtain changes of modulation the pedals must be employed." The tone of the clavicharp in a portion of its register resembles the harpsichord, while in the higher octaves true harp effects are obtained.

Clayden, F. W., author and journalist, has been connected with the *Daily News* (q.v.) ever since its reduction in price to one penny, and is now associated in the editorship of that newspaper with Mr. J. R. Robinson (q.v.). Formerly connected with the provincial press, Mr. C. was for some time one of the leader writers of the *Daily News*. Has been an unsuccessful candidate for Parliamentary

honours on three occasions, viz., at Nottingham ('68), Norwood Division of Lambeth ('82), and North Islington ('86). Is the author of "England under Lord Beaconsfield," issued in '80; "Samuel Sharpe, the Philanthropist" ('83); and "The Early Life of Samuel Rogers and his Contemporaries" is now passing through the press. Mr. C. was elected Chairman for '88 of the London branch of the National Society of Journalists (q.v.).

Clayton-Bulwer Treaty (1850). See ed. '88.

Clémenceau, Georges Benjamin, was b. at Mouilleron-en-Pareds, in the Vendée, Sept. 28th, 1841. He studied medicine in Paris, is an M.D., and practised at Montmartre. Elected mayor of the 18th arrondissement (Montmartre) in Sept. 1870, he was, in Feb. 1871, elected one of the deputies for the Seine, and formed part of the Extreme Left party. M. Clémenceau was still mayor when Generals Lecomte and Clément-Thomas were shot. He soon after resigned the positions of mayor and deputy. He then became a member, and afterwards president, of the Paris Municipal Council. He was elected to the Chamber of Deputies at the elections of Feb. 1876, and again voted with the Extreme Left. He has continued to sit in the Chamber, and during the latter years of Gambetta's life was the political adversary of the "dead tribune." He dexterously forced Gambetta into taking office, and was instrumental in securing his fall. He has since, as chief of the Radical party, frequently imposed his will upon the Chamber, particularly in making and unmaking ministries. He sits for the department of the Var, having been also elected, at the general election of Oct. 1885, as one of the deputies for Paris. He is proprietor of the *Justice*, an important Paris journal, and is regarded as one of the most expert swordsmen in France. It was a resolution moved by M. Clémenceau, and insisting on a thorough investigation of the Wilson scandal, that led to the overthrow of the Rouvier Government, and the consequent fall of M. Grevy. M. Clémenceau was asked by the President to form a Ministry, but declined, and told the President plainly that the crisis was not a political but a presidential one. M. C. acted as one of the seconds to M. Floquet in his duel with General Boulanger, July '88.

Clemens, Samuel Langhorne ("Mark Twain"); b. at Florida, Missouri, U.S., 1835; was apprenticed in his youth to a printer, and subsequently served as a pilot on the Mississippi (he adopted his *nom de plume* from the instructions he used to receive to "mark twain" where two currents met). Afterwards obtained an appointment as reporter on a paper in California, whence, after some years' service, he removed to edit a paper at Buffalo. He is undoubtedly the most original and popular of the American humorists; his best known works are "The Jumping Frog," "The Innocents Abroad," "The Gilded Age," "Roughing It," "Adventures of Tom Sawyer," "Life on the Mississippi," "The Stolen White Elephant," "Adventures of Huckleberry Finn," etc. His letter to the Queen on the subject of his assessment to the income tax on account of his books published in this country, and "The Ordeal of the Excelsior" (2 vols.) '87, is among the most recent of Mark Twain's contributions to humorous literature.

Clergy, Deceased, Jan. 1st to Nov. 30th, 1888. See OBITUARY.

Clerk of the Parliaments. See PARLIAMENTS, CLERK OF THE.

Cleveland, Stephen Grover, Ex-President of the United States, b. at New Jersey, March 18th, 1837. The son of a Presbyterian minister, he rose from a humble clerkship in Oneida to be Governor of the State of New York, defeating his opponent (Judge Foulger) by 102,000 votes. He thus became the prominent candidate for the presidency, and was so nominated by the National Democratic Convention, which met at Chicago in July '84. A few months later he was elected President by 4,910,975 popular votes, beating Mr. Blaine by about 100,000 votes. Subsequently receiving the majority of electoral votes, he was duly inaugurated at Washington, March 4th, '85. Two important events will mark the year '87 memorable in the history of Mr. C.'s term of office: i.e., the celebration of the centenary of the adoption of the American Constitution, and the enunciation of the programme of sweeping fiscal reforms contained in the presidential message of Dec. 6th, '87. The principal terms of this policy, which recommended a large reduction of the import dues on raw materials as the most practical means of dealing with the glut of money in the Treasury, were embodied in his address, seeking for re-election in November '88. On the occasion of the rejection by the Senate of the Fisheries Treaty, the President's announcement to ask for powers to adopt a policy of retaliation against Canada created a profound sensation at first, but soon came to be

regarded merely as a clever electioneering move. President C.'s action with relation to the retirement of Lord Sackville was the subject of much comment. President C. was opposed by General Harrison (*q.v.*). The result of the election was the return of General Harrison by 233 electoral votes against 168 given for Mr. Cleveland.

Clifford, Rev. John, M.A., D.D., President of the Baptist Union, was b. 1836 at Sawley. In '55 he entered the General Baptist College. During his third year at the College accepted an invitation from the Praed Street church, Paddington. Dr. C. graduated B.A. at London University in '61, B.Sc. in '62, in '64 taking the degree of M.A., and in '66 that of LL.B. The honorary degree of D.D. was conferred on him in '83 by Bates' University, U.S.A. His growing success at Praed Street led to the erection of **Westbourne Park Chapel**, which was opened Sept. '77, and where Dr. C. still continues to minister. His works include the following: "Is Life worth Living?" "The Dawn of Manhood," and "Starting in Life." The addresses he delivered to the Baptist Union attracted much attention.

Clifton College, Gloucester. Founded 1860, received charter '77. It is under a Council of fifteen, Earl Ducie being President. It has a military and engineering side, and prepares pupils specially for Sandhurst, Woolwich, or Cooper's Hill (*q.v.*); also for the Indian Civil Service (*q.v.*). Three exhibitions, ranging from £250 to £50 a year, tenable at the Universities, offered annually. Pupils, 600. **Head Master,** Rev. J. Wilson, M.A. **Closure.** See PARLIAMENTARY PROCEDURE.

Clubs, Expulsion from, Law on, in '88. A decision of Mr. Justice Kay (April) is of considerable importance to committees and members of clubs. The plaintiff in the action (*Andrews v. Salmon*) received a letter requesting him to attend a meeting of the committee of the Wanstead Conservative Club, of which he was a member, to hear a charge made against him. He wrote back stating that he would attend when he was informed of the character of the charge against him; and in his absence he was formally expelled. Mr. Justice Kay condemned such conduct as contrary to every notion of justice, and directed the defendants, who had subsequently reinstated the plaintiff as a member, to pay the costs of the action. A somewhat similar action was heard before the same judge in July. The officers and council of the Gas Institute had expelled Mr. Bray from the rights and privileges of membership, apparently because he had brought serious charges against the council. The defendants admitted that the resolution had not been regularly and properly passed, and consented to a perpetual injunction, as prayed. Mr. Justice Kay accordingly gave judgment for the plaintiff, with costs against the members of the council.

Coal. The chief varieties of coal are anthracite, or "stone coal," which occurs largely in South Wales, and is used in furnaces and malt kilns; semi-bituminous, or "steam coal," much used in marine and locomotive engines, being almost smokeless; bituminous, or "household coal," which is the common form of fossil fuel for domestic use; and lignite, known also as "brown coal" or "wood coal," an imperfect coal, not used in this country, though valued on the Continent. Cannel is a variety of coal which does not soil the fingers, and burns readily like a candle, whence the name. It occurs abundantly near Wigan, and is highly valued for gas-making. The vegetable origin of coal is fully established by its chemical composition, microscopic structure, its mode of occurrence, and its associated fossils. Some coals, notably the "better bed" of Bradford in Yorkshire, are largely made up of resinous spores or minute reproductive bodies shed from the cones of fossil lycopods, or plants allied to modern club-mosses. Two kinds of spores, known as microspores and macrospores, occur in certain lycopods, and similar bodies are found in coal. Some observers regard the larger bodies not as spores, but as sporangia or spore-cases. Certain kinds of coal seem to be largely made up of the mineralised bark of the coal-measure plants. Small deposits of coal may have been formed by vegetable matter drifted by streams, and buried in lakes or in estuarine deltas; but in most cases the vegetable matter must have grown *in situ*. The roots of the coal plants are often found in the "underlay" or fossil soils beneath the coal-seams. The principal coal fields of Great Britain are those of South Wales, Forest of Dean, Bristol and Somerset, Warwickshire, South Staffordshire, North Staffordshire, Shropshire, Denbigh and Flint, Lancashire and Cheshire, Cumberland, Yorkshire, Derbyshire and Nottinghamshire, Leicestershire, Durham and Northumberland, the Clyde Basin, Midlothian, Fifehire, and Ayrshire. In Ireland good coal occurs in Tyrone and Antrim, but the resources are not well developed; the coal in the south of Ireland is chiefly anthracitic. The deepest coal-pit in Britain is at the Ashton Moss colliery, near Manchester (12,688 feet).—

As the general characteristic of British trade in all its staple branches during '88 may fairly be inscribed as "good," coal mining prospered, first in quantity of output, and next as to prices and wages. Statistics of an official character for the year, so far as the whole country is concerned, will not as usual be available for months to come, but there are details which will sufficiently indicate the general tone. South Yorkshire has been described as the "cockpit of the coal trade," and during the first seven months of the year this district sent to Hull alone 991,176 tons against 1,002,704 tons for the same period of '87—a decline, certainly, but in face of the fact that the coalfields of South Russia, and the other fuel supplies of the same region have developed enormously, it is suggestive that for the ten months ending October there was a distinct improvement, notwithstanding temporary dislocation caused by a strike (see below), for the amount sent to Hull was 1,487,496 against 1,487,312 tons. As South Yorkshire sends a large quantity of fuel to London by rail, and as during the ten months of the year ending Oct. 31st there was an increase in this traffic amounting to 311,642 tons, it is fair to assume that the district amply made up her very small decline in foreign exports. The statistics of the London port and district for the ten months of '88 are as follows: Ships arrived, 4,957, bringing 4,009,870 tons—an increase of 291 ships and 250,224 tons over '87. By rail and canal 6,274,173 tons—an increase of 311,642 tons over '87. Once more it will be seen that the railway-borne coal shows the greater increase; but it will be remembered that a considerable quantity is brought into the London area *in transitu* for other parts or for export. Thus during the ten months of '88 no less than 2,588,188 tons were so disposed of—an increase of 116,010 tons over the corresponding period of '87. Adding together the increases in sea-borne and railway coal, a total of 561,866 tons is reached; deduct from this the increase in the exports, 116,010, and the actual increase of the trade in the London district is found to be 445,856 tons. One of the most remarkable events of the year was the combined effort of the men—except those districts which were bound by sliding scales or other arrangements, such as Northumberland, Durham, and South Wales, and also some of the coalfields beyond the border—to raise their wages. Towards the end of September a conference of delegates, representing 200,000 colliers, met at Manchester, and on the 27th of that month they passed a series of stringent resolutions, to the effect that notices be given all round, terminable in the week ending Oct. 29th, for an advance in wages of 10 per cent.; that no colliery or district accept less; and that no district should accept the advance conditionally on surrendering it if it were not granted elsewhere. For a month or more the whole trade was in a lively state of anticipation. Conferences of this kind had been held often enough before, and had proved abortive from one cause or another; in fact, it may be said that to see started a general movement of this kind was the day-dream of the late Mr. Alexander Macdonald, M.P. In this instance the project was carried out with signal success. The South Yorkshire miners' officials, led by Mr. B. Pickard, M.P., were the prime movers in the matter, but the Lancashire owners appear to have been the first to grant the full advance. To begin with, the colliery

proprietors of the Sheffield and South Yorkshire district set their faces firmly against such a large concession, but finding that they were likely to be left to fight the battle single-handed they gave way, and as Derbyshire followed, the men had practically won all along the line by the end of October. It was subsequently stated that the wages paid in a year to South Yorkshire miners amounted to £3,229,932, and the 10 per cent. advance would give them an additional £392,839. There were 48,526 miners; and if they paid 6d. each to the Trade Union per week, and the lads 3d., an income of £66,667 would be secured annually, the men still keeping for themselves a net gain of £326,171. About the same time the examination of the owners' books on behalf of the Sliding Scale Committee for South Wales and Monmouthshire showed that a 5 per cent. advance would be warranted, to come into effect at the beginning of '89, this being the first advance the men have received for years. In Lanarkshire a rise of 2½ per cent. was given on Nov. 1st, and an examination of the books later on warranted the employers in giving another 5 per cent. on the 15th.—*Miscellaneous.* On May 22nd the *Times* described a process by which Mr. W. A. Gibbs, of Gilwell Park, Chingford, Essex, produced a perfectly pure air from the combustion of coal, the discovery having arisen from the necessities of the drying branch of the tea trade.—The first annual meeting of the *Colliery Managers' Association*, which embraces members from all parts of the country, was held at Derby on Sept. 7th, Mr. Samuel Alsop, M.E., of the Pinxton Collieries, Alfreton, being the first president.—What may be described as a development of the trade, and what should be a very profitable one, came into prominence during the year in the form of compressed fuel. Patent fuel had long been known as an article of commerce, but its introduction for use in the household fire-grate is a matter of comparatively recent date. During the year the Universal Patent Fuel Machine Company, of London, introduced a machine by which these briquettes may be made at the rate of 14 a minute, the size being 4½ by 2½ by 2½ inches, and the weight 1½ lb. each. Steam or horse power can be used in the manufacture, and no skilled labour is required. Coal dust, which in some quarters even now is wasted wholesale, and pitch appear to be the only necessary ingredients.—A new coal-heading machine has recently been invented by Messrs. Stanley Brothers, and is at work in their Warwickshire collieries. Before its introduction roadways and headings were made by manual labour, aided by blasting; but this machine cuts an angular groove in the face of a heading, so that a core falls or is cleared as the work proceeds. There is a great saving of time by its use, and it will cut through the hardest material.—The report of the British Consul-General at Hamburg showed that in '87 the amount of British coal imported was 1,220,000 tons, against 1,210,000 tons in '86. He pointed out that a serious rivalry had sprung up with Westphalian coal, of which 549,640 tons were imported in '87.—An interesting article on the trade of the Welsh coal ports, as compared with other ports of the United Kingdom, appeared in the *Times* of Feb. 18th.—It seems that Ireland has now 76 collieries—9 in Ulster, 7 in Connaught, 31 in Leinster, and 29 in Munster; very few of them

being worked.—The formation of a *Collieries Trust* was mooted in October, with a capital of £80,000,000, but nothing seems to have been done in the matter.—A movement, which promised to be of a threatening character, arose among the miners of South Wales towards the end of the year on the wages question, the dissatisfaction as to the working of the sliding scale apparently being widespread.

Coal and Wine Dues. The total amount of the duty now levied upon coal entering the Metropolitan Police district, extending over an area of fifteen miles radius from Charing Cross, is 13d., made up of three separate duties of 8d., 4d., and 1d. each, imposed at different times for distinct and specific purposes. The whole of the duty is levied by the Corporation, though the 4d. tax only goes to swell their revenues, the 8d. and the 1d. dues being placed to the credit of the Metropolitan Board of Works. The 4d. duty is the survival of a metage charge of 4d. a chaldron, which the Corporation secured the right to charge as far back as 1591. From an account of revenues of the City Corporation presented to the House of Commons in 1692, we learn that the yield of the metage charge at that date was £1,120 a year, paid by fourteen coal metres at £80 each. In 1831, however, when the system of measuring coal was abolished in favour of weighing it, the annual yield of the tax was £20,000. In the same year the metage duty of 4d. per chaldron of 25 cwt., was changed to one of 4d. per ton weight; and in 1845 Parliamentary powers were obtained for levying the impost not only on the sea-borne coal entering the port, but also on all inland coal brought to London by rail. Mr. Firth points out that the original charge of 4d. per chaldron was for measuring actually done, but after 1831 the duty was received by the Corporation without, in the words of the Metropolitan Taxation Committee of 1861, their "rendering in return any service whatever in relation to the trade in coal." The 8d. duty is the equivalent of additional duties which the Corporation secured from Parliament the right to charge in 1694, in order to save themselves from threatened bankruptcy. The story of the proceedings by which the additional taxing powers of the City were thus obtained reflects little credit upon those concerned in them. The Corporation at the time were in debt to the extent of £747,472. These liabilities were incurred, according to the preamble to the bill of 1694, through "sundry accidents and public calamities." This bill was introduced to relieve the Corporation of their debts at the expense of the coal consumers. It was three times rejected, however, by the House of Commons. Finding that they could not get their bill passed by fair means, the Corporation tried other methods. They handed a bill for a thousand guineas to Sir John Trevor, the Speaker, and bribed other members of the House to get the bill through. Sir John Trevor was subsequently charged with accepting this bribe, and when summoned to appear in answer to it, excused himself on the ground that he was "taken suddenly ill with a violent colic." This excuse, however, was not considered satisfactory by the House of Commons, who on March 16th, 1695, declared him to have been guilty of a high crime and misdemeanour, and ordered his expulsion from the House. A similar sentence was passed upon another corrupted member,—viz., Mr. Hungerford, the chairman of the com-

mittee to whom the bill of the Corporation was referred. The bill, however, got through, and by its provisions the City debt was converted into an annuity by means of the additional coal tax of 10d. per chaldron. Part of this duty only was levied till 1750; but in 1748, the City being still in difficulties, the full 10d. was imposed for a period of thirty-five years, and in 1767 Parliament further decided to extend the period to 1831. In 1829 the Corporation induced Parliament to further extend the period to 1852, but in 1831 the duty was changed from 10d. per measure of 25 cwt. to the present charge of 8d. per ton. Since the latter date the coal dues have been six times reimposed, the last occasion on which the House of Commons sanctioned the reimposition being in 1868, when the period for levying them was extended to July 5th, 1889. The present annual yield of the coal dues, after deducting drawback and cost of collection, is about four and a half millions sterling.—The right to levy wine dues has also been enjoyed by the Corporation from a remote period, though this right also, as in the case of the coal dues, has been periodically limited to a certain number of years, fixed by Parliament. The rate of the wine duty is 4s. 9d. for every tun of 252 gallons, and the annual yield is about £9,000 net. A strong protest has been raised against the renewal of the coal and wine dues when the period for which they were last sanctioned expires, in July of the present year. The ground on which this application for renewal is based is that the revenues derived from the imposts have been devoted to the preservation of open spaces, such as Epping Forest, Burnham Beeches, Highgate Woods, etc., and to the execution of such important public works as the Thames Embankment, the Holborn Viaduct, Thames Bridges, etc. The objections to the imposition of the duties, however, are that they are raised and expended by authorities who are not directly responsible to the ratepayers; that as merchants, middlemen's, and retailers' profits have to be made upon the tax, the consumers really pay a much larger amount than the initial duty; that the coal duty, by largely increasing the price of that commodity, cripples manufacturing industry, and has in fact driven some important industries, such as shipbuilding, etc., from London, while at the same time the tax presses with intolerable hardship upon the poor. Lord Randolph Churchill (*q.v.*), in his reply to a deputation from the City and the Metropolitan Board, who waited upon him on Nov. 18th, 1886, to urge him to support them in their efforts to renew the impost, advanced the arguments against the reimposition, and pointed out that it was a question which those who were burdened by the duties, and not the irresponsible bodies who levied and expended them, ought to have the power to decide. A bill to continue the Dues until Dec. 31st, 1900, was (Jan. 28th, '87) introduced by Sir J. McGarel-Hogg (now Lord Magheramorne), but was eventually dropped, as no opportunity was found to discuss it on second reading. Mr. W. H. Smith stated in the House (Jan. 31st, '88) that the Government intended to adhere to the declaration of Lord Randolph Churchill. Having so far failed to get the sanction of Parliament for the renewal of the dues, it is stated that the Corporation will endeavour to establish a right, alleged to be vested in them by charters of James I. and James II., to levy a charge of 8d. per ton for weighing all coal that comes into

the port of London. Owing to this rumour, Sir Joseph Pease gave notice of his intention to move the Government to repeal such charters if they were found to be in existence.

Coaling Stations, British. See STATIONS, COALING.

Coal Mines Regulation Act, '87 see ed. '88.

Cobbe, Frances Power, b. in Dublin 1822. Has for many years been associated with various social and philanthropic movements, and is the author of many works devoted to the solution of social and ethical problems. She was connected with the late Mary Carpenter in the work of bringing criminal and neglected children under healthy educational influence. She has practically aided the establishment of institutions for the protection of young servants and for the relief of destitute incurables, and has been a powerful advocate for the removal of women's disabilities, and for the advancement of female education. She is also a prominent leader of the anti-vivisection agitation. Miss C. has contributed largely to periodical literature. Amongst the most important of her books are "An Essay on Intuitive Morals" ('35); "Religious Duty" ('57); "Darwinism in Morals" ('72); and "Duties of Women" ('80). In '88 Miss C. issued another book entitled "The Scientific Spirit of the Age."

Cobden Club. The formation of this political association was suggested by Mr. Bright (*q.v.*) and Mr. Thorold Rogers, within about a year of Cobden's death; and Mr. T. B. Potter, who had long been an intimate personal and political friend of Cobden, and had been accepted as his successor in the parliamentary representation of Rochdale, undertook the task of organising the Club and of presiding over its work. The specific object for which the Club was established was that of "encouraging the growth and diffusion of those economical and political principles with which Mr. Cobden's name is associated"; and its motto, which was suggested by Mr. Goldwin Smith, is "Free Trade, Peace, Goodwill among Nations." Since the foundation of the Club more than a million and a half of books and pamphlets enunciating Cobden's principles have been distributed at home and abroad; and during 1885-8 about twelve millions of leaflets on Free Trade and other subjects akin to it were circulated, with the view of counteracting what is known as the "Fair Trade" movement. An important feature of the Club is its banquet, presided over usually by some eminent statesman (see ed. '87). The roll of honorary members of the Association includes many distinguished foreigners. See, R. Gowing, 6, Upper Park Rd., N.W.

Coca. See ed. '88.

Cochin-China. (1) Lower or French Cochinchina consists of a portion of the old Annamese province of Champa, and comprises the whole of the Mekhong delta, but comprehends little or none of Cochin China proper. Area 23,082 sq. m., pop. 1,792,733. Capital, Saigon. (2) Cochin China proper is the protectorate kingdom of Annam, exclusive of Champa (or French Cochinchina) and Tonquin. See ANNAM, and COLONIES OF EUROPEAN POWERS.

"Cocker, According to." A phrase synonymous with "satisfactory, quite in order." It is derived from the name of Edward Cocker, an arithmetician and penman, who in the middle of the seventeenth century published a

treatise on arithmetic, which was for a long time very popular. The phrase doubtless originally implied mathematical accuracy.

Cocos (or Keeling) Islands. A dependency of the *Straits Settlements* (*q.v.*), 700 miles south-west of Java. Area 9 sq. m., pop. 400. Consists of Horsing and Keeling, with several smaller islands. Abound in cocoa-nut palms.

Code Napoléon. Finding no fewer than four hundred systems of administering the law in vogue, Napoleon I. assembled, in 1802, the ablest lawyers in France under the presidency of Cambacères, for the purpose of bringing the several systems into harmony. The result was the production of several codes—the Code Civil des Français, Code de Procédure, Code Penal, and Code d'Instruction Criminelle. There were created in addition Commercial and Military Codes, the whole of which are known as the Code Napoléon.

Codrington College. In Barbadoes. Affiliated to Durham University (*q.v.*).

Coercion Bills. See IRELAND and CRIMINAL LAW (IRELAND).

Coffee-House System. See ed. '87.

Colnago, The Jubiles. See ed. '88.

Col de Cabre Tunnel. This is a railway undertaking, cutting under the Col de Cabre, the frontier of the Drôme and the Hautes Alpes, and will be 3,800 metres in length. It is considered to be an important work in the strategic line, connecting Central France with the Italian frontier by Gap and Briançon. The work was commenced Sept. 25th, '86.

Coleridge, John Duke Coleridge, P.C., 1st Baron (creat. 1873), Lord Chief Justice; eldest son of the late Right Hon. Sir John Taylor Coleridge, of Heath's Court, Ottery St. Mary, Devon (a judge of the Court of Queen's Bench), by Mary, d. of Dr. Albert Buchanan, vicar of Woodmansterne, and rector of Northfleet; b. 1821. Educated at Eton and at Balliol College, Oxford: B.A. (42), M.A. (46), Hon. D.C.L. (77); was scholar of Balliol and Fellow of Exeter. Called to the bar at the Middle Temple (46); made a Q.C. and bencher of his inn (61); a serjeant-at-law (Nov. '73); was Recorder of Portsmouth (55-65, when he resigned). Was M.P. for Exeter (July '65 to Nov. '73); was Solicitor-General (Dec. '68 to Nov. '71); Attorney-General from the last date to '73, when he was appointed Chief Justice of the Common Pleas; and made Lord Chief Justice of England ('80). Paid a visit to the United States in '83, and was very cordially received, particularly by the judiciary and the bar. He has contributed to the *Edinburgh Review* and other periodicals. His name was prominently before the public in '86 in connection with certain libel actions brought by his son-in-law, Mr. Adams, a member of the bar. Lord C. distinguished himself in Parliament by his powerful advocacy of the removal of Dissenters' disabilities at the universities. Owing to his musical voice, he is known in society and at the bar as "the silver-tongued Coleridge." Lord C. (88) presided at the trial of the action for libel, *O'Donnell v. The Times*, in connection with the series of articles headed "Parnellism and Crime." At an early stage of the proceedings Lord Coleridge stopped the further hearing on the ground that the plaintiff had no case.

Collins, Wilkie, b. 1824, son of William Collins, R.A., whose life he published in '48.

It was, however, as a writer of sensational romances, and not as a biographer, that Mr. Collins was destined to achieve distinction. His first story was "Antonina," which was followed by others, including "The Dead Secret" and "After Dark," which attracted considerable attention; but it was not until the publication of the "Woman in White" that Mr. Collins rose to the height of his popularity. The success of this novel was electrical, and the author's subsequent stories—especially "No Name," "The Moonstone," "Man and Wife," "Poor Miss Finch," and "The Evil Genius" ('87), have had an immense circulation. He is distinguished by his marvellous ingenuity in the construction of plots.

Colombia. A republic of Central America, formed by the union in 1861 of nine states—viz., Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima—under the title of the "United States of New Granada," changed in '71 to that of the "United States of Colombia." After the termination of the revolution, which prostrated this country in '84-5, a new constitution was promulgated in August '86. By this constitution, the Republic, from being Federal, has become Central; and the country is now styled the "Republic of Colombia." The sovereignty of the nine States is abolished, and they are now simple departments, their presidents being reduced to governors under the direct nomination of the President of the Republic, whose term of office has been extended to six years. The Senate, as before, consists of 27 members, 3 from each department, and the House of Representatives of 66 members, elected by universal suffrage, each department forming a constituency and returning one member for 50,000 inhabitants. (For members of executive see article DIPLOMATIC.) Area, 513,938 sq. miles; pop. about 3,000,000. Capital, Bogota, pop. 100,000. Estimated revenue for the biennial period '87-8, £4,178,000; expenditure £4,580,000; foreign debt, £2,231,618, chiefly due to English creditors. Finances in a very unsatisfactory condition. Industries chiefly confined to agriculture and the rearing of cattle. Great attraction of Colombia its mineral wealth. Rich mines of gold, silver, iron, copper, lead, etc., and precious stones. Army, in time of peace, nominally 6,500 men. Education steadily progressing. Postal and telegraph services kept up as efficiently as the state of the country will admit. Railway construction extending. The bulk of the foreign trade is with Great Britain and the United States. The transit traffic across the isthmus of Panama is of great importance. In Feb. '81 an inter-oceanic canal was commenced by M. de Lesseps, and is steadily progressing. In '82 and '84 the claim of the United States to the control of any American inter-oceanic canal was the subject of conference between that Government and Great Britain with reference both to the Lesseps scheme and the project of an alternative canal through Nicaragua. See also PANAMA CANAL.

Colombo. Capital of Ceylon (*q.v.*), pop. about 120,000.

Colonial and Indian Exhibition '86. See ed. '87.

Colonial Institute. See ROYAL COL. INST.

Colonial Office. The authority of the Crown throughout our colonial dependencies is exer-

cised by the Colonial Secretary. Governors of colonies are nominated to the Crown by him; the enactments of all colonial legislatures come before him, for approval or disallowance (a pure formality in most cases); and in his office the constitution of new colonial legislatures is planned. The direct executive action of the department is mainly confined to the Crown colonies, protectorates, etc. (see BRITISH EMPIRE). An *Emigrants' Information Office* (q.v.) is attached to the department. Crown colonies are represented in London by Crown Agents, and colonies having responsible governments by Agents-General (see DIPLOMATIC). The *British Settlements Act 1887* enables Her Majesty in council to provide for the government of her possessions acquired by settlement, and by order in council to establish all such laws and institutions, and constitute such courts and officers, and make such provisions and regulations for the administration of justice as may appear to be necessary.

Colonial Wines and Vineyards. For detailed account see ed. 87.

Colonies and Dependencies of European Powers. Great Britain comes first on the list, the aggregate area of her possessions being 9,000,000 sq. m., pop. 316,000,000. All are separately treated, and a classified list will be found under the head BRITISH EMPIRE, etc. Powers having foreign dependencies are—France, Portugal, the Netherlands, Germany, Spain, Denmark, and Italy. Many of these dependencies will be found elsewhere treated under their respective headings. The figures here given are chiefly derived from the latest official returns of each mother-country, and will sometimes be found to differ from other enumerations.—**FRANCE** began to acquire foreign possessions in the sixteenth and seventeenth centuries. Recently she has largely increased them. Her colonies proper are represented in the Senate and Chamber of Deputies, and politically form part of the Republic. Including Algeria, officially a French department, Madagascar and other "Pays Protégés," the total area of the French dependencies amounts to 979,622 sq. m. (reckoning 2.6 kilometres carrés as equal to 1 sq. m. English), with total pop. 29,003,862, including estimates, detailed as follows:—**African:** Algeria, 256,538 sq. m., pop. 3,817,465; Tunis (pro.), 45,384 sq. m., pop. 2,000,000; Senegambia, 96,154 sq. m., pop. 183,237; Ivory and Slave Coast Stations, 35 sq. m., pop. 186,000; Gaboon-Ogowé-Congo Region, 174,000 sq. m., pop. 500,000; Madagascar (pro.), 228,500 sq. m., pop. 3,500,000; Réunion, 966 sq. m., pop. 179,639; Comoro Islands, 680 sq. m., pop. 53,000; Nossi Bé and Ste. Marie Islands, 320 sq. m., pop. 28,982; Obock and Tadjurah, 3,840 sq. m., pop. 22,370.—**Asiatic:** Pondicherry and Chandernagore, 192 sq. m., pop. 275,261; Cochin-China, 22,868 sq. m., pop. 1,792,733; Tonquin, 34,615 sq. m., pop. 9,000,000; Annam (pro.), 26,923 sq. m., pop. 6,000,000; Cambodia (pro.), 32,254 sq. m., pop. 1,500,000.—**Polynesian:** New Caledonia and Loyalty Islands, 7,624 sq. m., pop. 56,463; Marquesas, 478 sq. m., pop. 5,776; Tahiti, Society Islands, 453 sq. m., pop. 10,639; Tubuai, Austral Islands, 80 sq. m., pop. 665; Tuamotu, Low Archipelago, 384 sq. m., pop. 8,500.—**American:** St. Pierre and Miquelon Islands, 90 sq. m., pop. 6,300; Guadeloupe, etc., 719 sq. m., pop. 181,098; Martinique, 379 sq. m., pop.

169,232; Cayenne, 46,697 sq. m., pop. 26,502. Most of these possessions are very costly to France.—**PORTUGAL** possesses, according to the official lists, dependencies aggregating in area 705,258 sq. m., with pop. 3,336,951. These figures are largely discounted when it is remembered that in the two great African provinces Portuguese influence is really limited to a comparatively small portion of them. Details as follows:—**African:** Cape Verde Islands, 1,650 sq. m., pop. 110,926; Bissau, Casamansa, etc., 26 sq. m., pop. 4,985; 'Principe and St. Thomas Islands, 454 sq. m., pop. 21,037; Ajuda, 13 sq. m., pop. 4,500; Angola, Ambriz, Benguela, and Mossamedes, 312,509 sq. m., pop. 2,000,000; Mozambique, etc., 382,683 sq. m., pop. 350,000; **Asiatic:** Goa, Daman, Diu, etc., 1,605 sq. m., pop. 481,467; Timor, etc. (Asiatic Archipelago), 6,290 sq. m., pop. 300,000; Macao, 28 sq. m., pop. 66,036. Except the Cape Verde Islands, these colonies are in a decayed or stagnant state.—**HOLLAND** possesses colonies to the stated extent of 766,137 sq. m., with pop. 28,687,341. The Dutch East Indies comprise Java, parts of Sumatra, Borneo, Celebes, the Moluccas, New Guinea, and other islands of the Asiatic Archipelago: total area 719,674 sq. m., pop. 28,385,851.—**West Indian Islands:** Curaçao, 210 sq. m., pop. 25,203; Oruba, 69 sq. m., pop. 6,579; St. Martin, 17 sq. m., pop. 4,526; Buen Ayre, 95 sq. m., pop. 4,043; St. Eustatius, 7 sq. m., pop. 2,312; Saba, 5 sq. m., pop. 2,458.—**South American:** Surinam, 46,060 sq. m., pop. 56,869.—**GERMANY** since 1884, has annexed extensive territories, but it is doubtful whether it will pay her to retain them. As yet unorganised, and for the most part neither delimited nor explored, figures must be received as merely approximate. Total area perhaps 700,000 sq. m., with pop. probably 1,250,000—viz., **African:** Togoland, 400 sq. m., pop. 40,000; Cameroons, etc. (including country claimed in interior), 115,000 sq. m.; Damaraland and Luderitzland, 200,000 sq. m., pop. 235,000; German East African Company's territory, 100,000 sq. m., pop. 500,000; Somaliland, 200,000 sq. m., pop. 100,000. In **Pacific:** Bismarck Archipelago, 18,150 sq. m., pop. 188,000; Solomon Islands, 8,500 sq. m., pop. 80,000; islands in the Marshall Archipelago, area 42 sq. m., pop. 10,000; Kaiser Wilhelm's Land (New Guinea), 70,300 sq. m., pop. 109,000.—**SPAIN** retains but a remnant of her once vast possessions. Altogether they now amount to 239,526 sq. m., pop. 8,059,766—viz., **African:** Ceuta, Ifni, and other stations in Morocco, 650 sq. m., pop. 2,476; the N.W. Saharan seaboard (1887), 75,000 sq. m.; Fernando Po, Annabon, and Corisco Islands, Elobey, etc., 850 sq. m., pop. 70,000.—**West Indian:** Cuba and Pinos, 43,220 sq. m., pop. 1,521,684; Puerto Rico, etc., 3,550 sq. m., pop. 784,709.—**Asiatic:** Philippine Islands, 114,326 sq. m., pop. 5,561,232; Sulu Islands, 950 sq. m., pop. 75,000; Carolins and Pelew Islands, 560 sq. m., pop. 36,000; Marianne Islands, 420 sq. m., pop. 8,665.—**DENMARK** has dependencies to the extent of 86,954 sq. m., pop. 127,208—viz., **Northern:** Faeroe Islands, 340 sq. m., pop. 11,220; Iceland, 39,756 sq. m., pop. 72,445; Greenland (Coasts), 46,740 sq. m., pop. 9,780. **West Indian:** Santa Cruz, 74 sq. m., pop. 18,430; St. Thomas, 23 sq. m., pop. 14,389; St. John, 21 sq. m., pop. 944.—**ITALY** possesses Assab, in the Red Sea, 243 sq. m., pop. 1,193; in '86 she took possession of Massowah, area and pop. not yet declared.

Colonisation, German. See GERMAN COLONISATION.

Colour Blindness, or *Achromatopsia*, is a defect in appreciation of colour, shown by a want of power in distinguishing between certain complementary colours. Those so affected regard as similar colours which to most people are quite distinct. It depends either upon disease of the optic nerve, or it is congenital, and is often hereditary. It is very rare in women, but is said to occur, in varying degrees, in from 3 to 5 per cent. of the males of the chief European countries. (See ed. '88.) Instructions are now issued to superintendents of **Mercantile Marine Offices** to distribute copies of the circular of the Board of Trade containing the regulations for examination in C. B. to all young men and boys entering the marine service.

Columbia Market, The. See ed. '87.

Commemoration, Days of. The Black-letter Saints' Days of the Anglican Calendar, so called from the names being printed in ordinary black letters, and not in red, like the more important feasts. No special collect, epistle, and gospel are appointed.

Commercial Education. "A new departure" in the direction of making the national education more worthy of the first commercial country in the world, and more suited to modern conditions, and at least as efficient as that provided in those foreign countries—especially Germany—which are successfully competing with British traders in their oldest markets, was inaugurated in '87. The commercial and educational communities were at last awakened to the need for immediate action, and more long youths who are intended for a commercial career, instead of entering an office without even an elementary knowledge of trade or commerce, will have an opportunity of obtaining that special training which is given to those who are intended for the learned professions. **Technical Education** (*q.v.*)—thanks mainly to the City and Guilds of London Institute—has done, and is doing, much for our artisans and operatives engaged for the most part in manual labour. The Government of the day has placed upon its legislative programme a measure for the purpose of giving facilities for providing **Technical Instruction in Elementary Schools** after a child has passed the sixth standard, and it is quite likely that the fifth will ultimately be agreed upon. But C. E., or as it has been called, the "trained intelligence" of the merchant, the banker, the manufacturer, the manager, the commercial traveller, and the clerk, has been comparatively neglected in this country; and a young man entering a house of business, in spite of classical and mathematical efficiency at school or college, finds that he has learned very little that is of practical value to him at the outset of his career. It is only after a long and sometimes expensive experience that he realises the thousand-and-one conditions that enter into the consideration of the successful business man. In commerce, as in everything else, there are things that only experience can teach; but it is contended that, with a knowledge of the objects of commerce, of the economic laws and regulations which control it, of commercial law, of commercial geography, and of modern languages, a young man will at once

be able to take a more intelligent and therefore a more useful, part in the business he adopts. Such is the principle recognised by the Germans and other foreigners whose competition we have experienced at home and abroad in recent years, and there is no doubt that their educational superiority has stimulated it. The **Royal Commission on Depression of Trade** (see ed. '87) stated in their report: "In the matter of education we seem to be particularly deficient, as compared with some of our foreign competitors; and this remark applies not only to what is usually called technical education, but to the ordinary commercial education which is required in mercantile houses, and especially the knowledge of foreign languages." This statement of the position has been generally accepted. The C. E. movement is steadily gaining ground. The **Chambers of Commerce** have given a great impetus to it. An **Association** has been formed, with Lord Hartington as President and the support of many leading public men, to promote the required reforms; and the **Oxford and Cambridge Schools Examination Board**, after conferring with representatives of the Chambers of Commerce, have adopted a scheme under which certificates are granted for proficiency in commercial knowledge preparatory to entering upon a mercantile career. The next examination for certificates will be held July '88. Secs. E. J. Cross, M.A., Caius College, Cambridge, and P. E. Matheson, New College, Oxford, from whom all information can be obtained. In various parts of the country—and especially in London—evening classes have been instituted for imparting knowledge on commercial subjects, and efforts are being made to induce the governors and teachers of existing schools to modify their curriculum with the same object. By these means, and with the aid of the ample endowments already devoted to educational purposes in many places, it may be fairly hoped that the Educational movement will no longer be placed at a disadvantage compared with his foreign rivals. The movement has been fully recorded in the *Chamber of Commerce Journal* (Boltolph House, London, E.C.). A report has recently been published by the Foreign Office (Miscellaneous Series 76) in which Mr. Gratian, Consul-General at Antwerp, describes the working of the **Institut Supérieur de Commerce** (founded '52) at that city. The **Yorkshire College at Leeds** has also arranged for a special curriculum for students intended for commercial life.

Commercial Museums may roughly be divided into two classes: (1) those established in manufacturing countries for the exhibition of articles of every-day demand in foreign markets; and (2) those established in foreign countries for the exhibition of the manufactures of Europe and the United States. A consular officer living, say, in Cuba, finds the agricultural implements used in that island to be of a wretchedly crude type. He immediately opens a room, and therein exhibits specimens of light American ploughs and general agricultural machinery, sent out by the manufacturer, and a new trade with the United States is thus initiated. The other kind of commercial museum may be illustrated by a reference to that at Brussels. Here the Belgian cotton manufacturer will find samples of cotton goods used in various parts of the world. He will discover whether for a particular trade much or little "size" is required, in what lengths and widths the pieces are usually sold, and what colours are preferred,

Side by side with this will be found specimens of the cotton produced in certain little-known countries, and the spinner will be able to form an opinion whether he could with advantage draw a portion of his supply of raw material therefrom. At the beginning of '87, when the question of a suitable site for the Imperial Institute (*q.v.*) was being discussed, some amount of opposition was shown to its proposed location at S. Kensington; and this at one period threatened to seriously influence the Mansion House Fund for the Institute, as it was held in high quarters that its proper place was within the boundaries of the City of London. It was therefore proposed to invite subscriptions for a **City Commercial Museum**; but subsequently the project became incorporated with the Institute, and it was officially agreed that 30 per cent. of the Mansion House Fund should be devoted to the Museum, the remainder to the Imperial Institute, and the Museum to be an integral portion of the latter. A considerable sum has been already raised and there is established a **special committee** charged with the furtherance of the scheme.

Commerell, Vice-Admiral Sir John, b. in London, 1829. Entered the navy, '42. Served with distinction in China, South America, and the Crimea. Received the **Victoria Cross** for heroic service before Sebastopol. **Naval Aide-de-camp to the Queen**, '72. Groom-in-waiting, '74. **Junior Lord of the Admiralty**, '79. Commander-in-chief on the American Station, '82. In recognition of his long and distinguished service, Admiral C. was ('88) appointed to the **chief command at Portsmouth**.

Commissionaires, frequently called *Commissioners*, are public street messengers. The idea is of Persian origin. At first they were selected from the wounded soldiers pensioned after the Crimean and Indian wars. They receive their appointment from a society which was established by Captain Sir E. Walter, K.C.B., in 1859, and which regulates their charges. Their number is now about 1,723. During the year '88 the system has been introduced with success in Sydney and Melbourne. **Office**, 419, Strand, W.C.

Commissioners of Sewers of the City of London are appointed by the Corporation of London under the City of London Sewers Act 1848, as continued and amended by the City of London Sewers Act 1851. They exercise in the City of London functions in many respects analogous to those discharged by the Metropolitan Vestries and District Boards (*q.v.*), in other parts of the Metropolis. The **expenses** of the Commsrs., so far as they are defrayed out of rates, are met by a **Sewers Rate** and a **Consolidated Rate** made under the former of the above Acts; which rates are applicable to the payment, not only of the expenses of the Commsrs., but also of the amounts included in the precepts of the **Metropolitan Board of Works** and the **School Board for London**. The receipts of the Commsrs. (excluding loans) amounted during the year ending 29th Sept. 1887 (for which the latest returns of the Local Government Board are made up) to **£387,618**, of which £392,574 was derived from rates. Their **expenditure**, so far as it was not defrayed out of loans, was **£241,764**, of which £268,706 consisted of payments to the Metropolitan Board of Works and the School Board for London.

Committees, Various Parliamentary. See **BILLS, PRIVATE**; **GRAND COMMITTEE**; and **PARLIAMENTARY PROCEDURE**.

Commoners now Peers. See **PEERS WHO HAVE BEEN COMMONERS**.

Common Law. The Common Law has often been described as that immemorial and unwritten customary law, which dictated the decisions of those ancient Courts of King's Bench, Common Pleas, and Exchequer, in later times grouped under the name of Courts of Common Law. In reality the Common Law is an enormous accretion of law in the form of judicial decisions given by the judges of those courts in the course of several centuries. It is neither a complete nor a systematic body of law. It doubtless had a nucleus of primitive custom, and has been modified very largely by legislation, in the form of Acts of Parliament. Its early development is obscure, but its characteristic principles had been elaborated before the close of the fourteenth century. The Common Law is **contrasted** with (1) the statute law contained in Acts of Parliament; (2) equity, also an accretion of judicial decisions, but formed by a new tribunal, which first appeared when the Common Law had reached its full growth, and which administered justice upon new principles; (3) the civil law, inherited by modern Europe from the Roman empire, and never recognised as of authority in England, although, through the agency of the old ecclesiastical courts and courts of equity and admiralty, many of its provisions have been gradually introduced into our law. At the present day the Common Law is in a state of rapid disintegration, owing to the following causes: (1) the consolidation of all the superior courts of justice into one Supreme Court of Judicature, and the consequent obliteration of distinctive modes of procedure and distinctive legal habits of thought; (2) the extreme activity of the Legislature, whose acts embody the ideas of a modern society.

Common Prayer, Book of. After the Reformation the first Prayer Book was that of **Edward VI.**, in 1542; this was followed by the **New Prayer Book**, in 1549, succeeded in 1552 by the **Second Prayer Book of Edward VI.** Another revision was made in the reign of **James I.** (1604). Under the rule of the Puritans the use of the Prayer Book was made punishable by fine and imprisonment, and the "**Directory**" was substituted in its place. The P. B. underwent its **final revision** in 1662, and was embodied in the Act of Uniformity. A **revised Lctionary** came into use between 1871 and '79, and **shortened services** were authorised in '72. A society for obtaining such a **revision of the Prayer Book** as would "strengthen its Protestant basis" was established in '54.

Commons, House of. With certain exceptions any male of full age may be elected to represent a constituency in the House of Commons. English and Scotch peers are entirely disqualified, but Irish peers may be returned for any constituency in Great Britain. All English, Scotch and Irish judges, except the Master of the Rolls in England; clergymen of the Established Church of any of the three kingdoms; Roman Catholic priests; the holders of various offices specially excluded by statute

—including revenue officers—persons who have been convicted of certain offences, aliens who have been naturalised (except in special cases where exceptions are made), imbeciles, government contractors (except contractors for government loans), and sheriffs and returning officers within the constituencies for which they act, all these are disqualified. No candidate requires any property qualification, and no member receives any payment or allowance whatsoever from the country for his service in the House or on any committee thereof. The Speaker (*q.v.*) is the first to take the oath and subscribe the roll in a new House of Commons, and is followed by the other members, who come to the table without any ceremony, and are presented to him by the clerk. Members returned after a general election are introduced by two other members. The form of oath taken is as follows:—"I, —, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, her heirs and successors, according to law. So help me God." Quakers, Moravians, Separatists, and others are permitted to make an affirmation to the same effect as the oath; and under a standing order passed in 1880, any member returned who may claim to be a person for the time being by law permitted to make an affirmation instead of taking an oath may make such affirmation subject to any liability by statute. Until 1837 the roll subscribed by members was really a roll of paper, but since that date books have been used for the purpose. A few years ago a valuable return was made to the House of all the members who had sat for hundreds of years before, and was printed and sold as a parliamentary paper. A seat in the House is vacated when the holder is created a peer or succeeds to the peerage, by death, or by the acceptance of any office of profit under the Crown; and there are also certain disabilities attached to bankruptcy (see *PRIVILEGES* or *PEERS*, etc.). All the principal members of the Government, on accepting office, vacate their seats and are eligible for re-election; but the rule does not apply to such offices as Secretary to the Treasury or other similar appointments which are not held direct from the Crown; and a change from one office to another does not involve going again to the constituency. In theory a member cannot resign, but he can accept the office of honour or profit under the Crown or the stewardship of the Chiltern Hundreds, or of the manors of Northstead, which is granted to him by the Chancellor of the Exchequer, and resigned immediately its purpose is served. (See *WRITS*.) The Act of Union with Ireland increased the number of the House of Commons to 658, and though it stood nominally at this figure until the end of the parliament of '80-85, the disfranchisement of 4 constituencies returning 6 members, and the suspension of 12 writs in 7 cities and boroughs, had reduced the total of members to 640. The Redistribution Act did not alter the apportionment of members to Ireland or Wales, but increased the number returnable by Scotland from 60 to 72, and these 12 new seats being added to the nominal number of the House brought it up to 670. (For list of constituencies and members as then returned see *GENERAL ELECTION*, '87 ed.) The alphabetical list of the members follows below, together with summary of the number and political bias of the members returned by the boroughs, counties,

and universities of England, Wales, Scotland and Ireland, to the Parliaments of '85-86 and August '86. A table is also given exhibiting the result of the changes which the subsequent bye-elections have made up to December 1st, '88. A word as to the parts of the House which the different sections of members occupy may be added here. The benches are fixed in two long rows, extending on either side from the chair to the bar, and each row is divided midway by a narrow passage known as the gangway. The front bench to the right of the chair and above the gangway is the Treasury Bench, and upon it sit the leader of the House and as many of his ministerial colleagues as can find accommodation there. The other benches on the Ministerial side are occupied by supporters of the Government; below the gangway having been, when the Liberals were in power, the resort, for the most part, of the Radical members. In the last parliament the Liberal Unionists sat, some above and some below the gangway, Mr. Chamberlain and Sir G. Trevelyan taking the latter position, while Lord Hartington chose a place immediately behind the Treasury Bench. On the left of the chair are the Opposition benches, the front of which, above the gangway, is reserved to ex-Ministers and Privy Councillors. Now that the Liberals are in opposition Lord Hartington and Mr. Chamberlain, Mr. Gladstone and Sir W. Harcourt all sit on the front bench on this side. Since 1880 the Parnellites have always sat in opposition, and most of them keep below the gangway. The famous and now historic Fourth Party sat on the front bench of this quarter of the House, until its existence as such was terminated on the formation of the first Salisbury cabinet. By ancient custom the two members for the City of London sit on the Treasury Bench on the first day of the meeting of a new Parliament. The legislative duties of Ministers are familiar to most readers, but a word or two concerning some of them may be said here. If the Secretary for War and the First Lord of the Admiralty are peers, the Financial Secretary to the War Office generally, and the Secretary to the Admiralty, have charge of the Estimates. The Education Estimates for England and Wales are introduced by the Vice-President. A goodly number of the Civil Service Estimates are in charge of that hardly worked official, the Financial Secretary to the Treasury; and he is bound to be well up in a large mass of detail, not only as regards them but other parliamentary matters, for he arranges the course of Government business in the House of Commons. The Patronage Secretary as principal ministerial whip endeavours to secure a good attendance of members of his own side when Government business is being transacted, issuing on important occasions summonses, which are also called whips, and which, according to the urgency of the case, are emphasized by three, four, or five underlines. He is aided in his important party duties by the Junior Lords of the Treasury and the holders of subordinate Household appointments, or some of them; and with their assistance, too, he tells for the Government in divisions (*q.v.*). See *PARLIAMENT*, *SPEAKER*, *ELECTION*, etc. The important changes in the rules of the House, made during the sessions of '88, are noticed in detail under *PARLIAMENTARY PROCEDURE*, and for the provisions of the Oaths Bill see *Session*, sect. 37.

COMPLETE ALPHABETICAL AND BIOGRAPHICAL LIST OF MEMBERS OF THE

NOTES.—In cases where members possess a double surname (e.g., *Hicks-Beach*),

The asterisk (*) denotes Member of the last Parliament.

Names when given in italics indicate those members who, though returned at the General

For other "specialties" of members see last edition.

* For Tabulated Summary of Present Position of Political Parties, see next page. In view of the many changes that have occurred since the General Election of July 1886, and the increase of registered voters, we do not repeat the tables given in 1887 under that head. The reader will, however, find a complete list of all subsequent alterations in the representation under the head of ELECTIONS, BYE.

* The bye elections held between this General Election and the next resulted in a Conservative gain of two seats. † The Speaker is counted with the Liberal Unionists.

Commons, Principal Officers of House of. *Chairman of Ways and Means*, L. H. Courtney, Esq., M.P.—*Clerk of the House*, R. F. D. Palgrave, Esq., C.B.—*Clerk Assistant*, A. Milman, Esq.; *Second Ditto*, F. B. G. Jenkinson, Esq.—*Principal Clerks*: W. A. Ferguson-Davie, Esq., *Public Bills and Fees*; G. J. Stone, Esq., *Committee Office*; James B. Bull, Esq., *Clerk of the Journals*; Felix H. Webber, Esq., *Private Bill Office*.—*Senior Clerks*: C. E. A. Leigh, W. M. Molyneux, G. Laughton, W. Gibbons, E. H. Ley, C. Forster, Esqs.—*Assistant Clerks*: R. Dickinson, F. St. George Tupper, W. H. Ley, J. H. W. Somerset, H. C. Tower, C. E. Frere, L. T. Le Marchant, G. C. Gifford, A. W. Nicholson, E. H. Doyle, Hon. A. G. Brand, and S. L. Simeon, Esqs.—*Examiners of Petitions for Private Bills*, J. H. Robinson, C. W. Campion, Esqs.—*Taxing Master*, C. W. Campion, Esq.—*Clerk to Examiners and Taxing Master*, H. C. Tower, Esq.—*Librarian*, R. Walpole, Esq.—*Clerk in charge of Accounts*, W. O. Mayne, Esq.—*Shorthand Writer*, W. H. G. Salter, Esq.—*Secretary to Speaker*, E. Ponsonby, Esq.—*Serjeant-at-Arms*, H. D. Erskine, Esq.—*Deputy Serjeant*, F. R. Gosset, Esq.—*Assistant Serjeant*, Hon. E. H. Legge.—*Chaplain*, Hon. and Rev. F. Byng, M.A.—*Speaker's Counsel*, Hon. E. Chandos Leigh, Q.C.—*Referee of Private Bills*, Alfred Bonham Carter, Esq.

Commons, L.A. See ed. '88. **Commons in France** are territorial divisions under the jurisdiction of a mayor.

Commutation of Tithes. See TITHES.

Comoro Islands, The, a group of volcanic islands in the Mozambique Channel, between the east coast of Africa and the north-west coast of Madagascar. Area 758 sq. m., pop.

63,000. The group consists of four small elevated islands—Great Comoro, Mohilla, or Little Comoro, Anjuan, erroneously called Johanna, and Mayotta or Mayotte. Mayotte is a French possession, and the other islands form a French protectorate. Commercially the most important is Mohilla, which carries on a brisk trade with Madagascar, Zanzibar, Mozambique, and the rest of the mainland. The people are Mohammedans, speak Arabic, and are akin to the mixed races of Zanzibar. They were ruled by sultans. In 1841 France acquired Mayotte, and her influence has grown until, in 1886, she obliged the independent chiefs to place themselves under her protection. In spite of this a rupture occurred in 1887 between the Sultan of Johanna and the French authorities, and an armed demonstration was resorted to by the latter to enforce their claims. A British consul is resident. See COLONIES OF EUROPEAN POWERS.

Companies' Bill. See SESSION, '88, sect. 10.

Company Law in '88. Numerous important decisions respecting limited liability companies have been pronounced by the courts of law during the year. In the case of the **Land Development Association** an interesting question was raised under the much-litigated section 25 of the Act of '67, which provides that all shares shall be deemed to be held subject to payment in cash unless otherwise determined by a contract in writing filed with the Registrar. **Mr. Kent**, being a shareholder, purchased a debt due from the company to **Mr. Nichols**, and wrote requesting the directors to transfer to him from the sum due to Nichols the amount necessary to pay up his shares in full. A resolution was passed assenting to this, but except

for a minute of this resolution there was no entry in the books to show that Kent's shares were paid up, and no contract under sect. 25. Accordingly, Mr. Kent having been placed on the list of contributories in the winding-up, was held liable for calls by Mr. Justice Kay, and that decision was affirmed by the Court of Appeal.—In *re the South London Fish Market Company*, the court answered in the negative the question whether a director can validly make a nominal transfer of his qualification shares, and decided that a winding-up can be ordered, notwithstanding that by reason of such transfers there were less than three registered shareholders.—In the case of the **Anglo-Indian and Colonial Industrial Institution** it was also decided that a shareholder, whose transferred shares had not been registered within a year before the order to wind up the company, must be placed upon the list of contributories. In the case of **Peek v. Derry**, a tramway company had stated in its prospectus that it was authorised to use steam power, whereas in reality it could only have such power subject to the consent of the Board of Trade, which afterwards refused to grant it. The Court of Appeal held that the directors were liable in damages to a shareholder who had taken his shares in reliance upon this misstatement, even though at the time the prospectus was issued they might have believed that the consent of the Board of Trade would be given.—In another action for damages, that of **Dunoon v. Seafie**, the plaintiff had taken shares in a company whose prospectus alleged that it would be able to manufacture varnish from amber waste. An examination of certain specimens of the company's varnish proved that there was no decomposed amber therein, and it was suggested that the company had not really, as alleged, overcome the difficulty of employing amber waste for this purpose. In the result the Court found for the plaintiff.—In another case, that of the **British Burmah Land Company Limited**, the prospectus contained a florid description of the property acquired by the company, and of the minerals actually discovered therein. On the faith of this the plaintiff applied for shares, but it afterwards turned out that the prospectus was inaccurate, and the company had afterwards to be wound up. It appeared that the supposed mine was practically worthless, and that the proportion of ore obtained would not pay the cost of working. Mr. Justice Kay said he had never heard of more gross mis-statements, and directed the company to repay the applicant's deposit with interest and costs. In the case of **Barton v. The North Staffordshire Railway Co.** (March), Mr. Justice Kay held that a railway company was liable to replace stocks or shares which had been transferred by forged transfers. In connection with the winding up of the **Exchange Drapery Co.**, a novel question was raised as to whether, when there were more than sufficient assets to repay the shareholders advances made by them on their shares beyond the amount actually called up, the amount of these advances should be repaid with interest. Mr. Justice Kay decided the point in the affirmative. In the case of the **Faure Electric Accumulator Co.** (Chancery Division, Nov.), a question came before the Court for the first time for direct decision—namely, whether directors are justified in paying out of the moneys of their company commission to brokers or other

agents for "placing," or inducing the public to take, shares. Mr. Justice Kay decided that the practice was illegal.

Compensation for Improvements (Ireland) Bill, 1884. See ed. '88.

Compensation for Improvements. See AGRICULTURE.

Comptroller and Auditor-General. See EXCHEQUER and FINANCE.

Comptroller of the Household (see MINISTRY) is the second officer under the Lord Steward of the Household (*q.v.*), and checks and examines the expenses of the royal household. He is always a Privy Councillor.

Confucianism. The name commonly given to the State religion of the Chinese Empire, from *Confucius* (*khung-fu-tszé*, "the Master Khung," B.C. 551—478), the most celebrated of its sages. He was not, however, the author of the religion or of its moral teachings, but only a prophet. Confucianism consists in the belief in and worship of one Supreme God, who has appointed government by rulers for the good of all, and instruction by sages and intelligent teachers to make all acquainted with His will. Reverend fear and worship is obligatory in all, but the formal worship of God is restricted to the sovereign of the empire, as the parent of the people. In connection with this cult there prevails ancestor worship by all classes of the people, and in connection with this filial duty is celebrated as the chief and crown of all virtues. Communication and communion with spiritual beings is effected by the means of votive offerings, etc. See ed. '86, and consult "*Confucius' Life and Teachings*" (*Trübner*), '87.

Congo Railway. At the end of 1885 it was announced that the Government of the Independent Congo State had granted a concession to Mr. H. M. Stanley (*q.v.*), the explorer, and Mr. J. F. Hutton, President of the Manchester Chamber of Commerce, acting on behalf of the Congo Railway Syndicate, for the construction of a line to connect the Upper and the Lower Congo, taking the traffic of the Congo basin. Many distinguished names were attached to the scheme, and it was arranged that subscription lists for capital, estimated nominally at two millions sterling, should be opened in the capitals of the fourteen powers which at the Berlin Conference agreed to maintain the neutrality of this region. (For the earlier history of the scheme see ed. '88.) About the beginning of March '87 Mr. J. F. Hutton issued a circular from 29, Dale St., Manchester, inviting subscriptions in furtherance of the Congo Co.'s railway scheme. He stated in it that, although the necessary £40,000 for a complete survey had been raised, the King of the Belgians desired that the scheme should have more of an international character, and therefore subscriptions were invited up to £80,000, of which £10,000 was reserved for England, the subscribers having certain privileges. On May 8th the authorised expedition sent out by the Company for the railway survey left Antwerp under Captain Thys; and from Brussels, under date Sept. 18th, it was stated that he had reported to the effect that so far the country offered no insurmountable difficulties to the making of the line. From Brussels (Dec. 19th) it was reported that the preparatory survey had reached to a point near Lakunga,

but that it had been temporarily stopped by the rainy season. A telegram dated Brussels, Aug. 31st, '88, stated that the engineering preliminary studies had nearly terminated. It was added that the line, which is to run from Matadi to Stanley Pool, will have a length of 350 kilometres, be of 75 centimètres gauge, and commence at seven metres above the level of the sea, rising gradually to 60 metres.

Congo River and Free State. The mouth of the Congo river was known to the Portuguese in 1485; till the middle of the seventeenth century their possessions on the south bank formed a great and flourishing province. In 1877 the British Government despatched an expedition under Captain Tuckey, who succeeded in getting up the great river 172 miles; and till 1877 "Tuckey's farthest" remained the limit of our knowledge. In 1867, however, Livingstone, while exploring the country between Lakes Nyassa and Tanganyika, discovered a great river rising in the Chibulé hills, named Chambezi. He followed it to Lake Bangweolo, whence it emerged as the Luapula, thence to Lake Moero, whence it was called Lualaba, and then north to a place called Nyangwé, in Manyiema, 1,500 miles from its source. He believed it to be the Nile. In 1876 the *New York Herald* and the London *Daily Telegraph* despatched an expedition under H. M. Stanley, who succeeded in following the river of Livingstone to its outlet as the Congo, 1,660 miles beyond Nyangwé. Thus, in 1877, one of the greatest water highways of the world was made known to civilisation and commerce. At the end of 1878 a "Comité d'Etudes du Haut Congo" was formed at Brussels, under the presidency of Colonel Strauch, and with the warm co-operation of Léopold II., King of the Belgians. The Comité appointed Mr. Stanley to carry out its intentions. It was a special branch of the International African Association, which had been founded in 1876 by King Léopold, and had committees in all leading countries, and had already gone to work in East Africa. Mr. Stanley proceeded to the mouth of the Congo in August 1879, coming there by sea, commissioned by what was now the "Association Internationale du Congo" to open up the river and endeavour to form a free negro state under European tutelage. He was assisted by a band of European associates, besides native Zanzibar recruits, and had a flotilla of small steamers. First station established at Vivi, 110 miles up, the limit of maritime navigation; now removed to Boma, a better site. Thence roads were constructed past the Yellala and Livingstone cataracts, in spite of apparently insuperable difficulties, and steamers were hauled up to the upper Congo. The station of Léopoldville was then formed on Stanley Pool; (1882). From this point there is uninterrupted navigation for steam-vessels to Stanley Falls, 1,068 miles higher up. The great affluents already explored give a total of 6,000 miles of waterway accessible from the Pool, and this may probably be increased to 14,000 by further exploration. The area drained by this section of the great river is estimated at 1,090,000 sq. miles, with a pop. of 30 or 40 per sq. mile. By tact and persevering kindness the hostility of the natives has been overcome, and for the most part they now welcome the white man. Numerous stations have been formed between Léopoldville and Stanley Falls. The following

is a table of distances along the Congo, as prepared by Mr. Stanley:—

	Miles.
Banana (Congo mouth) to Vivi, navigable for ocean steamers	110
Vivi to Isangila, by road past cataracts	50
Isangila to Manyanga, navigable water	88
Manyanga to Léopoldville, by road past cataracts	85
Léopoldville to Stanley Falls, navigable	1,068
Above Stanley Falls to Nyangwé, navigable	385
Nyangwé to Lake Moero	440
Lake Moero	67
Lake Moero to Bangweolo	220
Lake Bangweolo	161
Bangweolo to Chambezi sources	360

Total length of Congo highway 3034
The formation of a railway, to connect the navigation of the upper Congo with the sea, has been projected and commenced. The distance is 235 miles, and the cost is estimated at about £1,000,000. A French scheme is to connect the navigable Ogové with some affluent of the Congo by rail. In 1885 the Congo Free State was constituted and defined by the general Act of the International Congo Conference of Berlin, and entered into treaties with all the Great Powers, by which its status as a sovereign power was recognised. At the same time the boundaries of the new State were settled. Its area is estimated at 1,056,200 sq. m., pop. 27,000,000. There are four administrative provinces—the Lower Congo, the Pool, the Equatorial, and the Upper Congo—in which are various stations. The central Government is at Brussels, and consists of the King of the Belgians as sovereign, and three departmental chiefs. On the Congo there is an Administrator General under whom are several European administrators of stations and districts. Revenue is principally derived from a subsidy granted by King Léopold; expenditure is about £70,000. Exports and imports '86-87 valued at about £2,800,000 each. Chief exports, rubber, ivory, coffee, nuts, palm oil. Gold, copper, and other metals have been discovered. Districts are suitable for growing sugar, cotton, coffee, etc. In 1886 Arab slave-dealers broke up the station at Stanley Falls. At Léopoldville natives (Bangalas) have been drilled and armed by European officers, and form a force of 2,000 citizen-soldiers for the new state. The Emin Pasha Relief Expedition (q.v.) will restore peace on the Upper Congo, and open up hitherto unknown affluents of the great river. It was stated (Brussels, Jan. 6th, '88) that the contract between the Congo State and the Walford Company of Antwerp for the working of the Belgian-African Steamship service has come to an end. The State has made a new contract with the Anglo-African Steamship Company, which has already come into operation. The Congo State has not during the past year made any progress; the project for the railway (q.v.) to connect the Lower Congo with Stanley Pool still remains a project, and the unfortunate agreement which constituted the Arab slave dealer Tippoo Tib (see SLAVERY IN AFRICA) the governor of the Stanley Falls Station, while it has only nominally restored the authority of the Congo Free State there, has not done anything for the promotion of legitimate commerce, and has tended largely to the extension of all the evils resultant from slavery. Mr. Stanley's

expedition for the relief of Emin Pasha, from which much was hoped, has vanished from our knowledge, and only vague rumours have been received as to the fate and whereabouts of the gallant explorer and his companions, and the most reassuring of these rumours only add to our anxiety, which is intensified by the knowledge that Mr. Stanley had suffered severely in health during the last year of his stay in civilised countries, and did not therefore enter upon this undertaking with any reserve stock of strength. Of the fate of Major Barttelot and Mr. Jameson, who were to have followed in the footsteps of their leader, there is unfortunately no doubt, for, after a year of tedious waiting and patient suffering, when they at last set out Major Barttelot was shot by one of his followers, and Mr. Jameson shortly after died of fever. What they had to endure and witness during that year may be gathered from the reports of Mr. Ward in the *Illustrated London News*. No trust can be placed or hope founded on the reports we from time to time receive of a White Pasha in the neighbourhood of the Bahr El Gazal, for they are only bazaar gossip caused by inquiries which have been made at Suakim and Wady Halfa. If, indeed, there be any truth in these reports, the White Pasha is more likely to be Gordon than either Stanley or Emin. An important change in the administration of the Congo State has lately been brought about by appointing none but Belgians to the posts that fall vacant; and if before this change we had to complain of lack of information, we now have to deal with official reports which are in direct contradiction to those of competent and independent witnesses. Indeed, unless the State shortly enters upon a more satisfactory condition, it will be a question for Europe to consider whether sweeping changes shall not be made in its constitution. It is to be hoped, in any case, that the agreement by which France was made universal legatee of the Congo State may not be carried out, as if that were to happen a heavy blow would be struck at the future of British commerce in Africa. Consult Stanley's "Through the Dark Continent" and "The Congo," Wauter's "Le Congo," and "Proceedings of the Royal Geographical Society, 1885-8."

Congregationalism. This is the democratic form of church life. It is based upon three ideas: the right of each individual to take part in the government of the community; the autonomy of the local church; and its independence of all external ecclesiastical authority. While complete in itself, the local church may voluntarily unite with other churches for consultation and common action. But no resolution of any such union binds the individual church without its own consent. Usually each church has one minister or pastor, who is chosen by the free suffrages of the membership; but there is nothing to prevent there being more than one, and in fact such cases are not uncommon. In addition to the pastor or pastors, home missionaries and evangelists are sometimes appointed, whose work is distinct from, though subject to the supervision of, the regular pastorate. Congregational polity admits two orders of church officers only: bishops, elders, or pastors, who are the presidents or administrative rulers in the spiritual department of church life; and deacons, who have charge of its secular affairs. It claims to be of apostolic origin, and to be at once the highest and most natural organisation of the

life of the Christian Church. It presupposes the Christian character of all members of the Church, and requires a credible profession of faith in Christ. There are in the British Isles 4,645 Congregational churches, branch churches, and mission stations, with about 3,600 recognised and accredited ministers, in addition to upwards of 300 evangelists. In England and Wales alone there are 4,338 places of worship, with accommodation for 1,625,600 persons. County or district associations of these churches exist for the purpose of upholding and extending evangelical religion, of promoting the spiritual intercommunion of the churches, strengthening their fraternal relations, facilitating co-operation in everything affecting their common interest, aiding weak churches, and carrying on mission work within their respective areas. The **Congregational Church Aid and Home Missionary Society** expends in mission work through the county unions about £25,000 per annum. For foreign missions see **MISSIONARY SOCIETIES** (**London Missionary Society**). There is also a general union of the churches, known as the **Congregational Union of England and Wales**, which in 1881 celebrated its jubilee by originating a fund for church extension, paying off church and chapel debts, and for evangelistic and home missionary purposes. The sum raised in connection with this celebration amounted to nearly £400,000. There are fifteen colleges belonging to the denomination in the three kingdoms, in which between 400 and 500 students are being trained for the regular ministry. Various societies have been formed for church extension; and for conducting mission work. In connection with their operations an amount of over £4,500,000 has been expended. The British Congregational churches raise for the support of religious worship, and for philanthropic purposes, in connection with their own organisations, upwards of £1,000,000 per annum. Congregationalism is also a prominent form of church life in the United States of America, throughout the British dependencies, and in other parts of the world. The annual meetings of the C. U. were held in '88 in London (May), and Nottingham (October). **Offices**, Memorial Hall, Farringdon St., E.C. Sec., Rev. A. Hannay, D.D. **Chairman**, '89, Rev. F. J. Falding, D.D. (*q.v.*).

Congregational Lectures. These lectures, promoted by the Committee of the Congregational Library, were established in 1833, for the general purpose of treating various important religious questions from the standpoint of Congregationalism. Lectures were instituted with the view of being "delivered annually at the Library, or, if necessary, in some contiguous place of worship;" and were to partake, to quote the words of the advertisement issued by the Library Committee, Nov. 19th, '83, "rather of the character of academical predictions than of popular addresses." The design of the Committee was more particularly described as that of providing "courses of lectures on subjects of interesting importance, not included within the ordinary range of pulpit instruction." Such arrangements were made by the Library Committee with the lecturers as should tend "to secure the publication of each separate course without risk to the authors; and, after remunerating them as liberally as the resources of the institution will allow, to apply the profits of the respective publications in aid of the

Library." Notwithstanding that it was the intention of the Library Committee, as already indicated, that the delivery of the Lectures should be of annual recurrence, it happened, from one reason or another, that between '33, the year of their inauguration, and '60, the date of their suspension and titular termination, there were nine years in which there was default of this observance, the first being the year '38, whilst in '51 and '52, and again in '56 and '57, there were two consecutive years without a Lecture. The first Congregational Lecturer was the late **Rev. Ralph Wardlaw, D.D.**, of Glasgow, whose subject was "Christian Ethics; or, Moral Philosophy on the Principles of Divine Revelation"; the second was the late **Rev. Robert Vaughan, D.D.**, at that time Professor of Ancient and Modern History in the University of London, who in '34 delivered a course of lectures on "The Causes of the Corruption of Christianity." The Lecturer for '37 was the late **Rev. George Redford, D.D., LL.D.**, whose subject was "Holy Scripture Verified; or, the Divine Authority of the Bible Confirmed by an Appeal to Facts of Science, History, and Human Consciousness"; and in '39, a course of lectures "On the Relation between the Holy Scriptures and some parts of Geological Science," was delivered by the late **Rev. John Fye Smith, D.D., F.G.S.**, Divinity Tutor in the Protestant Dissenting College at Homerton, who was succeeded, in '40, by the late **Rev. William Lindsay Alexander, D.D.**, of Edinburgh, whose subject of treatment was "The Connexion and Harmony of the Old and New Testaments; being an Inquiry into the Relation, Literary and Doctrinal, in which these two parts of the Sacred Volume stand to each other." In '44 the Lecturer was the late **Rev. Robert Hailey, D.D.**, of Manchester, who gave a series of discourses on "The Sacraments: an Inquiry into the Nature of the Symbolic Institutions of the Christian Religion, usually called the Sacraments—Part I., Baptism"; which he supplemented, in '50, by a course on the same general subject of "The Sacraments—Part II., The Lord's Supper." The late **Rev. Richard Winter Hamilton, D.D., LL.D.**, of Leeds, expounded, in '47, "The Revealed Doctrine of Rewards and Punishments"; and in the following year the late **Rev. Samuel Davidson, LL.D.**, Tutor in the Lancashire Independent College, Manchester, delivered a series which bore the title of "The Ecclesiastical Polity of the New Testament unfolded, and its Points of Coincidence or Disagreement with Prevailing Systems indicated." In '55, the **Rev. John Stoughton, D.D.**, delivered a course of lectures on "The Ages of Christendom, before the Reformation; in '58, **Professor John H. Godwin**, of New College, St. John's Wood, lectured on "Christian Faith: its Nature, Object, Causes, and Effects; and finally, in '60, the **Rev. John Kelly**, Everton, Liverpool, discoursed on "The Divine Covenants, their Nature and Design; or, the Covenants considered as Successive Stages in the Development of the Divine Purposes of Mercy."

"**Congregational Review**" (1s. monthly). Commenced Jan. 1887, and is a new series of *The British Quarterly Review* and *The Congregationalist*. It contains a record of passing events of Congregational churches, while attention is given to Biblical and theological questions, Church history, and also to general

literature. Editor, **Rev. J. Guinness Rogers, B.A.** Office: 26, Paternoster Square, E.C.

Congregational Union Lectures. The institution of these lectures, which took place in 1873, was essentially a revival of the almost identically named Congregational Lectures (*q.v.*), which had been in abeyance for some thirteen years, and the first projection of which was as nearly as possible coincident with the existence or incorporation of the Congregational Union. The essential identity of the two foundations is illustrated by the fact that for the first year or two the name of the former was alternatively and almost indifferently applied to the latter; which, however, presently attained its existing style and title as its permanent and exclusive designation. The responsibility for the opinions expressed by the Lecturer are not assumed by the Union (see an Advertisement by the Committee of the Congregational Union of England and Wales, dated January '74).

The **C. U. Lecture** has been established with a view to the promotion of Biblical science, and theological and ecclesiastical literature. It is intended that each lecture shall consist of a course of prelections, delivered at the Memorial Hall; but when the convenience of the Lecturer shall so require, the oral delivery will be dispensed with. The committee hope that the lecture will be maintained in an unbroken annual series; but they promise to continue it only so long as it seems to be efficiently serving the end for which it has been established, or as they may have the necessary funds at their disposal. The first series of **C. U. L.**, still called "The Congregational Lecture of '73," had for its subject "The Superhuman Origin of the Bible inferred from itself"; and the Lecturer was the late **Henry Rogers Emeritus** Professor of Theology, Lancashire Independent College, Manchester, probably best known as the author, out of all his works, of the "Eclipse of Faith." The four subsequent Lecturers, in their consecutive order, were **Rev. Henry Robert Reynolds, D.D.**, Professor of Theology, New Testament Exegesis, and Church History, Cheshunt College, whose subject was "John the Baptist: a Contribution to Christian Evidences"; **Rev. Robert William Dale, M.A.**, Birmingham, who lectured on "The Atonement"; **Rev. Enoch Mellor, D.D.**, Halifax who delivered a series of discourses on "Priesthood in the Light of the New Testament"; and **Rev. Eustace Rogers Conder, M.A.**, Leeds, who in '77 lectured on "The Basis of Faith: a Critical Survey of the Grounds of Christian Theism." From the last-named year till '81 no lectures were delivered. The Lecturer for '81 was **Rev. J. Guinness Rogers, B.A.**, Clapham, whose subject was "The Church Systems of England in the Nineteenth Century." The year '82, the fiftieth year of the existence of the Congregational Union, witnessed the publication of two composite and varied volumes, the aggregate of whose contents aimed at being nearly exhaustive of the entire *rationale* of Congregationalism, with the title of "Jubilee Lectures: a Historical Series delivered on the Occasion of the Jubilee of the Congregational Union of England and Wales, with an Introductory Chapter." This introductory chapter, which was by **Professor A. M. Fairbairn, D.D.**, and was entitled "Ecclesiastical Polity and the Religion of Christ," was not delivered as a lecture, but was prepared at the request of the Committee after the lectures had been delivered. The lectures proper were eleven in number: I. "The Early Inde-

pendents," by **Rev. E. W. Dale**, Birmingham; **Jl.** "Laud and the Puritans," by **Rev. Henry Allon**, D.D.; **III.** "The Westminster Assembly," by **Rev. J. Stoughton**, D.D.; **IV.** "Independents in the Days of the Commonwealth," by **Rev. Eustace R. Gonder**, M.A.; **V.** "The Policy of the Restoration, and of the Reign of Charles II.," by **Rev. J. Kennedy**, D.D.; **VI.** "Bishop Burnet and Contemporary Schemes of Church Comprehension," by **Rev. S. Pearson**, M.A.; **VII.** "The Struggle for Civil Liberty in the Georgian Era," by **Rev. J. B. Brown**, B.A.; **VIII.** "The Evangelical Revival in the Georgian Era, and its Effect on the Development of the Free Church Principle," by **Rev. A. Mackennal**, B.A.; **IX.** "Broad Church Doctrine and Independency," by **Rev. Edward White**; **X.** "Clericalism and Congregationalism," by **Rev. J. G. Rogers**, B.A.; and **XI.** "Nonconformity in Wales," by **Henry Richard**, M.P. The next series of the Congregational Union Lectures, and the latest, being the series for '88, was delivered by **Rev. Alfred Cave**, B.A., Principal and Professor of Theology and Hebrew, Hackney College, whose subject was "The Inspiration of the Old Testament inductively considered."

Conjugal Rights, Restitution of. See ed. '87.
Connaught and Strathearn. **H.R.H. Prince Arthur William Patrick Albert**, P.C., K.G., K.T., K.P., G.C.S.I., G.C.M.G., 1st Duke of (creat. 1874), was b. 1850. The third son of the Queen. Mar. the Princess Louise Margaret, youngest dau. of Prince Fredk. Charles of Prussia (1879). Commanded a Division in the Egyptian Expedition (1882). Holds a similar command in Bengal Presidency.

Constantinople. Otherwise called **Byzantium**. Enlarged by Constantine the Great, who removed thither the seat of the Eastern Roman Empire (A.D. 330). This most powerful situation for dominating Europe has always been in the hands of a decaying power. The Turks wrested it from Christian hands (1452), and it is now the capital of Turkey, situated on the waterway between the Black Sea and Mediterranean. It has long been coveted by Russia, and attempts to possess it have been the cause of expeditions for the last thousand years. The population of Constantinople exceeds a million, and is, therefore, larger than that of any Russian city. To protect it, the Berlin Treaty left on the European side a portion of territory about the size of England and Scotland combined (80,000 sq. m.), and a population of 5,250,000. See ed. '86.

Constitutionalist. See ed. '88.

Consul, A. is a diplomatic agent appointed to advise upon and protect the interests of traders of his own country in the foreign town at which he is resident, to certify and attest acts and documents, and to report upon the trade of the country to his Government. He may further celebrate marriages of the subjects of his own sovereign under foreign jurisdiction, and take evidence on oath respecting crimes committed on board vessels of his own nationality. A **Consul-General** is a consul

who at the same time holds a post of *Chargé d'affaires*. Consuls were first appointed in the sixteenth century.

Contagious Diseases Acts, '68, '69. See ed. '87.

Contagious Diseases (Animals) Acts, '78, '84, and '86. See ed. '88.

"Contemporary Pulpit" (monthly, 6d.). Founded Jan. 1883. Furnishes in its pages selected sermons from the greatest living preachers of the day; giving, in addition, exegetical outlines by experienced divines on texts for the Church's year, with copious references to all available sources of information. Office, 6, White Hart St., Paternoster Sq., E.C.

"Contemporary Review" (monthly, 2s. 6d.). Founded Jan. '66. First editor, **Dean Alford**. From the first it has paid particular attention to theological questions, treating them in a broad and Catholic spirit, and often giving successive articles on the same subject from writers of various schools and churches. It has also always given full scope for the discussion of all great questions, religious, social, political, literary, and artistic, by the leading writers of the day. Many eminent Continental and American authors write in its pages. The C. R. gives regularly signed surveys of "Contemporary Life and Thought" in various countries by competent writers on the spot. Editor, **Mr. P. W. Bunting**. Office, 56 Ludgate Hill, E.C.

Contempt, Committal of Members of Parliament for. See **PRIVILEGES OF MEMBERS**.

Contempt of Court, Law on, in '88. While the action of *Peters v. Bradlaugh* was pending in the Queen's Bench Division (March), the editor of the *St. Stephen's Review* wrote an article which included the following: "The thing is monstrous; more especially as Mr. Bradlaugh is acting, not merely for self advertisement, but to keep an accusation which he knows to be false as long as possible without legal refutation, so that the public mind may be poisoned by it, and the impending elections influenced." Attention was called to this as a gross contempt of court, and the editor of the journal in question was fined £50, and directed to pay costs. A more recent case of contempt is that of **Mr. Edward Harrington**, M.P., who, for publishing in the *Kerry Sentinel* an article stating that the Parnell Commissioners, who formerly appeared "spotless," had now got the "measles," was fined £500.

"Continued Irrelevance." See **PARLIAMENTARY PROCEDURE**.

Convention of '84. See **BECHUANALAND**.

Convocation. The clerical parliament of the Church of England. Was prorogued in 1717, and did not meet again till the year 1850, when it once more found voice, after a silence of 135 years. Sits now thrice yearly. First sat in its present form in the fourteenth century. (Convocations or Synods without the authority of the Crown date from the very earliest times.) It consists of **two Houses**—the **Upper** and **Lower**. There is also a separate Convocation for each of the two great ecclesiastical divisions of England, called **Provinces**. The **Upper House** consists of the several bishops of the provinces, as enumerated below. The **Lower House** is composed of the Dean of every cathedral and Archdeacons of the dioceses of the province, with Proctors elected by the clergy of every diocese. They represent (1) the cathedral chapters, and (2) the minor clergy.

A fresh election of Proctors is made with every new parliament. In Convocation are discussed, and resolutions passed upon, all matters affecting the interests of the Church, both doctrinal and administrative, as also the spiritual welfare of the nation at large. But any resolutions which suggest an alteration in the services, rites and ceremonies, or the rubrics of the Church service, as contained in the Book of Common Prayer, cannot be discussed in Convocation with the purpose of making such alterations, either in the Prayer-Book or in the Canons, without the Queen's Licence and Letter of Business, giving them the authority so to do, having been first obtained. And no such alteration made by such authority can be adopted and put in force without the authority of both Houses of Parliament. **Houses of Convocation.**

[In the Lower Houses those marked * are Proctors for the Chapter; those marked † Proctors for the Clergy.] **PROVINCE OF CANTERBURY.**

—1. **The Upper House.** Archbishop of Canterbury, *President*; Bishops of London, Winchester, Bangor, Bath and Wells, Chichester, Ely, Exeter, Gloucester and Bristol, Hereford, Lichfield, Lincoln, Llandaff, Norwich, Oxford, Peterborough, Rochester, St. Albans, St. Asaph, St. Davids, Salisbury, Southwell, Truro, and Worcester. 2. **The Lower House.** *Prolocutor*: Right Rev. George H. Sumner, D.D., Suffragan Bishop of Winchester. *Cantabury*—Dean R. P. Smith; Archdeacons Parry (Bishop Suffragan of Dover) and B. F. Smith; *Rev. Canon Rawlinson, †Rev. Canons Puckle and H. A. Jeffreys. *London*—Deans Church and Bradley; Archdeacons Gifford, Hessey, and Farrar; *Revs. Canons Gregory and Prothero, †Rev. A. Brooke and Canon W. Cadman. *Winchester*—Dean Kitchin; Archdeacons Sumner, Sapte, and Henry Haigh; *Rev. Canon Warburton, †Rev. V. Musgrave, and one vacant. *Bangor*—Dean Lewis; Archdeacons Pryce and Evans; †Revs. P. C. Ellis and D. W. Thomas. *Bath and Wells*—Dean Plumtre; Archdeacons Denison, Browne, and Fitzgerald; *Rev. Canon Bernard, †Rev. Prebendaries A. C. Ainslie and Edwin A. Salmon. *Chichester*—Dean Pigon; Archdeacons F. J. Mount and R. Sutton; *Rev. Canon J. F. Crosse, †Rev. H. Bailey. *Ely*—Dean Merivale; Archdeacons Emery, Chapman, Bathurst, and Vesey; *Lowe, †Rev. Canons W. B. Hopkins and J. H. Macaulay. *Exeter*—Dean Cowie; Archdeacons Herbert Barnes, C. T. Wilkinson, and E. G. Sandford; *Rev. Prebendary Kempe; †Rev. Prebendary Sadler and G. R. Prynn. *Gloucester and Bristol*—Deans Spence and Elliott; Archdeacons Norris, Hayward, and Sheringham; *Rev. Canons Tining and Nugent Wade, †Rev. Canons Medd and Mather. *Hereford*—Dean Herbert; Archdeacons Maddison and Stanhope; *Sir F. A. Gore-Ouseley, †Revs. H. W. Phillott and E. F. Clayton. *Lichfield*—Dean Bickersteth; Archdeacons T. B. Lloyd and E. Lane; *Rev. Canon J. G. Lonsdale, †Revs. J. T. Jeffcock and Bishop Stamer. *Lincoln*—Dean Butler; Archdeacons Kaye and Trollope (Bishop Suffragan of Nottingham); *Rev. Sub-Dean Clements, †Revs. G. G. Perry and A. S. Wilde. *Llandaff*—Dean Vaughan; Archdeacons W. C. Bruce and Griffiths; *Rev. Canon Evans, †Revs. C. R. Knight and J. T. Harding. *Norwich*—Dean Goulburn; Archdeacons Perowne, Woolley, and Neville; *Rev. Canon J. M. Nisbet, †Revs. Canon C. Frere and Hinds Howell. *Oxford*—Dean Liddell; Arch-

deacons Palmer, Pott, J. L. Randall; *Rev. Canon Bright, †Revs. Canon E. Savory, and G. N. Freeling. *Peterborough*—Dean Perowne; Archdeacons Thicknesse, Lightfoot, and Mitchinson (Assistant Bishop); *Rev. Canon Argles, †Rev. Canons Thos. Yard and H. Twells. *Rochester*—Dean Hole; Archdeacons Cheetham, Richardson, and Burney; *Rev. Canon H. W. Burrows, †Rev. Canons Erskine, Clarke and the Hon. A. Legge. *Salisbury*—Dean Boyle; Archdeacons Lear, Sanctuary, and Buchanan; *Rev. Canon Swayne, †Revs. Canons E. A. Dayman and Prebendary R. B. Hutchings. *St. Albans*—Archdeacons Lawrance, Blomfield (Bishop Suffragan of Colchester), and Johnson; †Revs. E. T. Vaughan and T. Scott. *St. Asaph*—Dean (vacant); Archdeacons D. R. Thomas and Smart; *Rev. William Howell Evans, †Revs. Canon William Richardson and J. E. Hill. *St. Davids*—Dean Allen, Archdeacons De Winton, North, James, and Hilbers; *Rev. Canon Phillips, †Revs. Canon Bevan and J. Walters. *Southwell*—(no dean); Archdeacons Balston and Maltby; * (none); Rev. Canon Grey and Rev. Thomas H. Frere. *Truro*—(no dean); Archdeacons Cornish and Hobbhouse; * (none); †Rev. Canons Hockin and Thynne. *Windsor*—Very Rev. R. Thomas Davidson; †Canon E. Capel Cure. *Worcester*—Dean John Gott, D.D.; Archdeacons Bree and Lea; *Rev. Canon Melville, †Revs. W. W. Douglas and H. B. Bowlby. *Vicar-General*: Sir J. P. Deane, Q.C., D.C.L.; *Registrar*: Sir John Hassard; *Actuary*: F. Cobb, Esq.; *Apparitor-General*: Sir J. Hanham, Bart. **PROVINCE OF YORK.**

—1. **The Upper House.** Archbishop of York, *President*; Bishops of Durham, Ripon, Chester, Carlisle, Liverpool, Newcastle, Wakefield, and Sodor and Man. 2. **The Lower House.** *Prolocutor*: Rev. Chancellor Espin, D.D. *York*—Dean Purey-Cust; Archdeacons Crosthwaite, Blakeney, Blunt, and Yeoman; *Rev. Canons Randolph and Fleming, †Revs. Canons Raine F. W. Peel, Machell, Watson, and Revs. C. N. Gray, H. Favell, W. R. Sharrock, and T. Rigby. *Durham*—Dean Lake; Archdeacons Long and Watkins; *Rev. Canon Evans, †Rev. Canons Grey, Falconer, Bailly, and Chancellor Espin. *Carlisle*—Dean Henderson; Archdeacons Cooper, Crosse, and Prescott, * (vacant), †Rev. Canons Phillips, Knowles, Hayman, Stock, Bardsley, and W. A. Matthews. *Chester*—Dean Darby; Archdeacons Barber and Gore; *Rev. Canon Hillyard; †Rev. Canons Cooper and Dodd; Revs. W. H. Lowder and E. C. Turner. *Liverpool*—(no dean); Archdeacons Clarke and Lefroy; * (none); †Rev. Canons Jones, Blundell, Warr, and Penrhyn. *Manchester*—Dean Oakley; Archdeacons Anson, Hornby, and Rawstorne; *Rev. Canon Cranc, †Rev. Canons Birley and Heywood, and Revs. S. Hastings, W. Rawstorne, and W. Champneys. *Newcastle*—(no dean); Archdeacons Hamilton, and Martin; * (none); †Rev. Canons Mason, Lloyd, Grey, and Waite. *Ripon*—Dean Fremantle; Archdeacons Cust and Boyd; *Rev. Canon Holmes, †Rev. Canons Owen, Jackson, Ellison, and Brooke. *Wakefield*—(no dean); Archdeacons Brooks and Stratton; no proctors yet elected. *Sodor and Man*—(no dean); Archdeacon Hughes-Games; †Rev. W. Kermode. *Archbishop's Commissioners*: the Dean, Canons Residential of York, and Canon Raine; *Synodal Secretary*: Rev. Canon Wright; *Registrar and Notary*: Hon. A. Hudson, Minister Yard, York; *Treasurer*: Canon Randolph.

Cookery. See ed. '88, and further '89.

Coolie, or Cooly, an unskilled Asiatic labourer, is a word of uncertain origin. It was first used in 1727 to describe labourers who unloaded Dutch ships at Nagasaki. Now it is used in Canton to designate all labourers in European factories. For many years, however, it has been employed almost exclusively to describe Indian and Chinese labourers who work under contracts of service on foreign plantations. (For history of the Coolie trade see our edition of 1886.) The over-peopled countries of India and China, where the touch of civilisation was overcoming the popular dread of emigration, were naturally the fields which were drawn upon by the Coolie importers. Coolies are hence divided into two classes—(1) Chinese, (2) Indians. The trade in Chinese Coolies was first recognised by the British Government in 1844, when Coolies were first introduced into Guiana under certain regulations. Peru and Cuba next followed our example—the usual terms made with the Coolie being \$17 a month, with food, clothing and lodging. Coolie labour has been successfully introduced into Natal. On Dec. 31st, '87, the number approximately estimated to be in the colony was 28,944, of which 7,040 were indentured to fixed masters, the remainder, 21,904, being free to select their own employers, or to work for themselves. The total number brought to Natal Nov. 17th, '60 to Dec. 31st, '87, was 35,750.

Co-operation. In England co-operative societies are united under the Co-operative Union, which began to form after 1869, the year in which the first Co-operative Congress was held. A central Co-operative Board was then formed, consisting of London and provincial members. This Board now consists of six sections—the Midland, Northern, North-Western, Scottish, Southern, and Western, and comprises fifty-three members. These six sectional Boards meet twice every year—on the Saturday before the meeting of the Congress, and on the Wednesday during the Congress. The governing body of the Union is the United Board, the members of which are representatives from the above six sectional Boards. This organisation directs and promotes the cause of co-operation. The number of societies already enrolled under the Union (which enrolment is conditional on the payment of a halfpenny per quarter per member) is, according to the latest published returns, in Great Britain 1,281. The members of these societies number close on 850,000, their share capital is £9,500,000 sterling, loan capital £2,000,000, their annual sales exceed £31,000,000, and their net profits are about £3,000,000. Every year the movement expands; it has an organ, *The Co-operative News*, which took the place of the *Co-operator* in '71; it has an Insurance Company, and has made considerable headway in Co-operative Cottage Building. It is usual to trace the origin of co-operation to the Rochdale Pioneers; as a matter of fact, however, many co-operative stores were started previous to the Rochdale experiment. These lacked the distinctive feature of co-operation as now understood, all the profits being distributed among the shareholders, and were in no way different from ordinary joint stock enterprises, though they assumed the name "Co-operative." It was in '44, then, and by twenty-eight poor weavers of Rochdale, that the genuine co-operative movement was inaugurated. These

weavers clubbed together, and by paying two-pence or three-pence a week into a common fund, purchased tea and sugar from a wholesale shop. This they sold to one another at the ordinary prices. The profits realised were great; and others joined them—bread, meat, and clothing being added to their stock-in-trade. In '56 this society was known as the Rochdale Pioneers, and possessed a capital of £12,000. The profits of the undertaking were divided at the end of each quarter between the shareholders and the customers—5 per cent. being first allotted to capital, and the surplus then distributed amongst the purchasers according to the amounts purchased. A portion of the profits—2½ per cent.—was always devoted to education. Meanwhile the example of the Rochdale pioneers was being rapidly followed in other parts of the country. A wholesale department was commenced in '52 to supply the various stores; then came a corn-mill, and a cotton mill, and in '60 the Co-operative newspaper was started. In '62 the first Parliamentary returns of the co-operative movement were made to the Registrar, and then there were already in existence 450 societies, with 90,000 members, and £450,000 share and loan capital; their annual sales amounted to £2,350,000, and their profits to £166,000. This was the result only eighteen years after the humble efforts of the Rochdale Pioneers. Soon after this the Co-operative Printing Society and the Co-operative Insurance Company were formed. In '63 the wholesale depot was opened at Manchester; it has now branches in London and Newcastle, and does a trade of more than £2,000,000 a year. In '68 the Scottish Co-operative Wholesale Society began at Glasgow; its branches are at Dundee, Leith, and Kilmarnock and its annual trade is a million and a half sterling. Socialists are now, too, developing the co-operative idea, and on July 11th, '88, was registered the Socialist Co-operative Federation, Limited. It will be seen from the preceding statements that co-operation has been successful mainly in distributing the products of industry; much headway has not yet been made in this country in what is called productive co-operation. True, there are over sixty productive societies, and an attempt at co-operative agriculture has been made. Still the ideas of co-operators on this branch of the subject are not very clear, and the chief advances made have been by private firms admitting their employees as shareholders, and as sharers in profits. Recent movements have been set on foot amongst the Tyneside engineers and a few workmen in Poplar with a view to united action on the lines of productive co-operation. It is in France, however, that co-operative production has reached its highest development. In Paris some masons united into a co-operative society in '48. They laid by one-tenth of their earnings until they got together a sufficient amount to start business. By '60 there were 107 of them, with a capital of £14,500. They employed only shareholders, devoting two-fifths of the profits to paying the annual dividend, and the remaining three-fifths went as bonuses to the labourers. A similar association was started amongst the Parisian pianoforte makers, and other trades. The Familistère of Guise is perhaps the completest co-operative association that has yet been realised. It was founded by M. Godin, the great ironmaster of Guise. In '65 M. Godin built a mansion to accommodate eight hundred of his

workpeople. In '69 schools, a theatre, baths, and wash-houses were added. In '77 he began a system of profit-sharing among his workers, and in '80 he incorporated his workshops, the mansion, stores, schools, theatre, etc., into one great co-operative society, under conditions that enable the whole to become the property of the workers and their families, who then numbered 7,040. The store that supplies the wants of this society brings in a large profit, which is divided amongst the purchasers and the schools. The children are kept in the nursery, a large well ventilated room, until they are three and a half years old; they then go to school until they are fourteen, when the boys go into the factory, and the girls to perform the various domestic duties of the community. Three doctors and two nurses reside in the *Familistère*, and a fund is set apart to provide pensions in cases of sickness and old age. The promoter of this great and good work died early in '88. "The Co-operative Traveller Abroad," by Arthur Standing, is the most recent work on the *Familistère* (price 1s.). Just as England leads the way in Distributive Co-operation, and France in Productive Co-operation, so Germany leads in Co-operative Banking. This is due to the efforts of Schulze-Delitzsch, the economic opponent of Lassalle. The object of Schulze-Delitzsch was to enable the labourer to obtain command over capital, and this was to be accomplished by associations of labourers into which individuals paid subscriptions. The funds so raised are lent out at interest, and the profits of the business are distributed amongst the subscribers. There are over a thousand of these Schulze-Delitzsch Credit associations in Germany. Among the leading Co-operators in England are G. J. Holyoake, whose *History of Co-operation* is a standard work on the subject; and Judge Hughes, Q.C., who has also written largely on it. A useful little book has been written by A. H. Dyke Acland and E. Jones, giving a concise statement of the history and present condition of co-operation; its title is "*Working Men Co-operators*." Consult also the "Annual Diary of the Co-operative Wholesale Society," and for an account of French Co-operative Production, Sedley Taylor's "Profit-sharing between Capital and Labour," Mill's "Principles of Political Economy," and Fawcett's "Manual of Political Economy": each contains an interesting chapter on the subject.

Co-operative Societies (usually called Industrial and Provident Societies). According to the latest report, the number of Co-operative Societies in the United Kingdom, making returns in 1886, was 1,351; the total membership was 841,848; the share capital amounted to £9,442,159; and the loan capital £1,999,658. The cash received during the year was £31,324,382; and the trade charges £1,723,843. The Societies showing sales of over a quarter of a million were—The Co-operative Wholesale, Civil Service Supply Association, Leeds Industrial Co-operative, Sowerby Bridge United District Flour, Oldham Industrial Co-operative, Bury Co-operative, Great and Little Bolton Co-operative, Newcastle-upon-Tyne Co-operative, Gateshead Co-operative, Barnsley British Co-operative, and Rochdale Equitable Pioneers. The Co-operative Wholesale has developed very large proportions, and has a turn-over of nearly £5,000,000. It has recently erected extensive premises in London.

Coopering at Sea. Coopering is a species

of trade carried on with mariners (principally fishermen) while at sea. The articles offered for sale on those "floating grog shops," as the coopers' vessels are termed in nautical phraseology, are inferior tobacco and different kinds of spirits. Coopers ply their trade on all parts round the coast of the United Kingdom where fishermen congregate; but are to be found in their largest numbers in the North Sea. Their goods are eagerly purchased by fishermen and others, being cheaper than when purchased on shore—as they are exempt from the usual heavy duty. An International Congress of the European countries interested in the system, at the Hague in '87, formulated important rules relative to coopering at sea. See SESSION '88, sect. 36.

Cooper's Hill College. See ROYAL COLLEGE OF ENGINEERING.

Copais Lake Drainage.—To complete this great scheme of reclamation, which was described in ed. '87 (a drainage canal, the work of five years, was opened on June 12th, '86 in the presence of the French Minister and other distinguished persons from Athens, as mentioned in our last volume) the French Company was reconstituted in the form of an English Company, and in Feb. '88, asked subscriptions for £150,000 of 6 per cent. First Mortgage debentures at £95 per £100. The French company having, it was stated, done the heavier part of the work at an expenditure of £400,000 took shares in the new company for its interest. It was calculated that the completion would be carried out in 2½ years, the land reclaimed or in process of being reclaimed amounting to 60,000 acres.

Cope, Charles West, R.A. (retired), b. 1811, is well known as a painter of historical and domestic pictures. Elected R.A. (1844) and R.A. (1848). He has been a most successful fresco painter, as his works in the Peers' Corridor of the House of Lords fully show. The subjects of the eight frescoes which he there painted are: "The Raising of the Royal Standard," "Defence of Basing House," "Expulsion of Fellows from Oxford for refusing to sign the Covenant," "Burial of Charles I.," "Speaker Lenthall asserting the Privileges of the Commons," "March of the Train-bands to relieve the Siege of Gloucester," "Departure of the Pilgrim Fathers," and "Parting of Lord and Lady Russell." Mr. Cope, who has been a constant contributor to the Royal Academy, is a trustee of that institution.

Copper. Some thirty-five years ago the world's production of copper was calculated at about 45,000 tons per annum; now the actual output from all sources amounts to over 200,000 tons. This, however, could be increased without difficulty if there was sufficient demand for the metal, and the market price was such as to allow many of the mines to be worked at a profit. With the great fall in the value of copper many of the mines have almost ceased to be worked, this being very noticeable in Australia. The great increase in the production of the world dates from between 1860 and 1884. The result of this has been that while America stands first, with an output of nearly 80,000 tons per annum, and the products of Chili and Spain have been augmented to over 47,648 and 40,800 tons respectively, the production of England has receded to 2,773 tons of metallic copper, and that of Australia has practically stood still, with an output of 73,000

tons. The great feature in copper during the past eighteen months has been the success attending the operations of a syndicate under the leadership of the *Société des Métaux*. With the aid of French bankers this combination of speculators commenced to buy up copper at about £40 per ton, and in spite of every effort to check their operations the price of Chili bars was carried over £100 per ton through their persistent buying. The effect of the enhanced value of the metal has been to stimulate production, so that the stock of copper in England, France, and afloat thereto, amounts to over 94,000 tons against 42,300 tons on 31st December, '87. The deliveries during the twelve months ending October 31st, '88, reached 78,182 tons, whereas in the previous twelve months they were 99,485 tons. The *Société des Métaux* have now entered into a contract extending to December 90 with twenty-seven mines, including all the leading producers of the world, to take their fixed annual production at prices ranging from £60 up to £70 per ton. Hecla and Calumet and the Montana mines receive £61 10s. per ton for their copper, Rio Tinto £65, and Cape Copper Co. £70. The annual output of the twenty-seven mines will be 175,858 tons, and the liability of the syndicate £11,353,000. Hitherto speculative dealings have been in Chili bars, but owing to the operations of the syndicate a free market has been now established in good merchantable brands. The advance in the value of copper is seen by the quotations of Chili bars on the following dates: Oct. 31st, '87, £44 5s.; Nov. 30th, £66 15s.; Dec. 31st, '85; Aug. 31st, '88, £89; Sept. 30th, £100; Oct. 31st, £78 5s.; Good merchantable brands £80 Dec. 31st, '87; Sept. 30th, '88, £78; Oct. 31st, £77 17s. 6d.

Coptic Church. The Copts are by race the descendants of the ancient Egyptians. They trace their Christianity to the preaching of St. Mark; but the Coptic Church as distinct from the Alexandrian Church dates from the Council of Chalcedon, in 451 A.D. That Council deposed and banished Dioskoros, then Archbishop of Alexandria, for heresy but Dioskoros, beloved and trusted, carried away with him the great majority of the people. The division thence arising in the Church of Egypt has lasted to this day, the Coptic Church and the orthodox or Melkite Church each retaining its own succession of Patriarchs; but the latter has only a small following of Greeks or other aliens, not native Egyptians. The Melkite or Royalist Church agrees with the Greek Church in doctrine, while the Copts are monophysites—i.e., they deny that our Lord had two natures after the incarnation—deny, in fact, His humanity. At present, however, *μία φύσις* has lost its force even as a sectarian watchword; few of the Copts know the meaning of monophysitism, and political obstacles alone prevented the union of the Coptic and Melkite Churches a few years ago. The Copts recognise seven sacraments; use triune immersion, and join confirmation with baptism; give both kinds to the laity; deny purgatory and masses for the dead; allow pictures, but not statues, in their churches and houses. Each church has three altars of stone, and generally the architectural arrangements of the Coptic sacred buildings, as well as their rites and ceremonies, are unrivalled in point of antiquity and interest. Consult "Coptic Churches of Egypt," by A. J. Butler (Clarendon Press).

Copyhold. The lord of a manor was in feudal law the landlord of the whole manor; but over different parts of it his rights were different. Part was cultivated by his free tenants, whose interests were carved out of and limited his interest in that part of the land. Another part was waste, and over this he had discretion limited only by their right to use it for purposes of pasturing cattle, cutting turf, etc. A third part was his own demesne, which he cultivated with the help of his villeins, who did not own the soil, but were attached to it, and could be sold with it. By degrees the villeins acquired both personal freedom and rights in the soil, and became the first copyholders, holders by copy of Court Roll—all transactions affecting this part of the manor being kept on record in its Court. The copyholder has as good a title as a freeholder, and the various estates in copyhold are analogous to those in freehold. But the lord of the manor still has substantial rights over copyhold land. He has a right to all minerals beneath the surface, and to all trees growing on it. He is entitled to a considerable fine every time the copyhold changes hands, and sometimes upon the death of a tenant to a heriot (the tenant's best beast or chattel). Sometimes he receives a small rent; indeed, his rights vary in different manors according to custom, which regulates the tenure of copyhold. Hence copyhold land is sometimes said to be held by customary tenure. The incidents of copyhold tenure being various and oppressive, enfranchisement has been made compulsory on both lord and tenant, whenever either desires it. The rights of the lord are commuted for either a lump sum or a rent-charge, or an estate in fee simple in part of the land; and thereupon the copyhold becomes freehold. In cases of compulsory enfranchisement application is made to the Land Commissioners; but where the lord and tenant both agree to enfranchise, a simple conveyance of the fee simple from the lord to the tenant is sufficient. Both modes of enfranchisement have been largely employed, and a great extent of copyhold has become freehold. The Copyhold Act, 1887, makes further provision for the enfranchisement of copyhold and customary lands. Among other things it provides that no new copyholds shall be created without the consent of the Land Commissioners.

Copyright, English. The first English Copyright Act, passed in the reign of Queen Anne, gave the author an absolute right of fourteen years, with an additional fourteen years in case of the author or his representative surviving this term. By an Act of George III. the period was increased to twenty-eight years, and the remainder of the author's life, if any. The Act at present in force (5 and 6 Vict., c. 45) fixes copyright at forty-two years, or the period of the author's life, with a grace of seven years, whichever is the longer. Copyright covers literary, dramatic, artistic, and musical property. The Act provides that the owner of a copyright shall present one copy of the article protected, if published, to the Library of the British Museum, and one copy each, if demanded, to the Bodleian Library, Oxford, the University Library, Cambridge, the Advocates' Library, Edinburgh, and the Library of Trinity College, Dublin.

Copyright in Government Publications
In a Treasury Minute relating to this subject,

and dated 31st August, 1887, Government publications are classified as follows:—(1) Reports of Select Committees of the two Houses of Parliament, or of Royal Commissions. (2) Papers required by Statute to be laid before Parliament, e.g., Orders in Council, Rules made by Government Departments, Accounts, Reports of Government Inspectors. (3) Papers laid before Parliament by Command—e.g., Treaties, Diplomatic Correspondence, Reports from Consuls and Secretaries of Legation, Reports of Inquiries into Explosions or Accidents, and other Special Reports made to Government Departments. (4) Acts of Parliament. (5) Official books—e.g., Queen's Regulations for the Army or Navy. (6) Literary or quasi-literary Works—e.g., the Reports of the Challenger Expedition, the Rolls Publications, the forthcoming State Trials, the "Board of Trade Journal." (7) Charts and Ordnance Maps. As respects the first five classes of publications, "the reproduction of them with certain exceptions, should not," says the Treasury, "be restricted in any form whatever. Indeed, in most cases it is desirable that they should be made known to the public as widely as possible." The first exception is, that Acts of Parliament and official books should not, except when published under the authority of the Government, purport on the face of them to be published by authority. The second exception is, where a work of a literary or quasi-literary character comes accidentally within these classes. For example, the Reports of the Historical Manuscripts Commission would, but for the fact that they were produced under the direction of a Commission instead of under the Master of the Rolls, be published in the ordinary manner like the Rolls publications, and come within Class 6. So, again, a Report to a Government Department may be laid before Parliament made by a person of eminent scientific knowledge, who is willing to give the Government and the public the advantage of his knowledge, but not to allow it to be reproduced for the private benefit of an individual publisher. Other exceptions will, no doubt, from time to time occur, which can only be dealt with as they arise. As regards the sixth and seventh classes above mentioned, it seems desirable to the Treasury that the copyright in them should be enforced in the interests of the taxpayer and of literature and science. Notice of the intention to enforce the copyright in any work should, the Treasury say, be given to the public. In the case of future works this can be given by prefixing to the work an announcement to the effect that the rights of copyright are reserved. In the case of past works it will be desirable to inform the publishing trade of those the reproduction of which without permission is forbidden. See STATIONERY OFFICE.

Copyright, Law on, in '88. Various decisions under the Copyright Acts have been given by the courts of law during '88. In the case of *Watts v. Seebohm*, a firm of publishers sought to restrain the defendant from infringing the copyright of "Little Lord Fauntleroy," a novel by Mrs. Burnett (*q.v.*), which they alleged had been improperly dramatised and represented on the London stage. It was not denied that the defendant had a legal right to dramatised the novel, but it was urged that the extensive appropriation of the novelist's words and ideas constituted a multiplication of copies of her book within the meaning of the Acts relating to

copyright. Under the earlier Acts it does not appear that Mrs. Burnett would have had any remedy, since they reserve only the "sole liberty of printing," while the copies of the play in question were made either in manuscript or with a type-writer. But the latest copyright Act defines copyright as the "sole and exclusive liberty of printing or otherwise multiplying copies of any subject to which the said word is herein applied." Mr. Justice Stirling therefore held that the copies of the play made for the purposes of representation constituted a multiplication of copies of the novel within the meaning of the Act, and directed the giving up of all the copies in order that the pirated passages might be removed. The court could not, however, prevent the continuance of the representation, provided it could be accomplished without copies of the words; but as a copy of every play must be deposited with the Examiner of Plays, and the copy in question had to be given up in compliance with the order of the court, the right of representation was thus lost. In a roundabout way, therefore, the right of an author to dramatise his own works has been more or less secured.—Mr. Harry Wall, who was well-known to amateur vocalists as a sort of public prosecutor under the Copyright Acts, was during the year sent to prison for three months for transgressing the Solicitors' Act, while his colleague, Mr. Grayson, was suspended from practice as a solicitor for two years.—In the case of the *Licensed Victuallers' Newspaper Company v. Bingham*, the defendants had published a newspaper under the title of the *Licensed Victuallers' Mirror*, and the plaintiffs sought to restrain them, on the ground that they had previously adopted the same title for a newspaper. It appeared, however, that the plaintiffs' paper had only recently been established, and it was held that (there being no copyright in the name of a newspaper) they had not established a reputation for their newspaper which would entitle them to an injunction. The Court of Appeal (March '88) affirmed this decision.—Another action of a somewhat similar character was that brought by the owners of the *Morning Post*, who unsuccessfully attempted to restrain the proprietors of a new venture, the *Evening Post*, from issuing a newspaper under that title.

Copyright (Musical Compositions) Act. See SESSION '88, sec. 11.

Coral Reefs. Three types of reef are recognised. (1) *Fringing reefs*, or simple belts of limestone surrounding an island or skirting a continent. (2) *Barrier reefs*, which are separated from the land by a channel of water. (3) *Coral islands*, enclosing lagoons, and forming irregular rings interrupted at several points, so as to form a series of islets, known as *atolls* (a Maldivian word). See ed. '88, and consult Darwin's "Coral Reefs," and Lecture by Mr. John Murray at the Royal Institution, March '88.

Corea. A kingdom embracing the peninsula lying between the Yellow Sea and the Sea of Japan, with an area of about 82,000 sq. m., and a population estimated at about 10,000,000. Capital, Seoul, pop. 250,000. Government modelled on that of China, which is the suzerain of Corea, and directs her foreign policy. Very little is known of the interior, either as to the people or the nature of the soil; but rice, millet, cotton, hemp, tobacco, and many fruits

are grown on the fertile territory skirting the sea, and the people are similar in their habits and customs to the Chinese on the neighbouring mainland. The foreign commerce is carried on at the three Treaty Ports of Jenchuan, Fusan, and Yuensan. Imports '86, £2,474,185; exports, £504,225. The bulk of the trade is with Japan. Chief exports, cowhides. For earlier details see ed. '88. Events in "The Hermit Kingdom," and connected with it, in '88 all appear to point in one direction—the weakening of the influence of China, the suzerain power, and the throwing open of the country to western civilisation and commerce. (See CHINA, ed. '88.) In '87 it was determined to send two envoys to represent Corea at various foreign capitals. One of them, Cho, who it was understood was to come to Europe, mysteriously disappeared for a time; but we learnt by mail in April that he had been discovered quietly living at Hong Kong. The other reached Washington, but was only formally received by the President, the question of suzerainty again being raised here, for of course China has her representative to the United States, although the King of Corea has at his court foreign representatives, and makes treaties. The whole story as to how the envoys came to be sent abroad, and China's conditions on which they might go, will be found in the *Times* of May 31st. It is further pointed out in this article that the scheme was the work of a party led by the Queen, whose aim it is to free the country from Chinese influence. However this may be, considerable sensation was caused later on by the circulation of a privately printed pamphlet (*Times*, Nov. 10th) from the pen of Mr. Denny, the "Foreign Adviser of the King." This gentleman, who is an American, formerly held a consular post in China, and was actually invited by Li Hung Chang to accept the post of adviser when Herr von Mollendorff left it in '85. Mr. Denny in his circular says that Li has not afforded him the support he promised, and then proceeds to question China's suzerainty, denounces her treatment of her so-called vassal, and the insolence and unscrupulous conduct of Yuan, her commissioner, and finally defends the character of the king. This document is of historical interest as being the first open declaration of Corean policy. In September Mr. Walters, the British Consul-General, it was stated, was about to leave Seoul, the Corean capital, when the king requested him to call at the palace. Mr. Walters having explained to the king's satisfaction that his uniform was packed up and sent on board ship, presented himself at the palace in evening dress, when, after waiting some time, he was informed that the king declined to receive him. It was afterwards reported that this refusal was by direction of Mr. Denny, who, however, was not aware of the previous understanding, and who afterwards expressed his regret at what had taken place. A telegram, dated New York, Sept. 12th, was to the effect that "Judge" Denny had written to say that he was not consulted in the matter, and that the difficulty was solely due to the consul's ignorance of official etiquette. Mail news at the beginning of November stated that two leading Japanese statesmen, Counts Ito and Saigo, were visiting, in a Japanese man-of-war, the principal ports of Corea and Siberia, ostensibly on a holiday cruise. It was variously reported that the

real object of the tour was to show that Japan still retained an interest in Corea; also to find out what progress Russia had made in that direction. Later in the month it was reported that the Grand Duke Alexander Michaelovitch was visiting Seoul, and had been warmly welcomed by the king, this being the first foreign royal personage who had ever visited Corea.—As to trade and commerce, the consular report for '87, the last issued, showed that business was good at all the ports, especially at Fusan. At the three open ports the imports passing the foreign customs increased by £75,511, or 164 per cent. Metals increased by £10,548, or 103 per cent.; copper and tin were largely used by the Coreans for the manufacture of domestic utensils, and quicksilver had been introduced for mining purposes. A line of telegraph was to be made from Seoul to Fusan, the poles having arrived from Japan and the other materials from Germany; the machinery for a mint had also arrived from Germany, while the king's palace had been furnished with Edison's electric light. The Yellow Book of the Chinese customs gives other details. The net value of the foreign import trade for '87 was 2,815,441 dollars, against 2,474,185 in '86, and 1,671,562 in '85. The figures for '86, however, include 586,343 dollars, the value of rice imported to supply the deficiencies of a bad harvest. The imports of cotton goods increased from 1,300,613 dollars to 1,884,497. Up to this year cowhides formed two-thirds of the export, but in '87 beans took their place. The total value of the exports was 804,996 dollars, against 504,225 in '86, and 388,023 in '85. No European country participates directly in Corean trade. Of the total of 3,620,437 dollars, Japan has 2,855,471, and China 751,599, the remaining 13,367 is a trans-frontier trade with Russian Manchuria. English goods, such as cottons, which latter form nearly half the total trade, go by way of Japan or China, and are included under those countries. Mr. Walters during the year presented a report to Parliament of a tour of inspection he had made to some of the ports (Miscellaneous Series No. 84). He recommends Masampo, about thirty miles from Fusan, as a likely place for British merchants to settle. A strange outbreak occurred at Seoul, according to the *Standard* of June 28th, nine Government officials being seized in the streets and beheaded, and the French, Russian, Japanese, and American war ships lying at Chemulpo sent men to guard the consulates where the foreigners had taken refuge. The riot is said to have arisen from a report spread by the Chinese that the American missionaries were buying Corean children to boil them down for medicine! The authorities took prompt action. About the same time Herr von Mollendorff arrived from Tientsin. Under date Tientsin Nov. 17th, it was stated that the Chinese Government had received information that a secret treaty (since denied) had been concluded between Russia and Corea, which provides for Corea being placed under Russian protection. Consult "Life in Corea" ('88), by W. R. Carles, F.R.G.S.

Corinth Ship Canal. The first sod of this canal across the Isthmus of Corinth was turned by the King of Greece in April 1882. The scheme of making a passage through the isthmus is of very ancient date, the Roman Emperor Nero being credited with some such design. General Turr, known for his connection with

similar enterprises, is said to have originated the present plan, and in May 1881 he obtained a concession from the Greek Government for the purpose, the idea being so well received that the capital was assured five times over. The isthmus is about 3½ miles in breadth, there being a backbone in the middle 220 to 180 feet high, which is approached on each side by a plain from the sea-shore. The engineers, *Messrs. Gerster and Kander*, decided to excavate and deport to the neighbouring plains all ground above 150 feet high, and to blast downwards through the remainder. The total amount of earth to be removed was calculated at ten million cubic metres, and the whole cost at about thirty million francs. It is calculated that the length of passage saved from the *Egean* to the *Black Sea* will be from 100 to 250 miles, and the dangers of the southern Greek coast will be thus avoided. A port and harbour will exist at each end of the canal. The work is still progressing. (See ed. '88.) Early in '88 it was stated that the 30,000,000 francs had been deemed insufficient to finish the work, and that power had been obtained to raise further funds, so that an issue of 60,000 more shares of 500 francs, each bearing 6 per cent. interest, had been decided upon. The grand total would thus require the realisation of 3,500,000 francs of net revenue, and *Le Moniteur des Tirages Financiers* pointed out that this would be covered by a daily earning of 10,000 francs.

"*Cornhill Magazine*" (6d. monthly). Established Jan. '60 as a shilling magazine. First editor, *W. M. Thackeray*. Price altered to sixpence July '83. Contents: General literature, and articles of a popular scientific character. Also an instalment of a serial story by a well-known writer. Editor, *Mr. James Payn*. Office, 15, Waterloo Place, S.W.

Coronation. See ed. '88.

Coroners. See SESSION '88, SECS. 26 and 27a.

Coroners' Inquests. The following was the number of inquests held in each of the years '86 and '87 (latest return), distinguished under the different verdicts:—

Verdict.	1886.	1887.
Murder	177	196
Manslaughter	147	154
Justifiable homicide	4	7
Suicide	2,222	2,227
Accidental death	11,003	11,983
Injuries, causes unknown	314	283
Found dead	2,624	2,043
Executed	19	29
Natural death:—		
From excessive drinking	397	372
Disease aggravated by neglect	142	129
Want, cold, exposure, etc.	282	250
Natural causes	10,345	11,231
Other causes	1,264	1,126
Total	28,940	30,030

The number of verdicts of murder of infants of one year old and under in 1887 was 85, as against 86 in 1886, 65 in 1885, 103 in 1884, 87 in 1883, 86 in 1882, 92 in 1881, 87 in 1880, and 88 in 1879. Of the 85 cases in 1887, 29, or 34½ per cent. were in the county of Middlesex. In Liverpool, there was only one such case; in Manchester, two; in the Bolton district none; in the Salford district two; in the borough of Birmingham no cases.

Coronini, Count Franz, Austrian politician, was b. Nov. 18th, 1833, in Gorizia. Retired from the army in '67, with the rank of colonel, and has sat in the Reichsrath since '71, where he founded ('81) the *Coronini party*—Liberal centre—one of the factions composing the ministerial majority. This party has recently occasionally supported the German-Austrian party, of which Dr. Herbst is the leader, and also, at times, assists with its influence the German party led by Dr. Heilsberg. The Coronini party, however, does not wield much influence in the Lower House of the Austrian Reichsrath, as it numbers only some sixteen members. See AUSTRIAN POLITICAL PARTIES.

Corporation of London, The, is the Municipal Authority for the City of London; but its powers and duties in that capacity are not regulated by the general law relating to Municipal Corporations; they have, however, to a certain extent been defined and regulated by special Acts of Parliament. Under the London Coal and Wine Duties Continuance Acts 1861, '63, and '68, the C. collect coal duties amounting to 1s. 1d. per ton on all coals coming into the Metropolitan Police District, and a wine duty of 4s. per tun on all wine imported by way of merchandise into the port of London. The net proceeds of this wine duty, and of 6d. out of the 1s. 1d. per ton coal duties, are required, by the above-mentioned Acts, to be paid by the C. to "The Thames Embankment and Metropolis Improvement Fund" at the Bank of England; the amounts thus paid being subsequently included as receipts in the accounts of the Metropolitan Board of Works. The net proceeds of the remaining 4d. out of the 1s. 1d. per ton coal duties are applicable primarily to the payment of interest and principal in respect of moneys borrowed under the Holborn Valley Improvement Acts '64, '67 and '69, and the Holborn Valley and Farringdon-Market Improvement Act (see COAL AND WINE DUTIES). In addition to the above duties, the C. are empowered by the *Metage on Grain* (Port of London) Act, 1877, to levy a grain duty of three-sixteenths of a penny per cwt. in respect of all grain brought into the port of London, which duty is, subject to the provisions of that Act, to be held by the C. for the preservation of open spaces in the neighbourhood of London, not within the Metropolis, as defined by the Metropolis Management Act, 1855. The only rates made by the C. are the *Police and Ward Rates*, which are made under the City of London Police Act 1839. The Police Rates are applicable to the payment of three-fourths of the expenses of the City Police, the remaining fourth of which expenses are, under Section 57 of the above Act, payable by the C. "out of their revenues and possessions." Of the estates of the C., the *Bridge House Estates*, prior to the passing of the Blackfriars Bridge Act 1863, were held by the C. "in trust for the maintenance and support of London Bridge." By that Act, and the Blackfriars and Southwark Bridges Act, 1867, the C. were empowered to borrow on the credit of these estates, for the purpose of rebuilding Blackfriars Bridge and purchasing Southwark Bridge from the Southwark Bridge Company, and the expenses of lighting, watching, and maintaining the two last-mentioned bridges were made a charge on these estates. A considerable number of other local Acts have been passed at various times relating to the C. and their estates.

Corsica.—An island of the Mediterranean, and a department of France, separated from Sardinia by the Strait of Bonifacio. Area, 3,376 sq. m.; pop., 278,501. Capital, Ajaccio, the birthplace of Napoleon Bonaparte. Other towns, Bastia and Corte. A central range of lofty and rugged mountains rises to a height of from 8,000 to 9,000 feet. On the south and west sides the spurs of this range run out to a great distance into the sea, forming bays and gulfs, some of which afford excellent harbours. On the eastern side, between the mountains and the sea, a considerable tract of low country is covered with plantations of olive trees, almond and fig trees, and vineyards. Oil and wine, and the honey and wax procured from the vast forests which cover the summits of the hills, form the bulk of the exports. The fisheries of tunny, pilchard, and anchovy are chiefly for the Italian market. Few native Corsicans, however, are engaged in this industry, and a great part of the agricultural labour is performed by temporary immigrants from Tuscany and Lucca. Agriculture is in a backward state, owing partly to the minute subdivision of the land, which led to that form of hereditary feud known as the *vendetta*, once common, but now sternly repressed by the French Government. Cattle, horses, asses, and mules, are reared in the mountain pastures. In the more inaccessible parts of the island are sheep of a peculiar black breed, called *mouflons*, formerly inhabitants of all the mountains of the Mediterranean peninsula and islands, but now confined to Corsica and Sardinia. Among the Romans Corsica was used as a place of banishment for political offenders. In consequence of the patriotic struggles of Paoli it was sold by the Genoese to France in 1768. For a few years after the French Revolution of 1793 it was under the protection of Great Britain, but since 1814 it has remained in possession of France. Railways have lately been introduced.

Corrupt and Illegal Practices Prevention Act, '83. This Act came into force on the 15th October, 1883, and has been annually renewed from the 31st December, 1884. It is directed to secure the purity and reduce the expense of parliamentary elections, and partially consolidates previous legislation on the same subject. It renders persons convicted of treating, bribery, perogation and undue influence, liable to imprisonment with hard labour. It renders a candidate who has been personally guilty of corrupt practices incapable of ever sitting again for the same constituency, and incapable for seven years of sitting in the House of Commons. It renders all persons guilty of such practices incapable for seven years of holding any public office or exercising any franchise. A guilty magistrate is to be reported to the Lord Chancellor, a guilty barrister to his Inn, and generally in the case of other professions a culprit is to be reported to its controlling authority to be dealt with as for misconduct in his profession. So licensed victuallers are to be reported to the licensing justices, who may refuse to renew their licences. A corrupt person or constituency may be ordered to pay the whole or part of the costs of the petition. The Director of Public Prosecutions or his representative is to appear at the trial of every election petition, and to take directions from the Court respecting the prosecution of offenders. Stringent formalities

are imposed upon persons desirous of withdrawing an election petition, and a corrupt agreement to withdraw is declared to be a misdemeanour. Even where no petition has been presented, the Director of Public Prosecutions is bound on receiving information of corrupt practices to make such inquiries and institute such prosecutions as circumstances seem to him to require. The number of paid assistants and committee rooms is strictly limited. No conveyances are to be hired. A variety of unnecessary payments are declared illegal. A limit varying with the extent of the constituency is imposed on the expenditure of the candidate. The breach of any one of these among other provisions constitutes an "illegal" as distinct, from a "corrupt" practice. Illegal payment, employment, hiring, etc., if committed personally by candidate or agent, amount to illegal practices. Persons convicted of such practices are liable to be punished by fine and incapacity. All claims must be paid through one election agent, who must make a return of the election expenses within a limited time. A violation of these rules amounts to a corrupt practice, and vacates the seat. Provision is made that persons shall not be subjected to any of the penalties provided in this Act merely through accident, inadvertence, or the fault of another. Consult Hobhouse, "Parliamentary Elections Act."

Cotton, James Sutherland, b. in India 1847, the son of J. J. Cotton, H.E.I.C.S., educated at Winchester School, and at Trinity College, Oxford; first class in moderations and in the final schools; Fellow of Queen's College. Called to the bar at Lincoln's Inn 1874, and went the Western Circuit. Has undertaken much literary work in connection with India; assisted Sir W. W. Hunt (q.v.) in compiling the "Imperial Gazetteer of India," and in revising the second edition; wrote "India" in Macmillan's "Citizen Series," prepared for the Government a report upon the administration of India for the ten years 1873-74 to 1882-83—a blue-book of nearly four hundred pages. *Editor of the Academy* (q.v.) since 1885.

Cotton, Rt. Hon. Sir Henry, a Lord Justice of Appeal, was b. 1821. Educated at Eton and Oxford. Called to the bar at Lincoln's Inn (1846). Q.C. (1866). Bench of his Inn (1867). Standing counsel to the University of Oxford (1872). Appointed a Lord Justice of Appeal (1877).

Cotton Trade, The. For history of this see ed. '87; for development of see TRADE, '88.

Couch, The Right Hon. Sir Richard, b. 1817, was called to the bar in '41. In '62 he was appointed a puisne judge in India. Four years later he was promoted to be Chief Justice of the High Court of Judicature at Bombay, subsequently receiving the honour of knighthood. Succeeded Sir Barnes Peacock as Chief Justice of the High Court of Calcutta ('70). On resigning in '75 he was sworn of the Privy Council, and was appointed a member of the Judicial Committee of that body ('83).

Counani Republic. Between the Oyapok river, eastern boundary of Cayenne, and the

Amazona mouth, lies a district neutralised by treaty in 1841 between France and Brazil. Coast line stated to be 187 miles, area 24,000 sq. m. Inhabitants are negro slave refugees from Brazil, and number only about 700. In '83 they begged to be annexed by France. Disappointed in this, they have since constituted themselves a "republic," the president of which is a Frenchman (M. Jules Gros). For history of this see ed. '88.

Councils, Ecumenical. An Ecumenical Council is one which represents the whole Christian Church. Of these there have been four recognised by the Reformed English Church, viz.:—(1) The first of **Nicaea** (A.D. 325), condemned Arianism and formulated the **Nicene Creed**. (2) **Constantinople** (380), added to the **Nicene Creed**. (3) **Ephesus** (431), condemned **Nestorius**. (4) **Chalcedon** (451), declared the divine and human nature of Christ, and set its seal on the additions to the **Nicene Creed** made at **Constantinople**. Amongst other Councils, reckoned by the **Roman Church** as Ecumenical, may be mentioned the **Second of Nicaea** (787), permitting worship of images. **Fourth Lateran** (1215), transubstantiation held to be an article of faith. **Constance** (1414), the cup denied to the laity. **Trent** (1545-63), condemned the reformers. **Rome** (1869), decreed papal infallibility.

Countess of Huntingdon's Connexion. The, owes its existence to the religious revival in the eighteenth century, with which **Whitfield** and the **Wesleys** are so prominently identified. The **Countess of Huntingdon** (d. 1791) had been a member of the Established Church, but finding that the parochial system interfered with her intense desire to have the gospel preached in every place in England, she cast in her lot with the Nonconformists. The **liturgy** formed part of the religious worship in her chapels, and it is still used in some of them. The Connexion has never been numerically strong. During life her control was absolute. Her successors were unable to exercise a similar control; and although a trust was created a few years after her death, many leasehold chapels lapsed into other hands. At one time the **preaching stations** numbered over a hundred; now those under the Trustees amount to over thirty, not including village stations vigorously maintained by the principal churches, and **Countess's chapels** which are beyond the control of the Trustees of the Connexion. **Cheshunt College** has been rebuilt. New **Spa Fields Church** has been erected. The Connexion chapels generally have been adapted to the religious requirements of the age, and the Trustees have faithfully endeavoured to maintain an evangelical ministry in every chapel of the Connexion. All its ministers have to subscribe to the "**Fifteen Doctrinal Articles**" of the Church of England, as are the professors of **Cheshunt College** and the students, with a view of carrying out the Countess's idea—the continuance of an earnest evangelical ministry. See, Rev. W. M. Leunox. **Offices**, Cheshunt College Rooms, 13, Blomfield St., London Wall, E.C.

Country Holidays Fund. This and similar Funds (e.g., the Children's Fresh Air Mission) have recently arisen in London to organise holidays, usually for three weeks, for poor sickly city children by boarding them with country cottagers, who are paid 5s. a week per child; and much good has resulted from the

movement, several thousands of children being annually benefited. Similar efforts in New York, Berlin, etc., have been equally successful. In the summer of '88 a special appeal on behalf of the fund was made by the Bishop of London. H.R.H. the Princess of Wales has recently become patroness. **Office**, 10, Buckingham Street, Strand.

County Courts. History.—The modern County Court, which must be carefully distinguished from the County Court of early English history, dates from the year 1846. Under the Act 9 & 10 Vict., c. 95, and subsequent Acts, a certain number of county court districts have been marked out in each county. The court for that county is held at short intervals in one or more places within each of these districts. Several districts are grouped in one circuit, and a judge is allotted to each circuit. The judge is appointed by the Lord Chancellor, and must be a barrister of at least seven years' standing. He has the assistance of a registrar and other officers. **Jurisdiction.**—County Courts have jurisdiction in the following cases:—(1) In actions in which the sum claimed by the plaintiff does not exceed £50; (2) in actions relating to real property, the annual value or rent of which does not exceed £20 per annum. But from the above cases must, generally speaking, be excepted all actions in which the validity of any devise, bequest or limitation in a will or settlement is disputed, and all actions for malicious prosecution, libel, slander, seduction, or breach of promise of marriage. But by consent in writing of both parties, any action whatever which could have been brought in the Queen's Bench Division may be brought in a County Court. And if the plaintiff in a superior court recover no more than £20 in an action for breach of contract or £10 in an action of tort, he can get no costs except by special favour of the court; and in an action for breach of contract in a superior court, if the claim be not for more than £50, either party may apply to have the action transferred to the County Court; (3) in actions such as may be brought in the Chancery Division of the High Court of Justice, provided that the property in dispute does not exceed £500 in value; (4) in Admiralty actions in which the claim is for salvage, for towage, necessities or wages, for damages to cargo, or by collision, or arises out of agreements concerning the use or hire of any ship, the care of goods therein, etc., and does not exceed certain specified limits of amount; (5) actions in bankruptcy; (6) a variety of actions too numerous to be severally mentioned here. **Procedure.**—A jury may be summoned when the amount claimed exceeds £5 at the requisition of either party, and in other cases at the discretion of the judge upon the application of either party. The jury consists of five persons qualified to serve as jurors in the High Court. The plaintiff begins by entering a plaint in a book kept by the registrar. The officer of the Court then serves a summons upon the defendant. Both parties must appear on the day named in the summons. Pleadings are not in use. Evidence is taken *visà voce*. Solicitors as well as barristers may address the Court. If the debt or damage claimed exceed £20, an appeal lies from the decision of the judge upon any question of law, or on the admission or rejection of evidence, unless the parties have previously agreed that such decision shall be final.

County Electors Act and County Government. See SESSION 88, secs. 12 and 25-28.

Course of Exchange, The. See STOCK EXCHANGE OFFICIAL LIST.

Coursing. With the exception of archery (*q.v.*), there are few sports more ancient than that of coursing the hare, and in all ages the greyhound has been admired for its graceful form and extraordinary speed. Its keenness of vision is also marvellous; and the numerous enclosed meetings which have of recent years been opened in close proximity to our large towns fully testify to the popularity of coursing. Prizes of great value are offered for competition at these fixtures; and although many owners, attracted by rich rewards, devote their attention to the breeding of greyhounds chiefly for speed, to the neglect of that cleverness which is of so much more value in the open, the Waterloo Cup is still the leading trophy of the year. For this there are sixty-four nominations, which are awarded as a rule to the best known and most respected of coursers, at a subscription of £25 each, of which the winner takes £500, the runner-up £200, two dogs £50 each, four £30 each, eight £20 each, and sixteen £10 each, the balance being awarded to the leading dogs in the Purse and Plate, which are confined to the beaten dogs in the Cup and Purse respectively. These events are invariably run for over the Altar Plate, and usually in the month of February, but continuous frost necessitated the '88 fixture being postponed to the first week in March. In the deciding course for the Cup, Mr. L. Pilkington's black and white dog *Burnaby*, by *Be Joyful*—Baroness, beat Col. J. T. North's blue dog *Duke Macpherson*, the latter, however, representing the nomination of Mr. W. Smith; the final course for the Purse terminated in favour of Mr. C. Hibberd's *Miss Glendyne*, the runner-up being Mr. W. H. Smith's *Donald Windland*; and in the closing trial for the Plate, Mr. H. Wansborough's *Winfarthing*, representing the nomination of Mr. T. E. Fiske, beat Mr. R. V. Mather's *Meols-Simon*. In the deciding course of the **Kempton Park Champion Stakes**, *Holmbay*, a black dog by *Clyte*—*High Opinion*, belonging to Mr. G. Hobbs, but running in the nomination of Mr. S. Handford, beat Mr. H. G. Miller's *Mullingar*; and the **Gosforth Park Gold Cup** resulted in a division between Mr. E. Dent's *Huio Halla*, a white-and-black dog by *Jester*—*Countess*, and *Burnaby*, the Waterloo Cup winner. The ruling body is the **National Coursing Club**. President, the Earl of Sefton. Hon. Sec., Mr. R. B. Carruthers. Consult "Coursing Calendar," edited by Mr. C. M. Brown, the Field Office, 346, Strand.

Courtesy Titles. The eldest son of a duke, a marquis, or an earl, takes by courtesy the second title of his father, which is generally, but not always, the next in degree. Thus the eldest son of the Duke of Devonshire takes the courtesy title of Marquis of Hartington, but the present Earl of Derby was Lord Stanley during the lifetime of his father, the second title being, not viscount, but baron. Where the second title is of the same name as the first it is dropped, to avoid confusion; for example, the Marquis of Salisbury is also Earl of Salisbury, so his eldest son is known as Viscount Cranborne. Younger sons of dukes and marquises prefix the courtesy title of lord, and all the daughters of earls, as well as of the higher degrees of nobility, the courtesy title of lady, to their Christian and surname,

and the daughters may retain it after marriage with the altered surname. The courtesy title of master is given in Scotland to the eldest son of a baron. A duke's eldest son's eldest son or a marquis's eldest son's eldest son sometimes takes by courtesy the third title of the duke or marquis. While these courtesy titles are invariably used when addressing the persons taking them, they are not accorded full recognition in certain formal documents: for example, the name of the Duke of Devonshire's eldest son appears sometimes in the House of Commons journals as "the Right Hon. Spencer Compton Cavendish, commonly called the Marquis of Hartington." In the following list the first column gives the courtesy title which is usually taken by the eldest son of a duke, marquis, or earl; but it will be borne in mind that in many cases the courtesy title is not in present use, because the peer has no son. Thus a familiar title to English ears, the Marquis of Granby, was long in abeyance as a courtesy title, the late Duke of Rutland's heir presumptive having been his brother, Lord J. Manners, M.P.; but on the succession of the latter to the dukedom the courtesy title was revived in the person of his son, now M.P. for the Melton Division. In several cases where the eldest son has died, and the next survivor has taken another family title, the dignity in actual use is given.

Court-martial is the name given to a tribunal of naval or military officers appointed for the trial of offenders against naval or military laws. **Military Law** has been defined as a rule of conduct for military persons prescribed by the legislative power in a state commanding what is to be done and prohibiting the contrary. **Naval Law** has the same source and authority as military law, the points of divergence being chiefly such as must needs result from the differing spheres of action of sea and land forces. What is known as "the custom of the service" forms an unwritten part of the naval and military law, but it is seldom appealed to unless certain and well defined, as well as not contravening any part of the written law. The **Mutiny Act**, first passed in 1689, is an English statute, passed annually for the government of military persons, and vesting in the Crown power to frame articles of war.

Courtney, Mr. Leonard H., M.P., was b. 1832. Graduated (1853) at St. John's College, Cambridge, as Second Wrangler, was bracketed first Smith's prizeman, and elected a Fellow of St. John's. He was called to the bar at Lincoln's Inn (1858) Professor of Political Economy at University College, London (1872-75). Visited India (1875-76). Entered parliament as Liberal member for Liskeard (1876-85). Successively Under Secretary of State for the Home Department (1880), Under Secretary of State for the Colonies (1881-82), and Financial Secretary to the Treasury (1882-85). Elected in the Liberal interest as member for South-East Cornwall (Bodmin) (1885), and re-elected as a Liberal Unionist in 1886. **Chairman of Committees of the House of Commons (1887)**. Mr. C. is a strong advocate of such a reform in the system of land tenure as would give absolute security to tenants for capital invested in their holdings. He was formerly leader-writer for the *Times*. He married in '83 Miss Catherine Potter, a lady well known for her exertions in behalf of the better housing of the poor in the East End of London. Delivered an address at Liskeard Nov. '88.

Courts Baron and Leet. See MANOR, ed. '88.

Cowen, Frederic Hymen, one of the most popular of modern song composers, b. in Kingston, Jamaica, 1832. From an early age he was a pupil of Sir Julius Benedict and Sir John Goss, and further studied at Leipzig and Berlin. He has written an opera ("Pauline") an oratorio ("The Deluge"), several cantatas, chamber music, four symphonies, pianoforte sketches, and many vocal pieces. Apart from a few of his songs, his most esteemed productions are his symphonies, his "Language of Flowers" orchestral suite, and his cantatas "The Rose Maiden" and "The Sleeping Beauty," the latter having been specially composed for the Birmingham Festival of '85. Mr. Cowen's oratorio "Ruth," was produced at Worcester Festival in Sept. '87. In May, '88, Mr. C. left for a six months' visit to Melbourne at the exhibition (*q.v.*) of which city he conducted a series of concerts, with the assistance of an orchestra led by Mr. Max Klein. The "Inaugural Ode," written specially for the opening of the exhibition, is among Mr. C.'s latest and most successful works. It was performed at the **Hereford Festival**, in Sept. last.

"Cramming." See EDUCATION.

Crane, Walter, poet and painter, b. 1845, first exhibited at the Royal Academy (1862), and has since contributed frequently to the Burlington House and Grosvenor Gallery exhibitions. He has published various illustrated books, and is an authority on decorative art. Mr. C., who was elected a member of the Institute of Painters in Water Colours in 1882, is an ardent advocate for the reform of the Royal Academy. In '86 Mr. C. published "*The Sirens Three*," a poem illustrated by himself. Mr. C. took an active part in promoting the *Arts and Crafts Exhibition* (Nov. '88). See *NEW GALLERY*.

Crèches are homes to which the infants and very young children of the poor can be sent during the day, when their mothers are at work. The crèche system is of French origin. See ed. '87.

Cremation. The disposal of the human body after death by the process of cremation, which rapidly resolves the body into its component elements, in an absolutely innocuous manner, is now largely practised throughout the civilised world, where formerly burial in the earth only was carried out. This modern movement in its favour commenced about fifteen years ago. Up to the present time, over 1,500 bodies have been cremated in Italy and in Dresden. Cremation societies have been instituted in every European country, and many of the states of America possess them also, and cremation in these states has become a regular practice. There are two patterns of crematories in use—the German and the Italian. The latter was chosen for use at St. John's, Woking, Surrey, where upwards of fifty cremations have already been carried out, there being no legal bar to its performance in Great Britain or in the Colonies, except in New South Wales, where the Government at present decide against it. The cremation of an adult by either process is complete in about an hour, and the ashes, which are perfectly white, weigh about 4 lb. The cost of reduction, were it to become common, would be about thirty shillings; but at present is more than treble this sum, owing to the necessity of heating the crematory every time for each cremation. It is understood to be in contemplation to build a chapel in connection with the crematorium at Woking. The literature of cremation since 1843 amounts to over 700 volumes, no mean share of them having been produced in England since the first "Essays" published by Sir Henry Thompson. The publishers of the English Society are Messrs. Smith, Elder & Co., and its "Transactions" are replete with plans and every information as to medical forms of certificate, etc. See also article in *Nineteenth Century*, Jan. '88, by Sir H. Thompson. Full particulars can be obtained at 88, Wigmore Street, London, W.

Creole. A person born in the West Indies. The name does not now imply any negro admixture, or indeed any indication of race. Children of Indian and Chinese coolies born in the West Indies are Creoles equally with whites, mulattoes, or negroes. It simply indicates the place of birth. It is used with a prefix, as—English Creole, Portuguese Creole, "coloured" Creole, etc.

Crete, Kriti, or Candia. An island of the Mediterranean, lying to the south of the *Aegean Sea* and *Archipelago*, and appertaining to Turkey. Area over 3,000 sq. m., pop. 279,200.

Chief cities, *Kastron*, otherwise *Candia*; *Khania*, or *Ganea* (pop. 15,000); and *Retimo*. The island is long and narrow, dominated by lofty mountains of calcareous formation. Mount *Ida*, near the centre, rises to 7,674 ft. Caverns abound, among them the famous *Labyrinth*. Forests clothe the hills, and the soil is very fertile. Among productions are olive oil, silk, wine, raisins, wool, carobs, valonia, honey and wax, oranges, lemons, figs, and other fruit. The finest kind of sponge is obtained along the coast. Crete is governed by a pasha, as a vilayet of the Turkish empire. Religion, Mohammedan and Greek Church. Education backward. Local forces consist of six battalions of infantry and one of artillery. Two-thirds of the people are of Greek race. Wheat, barley, oats, cotton, and flax are grown, besides above-mentioned productions. Pasturage is good, and cattle and sheep very numerous. Chief manufactures are soap, leather, wine, and spirits. Cretan wine was once renowned under the names of *Malmsey* and *Muscadine*. In the time of Homer, Crete was crowded with inhabitants, and contained a great number of flourishing cities. Modern history of Crete is made up of war, riot, insurrection, and intrigue, arising partly from the oppression and corruption of the Turkish government, and also from the turbulent character of the population, with its strong Greek aspirations. Consult "Reports of Her Majesty's Consuls, Part VII. 1884, and Part III. 1885, article 'Crete.'"

Cricket. Much doubt exists as to the origin of the word "cricket," which is first mentioned in the "*Mysteries of Love and Eloquence*," written by Edward Phillips, a nephew of the author of "*Paradise Lost*"; and although a game with bat and ball was much played in this country as far back as the 13th century, Fosbrooke states that club-ball, a pastime in vogue in the time of Edward III., was far more likely to have conduced to what is now looked upon as our leading summer pastime. The first collection of rules was framed in 1774, by a committee consisting of Sir William Draper, Sir Horace Mann, the Duke of Dorset, and Lord Tankerville, the wickets to this date being made up of two stumps. In the following year a middle-stump was added, and since then but few really important changes have been made in the game, beyond, perhaps, the regulations as to round-arm bowling and the sizes of bats. Lord's Cricket Ground, the headquarters of the Marylebone Club, was established in 1780, but in 1864 it was feared it would have to be given up to a firm of West-End builders. This was averted by the generous response of the cricketing public, the list of subscriptions being headed by the Prince of Wales with £100. In the early part of '88 the Club acquired the freehold of the adjoining *Nursery grounds* from the Clergy Orphan Corporation, at a cost of £18,500, and the space now available for cricket and other pastimes is about fifteen acres. In order to partially meet this expenditure one hundred life members were elected, at a subscription of £100 each, so that £10,000 of the purchase money advanced by Mr. Nicholson was promptly repaid. The *Marylebone Club*, or, as it is generally termed, the "*M.C.C.*," numbers over 3,000 members, and is regarded as the guiding authority upon all matters pertaining to the game; although in '87 a County Council was formed, which should be of great service to the game without in any

way interfering with the functions of the parent body. Another famous Metropolitan cricketing centre is **Kennington Oval**, which is situate between Kennington Park and the Harleyford Road, and covers 104 acres of ground. This belongs to the Duchy of Cornwall, and is let to the **Surrey Club**, which numbers over 2,000 members, at a nominal rent, the only stipulation made by the Prince of Wales being that the charges of admission to county matches must be fixed low enough to admit of the humblest lover of the game attending. At the **May meeting** of this club, **Mr. F. Gale**, whose works on the most popular of our summer pastimes are accepted as the most authoritative, moved: "That in the opinion of this meeting it is expedient that home-and-home matches should be made between the Surrey County Club and Ground (or any eleven approved by the committee of the Surrey Club) and elevens who have a ground of their own or village green in Surrey on which they play; and that such matches out and home shall, as regards the county elevens, be aided by a pecuniary grant not exceeding £5 for each match." This was carried, and the idea is undoubtedly an excellent one. At the first meeting of the County Council it was proposed to call the attention of the M.C.C. to the unsatisfactory working of Rule XXIV., which relates to leg before wicket; and so favourably was the proposition received that a sub-committee was appointed to consider and report whether any undue advantage rested with the batsman or with the bowler under the existing laws of cricket, and, if so, what steps should be taken to remedy this defect. The following gentlemen were accordingly appointed to serve upon the sub-committee: Lord Bessborough, Lord Lyttelton, Mr. C. E. Boyle, Mr. A. W. Ridley, Mr. W. E. Denison, Mr. V. E. Walker, Mr. A. J. Webbe, Hon. Sir S. Ponsonby-Fane, and Mr. H. Perkins. They met several times, the main subject of their deliberations being the alteration of Law XXIV., upon which the opinions of a number of leading umpires and cricketers were taken. On March 10th they made the following proposals, which were unanimously approved by a special meeting of the committee, subject to confirmation at the special general meeting. (1) That the over shall consist of five balls. (2) That a bowler shall be allowed to change ends as often as he pleases, provided only that he does not bowl two overs consecutively in one innings. (3) That on the last day of a match, or if a one-day match at any time, the in-side shall be empowered to declare the innings at an end. Recognising the great difficulties in the way of any extension of the law of leg before wicket, and the fact that the practice it was sought to prevent was adopted by a very limited number of cricketers, the committee abstained from recommending any alteration of the existing law, and passed the following resolution: "That the practice of deliberately defending the wicket with the person instead of the bat is contrary to the spirit of the game, and inconsistent with strict fairness, and the M.C.C. will discontinue and prevent this practice by every means in their power." At the special general meeting held on May 2nd, for the purpose of considering the proposed alterations in the laws, Lord Harris was the principal speaker, and he advocated a similar course to that taken in '83, when the laws were revised—namely, to take the opinion

of cricketers in general, both in this country and in Australia and America. There was no immediate necessity, his lordship thought, for these alterations, and it would be wiser, in his opinion, to defer them for the present. After several others had spoken, it was resolved to leave the laws unchanged; but there is no doubt that had the proposed amendment in the law as to overs been in practice during the season many matches which terminated in draws could have been played out. The first-class county season closed on August 29th, and Surrey again came out as the champion shire, with a record of twelve wins, one loss, and one draw, thus playing only fourteen matches as against sixteen in '87; but bearing in mind the almost uninterrupted series of defeats sustained by the representatives of Derbyshire in the year last mentioned, they were not included amongst the first-class counties of '88. Kent and Yorkshire were bracketed for second honours under the prevailing system, although the former won seven matches, as against six credited to the county of broad acres; but the proportion of both work out the same, Kent having lost four and drawn two, as against four lost and four drawn by Yorkshire. Gloucestershire comes fourth, with five wins, five losses, and four draws; Lancashire being fifth, with four wins, five losses, and an equal number of draws. Notts follows, with three wins, six losses, and five draws; and Middlesex is seventh, with four wins, seven losses, and one draw; whilst Sussex is at the bottom of the poll, with a single win, as against nine losses and two draws. In these matches the following are the highest averages for the counties, attached to which is also a return of all scoring three figures: **SURREY**—Batting, Abel, 27.4, with 207 runs; bowling, 8.136, with 142 wickets; centuries, Mr. M. P. Bowden, 180 not out; Mr. W. V. Read, 171; Maurice Read, 100, and Mr. Key, 108. **KENT**—Batting, Mr. W. H. Patterson, 30.5 with 275 runs; Mr. C. J. M. Fox coming next with 26.13 for 155 runs; bowling, Mr. W. C. Hedley, 9.4 for 17 wickets, and Martin 11.12 for 56 wickets; no centuries scored. **YORKSHIRE**—Batting, Wormald, 33.1, with only 100 runs, hence Hall's 20.13 for 473 runs affords a more reliable guide; bowling, Mr. J. Wilson, 10.3 for 5 wickets, consequently it becomes necessary to give Peel's figures, which read 13.32 for 86 wickets; century, Hall, 120 not out. **GLOUCESTERSHIRE**—Batting, Mr. W. G. Grace, 27.14, with 402 runs; bowling, Woolf, 12.23 with 51 wickets; centuries, Mr. W. G. Grace, 215, and Painter, 150. **LANCASHIRE**—Batting, Mr. J. Eccles, 27.12, with 525 runs; bowling, Briggs, 11.62 for 34 wickets; centuries, Mr. J. Eccles, 184; Briggs, 128 not out, and F. H. Sugg, 102 not out. **NOTTINGHAMSHIRE**—Batting, Gunn, 21.21 with 504 runs; bowling, Mr. H. B. Daft, 10.1 with 3 wickets, Richardson coming next with 11.15 for 30 wickets; no centuries scored. **MIDDLESEX**—Batting, Mr. T. C. O'Brien, 50.6 with 406 runs; bowling, Burton, 12.2 for 79 wickets; century, Mr. S. W. Scott, 121 not out. **SUSSEX**—Batting, Mr. W. Newham, 27.6 with 519 runs; bowling, A. Hide, 16.44 for 58 wickets; centuries, J. Hide, 130, and Mr. W. Newham, 128. The Oxford and Cambridge match at Lord's, in the first week of July, ended in a draw, owing to unfavourable weather, the totals at the close being—Cambridge, first innings, 171; second, 170; and Oxford, first innings, 124. This makes the 54th inter-University

match, of which total the Light Blues are credited with 26, and the Dark Blues with 25, the remaining three having been drawn. A few days later the **Eton** and **Harrow** match was played on the same ground, and after a capital game the Harrow boys won by 156 runs, the feature of the contest being the brilliant all-round play of **Hoare** and **Jackson** for the victors. This made the 63rd match between these public schools, and Eton just holds the lead, their wins numbering 27, as against 26 credited to Harrow, the remaining ten having been drawn. The **Rugby** and **Marlborough** match was fixed for the opening days of August, but so persistent and heavy was the rain that this annual contest had to be abandoned. An **Australian team**, captained by P. S. McDonnell, visited England, and enjoyed a fairly successful tour. In their representative matches it was a case of honours being divided, as they won four, lost four, and drew one; whilst in what may be called all matches they won nineteen, lost fourteen, and drew seven. **McDonnell** headed the batting averages with 2551 for 1,303 runs, and in the bowling **Turner** was first with 1138 for 314 wickets. A team of **Parsees** also visited our shores during the season; and an **Irish team** of cricketers had a very enjoyable tour through **Canada** and the **United States**; whilst late in the year a mixed team of amateurs and professionals left England for the **Cape**. The following are amongst some of the most interesting cricket records made in the days gone by:—**Throwing the Cricket Ball**: 137 yards, out and home, by **G. Brown**, on **Walderton Common**, about 1810; 127 yards 1 ft. 3 in., by **W. H. Game**, **Oxford University Sports**, March 13th, '73; 126½ yds., by **E. B. Fawcett**, **Brighton**, June '88; and 122 yds. 1 ft. 9 in., by **W. Forbes**, **Eton**, March '75. **Largest Individual Scores**: **A. E. Stoddart**, 485 (**Hampstead v. Stoics**), August 11th, '86; **J. S. Carriock** (not out), 410, '85; **W. N. Roe** (not out), 415, '81; **E. F. B. Tylecote**, 401 (not out); and in a first-class match, 344, by **W. G. Grace**. **Largest Gross Scores**: **Orleans Club v. Rickling Green**, 920, on August 3rd, '82; **Hampstead v. Stoics**, August 4th, '86, score—**Hampstead** (eight wickets down), 811; **New South Wales v. Victoria**, **Australia**, 775, on Feb 13th, '72; **West of Scotland** (four wickets down) **v. Priory Park, Chichester**, 745, on July 14th, '85; **United Service v. Non-descripts**, 734, on August 10th, '82. **Royal Engineers** (eight wickets down), 724, in '75; and **Emmanuel Long Vacation Club** (four wickets down) **v. Caius L.V.C.**, 708, on July 12th, '81. A meeting is annually held in Dec. at Lord's, when the fixtures for the succeeding year are arranged. Consult Cricket (the Badminton Library).

Crime, Statistics of.—England and Wales. The last official returns, contained in a Parliamentary Blue Book entitled "Judicial Statistics" for '87, issued in September last, show that the total number of **Indictable Offences** for the year ending Oct. 1st, '87, was 42,391. As compared with the number for the previous year this gives a decrease equal to 5.6 per cent. The total number of apprehensions was 19,045, showing a decrease of 0.4 per cent. as compared with '85-6. The apprehensions in '86-7 were in the proportion of 44.9 per cent. to the number of crimes committed. Of the persons apprehended 27.6 per cent. were discharged, 8.8 were bailed to appear for trial, 0.4 were committed for want of sureties, and 63.2 were committed for trial. The number of persons

committed for trial for indictable offences during the year was 13,958; and of these it may be computed that about 10,468 (75 per cent. being about the usual proportion) would be convicted. To this number, in order to show the total convictions during the year, may be added 529,386 summary convictions before the magistrates, making together 539,844, being an increase in the number on the same calculation for the preceding year of 30,650, or 6.0 per cent. In considering this increase it must be remembered that of the summary convictions, however, a large proportion was for offences of a trifling character. The total number of persons proceeded against summarily before magistrates in 1886-7 was 663,887, of whom 529,386 were convicted. The summary convictions showed an increase of 3.7 per cent. compared with the return for the previous year. The number of persons summarily proceeded against for each of the offences named in the following table was as follows for 1886-7 and 1885-6:—

	1886-7.	1885-6.
Breaches of the peace and want of sureties, etc.	15,791	16,034
Cruelty to animals	8,540	7,871
Drunkenness, and drunk and disorderly	162,772	165,139
Other offences under the Licensing Act, 1872	12,043	11,616
Elementary Education Act, offences against	76,265	67,093
Employers and Workmen Act, 1875	5,368	4,892
Highway, Turnpike, Railways, Carriage Laws, etc.	29,320	29,000
Local Acts and Borough By-laws	49,626	43,859
Mutiny Acts	4,614	4,401
Nuisances and offences against health	10,604	9,931
Poor Law Acts	11,022	9,283
Police Acts	17,045	18,463
Prevention of Crimes Act, 1871	532	522
Revenue Laws, offences against	12,354	11,440
Vaccination Acts	2,515	2,838
Vagrant Laws	54,224	51,633
Weights and Measures Act	2,570	2,407
The number of the criminal classes at large in England and Wales, according to last year's return, was 28,729, a decrease of about five hundred compared with the previous year. In Ireland the total number of commitments to prison last year was 40,779. This shows an increase over the returns for each of the three previous years. These commitments were exclusive of commitments under civil processes. The number of convicts sentenced to penal servitude during the year was 102, of whom only 12 were females. There has been a remarkable reduction in the number of female convicts in Ireland during the past thirty years, as will be seen from the fact that in '58 the number in custody was 674. In Scotland the total number of commitments to prison in '87 was 46,108, of whom 28,895 were males and 17,213 were females. The commitments for ordinary offences were 45,970, and for serious crime 131, of whom 11 were females. The total number of commitments was 525 in excess of the number in the previous year.		

Crimes Act, '82. See ed. '88.

Criminal Evidence Bill. See SESSION '88, sec. 13.

Criminal Law Amendment Act, '85. This Act consists of three parts—(1) provisions for

the protection of women and girls; (2) provisions for the suppression of brothels; (3) definitions and miscellaneous provisions. The first part enacts a maximum penalty of two years' imprisonment with hard labour against the procuring of minors for immoral purposes or of any female to become a common prostitute or to enter a foreign brothel, or of any female not already residing in a brothel to enter one anywhere. The same penalty is enacted against those who use fraud or threats or noxious drugs in procuring females for unlawful intercourse. The maximum penalty of penal servitude for life is extended to the defilement of girls under thirteen; and the maximum penalty of two years' imprisonment with hard labour is extended to the defilement of girls under sixteen years. The same penalties are enacted against householders permitting the defilement of girls under thirteen and under sixteen years respectively upon their premises. Any person withdrawing an unmarried girl under the age of eighteen from the possession of those who have lawful charge of her, and with intent that she should be unlawfully known by any man, is subjected to a maximum penalty of two years' imprisonment with hard labour. The same maximum penalty is enacted against any person detaining a woman against her will in a brothel or for immoral purposes in any premises. Any justice of the peace, upon information on oath that any woman or girl is detained anywhere within his jurisdiction for immoral purposes, may issue a warrant to search the premises and to remove such woman or girl to a place of safety. If in the trial of any offence under this Act it should be proved that any person having authority over a girl of sixteen has furthered her seduction or prostitution, the court has power to divest such person of his or her authority, and to appoint as her guardian any person whom it may think proper. The second part enacts stringent penalties, recoverable on summary conviction, against the keepers of brothels, their assistants, and all persons who knowingly allow their premises to be used for the purposes of a brothel. The enactments contained in the third part are not of general interest. Consult Mead Bodkin's "Criminal Law Amendment Act."

Criminal Law and Procedure (Ireland) Act, '87, which is commonly spoken of as the "Crimes Bill" or "Coercion Bill" (see PARLIAMENTARY SESSION ed. '87), enacts that where a sworn information has been made, a resident magistrate may, upon the written order of the Attorney-General, hold a preliminary inquiry, although no person may be charged before him, and examine on oath every person whom he has reason to believe to be capable of giving material evidence, in regard to the commission of any felony or misdemeanour and any offence punishable under the Act, committed in a proclaimed district. Any person may be prosecuted before a court of summary jurisdiction who anywhere in Ireland takes part in a riot or unlawful assembly, or who, in a proclaimed district, takes part in any criminal conspiracy to compel or induce any person either not to fulfil his legal obligations, or not to let, hire, use, or occupy land, or not to deal with, work for, or hire any person in the ordinary course of business, or to interfere with the administration of the law; who wrongfully uses violence and intimidation; who within twelve months after the execution of any writ of

possession of any house or land shall wrongfully take or hold forcible possession; who shall assault or resist any officer of the law in the execution or in consequence of the execution of his duty, or who shall incite to commit any of these offences. The High Court may, on application by the Attorney-General for Ireland, or a defendant, order that a trial at assizes of a defendant charged with having committed a crime in a proclaimed district shall be by special jury; and on application of the Attorney-General for Ireland the Court may order the removal of a trial from a court of assize or quarter sessions in a proclaimed district to some other court in Ireland. For the purposes of the preceding enactments the Lord-Lieut. may by proclamation declare that all or any of them which relate to proclaimed districts are to be in force within any specified part of Ireland, but any such proclamation shall be deemed to have expired if an address is presented by either House of Parliament praying that it shall not continue in force. If the Lord-Lieut. is satisfied that any association formed for the commission of crimes, or carrying on operations for or by the commission of crimes, or encouraging or aiding persons to commit crimes, inciting to violence or intimidation, or interfering with the administration of the law, exists in Ireland, he may, by the advice of the Privy Council, declare it by special proclamation to be dangerous, but such special proclamation shall not continue in force if an address against it is presented to Her Majesty by either House; and if when the special proclamation is issued Parliament is separated by such an adjournment or prorogation as will not expire within twenty days, it shall become void at the end of a week unless during that week Parliament shall be summoned to meet within twenty days. While the special proclamation is in force the Lord-Lieut. in council may by order prohibit or suppress the proclaimed association in any specified district, after which any meeting of the association in that district will be unlawful, and any persons calling or taking part in a meeting thereof, or publishing any notice concerning it, shall be guilty of an offence, and may be prosecuted before a court of summary jurisdiction. Persons prosecuted before a court of summary jurisdiction under the Act are liable on conviction to imprisonment, with or without hard labour, for a term not exceeding six months. An agreement or combination which under the Trades Union Acts, or the Conspiracy and Protection of Property Act, '75, is legal, and any act done in pursuance of the same is excepted from the provisions of this Act respecting conspiracy, intimidation, and dangerous associations. The Act is a permanent statute. The Peace Preservation (Ireland) Act, 1881, and the amending Act of '86, are continued for five years.

Criminal Prosecutions in '88. These have been numerous, but none of them possess any very special interest. Early in the year a man named Jackson, whose career of crime had been of a most extraordinary character, was condemned to death for the murder of a warder in Armley gaol. The murder was committed in order that Jackson might escape from prison, and he was not recaptured until he had been at large for some time, during which he committed a series of audacious burglaries.—In February Thomas Callan and Michael Harkins

were tried at the Old Bailey for taking part in a conspiracy to destroy public buildings in London by means of dynamite. The prisoners had come over from America, and from the articles found in their possession it was perfectly clear that they intended to commit a series of diabolical outrages. They were found guilty, and each sentenced to fifteen years' penal servitude.—The prosecution of the *Greenaways*, who had committed a variety of frauds in their capacity as bankers in the neighbourhood of Birmingham, ended in a sentence of five years' penal servitude upon one brother, and of twelve months' imprisonment in the case of the other.—*Mrs. Gordon-Ballie*, whose real name was Hannah Frost, received a sentence of five years' penal servitude for a series of clever frauds upon tradespeople. This lady's career was in many respects remarkable; and, among other things, she succeeded in raising a considerable fund, nominally intended for the starving crofters of Scotland, but in reality employed for her own purposes.—Among the *undiscovered crimes* of the year may be mentioned the *murders* which took place in the autumn in *Whiteshapel* and the adjacent neighbourhood. No fewer than seven women of the unfortunate class met with a terrible death at the hands of some inhuman fiend, who, despite the unexampled efforts of the police, is still at large.

Crispi. *Francesco*, is a native of Ribera, in Sicily, where he was born in 1830. He was educated for the law, and was called to the Neapolitan bar. His early aspirations for the realisation of Italian unity, prompted him to take an active part in the revolutionary movement of '48, when the kingdom of the two Sicilies was overthrown. He inspired the resistance of the Sicilians during the insurrection of Palermo, and was compelled to fly to France. He subsequently landed with Garibaldi at Palermo, and distinguished himself by his courage and capacity. In '61 he was elected to the first Italian Parliament as member for Palermo. He rapidly rose to a position of great influence, and was recognised as the leader of the Constitutional party. On the death of Depretis, in '87, Signor Crispi, who had been Minister of the Interior, became President of the Council and Minister for Foreign Affairs. His correspondence, in August '88, with M. Goblet, the French Minister for Foreign Affairs, on the *Masoviah question*, caused much excitement in political circles. In the same month Signor Crispi paid a visit to Prince Bismarck at Berlin. See ITALIAN POLITICAL PARTIES, and ITALY.

Croftia. See AUSTRIA-HUNGARY.

Crofters. Crofters are the descendants of the Highland clansmen, and number about 70,000. They occupy small farms or crofts, the produce of which, together with occasional fishing, constitutes their entire maintenance. They form the majority of the population of the western islands of Lewis, Skye, Haggis, Uist, Tyree, Eigg, and Coll; also a considerable proportion of the inhabitants of the counties of Ross, Argyll, Sutherland, Inverness, and the islands of Orkney and Shetland. They are besides to be found in the counties of Aberdeen and Perth. Up to 1745 the crofting population held the lands in common with the chiefs, with common rights of pasture, fishing, and shooting; but since that date, encouraged by the British Government, the chiefs gradually

assumed the rights and privileges of the sons of the soil. Large clearances commenced early in the present century, and whole districts were depopulated to make room for extensive sheep farms. From Sutherlandshire alone 15,000 persons were expatriated, and the example of the Duke of Sutherland was soon followed by the landlords all over the Highlands. The majority of the Highlanders who were still permitted to rent crofts were driven from their fertile straths to eke out a miserable existence on the inhospitable sea border. In time sheep farming became unprofitable, and gave place to the preservation, on a gigantic scale, of deer and grouse. Thousands of acres of the finest grazing land were turned into deer forests; and as an example it may be mentioned that an American at present possesses in Ross-shire a forest extending over 400 sq. m. In the winter of 1882 a widespread destitution in the crofting districts induced a number of Highlanders in London to form themselves into a *Crofters' Aid Society* (Hon. Treas., Dr. Macdonald, M.P.; Hon. Sec., Mr. Donald Murray, offices of the Highland Land Law Reform Association). A Royal Commission was appointed by the Liberal Government, in March 1882, which issued a report condemning the prevailing system, and made recommendations which many, including the Duke of Argyll, considered to be revolutionary in character. In 1885 the Government introduced a Land Bill, which was severely criticised in the House of Commons by Mr. Macfarlane, M.P., and others, on account of the inadequate nature of its provisions, so it was resolved to drop the measure until after the general election of that year. At that election five "crofter" members were returned. The demands of the crofters are fixity of tenure and the establishment of a Land Court to fix the rents; this court also to be empowered to compel a re-apportioning of the land for the benefit of the native population. In other words, this demand is to break up all deer forests and sheep farms that are suitable for agricultural purposes, and give the land to the crofters and cottars. Cottars have no land, but subsist on fishing and whatever employment they can obtain as labourers. Among this class great distress and destitution invariably prevail. A bill to remove existing grievances was introduced in the session of 1885 by Mr. Trevelyan. The bill was read the second time on March 8th, 1886. Its provisions, however, met with considerable opposition from both sides of the House, and numerous amendments were proposed, especially by the Crofter representatives. The bill underwent considerable modifications before ultimately passing into law (see CROFTERS ACT, 1886). A subsequent Act, giving further relief, was passed in '87. During the sitting of the Commission in that year, the crofters complained that many of them were made bankrupts before they had time to lay their cases before it; and accordingly a short amending bill (see below), on the initiation of Mr. Chamberlain, was brought in by the Government and passed, which put an end to such cases. In Sutherland and Caithness, in Skye and Uist, rents were reduced by 20, 30, and in some cases 50 per cent., and many arrears were cleared off. In Nov. '87, there was an outbreak of lawlessness in the island of Lewis, and a large number of impoverished cottars made a raid on the deer

forests and lochs, and slaughtered many deer. The arrival of the gunboat *Seahorse* put a speedy end to the disturbances, and the ringleaders gave themselves up. A similar movement took place on the opposite mainland, where pasture lands belonging to the Duke of Sutherland were occupied by crofters and cottars, who drove their own cattle on to them. The crofters claimed the land as theirs, alleging that their forefathers had been robbed of it. At the end of last year other raids took place. Early in Jan. '88 a serious conflict also occurred at Galsoun with the police, several of whom were severely wounded. The trial of the **Lewis raiders** at the High Court of Justiciary, Edinburgh, terminated in a verdict of acquittal, owing chiefly to the indictment being badly drawn. The **scheme for transferring 1,250 Crofter families** from Lewis to British Columbia with the assistance of the Government, who were prepared to advance £150,000 in support of it, has only been partially carried out, about 30 families, composed of 193 persons, having left Lewis. During the last six months the agitation among the Crofters has to a large extent subsided, chiefly owing to the large reductions of rents made by the Commissioners—greater, as a rule, than those effected in Ireland. In reply to Dr. Cameron, the Lord Advocate stated in the House of Commons (Nov. 22nd) that the amount spent on Crofter Emigration up to date amounted to £4,445 16s. 6d., of which £730 had been received from private subscription.

Crofters' Act, '86. See ed. '88.

Crofters' Holdings (Scotland) Act, '87, enables the Crofters' Commission to stay proceedings for the sale of a crofter's effects on a seizure for arrears of rent until the Commission has adjudicated on his application for fixing a judicial rent.

Croke, The Most Rev. Thomas W., Archbp. of Cashel, b. at Mallow 1824. Educated at Chorleville School and the Irish Colleges in Paris and Rome, where he greatly distinguished himself. After graduating D.D. ('46) he returned to Ireland, and received an appointment in Carlow College two years later. In '49 he taught theology in the Irish College in Paris, and subsequently devoted himself to mission work in the diocese of Cloyne. He was appointed **President of St. Colman's College, Fermoy, '58,** and ('65) became **Chancellor of the Diocese of Cloyne.** From '70 to '74 he was **Bishop of Auckland, New Zealand,** and in '75 made **Archbishop of Cashel.** Dr. C. is an ardent sympathiser with the Irish Nationalists, and has taken a prominent part in recent movements.

Crown. The Crown of these realms is by common law and constitutional custom hereditary, and this in a manner peculiar to itself; but the right of inheritance from time to time may be changed or limited by Parliament, under which limitations the Crown still continues hereditary. The **Sovereign power** is limited to the heirs of **Princess Sophia,** the granddaughter of James I. (who was himself the heir of William the Conqueror and of Egbert), being **Protestants;** and the Crown on its demise passes to the next heir, males in the next degree in relationship being preferred to females, though any daughter stands in the order of succession before an uncle, nephew, or male cousin. The **Sovereign** enjoys various prerogatives by prescription, custom, and law, which assign to her the chief place in Parliament

and the sole executive power. She is the head of society, the supreme head of the Church, appointing as such the archbishops, bishops, and deans. As the fountain of honour she awards all titles of nobility and honourable distinctions; as the fountain of justice she appoints the judges. Criminal prosecutions are carried on in her name, and she may pardon or abate the punishment of offenders; she is head of the army and navy, appoints their officers, and wages war or concludes peace; she sends and receives ambassadors, signs treaties, appoints the Viceroy of India, the Lord Lieutenant of Ireland, all governors of colonies and lords lieutenant of counties; she coins money for the use of her subjects, owns much landed property, receives and holds in law the entire revenue of the State, and appoints the ministers. The right of summoning, proroguing, or dissolving Parliament is vested exclusively in her, and every bill must receive her assent before it can become law. Finally, she can legally do no wrong. But the prerogatives are subject to many limitations, and in the coronation oath the Sovereign solemnly pledges herself to govern the people according to the statutes of Parliament and the law and customs of the same. Parliament must be called together at least once in three years, and its existence ceases at the end of seven years if it be not previously dissolved; while the necessity of annually voting supplies for the forces, and of continuing the Mutiny Act, renders it absolutely necessary Parliament should be convened once in every year. The royal assent has not been refused since the days of Anne. Although the Sovereign enjoys the chief place in Parliament, she cannot make, alter, or dispense with any law without the concurrence of the other constituent parts of the legislature. The Sovereign, although she appoints the judges, cannot remove any of them except at the request of both Houses, nor may she influence the decision of causes between subject and subject. She cannot maintain a standing army in time of peace without the assent of the Parliament. Though she alone can coin money, she cannot alter the standard. She is supreme head of the Church, but she cannot alter the established religion, nor call individuals to account for their religious opinions; she cannot be a Roman Catholic, nor marry one. The hereditary revenues of the Crown are at the commencement of each reign surrendered in exchange for a fixed civil list; and though the public revenues are in law received and held by her, nothing can be expended for the public service which has not been granted to her by Parliament and primarily by the Commons. The executive power, though vested in the Crown, is exercised only under the advice of and through the responsible ministers. Appointments are made, titles and honours are conferred, punishments are remitted, war is proclaimed and peace concluded, treaties signed, Parliament is assembled or dissolved,—in short, every act of the Crown, by the sign manual or otherwise, is covered by their counter-signature or their advice, so that the old constitutional maxim that the Crown is incapable of wrong is true to the letter. In one matter—the selection of a person to form a new administration when a ministry has resigned—the Sovereign has theoretically a free choice; but in practice the range is limited to the few members of the Opposition who could

undertake the task with a prospect of success. See PARLIAMENT, MINISTRY.

Crown Agents for Colonies. See DIPLOMATIC.

Crown Colonies. See BRITISH EMPIRE, COLONIES, ETC.

Crown. The. Originally a mere fillet of linen, the crown was, in common with most of the regalia, borrowed from the East on the introduction of Christianity into Europe. It is now used only for coronations and at the openings of parliament. Until the time of the Reformation it was in the charge of the Dean and Chapter of Westminster; but has since been preserved in the Tower. In 1649, the regalia having been destroyed, new crowns were made for Charles II. at his coronation.

Crown Lands. The mediæval king of England was not only the ultimate lord of all the land of the kingdom, but also lord in the usual sense of a very large demesne, the rents and profits of which were a principal source of revenue. In that age the revenue and expenditure of the state were never clearly distinguished from the revenue and expenditure of the sovereign. The hereditary revenue, the taxes granted for life, and the occasional subsidies, were the king's, subject to a general understanding that he should carry on the government of the country. Thus successive sovereigns granted away the Crown lands as a private person might grant away his farms. Although frequently increased by immense confiscations, such as those in the Wars of the Roses or at the suppression of the monasteries, the Crown lands on the whole steadily declined in extent and value. Charles II. in three years dissipated half the revenue of the Crown lands; William III. was obliged to recall a grant of four-fifths of the county of Denbigh to the Earl of Portland. The income of the lands which remained was frittered away. Leases were carelessly or corruptly granted; renewals were conceded upon such terms as the tenants chose to give; the revenue was received almost altogether in the shape of fines; and waste and corruption in the management of the estates which had not been granted away reached such a height at the accession of George III., that the Crown lands produced a net annual revenue of little more than £6,000 a year. George III. was the first English king who surrendered the hereditary revenues, including the revenue arising from the Crown lands, in exchange for a fixed Civil List. In 1786 an Act was passed for making an inquiry into the condition of the woods, forests and land revenues of the Crown; and eight years later there was passed an Act for their better administration. Originally there had been one Surveyor-General of woods and forests, and another of land revenues. In the year 1810 the functions of both were vested in a single commission, which in 1832 was further intrusted with the care of public works. But in 1851 the department of woods and forests was again separated from that of public works, and has continued separate ever since. The revenue of the Crown lands reached in 1798 a total of £201,250 a year, in 1830 of £373,770, and in 1860 of £416,530. This revenue is paid into the Consolidated Fund; each sovereign since George III. having received a fixed Civil List in lieu of the hereditary revenues. But the revenues of the Duchies of Lancaster and Cornwall are still enjoyed, those of the former by the reigning

sovereign, and those of the latter by the Prince of Wales as Duke of Cornwall. Return for the year ending March 31st, '88, published in October last:—

	Receipts			Expenditure		
	£	s.	d.	£	s.	d.

Cruelty to Children. See LONDON SOCIETY FOR PREVENTION OF.

Cuba. The largest of the West Indian islands, lying between Florida and the Caribbean Sea. The Queen of the Antilles, and the most important of all the Spanish colonial possessions. Area, 43,220 sq. m., pop. 1,521,684.—Divided into three provinces, containing 22 cities and towns and 204 villages. Capital, **Havana**, a splendid city, with pop. 250,000, connected with other towns by 1,000 miles of railway.—Coast much beset with rocks and reefs, but Cuba contains a number of splendid bays and harbours. A mountain chain, rising to 8,000 feet, forms the backbone of the island. From its base extend wide savannahs, well watered, fertile, and covered with luxuriant vegetation. There are great forests and scenery of wondrous beauty, devoid of noxious reptiles or insects. Two-thirds of the island are uncultivated, and in the almost unknown recesses of the interior lurk wild dogs and Maroons (negro outlaws). Cuba has hitherto been almost exclusively confined to the raising of sugar and tobacco, but of late attention has been paid to the growth of **textile plants**, coffee, Indian corn, and cacao. Cattle breeding has been successfully tried, and has already stopped foreign importations. A considerable **fruit trade** has sprung up with the **United States**, which may be said, commercially speaking, to have annexed the island.—**Ruled** by a Captain-General. Defence is provided for by 22,000 regular Spanish troops and thirty-five small gunboats. Ports are fortified. Education is compulsory; religion Roman Catholic; and slavery was absolutely abolished in '86. **Estimated revenue** for '87-8, \$23,273,100; **expenditure**, \$22,880,439. **Exports to United Kingdom** (including those from Puerto Rico) in '86, £134,935 (£984,976 in '85); **Imports** (ditto) in '86, £1,740,043. The staple articles of export from Cuba and Puerto Rico to the United Kingdom are unrefined sugar and tobacco; and of import cotton and linen manufactures. Of the **people** 977,992 are Spaniards and Spanish Creoles, 10,632 other whites, 489,249 negroes, and 43,811 Chinese. Cuba has belonged to Spain since 1511. In '68 a revolt broke out, aiming at political independence, and continued for ten years, but in '78 the patriots laid down their arms, Spain offering terms of great liberality, and promising reforms. Cuba is now

entitled to representation in the Spanish Cortes at Madrid. In consequence of the increase of brigandage the Governor-General (April '88) declared the establishment of a state of war in the provinces of Havannah, Pinar del Rio, Matanzas, and Santa Clara. In September a terrific hurricane visited Cuba, doing great damage to life and property. The damage to the latter was estimated at over \$1,000,000. See COLONIES OF EUROPEAN POWERS. Consult Bates' "Central and South America and West Indies."

Cumulative Voting. This principle in the conduct of public elections was introduced by the Elementary Education Act of 1870, which provides that at the election of a school board "every voter shall be entitled to a number of votes equal to the number of the members of the school board to be elected, and may give all such votes to one candidate or may distribute them among the candidates as he thinks fit."

Cunliffe-Owen, Sir Francis Philip, K.C.M.G., b. 1828. In '55 appointed one of the superintendents of the Paris Exhibition. In '57 he was made Deputy General Superintendent of the South Kensington Museum, and ('60) became Assistant Director of that institution. He succeeded Sir Henry Cole as Director ('73). He rendered valuable services in connection with the International Exhibition held in London in '62, the Paris Exhibitions of '67 and '78, Vienna Exhibition of '73, and the Centennial Exhibition in Philadelphia in '76, the British sections at most of these gatherings finding in him an able organiser. Knighted in '78, Sir Philip Cunliffe-Owen devoted his energies to secure the success of the series of exhibitions held in the grounds of the Royal Horticultural Society, the last of which, the Colonial Exhibition, took place in '86. He also actively aided the project to establish the Imperial Institute (*q.v.*) in commemoration of the Jubilee of Her Majesty the Queen.

Cunningham Lectures. These lectures are the foundation of the late William Binny Webster, a sometime surgeon in the H.E.I.C.S., who in '62 made over to the General Trustees of the Free Church of Scotland the sum of £2,000 in trust for the endowment of a Lectureship to commemorate the name and the services of the Rev. William Cunningham, D.D., who died December 14th, '61. Dr. C. had, from his nomination, been a man of mark, having early attracted special attention by his splendid powers in debate. In '43, the year of the Disruption in the Church of Scotland, Dr. C. became one of the most trusted and fearless leaders of the Free Church, the General Assembly of which nominated him to one of the Professorships of Theology in New College, Edinburgh. He occupied the Moderator's chair of the General Assembly in '59; and at the time of his death he was Principal of New College, having succeeded, in '47, to the office left vacant by the death of Dr. Chalmers; and Professor of Divinity and Church History in the same institution. The Cunningham Lectures were established for the general purpose of "advancing the theological literature of Scotland"; and the Lecturer must be a minister or professor of the Free Church of Scotland, with an occasional appointment, under certain specified conditions, of a minister or professor from some other denomination. The appointment is not to be for less than two

years, or for more than three; and the Lecturer is at "liberty to choose his own subject within the range of apologetical, doctrinal, controversial, exegetical, pastoral, or historical theology, including what bears on missions, home and foreign, subject to the consent of the Council." This body, which includes, as *ex-officio* members, the Principal of New College, and the Moderator of the Free Church General Assembly, has been at liberty, since the expiry of five years from the date of the foundation of the lectures, "to make any alteration that experience may suggest as desirable in the details of this plan, provided such alterations shall be approved by not fewer than eight members of the Council." Hitherto, however, the rule has held good that the lectures shall not be fewer than six in number, and that they shall be delivered at some time immediately preceding the expiry of the appointment of Lecturer, and during the session of New College, Edinburgh; and in the presence of the professors and students of that institution. The first Cunningham Lecturer was the Rev. Robert Smith Candlish, D.D., who succeeded Dr. Cunningham as Principal of New College, before which he delivered a course of lectures, in March '64, on "The Fatherhood of God"; and among those who succeeded him may be noticed the Rev. James Buchanan, D.D., Professor of Divinity, New College, Edinburgh; the Rev. Patrick Fairbairn, D.D., Principal and Professor of Theology in Free Church College, Glasgow, and which acquired the reputation of being "one of the most scientific productions of Scottish theology"; was published as "The Revelation of Law in Scripture, considered with respect both to its own Nature and to its Relative Place in Successive Dispensations," '60; the Rev. James Walker, D.D., of Carnwath; the Rev. Robert Rainy, D.D., who, about the time of their publication, succeeded Dr. Candlish as Principal of New College, on "The Delivery and Development of Christian Doctrine," '74; the Rev. Alexander B. Bruce, D.D., Professor of Apologetics and New Testament Exegesis, Free Church College, Glasgow; the Rev. John Ludlow, D.D., who in '81 became Professor of Systematic Theology, New College, Edinburgh; the Rev. John Cairns, D.D., Principal of the United Presbyterian College, Edinburgh; the Rev. George Smeaton, D.D., Professor of Exegetical Theology, New College, Edinburgh; and the Rev. James Smith Candlish, D.D., Principal and Professor of Divinity in the Free Church College, Glasgow, and son of the first Cunningham Lecturer, who delivered the tenth series, afterwards published as "The Kingdom of God" ('84).

Curacao. An island in the Caribbean Sea, off the coast of Venezuela. It is a Dutch possession, and chief of Holland's West Indian possessions. Area 210 sq. m., pop. 25,203. Is rocky, with poor soil, suffering from aridity. It produces salt in large quantities; cochineal, tamarinds, and other fruits are cultivated, and the celebrated liqueur "Curacao" is prepared extensively. Cattle, sheep, and goats are bred for exportation. The town of *Willemstadt* is the capital and seat of government for this and the neighbouring Dutch islands. See COLONIES OF EUROPEAN POWERS.

Currency, Royal Commission on. In September 1886 a Royal Commission was appointed to inquire into and report upon the

causes of the changes which the precious metals have undergone, as shown by the decrease in the gold price of silver; and especially to inquire whether they are due (1) to the depreciation of silver; or (2) to the appreciation of gold; or (3) to both these causes. The Commission is thus constituted:—**Rt. Hon. Lord Herschell** (chairman), **Sir Louis Mallet**, **Mr. L. Courtney**, **M.P.**, **Sir W. R. Houldsworth**, **Bart.**, **M.P.**, **Sir J. Lubbock**, **Bart.**, **M.P.**, **Mr. E. M. Harboure** (Secretary to the Government of India Department of Finance and Commerce), **Mr. J. W. Birch** (Director of the Bank of England), **Sir T. Farrer**, **Bart.**, **Hon. C. W. Fremantle** (Deputy Master of the Mint), **Mr. Samuel Montagu**, **M.P.**, and **Mr. Chapman**. They issued their report on Nov. 6th, '88. The changes referred to have, says the report, been of a twofold character. There have been extensive fluctuations in relative values of gold and silver, and there has been a considerable fall in the gold price of silver. After investigating the question in its various bearings upon foreign and internal trade, etc., the Committee state that they are strongly of opinion that both metals must continue to be used as standard money. The result of using them separately and independently since '73 have been most unsatisfactory, and may be positively disastrous in the future. Until '73 gold and silver were always effectively linked by a legal ratio in one or more countries. In '73-74 the connecting link disappeared, and for the first time the system of rating the two metals ceased to form a subject of legislation in any country in the world; and the Commission cannot doubt that if the system which prevailed before '73 were replaced in its integrity, most of the evils which they refer to would be removed; and that, whatever evils may be expected to follow a return to the *status quo ante*, the evils both present and prospective of the existing situation are infinitely more serious. No settlement of the difficulty is deemed possible, however, without international action. The essential features of the proposed remedy are—(1) free coinage of both metals into legal tender money; (2) fixing a ratio at which coins of either metal should be available for payment of all debts at the option of the debtor. The Commissioners, however, were not unanimous, and the majority report was only signed by six of them. See **BIMETALLISM**.

Customary Court. See **MANOR**, ed. '88.

Customs. See **FINANCE**, **NATIONAL**.

Cycling. The National Cyclists' Union (president, Viscount Bury) has the control of all British Cycling affairs. Several American cycling teams visited England in '88, and many records were made. **W. A. Rowe**, American champion bicyclist, on April 14th was beaten by **R. Howell** (Leicester) in a 5 miles race, by 5 yards; and in a mile race in the same month Howell defeated Rowe by nearly 30 yards; time 2 min. 47 sec. The American was also beaten by a foot in a 20 miles race against **W. Wood** (North Shields), but in a 5 miles contest he defeated Wood by 9 inches. Rowe also won the half-mile championship at Birmingham, in 1 min. 22½ sec. The Irish International cycling tournament was held at Dublin, when **P. P. Kilkelly** won the five miles bicycle championship by 5 yards, in 16 min. 44 sec.; and **R. Temple** (Chicago) secured the one mile professional bicycle handicap, the five miles professional bicycle race, and the mile bicycle

scratch race, the time for the latter being 2 min. 40 sec. (Irish record). **R. I. McCreedy** won the mile triocycle in 2 min. 49½ sec. (Irish record). The five miles amateur championship, run at North Shields, fell to **H. Synner** (Notts Boulevards C.C.), time 15 min. 48 sec. Synner also won the Lincoln Cup (2 miles) at the Lincoln Bicycle Sports, in August. At the joint meeting of Brixton, Lewisham, and London Bicycle Clubs, at the Crystal Palace, in July, the ten miles bicycle race for a challenge cup was won by **F. J. Osmond**, Brixton Ramblers (holder), in 32 min. 3½ sec. **F. P. Wood**, Brixton Ramblers, won the five miles International bicycle scratch race, at Bath, in August; and **W. F. Ball**, Speedwell B.C., Birmingham, for the third successive time, secured the five miles bicycle scratch race. The N.C.U. twenty-five miles amateur bicycle championship was brought off in August, at Grimsby, the winner proving to be **J. H. Adams**, Speedwell B.C., who defeated **H. Synner** and eight others; time 1 hr. 22 min. 34 sec. At Leicester, in June, **W. Wood** (North Shields) won a twenty miles professional bicycle championship, in 1 hr. 4 min., beating amongst others, **R. Howell**, champion; but in a 20 miles match for £200, in August, over the same ground, Howell turned the tables, beating Wood by 150 yards in 1 m. 40 sec. **R. Temple**, Chicago, won a 20 miles champion race at Leicester, August 4th, defeating **H. G. Crocker**, Boston, U.S.A., by a foot, in 1 hr. 9 min. 16 sec. The N.C.U. meeting was held at the Paddington Ground, Maida Vale, on July 21st, when in the University contests the Dark Blues had the best of it, **W. J. Turrell** (Turrell's Hall, Oxford), winning the 4 miles and 1 mile races, and making a dead-heat in the 20 miles race with **W. L. Raynes** (Pembroke Coll., Cambridge). The five miles amateur triocycle championship gold medal was won by **F. J. Osmond**, Brixton Ramblers. At a contest at Wolverhampton in August, **E. Oxborough**, Coventry, in the mile Safety bicycle handicap, covered the distance (less 20 yards) in the fast time of 2 min. 45½ sec. At Coventry in May, **F. W. Allard** lowered the professional Safety bicycle mile record, which then stood at 2 min. 39 sec., by 1½ sec.; and in September, at Long Eaton, **Lawrie** (Worcester) covered a mile on a Safety bicycle in 2 min. 36½ sec. but this was eclipsed by **Whittaker**, an American, on the same track, whose time for a mile was 2 min. 31½ sec. (which is the world's mile Safety record). Another American, **F. W. Knapp** (Denver), in July, at Leicester, lowered bicycle records at 23, 30, 35, 40, 45, 50, 55, 60, 65, 70, 75, 85, 90, 95, and 100 miles; 50 miles in 2 h. 39 min. 48 sec., and 100 m. in 5 h. 55 min. 21 sec.; and in another trial in August Knapp rode 26 miles in 1 h. 16 min. 34 sec., and 50 miles in 2 h. 29 min. 41 sec., which are the best times ever accomplished. **H. G. Crocker**, of Boston, U.S.A., at Leicester, beat all English records from 2 up to 10 miles, and lowered the world's records over 7, 8, and 9 miles; time 10 miles, 27 min. 8 sec. (previous record 28 min. 5 sec.). At Long Eaton, on Sept. 18th, **E. C. Taylor**, in an attempt to beat the world's triocycle record for an hour, rode 8 miles in 23 min. 1 sec., and 9 miles in 26 min. 14 sec. (records). On the Crystal Palace track, **F. J. Osmond** (Brixton Ramblers) rode a mile in 2 min. 31½ sec., beating the previous amateur record of 2 min. 32½ sec. made by Furnival. Osmond also covered a flying quarter-mile in 33½ sec., but **S. G. Whittaker**, America, is credited with the flying

quarter in 33½ sec., accomplished at Long Eaton in September. J. H. Adams, Lewisham (25 and 750 miles amateur champion), at the Crystal Palace, made records from 26 miles (1 h. 20 min. 49½ sec.) to 37 miles (1 h. 57 min. 2½ sec.), and from 51 miles (2 h. 47 min. 2½ sec.) to 55 miles (3 h. 2 min. 33½ sec.). At Coventry, S. F. Edge, on a tricycle, covered 25 miles in 1 hr. 15 min. 44½ sec. S. G. Whittaker, at Long Eaton, Sept. 12th, beat Safety records from 2 to 11 miles, covering 2 miles in 5 min. 18½ sec., and 11 miles in 29 min. 50½ sec. At the Surrey B.C. meeting, on Sept. 8th, F. J. Osmond won the mile scratch race (Sydney challenge trophy) and the ten miles scratch race, in good time; but the lap distance was found to be incorrect. The fifty miles amateur bicycle championship, decided at Newcastle-on-Tyne, on Sept. 1st, was secured by F. P. Wood, Brixton, time 2 h. 55 min. 12½ sec. H. E. Laurie, at Long Eaton, on Aug. 31st, covered 21 miles 200 yards in 1 h. on a Safety bicycle, a good performance for a youth of 17, beating Whittaker's (Chicago) distance for 17 hour by 72 yards. The latter, however, on Sept. 22nd, at Long Eaton, rode 21 miles 380 yards in 1 h. At the Kildare sports, on Sept. 15th, at Stamford Bridge, F. J. Osmond (Brixton Ramblers) was successful for the second year in the five miles scratch bicycle race, beating McRae (London B.C.) by 4 yards, in 74 min. 45½ sec.; and in the mile handicap W. G. Bramson (Lewisham) won his heat in 2 min. 45 sec. (both times records for Stamford Bridge). An English cycling team visited the United States in '86, and met with a fair amount of success; while at the Danish Cyclists' Union meeting, held at Klampenborg, E. M. Mayes, London, won the one mile and the five miles international races. The National Cyclists' Union held their benefit meet at Kennington Oval on Oct. 6th, when Syner, of Nottingham, beat Osmond, of Brixton, in their mile match by a few yards. In October G. P. Mills, on a tricycle, rode 50 miles in 2 h. 52 min. 25 sec., and 100 miles in 6 h. 58 min. 54 sec. (records). Consult Cycling (the Badminton Library).

Cyclone Pulveriser. The machine bearing this name suggested itself in the first instance to two American gentlemen, who, from observation of the effects of cyclone storms, judged it possible to devise an apparatus whereby a whirling current of air, which in a cyclone moves in one direction only, might be made, by creating another and opposing current, to exercise a powerful pulverising effect upon various kinds of material. Such a machine was eventually made, and in America it came into early use. It consists of a box containing the material to be reduced, which is mechanically delivered beneath into a mill. Here are a pair of discs with blades, the latter varying according to the substance introduced, each disc and blade formed in one. The discs are revolved in contrary directions at about 1,800 revolutions per minute, while a supply of air, which can be regulated, is admitted into the mill. The result is a complete pulverisation of the material. The machine successfully deals with all kinds of substances it is desired to reduce.

Cymmrodorion. See EISTEDDFOD.

Cyprus. An island and British colony in the Levant, 40 miles from Asia Minor, 60 from Syria, 258 from Port Said, and 1,117 from Malta. Area 3,584 sq. m., pop. 186,173. Divided into six districts. Capital *Nicosia*, pop. 11,500, inland. Other towns and ports, *Larnaka*, *Limasol*, *Famagusta* (harbour), *Kyrenia*, *Ktima*. Mountains traverse the island; highest peak Mount Troodos, 6,340 ft. in the Troodos or Olympus range. Rivers not navigable. Climate salubrious, lowlands hot in summer; soil, generally fertile. Former destruction of forests has done great harm, — now being remedied. Ravages of locusts had almost ruined the island, — now energetically combated. Chief produce, cotton, wine, salt, carobs, wheat, barley, wool, silk, spirits, sponges, raisins. Minerals: lead, building and ornamental stones, salt. The copper mines of Cyprus were of great importance in classical times, but no large deposits of the ore are now known. Government, representative: High Commissioner, Official Executive, Elective Legislature. Religion: Mohammedan and Greek Church. Schools subsidised. Cyprus is a military and naval station, but undefended. Revenue (1887), £187,044; expenditure, £110,679; debt, £92,800 annually credited to Turkey. Trade improved since British occupation. In 1878 imports £177,651, exports, £157,328; in 1887 £355,795 and £312,797. History long and most eventful. Island made over to Great Britain in 1878 by Convention with Turkey, subject to the payment of subsidy (£92,800) annually to the latter, and restoration to be made should Russia surrender Kars and Batoum to Turkey. A journal entitled *Cyprus* is now issued, being printed both in Greek and English. Consult Lang's "Handbook to Cyprus," Brown's "Locust War in Cyprus," the *National Review* and *Blackwood's Magazine* for March '88, etc.

Cyprus Exploration Fund. Formed to undertake systematic archaeological researches in Cyprus, — England having often been the subject of reproach by foreign scholars, because no researches had been attempted since the island came under English government. In '87 the Cyprus Exploration Fund was formed, with a Committee on which the British Museum, the Universities of Oxford and Cambridge, and many leading archaeological societies, were represented. The application, on the part of this committee, to the High Commissioner of Cyprus for permission to excavate in the island was supported by a special resolution addressed to the Secretary of State for the Colonies by the trustees of the British Museum. Permission has now been obtained in respect of one site, the village of *Kouklia*, which stands on the site of the ancient *Paphos*, and operations have begun there, on a large scale, which promise to yield results of exceptional interest, the special object in view being the great temple of *Venus*. The work is being carried out by students of the British School at Athens, under the supervision of the director, Mr. Ernest Gardner. Hon. Treas., Mr. Walter Leaf, M.A., Old 'Change, E.C. Hon. Sec., Mr. George Macmillan.

D

"Daily Chronicle." Morning paper (*id.*). Originally a local paper for the whole of London, it was purchased by Mr. Lloyd (1876), and converted into an imperial Liberal organ with an independent line of action. It has a very large circulation. Editor, **Mr. B. Whelan Boyle** (*q.v.*). Offices, Fleet Street, E.C.

"Daily News." A prominent Liberal daily paper (*id.*), and principal organ of the Gladstonian party. Established 1845. It made much headway in 1870-71, owing to its early and impartial telegrams respecting the Franco-German war; again in 1876, when Mr. MacGahan, its special correspondent, first called attention to the Bulgarian Atrocities; and later during the Egyptian campaigns. Charles Dickens was its first editor, and it is at present edited by **Mr. J. R. Robinson** (*q.v.*). New and handsome buildings, lit throughout by the electric light, have recently been erected, in Bouverie Street, E.C.

"Daily Railway Share List." See STOCK EXCHANGE OFFICIAL LIST.

"Daily Telegraph." Morning paper (*id.*). Founded 1855. Circulation approximates to a quarter of a million daily. Its politics are Independent Liberal, and it takes a foremost part in the discussion of great social problems. Has special wires from Paris and Vienna. In late years it has employed **Mr. Smith** on his successful special commission in Assyria, and **Mr. Henry M. Stanley** to Central Africa. A new feature of interest was added in 1886: "Paris Day by Day," a record of the chief occurrences in the French capital. During '88 a correspondence on the question "Is Marriage a Failure" (*q.v.*) engaged public attention. Offices, Fleet St., E.C.

Dairy Farming is that branch of agriculture which has in view specially the production of milk, and the manufacture therefrom of butter and cheese. The dairy districts of Britain are the western counties of England and the south-western counties of Scotland. The generally humid climate of these districts is favourable to the growth of grass, and the grazing of cows and other cattle. The same feature in the climate of Ireland makes it suitable to the development of this important branch of agriculture. The improved facilities afforded by the railways in the rapid transit of fresh milk to the great centres of population have increased the demand for this product to an enormous extent within the last few years. The supplying of this daily demand for fresh milk is now one of the most important and probably remunerative industries connected with the dairying interest; and our dependence upon the foreign importations for our supplies of butter and cheese has in consequence increased. The great bulk of the London milk comes from country farmers within an area bounded by Kent, and Dorset on the south, Cheshire and Wilts on the west, and Essex and Norfolk on the east. The prices paid for London milk vary considerably. The farmer usually prefers to contract with a respectable firm for the year, as his sale is then certain and his money safe. The milk is offered at 11*d.* to 1*s.* 2*d.* for the six summer months, and 1*s.* 5*d.* to 1*s.* 8*d.* for the six winter months, per barn gallon of 17 pints. But British dairy farming is on the whole gradually improving its resources. The Royal

Agricultural Society (*q.v.*), which offers prizes for improved utensils and dairy machinery, and the **British Dairy Farmers' Association**, formed a few years ago, which by means of lectures and dairy exhibitions diffuses a mass of useful information, have done much to promote the interests of dairy farming. In dairy farms proper, on which is a large area of meadow or pasture with a small area of arable land, where the live stock consists almost entirely of cows, the latter are sent to grass in summer, being brought into the stalls twice a day for milking, and probably to get a little cake or meal if the grass is not abundant. On arable farms, however, where the dairy does not form the principal or important part of its economy, the cows are **stall fed** both summer and winter on fodder crops, supplemented by more concentrated kinds of food. The natural time for calving is from January to May; but it is made to take place at all times of the year, so as to provide fresh milk and butter for the market. A very small portion of the milk produced on a dairy is used in the rearing of calves. There are various ways of testing milk, but it is always important to show the amount of solids and of butter-fat in it. In '88 the **British Dairy Institute** established a school in the Vale of Aylesbury, called **Alwyn Lawn**. An interesting report was published by the **Foreign Office** in September last showing the remarkable increase in the export of the butter from Denmark. The total average value of butter exported between '77 and '82 had risen from 19,000,000 pounds to 45,000,000 in '87. The extension of the co-operative system to dairy-farming has resulted in there existing 200 co-operative dairies.

Dale, Robert William, M.A., D.D., LL.D., was b. in London, 1829. Educated at Spring Hill Coll., Birmingham, graduated M.A. Lond. Univ. '53. Hon. LL.D. Glasgow '83. He was appointed pastor of Carr's Lane Congregational Church, Birmingham, in '53, in conjunction with the late John Angell James, on whose death he took the entire charge of the church. In '68 Dr. D. held the office of **Chairman of the Congregational Union of England and Wales**. He accepted the **Lyman-Beecher Lectureship of Yale Coll., Connecticut**, in '77, when he lectured on Preaching at that Institution, the Senate of which conferred upon him the degree of D.D. He was a member of the **Royal Commission on the Elementary Education Acts, 86-88**. Dr. D. has published many theological works, the best known of which are "Laws of Christ for Common Life," "The Ultimate Principle of Protestantism," and "The Atonement"—a series of Lectures prepared at the request of the Congregational Union of England and Wales, which has been translated into French and German. Dr. D. is one of the most eloquent of modern preachers and platform speakers, and has long been regarded as a foremost champion of religious and political toleration. On the break-up of the Liberal party on Mr. Gladstone's Home Rule policy, Dr. D. lent his powerful aid to the Unionist Liberals. He recently paid a visit to Australia; and on his return took a prominent part in the Education controversy.

Dallinger, Rev. W. H., LL.D., F.R.S., F.L.S., was b. at Davenport, 1841. His father was a

well-known artist. Dr. D. received his early education at a private school, and subsequently entered the Wesleyan ministry. He was stationed successively at Faversham, Cardiff, Bristol, and Liverpool, whence he removed on his acceptance of the presidency of Wesley College, Sheffield, which he has recently resigned ('88). He early devoted himself to microscopical research, and has thrown much new light on the life histories of the minutest living organisms. His successful researches have also led to great improvements in the microscope. He was elected a Fellow of the Royal Society in '80, and President of the Royal Microscopical Society in '83. He has made most important contributions to the Proceedings of both these Societies.

Daman. A Portuguese seaport north of Bombay. See COLONIES OF EUROPEAN POWERS.

Damaraland. A German protectorate in West Africa, coast extending from Cape Frio to Walvisch Bay, inland to 20° E. long. Area about 100,000 sq. m. Coast infertile and desolate; inland are richer tracts. Ovampo-land is partly within this territory. Here, a few years since, there migrated overland from the Transvaal a party of Dopper Boers, an extreme religious sect. A settlement called **Upingtonia** was formed; but the exactions and pitiless oppression of the Boers caused the Ovampo tribes to rise against them. By last accounts the settlement had been broken up. All mining and other rights conceded to these settlers by the native chiefs have recently been purchased by the German West African Society.

Danish Colonies. See COLONIES AND DEPENDENCIES OF EUROPEAN POWERS.

Danish Political Parties. With a constitution at least equal in freedom to that of England, Denmark has, for the past decade and a half, been the scene of a stubborn political conflict, consequent on the refusal of the King to allow the majority (the **United Left**) to take office. The present ministry (of seven members) presided over by M. Jacob Brønnum Scavenius Estrup, was appointed June 11th, 1875, and, with occasional modifications, has remained in power ever since, notwithstanding repeated defeats in the Folkething, and the absolute refusal of that body for the past four years to vote any financial measure. As a consequence the affairs of Denmark have, since March 31st, 1885, been administered by provisional financial laws, which a clause in the charter authorises the King to promulgate. When parliament was dissolved on January 8th, 1887, owing to its refusal to vote the budget, the **Opposition** numbered over 80, leaving the **Ministry** with less than 20 supporters out of a house of 102. The present Folkething was elected on Jan. 28th, '87, when the Ministry increased its following to 27, thus reducing the strength of the Opposition to 75. The chief stronghold of the Conservatives is Copenhagen, where they possess all the seats except one. The leader of the Opposition is M. Berg, who up to the end of '87 united the functions of leader of the Opposition with that of speaker of the Folkething.

Danube (Iron Gates) Improvement. On May 28th, '88, the Hungarian Government brought into the Lower House a Bill to provide for the long talked-of improvement in the navigation of that portion of the Danube between Orsova and Turn-Severin known as the Iron Gates. By the Berlin Treaty, the empire of Austro-Hungary

was charged with this work, with provisions for levying tolls; but Austria undertaking the construction of the Arlberg Railway, which she completed, the Danube project fell to Hungary, but was hindered, it is said, by the local landowners, who fear the imports of Roumanian wheat, etc. The work was formally taken in hand on the above date, but it is not expected to be commenced till '89, the cost being estimated at 9,000,000 florins. It is recorded that the scheme was first contemplated by the Emperor Trajan; it was taken up in '43 by Count Stephen S. echenyi, and was provided for in the Treaty of Paris, in the London Treaty of '71, and in the Berlin Treaty. Several plans and schemes have been submitted for this, one of the greatest works of the kind in Europe, and the one adopted is by a Hungarian engineer, M. Wallandt, who follows the English plan of cutting open canals through the rocks.

Dardanelles, or Hellespont, is the narrow strait, about forty miles long, and varying in width from one to four miles, between the European and Asiatic coasts of the Turkish Empire between the Sea of Marmora and the Grecian Archipelago. Its geographical position is of great importance, inasmuch as it is the key to Constantinople. Both sides of the strait are strongly fortified. It derived its ancient name of Hellespont from Helle, daughter of one of the kings of Thebes, who was drowned in it; and its modern name from the castles built at the south-west entrance by Mahomet IV. in 1658. The passage of the Dardanelles was forced by the British fleet, under Admiral Duckworth, in 1807.

Darwin, George Howard, M.A., F.R.S., b. 1846. Is an elder son of the late Charles Darwin. Graduated in the Mathematical tripos of 1868 as second wrangler, second Smith's prizeman; Fellow Trin. Coll. ('68). In the winter of '70-'71 he took part in the **Eolipae Expedition** to Sicily. Fellow of the Royal Society ('79), to the transactions of which Mr. D. has on many occasions contributed papers, which attracted great notice in the scientific world. Since '77 the greater part of his labour has been directed to investigation in physical astronomy. Assisted ('82) Sir W. Thomson in the preparation of the second part of the new edition of Thomson and Tait's "Natural Philosophy." Elected Plumian Professor of Astronomy and Experimental Philosophy at Cambridge ('83). Has recently published the life of his father.

Daudet, Alphonse, distinguished French novelist, born in humble circumstances at Nîmes, 1840. He commenced his career as a teacher, but after the publication of "Les Amoureuses" devoted himself to literature and journalism. In '61 he became secretary to the Duke of Morny, under whose auspices he travelled in Italy and the East. Amongst his numerous works his greatest success was "Fromont Jeune et Rialar Aîné," a work which went through more than forty editions, and was crowned by the Academy. His dramatisation of "Numa Roumestan" was performed at the Odéon at Paris, Feb. '87. M. Daudet in '88 published "L'Immortel," a translation of which, under the title of "One of the Forty," appeared in the *Universal Review*; and was subsequently invited to be the guest of the king and queen of Roumania at their château in the Carpathians.

Davey, Sir Horace, Q.C., b. 1833, and after a distinguished career at Oxford, was called to the bar (1861), Q.C. (1875), and is the leader of the Chancery Bar, as Sir Charles Russell is leader of the Common Law Bar. Mr. Davey became Solicitor-General when Mr. Gladstone formed his last Government, although he had had the misfortune to lose his seat at Christchurch. His subsequent attempts to secure election resulted in defeat on each occasion. During the Parliament of 1880-85 Sir Horace Davey rendered good service to the Liberal party in a quiet way, and was always heard by the House with interest, especially when his remarks related to legal subjects. His name has been recently mentioned in connection with certain constituencies, and it may be confidently expected that Sir H. D. will shortly re-enter the House.

Davidson, Rev. Samuel, D.D., LL.D., one of the most eminent of living authorities on biblical criticism, was b. 1837, at Ballymena, Ireland. Educated at Queen's Coll., Belfast. He entered the Presbyterian ministry in '35, but subsequently went over to the English Congregationalists, and in '42 was appointed Professor of Biblical Literature and Oriental Languages at the Lancashire Independent College. He is the only living Englishman who has received the honorary degree of D.D. from the University of Halle. The liberality of his views respecting the writings of the Sacred Scriptures has given offence to orthodox theologians, and some years ago he found it necessary to resign his professorship. Amongst the best known of his works are "Biblical Criticism," "The Canon of the Bible," and his *Critical and Exegetical Introductions* both to the Old and New Testaments.

Davies, Mrs. Mary, popular vocalist, b. in London of Welsh parents. At the age of 14 she late Mr. Brinley Richards commenced to take an interest in her musical studies, and allowed her when only sixteen to make her *début* at one of his concerts in Hanover Square Rooms. She won a scholarship at the Royal Academy of Music, where she became a pupil of Signor Randegger, and greatly distinguished herself in her studies, taking among other honours the *Papepe-Rosa* gold medal and the *Christine Nilsson* prize. In 1878 she made her first appearance at the *Ballad Concerts*. Miss D. created the part of *Marguerite* in Berlioz's dramatic cantata "*Faust*," on the occasion of its first performance in English in this country, with which her name is identified. In the early part of '88 she was married to Mr. W. C. Davies.

Davis, Henry William Banks, R.A., b. at Finchley 1833, was a successful student of the Royal Academy, of which he was A.R.A. (73). A frequent exhibitor at Burlington House. His "*Trotting Bull*," in bronze, shown in '72, obtained a medal for sculpture at the Vienna Exhibition, while his "*Returning to the Fold*," exhibited in '80, was purchased by the president and council of the Royal Academy under the terms of the Chantrey bequest. R.A. (77).

Dawson, Sir John William, LL.D., F.R.S., F.G.S., geologist and naturalist, b. at Picton, Nova Scotia, 1820. Educated at Edinburgh Univ., and returning home devoted himself to the study of the natural history and geology of Nova Scotia and New Brunswick. Accompanied Sir Charles Lyell ('42 and '52) in his explorations in Nova Scotia, aiding him materially in his investigations. He has made

important discoveries, amongst these being *Eosoon Canadense*, the oldest known foraminifer. In '50 he was appointed Superintendent of Education for Nova Scotia. Principal of the *McGill University* ('55) at Montreal, of which he is now *Vice-Chancellor*. Author of "*The Story of the Earth and Man*" ('72), in which he combats the Darwinian theory of the origin of species. Created C.M.G. ('81). Selected by the Gov.-General (the Marquis of Lorne) as President of the Royal Society of Canada ('82). Was President of the British Association for '86. In '88 Sir J. W. D. issued "*Modern Science in Bible Lands*."

Day, Sir John Charles, b. 1826. Joined the Middle Temple (1845). Called to the bar (1849). Q.C. (1872). Appointed a judge of the Queen's Bench division (1882). Mr. Justice D. who is a Roman Catholic, was chairman of the *Belfast Riots Commission* in 1886, and was last year appointed one of the judges on the *Farnell Commission* (q.v.). This appointment met with much opposition in the House of Commons on the part of the Liberal party, as it was alleged that Mr. Justice D. had Orange sympathies. During the debate on the Members of Parliament (Allegations) Bill, Mr. J. Morley (q.v.) read a letter from one of Mr. Justice D.'s fellow-commissioners on the Belfast Riots, in which the writer said that, in his opinion, he considered him to possess a leaning towards the Orange party. This letter provoked much comment and rejoinders from more than one of Mr. Justice D.'s former colleagues. The opposition, however, soon subsided. He is the editor of the "*Common Law Procedure Acts*," and Roscoe's "*Nisi Prius*."

Days of Commemoration. See *COMMEMORATION, DAYS OF*.

Days of Devotion. The Red-Letter Saints' Days of the Anglican Calendar, together with Easter Monday, Easter Tuesday, Whit Monday and Whit Tuesday, on which the faithful attend mass through devotion (*de fide*).

Days of Obligation. All Sundays, and Christmas, the Circumcision, Epiphany, the Ascension, and All Saints' days, on which the faithful attend mass through obligation (*de obligatione*).

Dean and Chapter. A corporate body, consisting of the Dean, who is president, together with his canons or prebendaries, who form the Chapter. They are the council of a Bishop, govern the cathedral under him, and also assist in the celebration of divine service.

Deans. From Latin *decanus*. The term dean was originally applied to heads of chapters, because they presided over ten prebendaries, or canons. Formerly the chapter was regarded as (1) the bishop's council, (2) a collegiate institution, and (3) a body of learned canonists charged with the maintenance of rubrical strictness in the discipline of the Church. — **Deans Feudial.** This term is applied to the following nominal heads of obsolete capitular bodies: Dean of Battle (Very Rev. E. R. Currie), Deans (two) of Bocking (Very Revs. H. Carrington and E. Spooner), Dean of Guernsey (Very Rev. C. Brock), Dean of Stamford (Rev. W. W. Howard). The Dean of Jersey presides over a council of twelve rectors, in whose direction are the affairs of the Church in the Channel Islands. — **Royal Peculiars** are the deaneries of Westminster and Windsor. The term is also applied to another class of dignitaries, such as Dean of the Closet, Dean of the

Chapel Royal and to the chaplains of Knightly Orders, *e.g.*, **Dean of the Thistle**, who is a Presbyterian. Ancient collegiate chapters which have been suppressed are those of Middleham (extinguished 1856), Wolverhampton (extinguished by 3 & 4 Vict. c. 123), and Southwell collegiate church, now the cathedral church of that see.—**Greater and Lesser Chapters**. Nominally the chapter comprises all canons and prebendaries who have been appointed to stalls by the bishop, but statutorily only the prebendaries of the old foundation are competent to transact capitular business. Of late it has been sometimes the practice to invite all prebendaries, including **honorary canons**, into consultation with the dean and statutory canons. It has been decided that the dean is not responsible to the bishop for the conduct of divine service in any cathedral church. St. Albans, Liverpool, Southwell, Wakefield, and Newcastle are without deans. The Bishop of Truro is also dean of St. Mary's Cathedral, Truro. The dean of Bristol ranks with the dean of Gloucester in the diocese of Gloucester and Bristol.—**Rural Deans** (see **DIOCESE**), an honorary office involving the right of observing and reporting to the archdeacon or bishop in matters concerning the welfare of parishes within a specified district, and in examining candidates for confirmation.—**Dean, Cardinal**. The senior Cardinal Bishop of the Sacred College of Cardinals at Rome, who, amongst other honours, receives the first visits of foreign ambassadors, and consecrates the Pope, should he not be a bishop.—**Dean of Faculty**, also called **Master of Faculty**, is the head of the Faculty Committee, a tribunal pertaining to the Archbishop of Canterbury, which creates rights to pews, monuments, burials, grants, dispensations, etc.

Death, Accidental. See **CORONERS' INQUESTS**.

Deaths. See **POPULATION**.

Debates and Proceedings in Parliament. See **SESSION '88**, sect. 53.

Debt, Imprisonment for, was abolished by the Debtors' Act, 1869 (32 & 33 Vict. c. 62), excepting in the case of a defaulting trustee or of a debtor who is ordered by court to pay (*i.e.*, a judgment debtor), and is demonstrably able yet refuses to do so. This Act also gives powers for the arrest and imprisonment, pending security being given, of a defendant whose presence in an action is material to the prosecutor, and who is about to leave England; and it further provides for the punishment of fraudulent debtors.

Deceased Wife's Sister (Marriage with) Bill, '85. This Bill was intended to legalise marriage between a man and the sister of his deceased wife. The Bill was retrospective, but contained savings of marriages and of rights of property which might otherwise have been effected. A similar bill has been brought in almost every session for many years back, and has passed the House of Commons several times; but it has never yet become law, owing to the strenuous opposition offered to the bill in the House of Lords.

Decree nisi. A decree nisi is a provisional decree, which will be made absolute within a given time unless some reason is shown to the court why it should not be made absolute. It means literally a "decree unless" (*Latin nisi*). If within the time appointed good reason can be shown for such a proceed-

ing, the decree nisi will be reversed, or a further inquiry will be ordered. See **DIVORCE**.

Dee Dock Scheme. It was reported in July '88 that a party of **American steamship owners**, who had been examining various places on the western coast in search of a suitable point for the construction of docks, had fixed upon **Mostyn**, in the estuary of the Dee. It is stated that at low water there is a depth of 16 to 20 ft., and at high water 40 to 46 ft., while the L. & N. W. Railway main line from Holyhead to London is within 300 yards of the proposed site. Further, the bar at the mouth of the Dee has from 3 to 6 ft. more water over it than the Mersey bar; the distance to Mostyn is only four miles, and the anchorage outside Mostyn would, it is said, accommodate all the navies of Europe.

Dee Railway Bridge. The first cylinder of a new railway bridge between **Chester and Flint** was laid on Aug. 16th, '87, by Mr. Gladstone. The work is being undertaken by the Manchester, Sheffield, & Lincolnshire Railway Co., who, taking the necessary steps in '84, determined to extend the Cheshire railway lines from Chester to Connah's Quay by means of a low-level opening bridge across the Dee; thus, by means of the Wirral line and the Mersey Tunnel, Liverpool will be within half an hour of North Wales. (See **cd. '88**.) It is stated that when completed the bridge will exceed the span of every other bridge over a navigable river in the United Kingdom. This is the second bridge connecting North Wales with England, and it is expected will prove a valuable outlet for this portion of the Principality, especially for coal, the field being estimated to contain 4,450,000,000 tons, with a present annual output of 3,000,000. On Sept. 4th, '88, Mr. Gladstone formally opened the first portion of the **Hawarden loop line**, the first link in a railway chain which, by means of the Dee Bridge, will connect Lancashire and Yorkshire at one extreme and Flintshire, etc., at the other. The total length of the loop is $4\frac{1}{2}$ miles, but only $2\frac{1}{2}$ were complete at the time of the ceremony. It was stated at Liverpool towards the end of November that the M., S. & L. Railway Co. had acquired from the Wirral Co. their powers for a line from the Dee Bridge to Birkenhead.

Deeds of Arrangement Act, 1887, enacts that after Jan. 1st, '88, all deeds of arrangement specified therein shall be void unless they shall have been registered with the Registrar of Bills of Sale within seven clear days of the execution thereof by the debtor or any creditor. Any person is entitled on payment of a small fee to search the register and inspect the deed.

"De Facto." A phrase used in antithesis to "de jure," to describe that which is in fact, as opposed to that which is legal. Thus, after the expulsion of the Rump, Cromwell was *de facto* sovereign of England, although Charles II. was *de jure* sovereign from the day of the execution of Charles I.

Delagoa Bay. Situated on the E. coast of South Africa, on the twenty-sixth parallel of S. latitude. It forms the southern extremity of the Portuguese territory of **Mozambique**. The port and settlement is **Lourenço Marques**, a young town now rapidly growing. Delagoa Bay is available for vessels of large tonnage; the Olifants or Krokodil river, flowing into it, is navigable for steam launches for a considerable distance; but there are swamps around

the coast, and some malarial fever is prevalent. The Transvaal border begins 52 miles inland. Concessions for the construction of a railway from the Bay to Pretoria were granted by the King of Portugal in 1876, but the undertaking fell through. See ed. '88, and *infra*.

Delagoa Bay and Gold-fields Railway. On Nov. 1st, '87, the Portuguese Government announced the completion of this line. It is to be extended to Pretoria by a company working with a subsidy from the Transvaal Government, and the money required was subscribed in Amsterdam and Berlin by the time the Delagoa portion was completed. The Delagoa Company's frontier station is at the river Komati, which pierces the mountain chain a little to the south of the northern road to Lydenburg. The extension to Pretoria will pass through that gold region, with a branch to Barberton in the De Kaap district. A despatch, dated Durban Dec. 14th, stated that the first section to Komati was opened on that day by the Governor-General amid great rejoicings. On Feb. 20th, '88, whilst inviting subscriptions for an issue of 7 per cent. debentures (£100,000 at 98 per cent.), the directors stated that the negotiations between the Portuguese and Transvaal governments rendered it probable that the frontier would be fixed about 10 kilometres further on than the railway had reached, thus necessitating a short extension of the line. The survey had been made and there were no engineering difficulties to be encountered. It was further added that a company had been formed to construct the extension over the frontier to Pretoria, and had received in full all the capital then asked for—£650,000. Some important references were made to this line, or lines, on Feb. 17th, in a paper on Amatongaland read before the London Chamber of Commerce by Col. W. Jesser Coope. He pointed out that the Portuguese portion was in the hands of an Anglo-American-Portuguese company, and the other in those of a German-Dutch syndicate, and if the latter bought the other out, English trade would not be favoured. In the House of Lords on Feb. 27th, however, Lord Onslow assured Lord Rosebery that existing and probable treaties would prevent the possession of the railway by foreigners from becoming a source of danger. By way of reply, on March 1st a telegram was published from Cape Town to the effect that the Cape government had never entertained the idea of purchasing the railway. In the Chamber of Deputies at Lisbon on March 1st, Senhor de Barros Gomes declared that the company was Portuguese, and would have to abide by the statutes and conditions of contract. At Capetown on July 20th was published telegraphic correspondence between Sir Hercules Robinson, the High Commissioner, and Mr. Kruger, President of the Transvaal. In one telegram the latter required the British Government to declare that it had no intention of acquiring domination over the railway. Sir Hercules agreed, provided that the Transvaal admitted imports through colonial routes at Delagoa Bay duties. Mr. Kruger acquiesced, and cancelled Article 39 of the Netherlands Company's concession. Replying to Mr. O. V. Morgan in the Commons, May 14th, Sir J. Fergusson said that the Transvaal Government had granted to a Dutch-German syndicate a concession for a railway from the Portuguese border to Pretoria, and that the British Government was in correspondence with the South African Republic on the ques-

tion. A meeting of the *Nederlandsch Zuid-Afrikaansche Spoorweg* was held at Amsterdam on Aug. 5th, when the cancelling of clause 39 and the consequent modification of clause 17 of the concession were ratified. It was added that an application of the Portuguese Consul for a concession to extend the line to Pretoria had been declined.

De La Rue, Warren, M.A., D.C.L., F.R.S., a son of the head of the well known firm of De La Rue & Co., is a native of Guernsey, where he was b. 1815. After attending the college of St. Barde, Paris, he entered his father's business, where he successfully devoted his scientific genius to the invention of machinery and new processes of colour printing. He is one of the most eminent of living electricians, and has rendered immense service by successful physical researches in the application of electricity to practical purposes. In conjunction with Dr. Hugo Müller, he has carried on a series of remarkable experiments in his private physical laboratory, with a view to the observation and explanation of the phenomena of the electrical discharge. He has recently presented some valuable instruments to the laboratory of New Coll., Oxford. He is a corresponding member of the Institute of France, and Fellow of many learned societies. He succeeded the late Mr. Spottiswoode as Secretary to the Royal Institution. Has been Pres. of the Royal Astronomical and Chemical Societies and of the London Institution.

Delegations. See AUSTRIAN POLITICAL PARTIES.

Demerara. One of the three counties of British Guiana (*q.v.*).

Democracy. See ed. '88, more fully ed. '87. Consult Sir H. E. Maine, "Popular Government" (4 essays, *Quarterly Review*); Sir T. E. May, "Democracy in Europe—a History"; H. Spencer, "Man versus The State"; A. C. De Tocqueville, "Democracy in America"; Guizot, "History of Democracy in the United States"; J. L. Motley, "Historic Progress of American Democracy"; J. A. Pictou, "The Conflict of Oligarchy and Democracy," etc.

Denison, The Ven. Geo. Anthony, Archdeacon of Taunton, nephew of the late Viscount Ossington, Speaker of the House of Commons (1857-72), was b. 1805. Educated at Eton and Christ Ch., Oxford, graduating First Class in Classical Honours '26. Elected Fellow of Oriel '28. He held successively the curacy of Cuddesdon, Oxon, and the vicarages of Broadwindsor, Dorset, and East Brent, Somerset. He was appointed to the *Archdeaconry of Taunton* '51. He resigned his examining chaplaincy to the Bishop of Bath and Wells in '53, when Dr. Spencer charged him with holding views on the *Doctrine of the Real Presence* contrary to those sanctioned by the Articles of the Church. In consequence of three sermons which he preached on that subject in Wells Cathedral '54, he was deprived of his preferments by an Ecclesiastical Court presided over by the primate at Bath. On his appeal, however, to the Court of Arches (*q.v.*) this sentence was set aside, and on further appeal to the Privy Council (*q.v.*) in '58, the decision of the Court of Arches was confirmed. Archdeacon D. was Chairman of the respective Committees of the Lower House of Convocation, which condemned the "Essays and Reviews" and Bishop Coleman's Comments on the Pentateuch. He has long been an active member of

the Church Union (*q.v.*), and has frequently afforded evidence of his strong individuality and tenacious grasp of his private opinions by his vigorous opposition to the School Board System and other democratic movements. Archdeacon D. was for many years editor of the "Church and State Review," and has written "Notes of my Life" ('78), and "Mr. Gladstone," a pamphlet which had a large sale, in '85. He petitioned the Pan-Anglican Synod in '68 in favour of admitting to Church Schools only such children as have been baptised in accordance with the rites of the Church of England.

Denman, the Hon. George, the fourth son of the first Lord Denman; b. 1819. Educated at Cambridge. Called to the bar (1846). After two unsuccessful attempts to enter Parliament, Mr. Denman was elected member for Tiverton, his colleague in the Liberal interest being Lord Palmerston. He continued to sit for Tiverton, with a brief exception, until 1872, and carried through Parliament two useful measures modifying the laws of evidence. In 1872 he was appointed a judge of the Court of Common Pleas, and is now, by the operation of the Judicature Act, a judge of the High Court.

Denmark. Kingdom under Christian IX., of Glücksburg. By charter of 1849 (modified in '55, '63, and '65) the executive power is vested in king and ministers, the legislative in the Rigsdag or Diet jointly with the sovereign. The Rigsdag is composed of the Landsthing (or Upper House of 66 members, 12 crown nominees, and 54 indirectly elected by the people for eight years), and of the Folksthing (or House of Commons of 102 members directly elected by universal suffrage for three years). The Rigsdag must meet every October, and all money bills be submitted to the Folksthing. Colonies comprise Iceland (which has its own constitution and assembly of 36 members, with a minister nominated by the king), the Faroe Islands, Greenland, and three small West Indian Islands. The state religion is Lutheran, but all others are tolerated, and there are no civil disabilities to dissenters. Area (excluding Faeroe Islands), 13,784 sq. m.; estimated pop. in '86 2,108,000. Budget estimates for '88-9 revenue, £2,088,882; expenditure, £3,104,428. Total public debt, £10,723,203; but State investments amount to £4,800,000, reducing debt to nearly one-half. Imports ('85). £13,845,761; exports, £9,014,520. The United Kingdom ranks second in the trade with Denmark, coming next after Germany. Chief exports to Great Britain, butter and butterine, cattle, eggs, lard; chief imports, cotton and woollen manufactures, iron, sugar. The agricultural returns for the past two or three years show that the foreign demand for Danish agricultural produce continues to increase. Cattle breeding is at the same time taking more and more the place of arable farming. Above all, dairy farming (*q.v.*) is being pursued with unparalleled skill and success. The export of butter and other dairy produce is now the main source of the wealth of Denmark. (For army and navy see ARMIES and NAVIES, FOREIGN; and for history '73-87 see previous eds.) The strained relations which of late years have existed between the king and the Opposition led in the early part of '88 to a dissolution of Parliament. Among the principal events of the little kingdom have been the celebration of the 70th birthday of the king (April 8th), when an amnesty to all political prisoners was proclaimed; the centenary of the

emancipation of the Danish peasants, which was commemorated amid great rejoicing (June 20th); and the Exhibition at Copenhagen, opened by the king (May). Visits have been paid to Denmark by the King and Queen of Saxony, the German Emperor William (July), and the King of Greece (August). King Christian himself visited Berlin (August). The celebration of the king's jubilee was held in the autumn, and an illustrious assemblage of royal personages were present to do him honour, among them being H.R.H. the Princess of Wales and her son H.R.H. Prince Albert Victor.

Denmark and Sweden (Sound) Tunnel. In the *Journal des Debats* of July 30th, 1886, was published a telegram from Copenhagen to the effect that the Danish and Swedish journals had for some time been discussing schemes for the construction of a tunnel between those two countries under the Sound, this being the revival of an old topic. M. A. de Rothe, a French engineer, late of the Panama Canal, in the name of a company of his countrymen, had now, however, presented to the two Governments concerned a plan for cutting a tunnel between Copenhagen and Malmö in Sweden. This tunnel was to be in two parts, 2 miles between the islands of Amak and Sattholm, and 5½ miles between the latter and the Swedish coast—7½ miles in all. A *Times* telegram from Berlin, August 12th, says that the tunnel was for the purpose of connecting the Danish and Swedish railways. (See ed. '88.) In Nov. '88 it was reported in this country that for the time, at least, the scheme had been shelved. A Swedish-Danish Commission had reported adversely, their views being to the following effect: (1) That although the tunnel would offer great international advantages, its costliness would require for many years a heavy State subsidy; (2) that should such a submarine railway be required, it should be built and worked by the State Railway of both countries; (3) that under any circumstances it would be highly inadvisable to have such a railway in the hands of foreigners. It seems the French syndicate offered to make the tunnel and railway on condition that after their completion they received for ninety-nine years the sum of £72,400 annually, and an eventual increase, this sum being about equal to 3½ per cent. on the capital outlay of £2,000,000.

Département. (From the French.) One of the principal territorial divisions of France under the administration of a prefect (*prefet*), who is the head representative of the Government. The administrative seat of a prefect is called *prefecture*, and is always situated in the capital town of the *département*. A *département* is subdivided into *arrondissements* (districts). A French *département* is like an English county.

Depression of Trade and Industry, Royal Commission on. A commission to inquire into the extent, nature, and probable causes of the depression, now or recently prevailing, was appointed by Lord Salisbury's first Administration, and issued their final report in March '87. (A full and detailed account of the C. is given in ed. '87.)

Derby, Tho. See TURF.

Desirade. A French West Indian island, four miles west of Guadeloupe (*q.v.*), of which it is a political dependency. It is four miles long by two broad, lush, rocky, and unfertile. Cotton is grown, but fishing is the leading pursuit. Pop. 1,728.

Detectives, Female. For the discovery of crime women have occasionally been employed by the public authorities of Great Britain and Ireland, under the guidance and supervision of members of the detective staffs. The Chiefs of the Police forces in this country are disinclined to employ women as permanent detectives, as it is difficult to obtain competent and reliable females to train for this purpose, as in some of the leading capitals on the Continent. As private detectives, however, a great number of women are now employed in the Metropolis. Some leading firms of private inquiry agents engage a great number of women as their assistants, who are, it is said, more efficient for the purposes for which they are employed than male detectives. Great care is taken in their selection; they are regularly engaged in their work, and receive much better remuneration for their services than they would in the investigation of crime for police forces, and are of a superior class to those who occasionally assist the police. Some of the private lady detectives receive regular salaries in addition to certain sums on the successful conclusion of their investigations mainly due to their own efforts.

Dewar, James, M.A., F.R.S., b. 1842, at Kincardine. Educated at Dollar Academy and the University of Edinburgh. Appointed assistant to Dr. Lyon Playfair, then Professor of Chemistry in the University of Edinburgh (1863), from whom he received his chemical training. Studied subsequently at Ghent. Is Jacksonian Professor of Natural Experimental Philosophy in the University of Cambridge, and Fullerian Professor of Chemistry in the Royal Institution. He is the author of several papers, and also published the well-known investigation on the "Physiological Action of Light," in connection with Professor McKendrick, of Glasgow, in which the authors proved that the effect of light on the living retina is to produce a sudden alteration of its electrical condition.

Diamond Fields. In ancient times India was the only known source of diamonds, and the famous gems of history have come thence. But the once prolific mines of Golconda and Punnah have been exhausted, though a few stones are still found in the Deccan and elsewhere, in gravel underlying black clay. At Pontiana, in Borneo, diamonds are found with gold and platinum in red clay. Some magnificent gems have come thence. Some are got in the Ural Mountains, in mica slate, and one or two have been found in Bohemia. In Australia small diamonds are taken out of Pliocene river drift along the Macquarie river; and specimens occur in Mexico, Georgia and North Carolina, and in California and Arizona. But the great diamond fields of to-day are in Brazil and in Cape Colony. In the former mines have been in existence since 1727, and the value of the output must have been enormous. The chief districts are in the interior provinces of Minas Geraes and Matto Grosso. The stones are usually small, but a large percentage are of the finest quality, and they are dug from gravel and red clay. Diamonds were discovered in Griqualand West, Cape Colony, in 1871, and since then energetic digging has proceeded. The chief mines are the "Kimberley" and "De Beers." These are gradually absorbing lesser companies. Their nominal capital is about £2,000,000 respectively, but in reality is more. Large sums have been invested in procuring water, which

is now conducted to the mines from the Vaal river, about 16 miles away. The total output up to 1885 has been valued at over £32,000,000 sterling. For '84 it was valued at £2,807,288, for '85 at £3,492,755, for '86 at £3,261,574, and for '87 at £4,033,582. The production in '86 was 3,047,639 carats, and in '87 3,635,634 carats. The stones are found in an igneous black clay, which occurs in deep circular "pans" or "pipes." It is conjectured that these are a kind of craters, filled up by upheavals from below in old geological periods. The stones are of all varieties, among them many of the purest water, some of which have been found of very large size. The first discovered was a 2½ carat, valued at £500; this was followed by an 83 carat, known as the "Star of South Africa," which realised £11,200. Even the famous Koh-i-Noor seems insignificant beside the "Stewart Diamond," a Cape stone of pure water weighing 288½ carats. In London "trade" it is customary to call any pure white stones "Brazilian," and all others "Cape." As a matter of fact the best stones, especially large ones, now come from South Africa.

Diamond Sculls. See AQUATICS.

Dictionary, A New English, on historical principles, founded mainly on the materials collected by the Philological Society; edited by James A. H. Murray, LL.D., "with the assistance of many scholars and men of science," and published at the Clarendon Press; has advanced to Cass, making vol. i.; vol. ii., *Cast-Dyz*; and vol. iii., *E-H*, in progress, and has been received with general approval. In order to insure complete accuracy and thoroughness, an entirely fresh selection of representative extracts from the original works themselves have been made from over 5,000 of the chief English writers of all ages; and when completed there will be about 1,000,000 distinct quotations in the dictionary. The work will be completed in six volumes, each containing four parts; and each part will be issued at intervals of six months. The headquarters of the staff are at Oxford, and the publisher is Mr. Henry Frowde, Amen Corner, London, E.C.

Diego Garcia. An island in the Indian Ocean. It is chief of the *Oil Islands*, a group forming part of the *Chagos Archipelago* (q.v.), and has an excellent harbour.

Diego Suarez Bay, or British Sound, a fine harbour, near the north extremity of *Madagascar* (q.v.). By the treaty of December 1885, made between the French and Malagasy Governments, this bay was ceded to France.

Dillon, Mr. John, M.P., L.R.C.S.I., son of the late John Dillon, M.P., of 48 celebrity, was b. 1851. Educated at the Catholic University of Dublin. Returned as Nationalist for Tipperary (1880), but owing to ill health resigned the seat. Elected for East Mayo in 1885, and again in 1886. Mr. Dillon has recently been identified with the "*Plan of Campaign*" (q.v.); and in Nov. 1886, while carrying that plan into operation at Loughrea by receiving the rents of the tenants, was arrested by the police. He was subsequently tried for the offence, and bound over in heavy securities to keep the peace. Mr. D. was twice imprisoned under Mr. Forster's Coercion Act, and has been repeatedly suspended by the House of Commons. He is one of the most powerful speakers in that assembly. At the Mell Petty Sessions, Drogheda, on May 11th, '88, for "having on April 8th, at Tullyallen, co. Louth, taken part in Criminal Conspiracy known as the Plan of

Campaign," Mr. D. was sentenced to six months' imprisonment. The sentence was confirmed on appeal on June 21st. Mr. D. was sent to Tullamore Prison, but was liberated in September. He subsequently addressed great gatherings of his countrymen, and defended the action for which he had been imprisoned.

Dimorphism. A term used (1) in chemistry, (2) in botany. In each case the word denotes twofold form in the same body, but with very different significations in the two sciences. See ed. '86, and further, '86.

Dindings. An island and territory of the Straits Settlements (*q.v.*).

Diocesan Courts. Ecclesiastical courts for exercising general jurisdiction in diocesan affairs. They consist of the Consistory Courts, the Courts of Commissaries, and the Courts of Archdeacons (*q.v.*).

Diocese. Anciently the Established Church of England (*q.v.*) was divided into three provinces—viz., Lanterbury, York, and Caerleon. The latter, however, was abolished and the several dioceses in it added to the Province of Canterbury in 1147. Including these, the number of dioceses now contained in the Province of Canterbury is twenty-five; those of the Province of York numbering ten. (See **ANGLICAN CHURCH**.) Immediately under the authority of the Bishops are the **Bishops Suffragan** (*q.v.*). The dioceses which now possess such an assistant prelate are Canterbury (Dr. Barry, Bishop of Dover), London (Dr. Earle, Bishop of Marlborough), and Dr. Billing, Bishop of Bedford, Winchester (Dr. Sumner, Bishop of Guildford), Lichfield (Sir Lovelace Stamer, Bishop of Shrewsbury), Lincoln (Dr. Trollope, Bishop of Nottingham), Peterborough (Dr. Mitchinson, assistant Bishop), St. Albans (Dr. Blomfield, Bishop of Colchester), Durham (Dr. Sandford, Coadjutor Bishop), Manchester (Dr. Cramer Roberts, Coadjutor Bishop), and Ripon (Dr. Pullaine, Bishop of Penith). Next in rank are **Deans** (*q.v.* and **Convocations**), with whom come the **Greater Chapter** including the Archdeacons holding stalls. The **Minor Canons** read the prayers and control the musical part of the services in cathedrals. The Bishop nominates **resident chaplains** and **examining chaplains**, the latter being employed in examining candidates for ordination by the Bishop. The other diocesan officials lay and clerical, are as follows:—Chancellor (usually a lawyer), diocesan inspectors (charged with the inspection of Church schools), Pluralities Act commissioners, secretaries, registrar, architect, chapter-clerk, and organist. The principal lay officers are the two vicars general (Sir J. Parker Deane and Lord Grimthorpe). Territorially, each diocese is subdivided into **archdeaconries** and again into rural deaneries. The office of the archdeacon is to act as **oculus episcopi**—the Bishop's eye, while that of rural dean is to assist the archdeacon. Both are entitled to be heard in the Bishop's Court. Most of the cathedral patronage is vested in the Chapter, while that of the diocese is vested in the Bishop. **Geographically** the limits of diocesan jurisdiction are usually continuous with county divisions, though there are several important exceptions. The Northern Province is divided from the Southern by a zigzag line extending from the Mersey to the Humber, touching Newcastle-under-Lyme at its south-western and Hull at its north-eastern extremities. Jurisdiction in London and suburbs is

shared by no less than four bishops—viz., London (Middlesex), St. Albans (Essex), Rochester (Surrey), and Canterbury (Kent). The largest diocese in point of acreage is St. David's, with 2,360,000, and the smallest London, with 181,000. London has the greatest population, viz., 2,920,000, and Bangor the least, 226,000. The diocese of Norwich has the greatest number of benefices, 908, to 1,006 clergy, while London has the largest number of clergy, 1,106, to 566 benefices. The **Roman Catholic** dioceses in England are fifteen in number—viz., Westminster (Archbishop and Metropolitan, Cardinal Manning), and, in order of foundation, Birmingham (1857), Clifton, Hexham and Newcastle, Leeds, Liverpool, Middlesbrough, Newport and Menevia, Northampton, Nottingham, Plymouth, Portsmouth, Salford, Shrewsbury, and Southwark (1883). For information respecting **Scottish and Irish** dioceses see **CHURCH OF IRELAND**, and **SCOTLAND**, **EPISCOPAL CHURCH OF**, etc.

Diplomatic. The following list gives the names of the Cabinet, or Executive Council, or principal members of the Government, of each of the leading Foreign States, and of the more important British Colonies:—

AFGHANISTAN. Agent to the Governor-General of India, Col. Attaoolla Khan, 10th Bengal Lancers.

ALGERIE. Chief Commissioner (vacant).

ALGERIERS AND TUNIS. Governor-General of Algeria, M. Tirman.—British Consul-General, Sir R. L. Playfair, K.C.M.G. See also **Tunis**.

ARGENTINE REPUBLIC. President, Dr. Miguel Juarez Celman.—Vice-President, Dr. Carlos Pellegrini. Ministry: Minister of Foreign Affairs, Dr. N. Quirno Costa.—Minister of the Interior, Dr. E. Wilde.—Minister of Finance, Dr. W. Pacheco.—Minister of War and Marine, General Racedo.—Minister of Justice, Worship, and Public Instruction, Dr. F. Posse.—Minister in London, Don Luis L. Dominguez, 16, Kensington Palace Gardens, W.—Secretary of Legation, Florencio L. Dominguez.—Consul-General, Alejandro Paz.—Consul, Alfredo O. Lumb, 16, Bishopsgate Without, E.C.—British Minister at Buenos Ayres—Hon. F. J. Fakenham.

ASSAM. Chief Commissioner, D. Fitzpatrick, C.S.I.—Secretary to Commissioner, C. J. Lyall, M.A. C.I.E.

AUSTRALIA SOUTH. Governor, Sir W. C. F. Robinson, G.C.M.G.—Chief Secretary, Hon. James Gardon Ramsay, M.L.C.—Attorney-General, Hon. Charles Cameron Kingston, M.P.—Premier and Treasurer, Hon. Thomas Playford, M.P.—Commissioner of Crown Lands and Immigration, Hon. Jenkin Coles, M.P.—Commissioner of Public Works, Hon. Alfred Catt, M.P.—Minister of Education, Hon. J. C. Johnson, M.P.—Agent-General in London, Sir Arthur Blyth, K.C.M.G., C.B., 8, Victoria Chambers, Westminster, S.W.—Assistant Agent-General, Samuel Deering, Esq., J.P.

AUSTRALIA, WEST. Executive Council: President, The Governor, Sir F. Napier Broome, K.C.M.G.—Colonial Secretary, Hon. Sir Malcolm Fraser, K.C.M.G.—Attorney-General, Hon. Charles Nicholas Warton.—Colonial Treasurer, Hon. Anthony O'Grady Lefroy, C.M.G.—Commissioner of Crown Lands and Surveyor-General, Hon. John Forrest, C.M.G.—Commissioner of Railways, and Director of Public Works, Hon. J. A.

Wright, C.E.—*Unofficial Member*, Sir J. G. Lee Steere, K.C.M.G., M.L.C.

AUSTRIA-HUNGARY. *I. and R. Minister of the Imperial House and for Foreign Affairs*, Count Gustav Kálnoky de Köröspatak.—*Imperial Minister of Finance*, Benjamin Kállay de Nagy-Kálló.—*Imperial Minister of War*, Baron Bauer. **Ministerial Council for Austria:** *Minister President, and Minister for Home Affairs*, Count Eduard Taaffe.—*Agriculture*, Count Julius Falkenhayn.—*Justice*, Count Schoenborn.—*Worship and Education*, Chevalier Gautsch de Frankenthurn.—*Military Service*, Count Zeno von Welsemsheim.—*Finance*, Chevalier Dr. Julian Dunajewski.—*Commerce*, Marquis Olivier de Bacquehem.—*Minister (without portfolio)*, Baron Alois Prazak. **Ministerial Council for Hungary:** *Minister President*, Koloman Tisza de Borosjenő.—*Worship and Public Education*, Count Csaki.—*Croatia, Slavonia, and Dalmatia*, Koloman Bedekovich de Komor.—*Justice*, Theophil de Fabinyi.—*Finance*, Count Julius Szápary.—*Public Works and Communication*, Baross von Bellus.—*Minister for Home Affairs, and at H. M. Court*, Baron Bela Orczy.—*Military Service*, Baron Géza de Fehérváry.—*Agriculture, Manufacture, and Commerce*, Count Paul Széchenyi.—*Ambassador in London*, Count Deym, 18, Belgrave Square, S.W.—*Hon. Consul-General*, Baron Alfred de Rothschild.—*Acting Consul-General*, Chevalier Ferdinand Krapf de Liverhoff, Mansion House Chambers, 17, Queen Victoria Street, E.C.—*British Ambassador*, Rt. Hon. Sir Augustus Berkeley Paget, G.C.B.

BADEN. *President of Ministry*, Dr. L. Turban.—*British Chargé d'Affaires*, Hon. W. N. Jocelyn, C.B.

BARODA. *Resident and Agent to Governor-General*, Sir O. B. St. John, K.C.S.I., R.E.

BASUTOLAND. *Resident Commissioner*, Col. Sir Marshall Jas. Clarke, K.C.M.G.

BAVARIA. *Ministers of State: President, Instruction, and Worship*, Dr. Von Lutz.—*Justice*, (vacant).—*Finance*, Dr. Von Riedel, Von Leonrod.—*Foreign*, Baron Von Crailsheim.—*Interior*, Baron Von Feilitzsch.—*Minister of War*, Von Heinleth.—*British Chargé d'Affaires*, Munich.—Victor A. W. Drummond.

BECHUANALAND. *Governor*, Sir Hercules Robinson, G.C.M.G.—*Administrative and Chief Magistrate*, Sir Sidney Godolphin Alexander Shippard, D.C.L., K.C.M.G.

BELGIUM. *Finance*, M. A. Beernaert.—*Justice*, M. Jules Lejeune.—*Home and Public Instruction*, M. Jos. de Volder.—*Foreign Affairs*, Prince de Chimay.—*Agriculture, Industry, and Public Works*, Chevalier de Moreau.—*War*, Gen. C. Pontus.—*Railways, Posts, and Telegraphs*, M. J. Vanden-Peeboom.—*Minister in London*, Baron Solvyns, 36, Grosvenor Gardens, S.W.—*Consul-General*, M. François H. Lenders, 118, Bishopsgate Street Within, E.C.—*British Minister at Brussels*, Lord Vivian, K.C.M.G., C.B.

BELUCHISTAN. *Agent to the Governor-General for India*, Col. Sir R. G. Sandeman, K.C.S.I., B.S.C.

BENGAL. *Lieutenant-Governor and President of Council*, Hon. Sir Stewart Colvin Bayley, K.C.S.I.—*C.I.E.*—*Council of the Lieutenant-Governor*, The Honourables Sir G. C. Paul, K.C.I.E.; H. J. Reynolds, C.S.I.; C. P. L. Macaulay, C.I.E.; Abdul Jubbar; T. T. Allen;

Sir Alfred Croft, K.C.I.E.; Sir H. L. Harrison; Kali Nath Mitter; Dr. Mohendra Lal Sircar, C.I.E.; C. H. Moore; Dr. Gooroo Das Banerjee; H. Pratt. *Secretaries to Government: Chief Secretary*, J. Ware Edgar, C.S.I.—*General Statistical and Revenue*, P. Nolan.—*Financial and Municipal*, C. P. Louis Macaulay, C.I.E.—*Public Works*, Col. S. T. Trevor, R.E.

BOLIVIA. *President*, Señor Don Aniceto Arce (proclaimed 15th August, '88).—*1st Vice-President*, Don José Manuel del Carpio.—*and Vice-President*, Don Serapio Reyes Ortiz.—*Ministry: Foreign Affairs*, Don Mariano Baptista.—*Finance*, Don Heriberto Gutierrez.—*Interior and Posts*, Don Telmo Ychaso.—*Justice and Public Worship*, Don Isaac Tamayo.—*War*, Don Jorge Obolitas.—*Chargé d'Affaires in Paris, London, and Madrid*, Don L. Salinas Vega, 8, Rue de Berri, Paris.—*Consul-General in London*, Don José María de Artola.—*Vice-Consul*, Don Jorge de Artola, 74, Austin Friars, E.C.

BOMBAY. *Governor*, Rt. Hon. D. J. M. Lord Reay, LL.D., C.I.E.—*Council of the Governor*, Lieut.-Gen. H.R.H. the Duke of Connaught and Strathearn, K.G., K.T., K.P., G.C.S.I.; G.C.M.G., G.C.I.E., C.B., Commander-in-Chief; J. B. Richey, C.S.I.; and Raymond West, M.A., LL.D.—*Additional Members for making Laws and Regulations*, J. Macpherson, B.A.; K. T. Telang, LL.B., C.I.E.; F. Forbes Adam, C.I.E.; J. R. Naylor; Khan Bahadur Kazi Shahbuddin, C.I.E.; Rao Bahadur Mahadeo Vasudeo Barve, C.I.E.; Phirozshah Mervanji Mehta, M.A.; J. Batty, M.A. (*Secretary*). *Secretaries to the Government: Chief Secretary*, Thomas Duncan Mackenzie (acting).—*Revenue, Financial, etc.*, John Nugent.—*Military, etc.*, Brig.-Gen. B. H. Pottinger, R.A.—*Public Works*, J. H. E. Hart.—*Railway*, Major F. Firebrace, R.E.

BRAZIL. *Premier and Minister of Foreign Affairs*, Rodrigo Augusto da Silva.—*Minister of the Empire (ad interim)*, José Fernandes da Costa Pereira.—*Justice*, Antonio Ferreira Vianna.—*Marine*, Luiz Antonia Vieira da Silva.—*War*, Thonaz José Coelho de Almeida.—*Agriculture, Commerce, and Public Works*, Antonio da Silva Prado.—*Finance*, João Alfredo Corrêa de Oliveira.—*Minister in London*, Baron de Penedo, 32, Grosvenor Gardens.—*Consul-General in London*, Barão do Ibirá-Mirim, 6, Great Winchester Street Buildings, E.C.—*British Minister to Brazil*, Geo. H. Wyndham.

BRITISH COLUMBIA (including Vancouver Island and the Queen Charlotte Islands). *Lieutenant-Governor*, Hon. Hugh Nelson. *Executive Council: President without Portfolio*, Hon. Robert Dunsmuir.—*Premier and Attorney-General*, Hon. A. E. B. Davie, Q.C.—*Agriculture and Finance*, Hon. J. Herbert Turner.—*Provincial Secretary and Minister of Mines*, Hon. J. Robson.—*Chief Commissioner for Lands and Works*, Hon. F. G. Vernon.—*Agent-General in London*, H. C. Beeton, 33, Finsbury Circus, E.C.

BULGARIA. *President of the Council and Minister of the Interior*, M. Stambouloff.—*Minister for Foreign Affairs*, Dr. Stransky.—*Minister for War*, Colonel Moutkoff.—*Minister of Finance*, M. Natchevitch.—*Minister of Justice*, M. Stouloff.—*Minister of Public Instruction and Worship*, M. Zivkoff. *British Agent and Consul-General*, Nicholas Roderick O'Connor, C.B., C.M.G.

BURMAH. *Chief Commissioner*, Sir C. H. T. Crosthwaite, K.C.S.I.—*Personal Assistant to*

Chief Commissioner, G. A. Soppitt.—Chief Secretary to Chief Commissioner, E. S. Symes, C.I.E.—Secretary to Chief Commissioner, H. T. White.

CANADA. *Governor-General, His Excellency Lord Stanley of Preston, P.C., G.C.B.—Premier, Rt. Hon. Sir John A. Macdonald, G.C.B. (President of Council).—Minister of Finance, Hon. C. F. Foster.—Justice, Hon. Sir J. S. D. Thompson, K.C.M.G.—Public Works, Hon. Sir Hector L. Langevin, K.C.M.G., C.B.—Agriculture, Hon. John Carling.—Railways and Canals, Hon. John Henry Pope.—Customs, Hon. Mackenzie Bowell.—Militia and Defence, Hon. Sir Adolphe Caron, K.C.M.G.—Marine and Fisheries, Hon. Charles Hibbert Tupper.—Postmaster-General, Hon. A. W. Haggart.—Minister of the Interior and Superintendent of Indian Affairs, Hon. Edgar Dewdney.—Minister of Inland Revenue, Hon. John Costigan.—Secretary of State, Hon. Pattison. *Agent-General*, Thomas Archer, C.M.G. *Clerk of Executive Council*, Albert Victor Drury. *Office of Agent-General*, 1, Westminster Chambers, S.W. On Nov. 30th, Sir Thomas McIlwraith, the Premier, owing to ill health, resigned the offices of Chief Secretary and Colonial Treasurer, retaining

the position of Vice-President of the Executive Council. The party leadership was assumed by the Hon. B. D. Morehead, Colonial Secretary, who, it was stated, would also become Premier and Chief Secretary. The Hon. W. Pattison, previously without a portfolio, was to become Colonial Treasurer. Sir Arthur Blake, K.C.M.G., was (Nov. 7th) appointed Governor of Queensland, but in consequence of the opposition manifested in the colony, he requested to be relieved of the appointment. The Government agreed to the request, though they thought the opposition had proceeded from a misapprehension of the position and a want of knowledge of Sir Henry's eminent qualifications and services. On Nov. 30th it was notified that the Governorship had been offered to, and accepted by, Sir Henry Norman, G.C.B., G.C.M.G., C.I.E., Governor of Jamaica.

SPAIN. Prime Minister and President of the Council, Don Praxedes Mateo Sagasta.—Foreign Affairs, Marques de la Vega de Armijo.—Justice, Don Manuel Alonso Martinez.—War, General O'Ryan.—Marine, Don Rafael Rodriguez de Arias.—Finance, Don Joaquin Lopez Puigcerver.—Trade, Agriculture, and Public Works, Don J. Canalejas y Méndez.—Colonies, Don Trinitario Ruiz y Copcedo.—Interior, Don Segismundo Moret.—Ambassador in London, Signor Albareda, 46, Portland Place, W.—Consul-General, Don Urbano Montejo, 21, Billiter Street, E.C.—British Ambassador at Madrid, Right Hon. Sir Francis C. Ford, G.C.M.G., C.B.

SWEDEN. Council of State: Minister of State, Baron D. A. G. Bitot.—Foreign Affairs, Count A. C. A. L. Ehrensward. Councilors of State: Dr. J. H. Loven.—Justice—C. G. H. Ösborn.—Marine, Baron C. G. von Otter.—Ecclesiastical, Dr. G. Wennesberg.—War, Major-General Baron Hy. Pahnstjerna.—Interior, J. E. von Krusenstjerna.—Finance, Baron R. J. von Esseny.—Baron H. L. E. Akerhjehn.—Minister in London, Count Charles E. Piper, 47, Charles Street, Berkeley Square, W.—Consul-General, Carl Juhlin-Dannfeldt, 24, Great Winchester St., E.C.—British Minister at Stockholm, Hon. Sir F. R. Plunkett, K.C.M.G.

SWITZERLAND. The chief executive authority in Switzerland, the "Federal Council," is practically equal to what is called "Cabinet" here. The President and Vice-President of the Council hold office for one year. President for 1888, W. F. Hertenstein.—Vice-President for 1888, B. Hammer. The other members of the Federal Council are:—Charles Schenk, Emile Welti, Louis Ruchonnet, A. Deucher, N. Droz.—Agent and Consul-General in London, Henry Vernet, Esq., 25, Old Broad Street, E.C.—British Minister at Berne, C. S. Scott, C.B. M. Hertenstein died Nov. 27th.

TASMANIA. Governor, Sir Robert Hamilton, K.C.B.—*Premier and Chief Secretary*, Hon. P. O. Fysh.—*Attorney-General*, A. I. Clark.—*Treasurer*, Hon. B. S. Bird.—*Minister of Lands and Works*, Hon. E. N. C. Braddon.—*Agent-General*, James A. Joul, Esq., C.M.G., (acting), 3, Westminster Chambers, Victoria Street, S.W.

TRANSVAAL. President, S. J. Paul Krüger.—*Vice-President*, U. J. Smit.—*President of Legislative Council (Volksraad)*, J. J. Hoffman.—*Secretary of State*—J. V. Eduard Bok.—*British Resident*, R. C. Williams.

TRIPOLI. Governor-General, Ahmed Rassim Pasha.—*British Consul-General*, Frank R. D. Hay.—*Vice-Consul*, Alfred Dickson.

TUNIS. Prime Minister, Sidi el Aziz Bon Attour.—*French Governing Resident*—M. Masciault.—*Secretary-General to Tunisian Government*, M. Regnault.—*Financier*, Depienne.—*Public Works*, Michaud.—*British Consul at Tunis*, G. T. Ricketts.

TURKEY. See Ottoman Empire.

UNITED STATES OF AMERICA. President of the United States and of the Cabinet, Grover Cleveland.—*Vice-President*, John J. Ingalls.—*Secretary of State*, Thomas F. Bayard.—*Secretary of Treasury*, Charles S. Fairchild.—*War*, William C. Endiecott.—*Navy*, William C. Whitney.—*Postmaster-General*, Don M. Dickinson.—*Interior*, William F. Vilas.—*Attorney-General*, Augustus H. Garland. (The above form the Cabinet.)—*Solicitor-General*, John Goode.—*Commissioner of Agriculture*, Norman J. Colman.—*President of Board of Health*, James L. Cabell, M.D.—*Minister in London*, Edward J. Phelps, 31, Lowndes Square, S.W.—*Secretaries*, Henry White and Charles J. Phelps.—*Consul-General to Great Britain and Ireland*, Thomas M. Waller, 12, St. Helen's Place, Bishopsgate Street, E.C.—*Vice-Consul-General*, Martin B. Waller.—*Deputy Consuls-General*, Edmund J. Moffat and Francis W. Frigout.—*British Minister at Washington*, Lord Sackville, K.C.M.G. See headings UNITED STATES, and SACKVILLE, LORD.

URUGUAY. President, General Tajes.—*Interior*, Dr. Julio Herrera y Obes.—*Foreign Affairs*—Dr. Idefonso Garcia Lagon.—*Finance*, Don A. M. Marquez.—*Public Instruction*, Dr. Martin Berinduagne.—*War and Marine*, Col. Pedro de Leon.—*Minister and Consul-General in London*, Dr. Alberto Nin, 35, New Broad Street, E.C.—*British Minister at Monte Video*, E. M. Satoru, C.M.G.

VENEZUELA. Ministry: Interior and Justice, N. M. Gil.—*Foreign*, N. Borges.—*War and Marine*, R. Fonseca.—*Finance*, J. Coronads.—*Public Works*, J. M. Tebar.—*Instruction*, González Guinan.—*Consul in London*, Nathaniel G. Rurch, 4, Tokenhouse Bldgs., E.C.

VICTORIA. Governor, Sir Henry Brougham Loch, G.C.M.G., K.C.B.—*Lieutenant-Governor*, Sir William Foster Stawell, K.C.M.G.—*Premier, Treasurer, Commissioner of Railways and Minister of Mines*, Hon. Duncan Gillies.—*Chief Secretary and Minister of Water Supply*, Hon. Alfred Deakin.—*Attorney-General*, Hon. Henry Wrixon.—*Minister of Lands and Agriculture*, Hon. John Dow.—*Minister of Public Instruction*, Hon. Charles Pearson.—*Commissioner of Public Works*, Hon. John Nimmo.—*Commissioner of Trade and Customs*, Hon. W. F. Walker.—*Minister of Justice*, Hon. Henry Cuthbert.—*Minister of Defence*, Hon. Sir James Lorimer, K.C.M.G.—*Postmaster*

General, Hon. F. T. Derham.—*Without Office*, Hon. J. Bell.—*Agent-General*, Sir Graham Berry, K.C.M.G., 8, Victoria Chambers, S.W.—*Secretary to the Agent-General*, J. Cashel Hoey, C.M.G.

WEST AFRICAN COAST. OLD CALABAR: *British Consul*, E. H. Hewett, C.M.G. CAMEROONS AND BIGHTS OF BENIN AND BIAFRA: *British Consul*, H. H. Johnston. MOZAMBIQUE: *British Consul*, Lieut. H. E. O'Neill, R.N.

WEST AFRICA SETTLEMENTS. Executive Council: Governor-in-Chief and Consul for Liberia, James Shaw Day Eyre, C.M.G.—*Colonial Secretary and Treasurer*, T. R. Griffith.—*Chief Justice*, W. Quayle Jones.—*Queen's Advocate*, J. K. Donaldson.

WÜRTEMBERG. President of Ministry, Dr. von Mittnacht.—*Finance*, Dr. von Renner.—*Public Worship*, Dr. von Sarwey.—*Instruction*, von Sick.—*War*, von Steinheil.—*Justice*, Dr. von Faber.—*British Minister, Stuttgart*—Sir Henry Page T. Barron, Bart., C.M.G.

ZANZIBAR. *British Political Agent and Consul-General*, Col. C. B. Euan-Smith, C.S.I.

Dipsomania (thirst madness) is a form of insanity, causing a morbid craving for stimulants. It may be produced by previous habits of intemperance, but is seldom the result of this alone, being often of hereditary origin, or in consequence of sunstroke, or from injury to or structural disease of the brain. Homes are now established at The Cedars, Rickmansworth, and elsewhere (licensed under the *Habitual Drunkards Act*, '79, introduced by Mr. Dalrymple), where, with the patient's own consent, he can be treated. See further, ed. '88; and Session '88, sect. 18.

Director of Public Prosecutions. An Act of 1879 provides for the appointment by the Secretary of State for Home Affairs of an officer with the above title and a salary not exceeding £2,000 a year. Six paid assistant directors may also be appointed, who may not hold their office for more than seven years, but are eligible for reappointment. The Director must be a barrister or solicitor of ten, and an assistant must be a barrister or solicitor of seven years' standing. It is the duty of the Director, under the superintendence of the Attorney-General, to institute or carry on such criminal proceedings, and to give such advice and assistance to all officials concerned in the administration of the criminal law, as may be prescribed by the regulations made under the Act or by special instructions from the Attorney-General. See ed. '87.

Disbarring. The expulsion of a barrister from his Inn of Court (*q.v.*). The Inns of Court were established and are continued by voluntary association, for the purpose of affording facilities for the study and practice of the law. But any person wishing to be called to the bar must become a member of some Inn of Court, and can practise only so long as he continues a member. The governing body of each Inn, the Bench, has jurisdiction to expel a member for misconduct, and so to prevent him from any longer practising; and thus he is disbarred. If he is a benchman as well as a barrister, he is, on expulsion, both disbenched and disbarred. The Bench of an Inn of Court is in no way restrained in the exercise of this jurisdiction, except by the disbarred person's right of appeal to the Judges.

Disestablishment. While the State does not concern itself about the affairs of other religious bodies, the Churches of England and Scotland are national church establishments; and disestablishment means the placing of them on exactly the same footing, as regards the laws and government of the country, as those other bodies. The Protestant Episcopal Church in Ireland was established at one period, but was disestablished by an Act of Parliament passed in 1869. The advocates of disestablishment object to church establishments because (1) the national legislature, which represents everybody, ought not to confer privileges on particular religious bodies, and thereby to create religious inequality; (2) because Parliament is an unfit body to deal with the affairs of churches, and cannot do so compatibly with its other duties; (3) because established churches being necessarily subject to state-control, cannot possess the liberty required to adapt their operations to changing circumstances; (4) because establishments obstruct political and social reforms, waste much national property by applying it in an ineffectual way, and also injure religion by associating it with injustice, and occasioning discontent and division. It is specially objected to the establishment of the Church of Scotland that its adherents probably do not embrace more than about one-third of the population. The disestablishment of the Church of England in Wales is demanded on the ground that it is the church of probably only one-sixth of the Welsh people; and at the general election of 1886 every Liberal member returned declared in favour of disestablishment. It is further alleged that the steps already taken towards religious equality and disestablishment—such as Catholic emancipation, the admission of Jews to Parliament, the abolition of compulsory church rates, the admission of Dissenters to the national universities, and the legalisation of Nonconformist burial services in churchyards—have all had a distinctly beneficial effect; and that as Parliament has thrown the established churches more and more on their own resources their activity and usefulness have greatly increased. On the other hand, those who object to disestablishment, while they acknowledge that it would be objectionable to set up establishments now for the first time, assert that the amount of good which they effect justifies their continued existence; that disestablishment would be very difficult, and would be injurious to the State; while disendowment, which, it is admitted, must accompany disestablishment, would seriously cripple the resources of the churches. With regard to disendowment, it should be stated that the advocates of disestablishment propose to scrupulously respect all existing life interests, and also to leave the disestablished churches in possession of the buildings and endowments which have been the result of their own liberality during the last sixty years. The organisation which is most closely identified with the disestablishment movement is popularly known as "The Liberation Society," its full title being *The Society for the Liberation of Religion from State Patronage and Control*. It was founded in the year 1844, under the title of *The British Anti-State Church Association*, that title having been changed in 1853. Its chief office and depot for publications is 2, Serjeant's Inn, Fleet Street,

Secretaries, Mr. John Fisher and Mr. Sydney Robjohns. On the other side *The Church Defence Institution* (Offices: 62 to 67, Palace Chambers, Westminster, S.W.; Secretary, Rev. H. G. Dickson, M.A.) is organised for defence of the Church (see CHURCH OF ENGLAND). Consult (*pro*) "The Case for Disestablishment"; (*contra*) Lord Selborne "The Case against Disestablishment."

Distillation. See PARLIAMENT.

Distilling Industry of the United Kingdom. The number of distilleries in operation during the year ending Sept. 30th, '87 (latest returns) were 11 in England, 129 in Scotland, and 28 in Ireland, being an increase of one in Scotland compared with the like period of the previous year. The number of proof gallons of British spirits distilled for the year ending the 31st of March, '88, was 39,049,365, of which, 9,816,769 were produced in England, 18,159,651 in Scotland, and 11,063,945 in Ireland. The estimated quantities of the principal materials used include 855,089 quarters of malt, 901,492 quarters of unmalted grain, 221,442 cwt. of molasses, 12,188 cwt. of rice, and 20,047 cwt. of sugar. The relative proportions of the various materials remain practically unchanged, except that a marked increase is shown in molasses. The number of proof gallons of British and Irish spirits in bonded warehouses on the 31st March last was—English, 8,683,437; Scotch, 43,689,520; and Irish, 24,138,152; total, 76,511,109. For the year ended on this last-mentioned date the number of detections made by the Excise authorities in connection with illicit distillation were 3 in England, 25 in Scotland, and 1,108 in Ireland. The Inland Revenue Commissioners state that the figures for England are satisfactory. As regards Scotland illicit distillation is limited to a few isolated localities in the Highlands. This fraud in Ireland is attributed to the difficulty experienced by the people in obtaining a market for their barley and oats. The consumption, however, of duty-paid spirits in Ireland again shows a small increase.

Distinguished Service Order. Her Majesty having taken into consideration that the means of adequately rewarding the distinguished services of officers in the naval and military services who had been honourably mentioned in despatches were limited, instituted and created for the purpose of rewarding individual instances of meritorious and distinguished service in war a new naval and military Order of distinction. The statutes of the Order, which are dated Balmoral, Sept. 6th, 1886, but which were not issued from the War Office until Nov. 6th in that year, provide that no person shall be eligible for the distinction who does not hold, at the time of his nomination, a commission in the navy, in the land forces, or marines, or the Indian or Colonial naval or military forces, or a commission in one of the departments of the army or navy the holder of which is entitled to honorary or relative navy or army rank; nor shall any person be nominated unless his services shall have been marked by the especial mention of his name by the admiral or senior naval officer commanding a squadron or detached naval force, or by the commander-in-chief of the forces in the field, in despatches for meritorious or distinguished service in the field or before the enemy. Foreign officers who have been associated in naval and military operations with our forces are eligible to be honorary members; and the Order ranks next

to the Order of the Indian Empire. The badge, which consists of a gold cross, enamelled white, edged gold, having on one side thereof in the centre, within a wreath of laurel enamelled green, the Imperial Crown in gold upon a red enamelled ground, and on the reverse, within a similar wreath and on a similar red ground, the Imperial and Royal cypher V.R.I., is to be suspended from the left breast by a red riband edged blue of one inch in width.

Distress, Law of. Some important alterations in the law of landlord and tenant (*q.v.*) have been made by the **Law of Distress Amendment Act**, which came into operation on Nov. 1st '88. By its provisions the wearing apparel and bedding of a tenant or his family, and the tools and implements of his trade, to the value of five pounds are now exempted from distress for rent; though, to prevent tenants from remaining in possession without paying rent, it is provided that the exemption shall not apply to any case where the tenant's interest has expired and possession of the premises has been demanded, and where the distress is made not earlier than seven days after such demand. There is a further provision that a landlord may sell goods taken in distress without any appraisalment being made, unless he is requested in writing by the tenant or owner of the goods to have the same appraised, in which case the tenant must pay the costs of such appraisalment. A tenant could only replevy within five days, but by the new Act this time may be extended to a period not exceeding fifteen days on the written request of the tenant or owner of the goods. Every bailiff levying distress for rent must hold a certificate in writing either under the hand of a county court judge, or a registrar having authority to grant the same, otherwise both he and the person authorising him will be guilty of trespass. It has been pointed out that by the joint operation of the **County Courts Consolidation Act** and the **Law of Distress Amendment Act**, there will be no judge for the City of London, who will have power to appoint a bailiff to levy distress for rent. Consequently no one can distrain for rent within the city without being guilty of trespass, and both the person levying and the landlord authorising the levy will be deemed to have committed a trespass. See also **SESSION '88**, section 23.

Diu. A Portuguese seaport and island, off coast of Kattywar, India, 170 m. N.W. of Bombay. Has belonged to Portugal since 1515; pop. with Gogola, 12,636. See **COLONIES OF EUROPEAN POWERS**.

Divisions. At the conclusion of a debate in the House of Commons the Speaker puts the question, and calls upon as many as are of that opinion to say "Aye," the contrary "No," and declares whether in his opinion the "Ayes" or the "Noes" have it. Unless his opinion be acquiesced in by the minority, the question is determined by a division. The Speaker calls upon strangers to withdraw, and the Clerk turns a two-minute sand-glass. When this has run out and the strangers below the bar have retired, the doors are locked and the question again put in the same form; the Speaker directs the "Ayes" to go into the right lobby and the "Noes" into the left lobby, and appoints two tellers for each party. In a great party division the tellers are usually the whips on either side. Should there not be two tellers on either side the Speaker declares the resolution of the House; and when

in his opinion a division is frivolously or vexatiously claimed, he may take the vote of the House by calling upon members to rise in their places (see **PARLIAMENTARY PROCEDURE**). Every member in returning from either lobby is counted by the tellers, and his name is recorded by the division clerks on a large printed sheet of names. If a member go into the wrong lobby he is not permitted to correct his error. No member may speak after the question has been put except upon a point of order which may arise, and then he must, while speaking, remain sitting and covered. Divisions in committee are taken in the same manner as in the House itself. The two sides in a Lords division are termed "**Contents**" and "**Not-Contents**."

Divorce. See ed. '88, and consult "**Law Practice and Procedure in Divorce in Matrimonial Cases**," by W. J. Dixon; and "**Epitome of Probate and Divorce**," by J. G. Harrison.—**Law on**, in '88. In the case of **Walter v. Walter**, heard in the Divorce Division, in February, the plea was raised that at the time of the wife's misconduct she was of unsound mind. The jury, however, found that the respondent was not insane, so that Mr. Justice Butt was not called upon to decide this novel point of law. In the action of **Otway v. Otway**, it was proved that both husband and wife had been guilty of misconduct, but Mr. Justice Butt made an order of judicial separation to protect the wife and her children from the husband's cruelty. On appeal, however, the order was discharged by the Court of Appeal, which held it to be a departure from the principles on which the Divorce Courts have acted, and considered that the children could be more effectually protected by the jurisdiction of the Court of Chancery. A somewhat novel point was raised in the Divorce Division (November) as to whether the petitioner, who had married the husband of her deceased sister, was entitled to have her marriage declared null and void. Mr. Justice Butt held that it was obligatory upon him to declare the marriage null and void, but refused to grant costs. **Waite v. Moreland** (Court of Appeal March '88) was a case arising out of section 25 of the Divorce Act 1877, which enacts that "in every case of a judicial separation the wife shall from the date of the sentence, and while the separation shall continue, be considered a *feme sole* with regard to property of every description which she may acquire, or which may come to or devolve upon her." The question was whether the section applied to property which had devolved on a married woman before the date of her separation, so as to release her from the restraint on anticipation annexed to such property. The Court of Appeal unanimously decided that the section only applied to property acquired after the separation order, and therefore the restraint on anticipation was still binding.

Dobrukscha. A slice of Turkey, at the mouth of the Danube, which was bestowed in 1878 by Russia upon Roumania as a set-off for the Bessarabian district on the opposite side of the river, wrested by the Czar from that kingdom. The country is flat and marshy, and its acquisition implied a loss rather than a gain.

Dobson, William Charles, R.A., b. 1817, evinced an early taste for art, and, after studying at the British Museum, became a student of the Royal Academy in '36. He was appointed headmaster of the Government School of Design at Birmingham ('43), where he

taught pattern-drawing and flower-painting. He resigned this office ('45), and subsequently proceeded to Italy and Germany studying art in both countries. Elected A.R.A. ('60), R.A. ('72). He is also a member of the Society of Painters in Water Colours. Many of Mr. Dobson's pictures have been engraved.

Dogs in the German Army are employed to assist patrols in reconnoitring. See ed. '88.

Dogs, Law on, '88. There is a very common belief that a dog must bite at least one human being before its owner can be made responsible or any other personal injuries which it may inflict. In a recent county court case, however,

Worth v. Gilling the judge laid it down that it was not necessary to prove that a dog had bitten some one else: it was quite enough to show that its vicious propensities had been brought to the knowledge of the defendant. The shooting of dogs trespassing in pursuit of game is illegal, and the owner may recover damages. Probably, however, if the dog were in hot pursuit in preservation, and the game could not otherwise be saved from destruction, the shooting of the animal would be justified.

Döllinger, John Joseph Ignatius, was b. at Bamberg, in Bavaria, in 1799. Took priest's orders in the Church of Rome, 1822. Devoted himself to the study of Church History, and acquired considerable distinction by the publication of numerous treatises on that subject. In '45 he was returned by the University of Munich to the Bavarian parliament, and in '51 to the parliament of Frankfurt. He became a vigorous advocate for the separation of the Church from the State, and when by decree of the Vatican Council, in '70, the doctrine of Papal Infallibility was made an article of the Roman faith, Dr. Döllinger refused to assent to it. This made him immensely popular with the Protestants, and also with that party within the Church itself which tended towards religious liberalism. He was subsequently excommunicated, but received many honours, both from the Bavarian Government and from various foreign societies and institutions. From the University of Oxford he received the honorary degree of D.C.L. in '71, and from Edinburgh that of LL.D. in '72. In the following year he was appointed President of the Academy of Science at Munich. At the celebrated Conference of the Old Catholic Party, held at Bonn in '74, Dr. D. presided, and drew up the declaration, unanimously adopted on that occasion, against the orthodox view of the Eucharistic celebration. Dr. D. is a voluminous author amongst the best known of his works being "Origins of Christianity" ('33-35), "The Reformation" ('46-48), "The Church and the Churches" ('60), "Prophecies and the Prophetic Spirit in the Christian Era" ('72), and "The History of the Council of Trent" ('74). Several of his works have been translated into English.

Doll Mission. See ed. '88.

Dominica. An island in the West Indies forming a Presidency of the British colony of the Leeward Islands. Area 275 sq. m., pop. 28,221. Capital, *Roseau*; second town St. Joseph. The island is mountainous, rising to 6,000 feet. Volcanic rocks and hot springs abound, and there are large deposits of sulphur. The island is well timbered and well watered, and the arable parts are very fertile. Less than one-third is under cultivation, the rest being clothed with fine forest. Sugar, cacao, lime-juice coffee, fruits, and spices are the chief

productions. The people are generally Catholics, of French descent. A few aborigines (Caribs) still exist here. There was a volcanic eruption in 1880.—A President and Local Council administer internal affairs, subject to the Federal Government. For statistics see BRITISH EMPIRE, etc. (table). Crown lands, uncleared, are purchasable at £1 per acre.—The island was taken from the French in 1793, and confirmed to Great Britain in 1763. There were French invasions subsequently.

Dominican Republic. See HAYTI; and for Ministry, etc., see DIPLOMATIC.

Don and Volga Canal. It was reported in Nov. '88 that a project was on foot to connect these two rivers by a canal, starting from the Volga just below Tsaritsin and joining the Don at Karparka fall. As the Volga discharges itself into the Caspian Sea at Astrakhan, and the Don flows into the Sea of Azov, which communicates with the Black Sea through the Yemakale Straits, the importance of the project is at once apparent. The total length of the canal would be 53 miles, and vessels with a tonnage of 500 or 600 tons would be able to make the passage. There will be, in all, 15 bridges and 17 reservoirs, with a surface of 25,000,000 square metres to supply the canal with water. The total cost, including buildings, bridges, lighting, etc., is put down at £4,800,000.

Donaldson, James, M.A., LL.D., F.R.S.E., b. at Aberdeen 1831. Educated at the Grammar School and Marischal College and University, Aberdeen and at New Coll., London, and Berlin Univ. Appointed Greek Tutor in Edin. Univ. '52. Classical Master in the High School of Edin. '56. Rector of the same '66. Professor of Humanity in Aberdeen Univ. '81, and Principal of St. Andrew's Univ. '86. Edited for some years the *Museum, or English Journal of Education*, and has contributed to the *Encyclopædia Britannica* and the *Cyclopedia of Education*, and the leading periodicals. He is the author of "Lyra Græca," "Specimens of the Greek Lyric Poets," "Critical History of Christian Literature and Doctrine from the Death of the Apostles to the Nicene Council" ('64-66), "Lectures on the History of Education in France and England," '74. Edited, '67, in conjunction with Rev. A. Roberts, D.D., the "Ante-Nicene Christian Library."

Donnellan Lectures. These Lectures were instituted in 1794, by the Provost and Fellows of Trinity College, Dublin, in pursuance of a bequest of £1,243 by "Mrs. Anne Donnellan, of the Parish of St. George, Hanover Square, in the county of Middlesex, Spinster, for the encouragement of religion, learning, and good manners." The particular mode of the application of the legacy was reserved to the discretion of the Provost and Senior Fellows of the College; who accordingly (Feb. 22nd, 1794) formulated Resolutions to the effect "(1) That a Divinity Lecture, to which shall be annexed a salary, arising from the interest of £1,200—the sum announced in the *College Register*, Feb. 9th, '56, as being then invested for the Donnellan Fund in three per cent. stock, was £1,510 5s.—"shall be established for ever, to be called Donnellan's Lecture. (2) That the Lecturer shall be forthwith elected from among the Fellows of said College, and hereafter annually on the 20th of November. (3) That the subject or subjects of the Lectures shall be determined at the time of election by the Board, to be treated of in six sermons, which shall be delivered in the College Chapel after morning

service on certain Sundays, to be appointed on the 20th of November next, after the election of the Lecturer, and within a year from said appointment." More recent orders of the Board have so far modified the foregoing Regulations as to throw open the Donnellan Lectureship to all Masters of Arts of the University, being clergymen, and to ordain that the Lecturer shall be elected every year, on the last Saturday in November. The first course of the Donnellan Lectures, which was on *Miracles*, was delivered in 1795, by the *Rev. Thomas Elrington*, D.D., Fellow and afterwards Provost ('11) of Trinity College, Dublin, and successively Bishop of Limerick (1820-22) and Ferns (22-35). Amongst the other more prominent Lecturers on the Donnellan foundation were the *Rev. Richard Graves*, D.D., M.R.I.A., Senior Fellow of Trinity College, Dublin, and Chaplain to the Duke of Richmond, the Lord Lieutenant of Ireland, who in 1807 delivered a course of "Lectures on the Four Last Books of the Pentateuch, designed to show the Divine Origin of the Jewish Religion, chiefly from Internal Evidence"; the *Rev. James Kennedy*, B.D., F.T.C.D., M.R.I.A., who in '24 delivered his "Lectures on the Philosophy of the Mosaic Record of Creation"; and the *Rev. James Henthorn Todd*, D.D., M.R.I.A., Fellow of Trinity College, Dublin, who in '41 delivered "Six Discourses on the Prophecies relating to Antichrist in the Apocalypse of St. John."

Dowden, Edward, LL.D.; b. in Cork 1843. Educated at Queen's Coll., Cork, and Trin Coll., Dublin, where he gained the Vice-Chancellor's prize for English Verse and Prose. In '63, he obtained the Senior Moderatorship in Logic and Ethics. He became ('67) a candidate for the Erasmus Smith's Professorship of Oratory in Dublin Univ., which he obtained by examination, being afterwards appointed Professor of English Literature. Prof. D. has contributed several articles to the leading periodicals, and is also the author of "Shakespeare Primer," "Poems," "Shakespeare: a Study of his Mind and Art"; "Southey's Correspondence with Caroline Bowles"; a Life of Southey for the series entitled "English Men of Letters"; editions of "The Passionate Pilgrim" and Shakespeare's "Sonnets," and a "Life of Percy Bysshe Shelley." In '88 Prof. D. issued a new work entitled "Correspondence of Henry Taylor."

Dowell, Admiral Sir William Montague, K.C.B., b. 1825. Entered the navy (1839). Present at the bombardment and capture of Amoy (1842). Served in the Black Sea, in the Crimean War, as lieutenant of the *Agamemnon*, and for his services with the naval brigade before Sebastopol, was promoted to the rank of Commander. Commander in the naval brigade (1857) at the capture of Canton. Aide-de-camp to Her Majesty (1870-75). Second in command of the Channel Squadron, 1877-78 and 1882-83. Appointed (1884) Commander-in-Chief of the China Station.

Downton College of Agriculture. See AGRICULTURAL COLLEGES.

Drama, The. '88. Not the least notable feature of the dramatic year in the Metropolis was the frequent utilisation of the materials of popular modern novels for stage purposes. Fictional writers of Australia, of America, and of the United Kingdom, alike helped to contribute, and in the majority of instances the result was satisfactory from the managerial

point of view. That the revived fashion of presenting in theatrical form well-known stories that seem peculiarly adapted to such treatment should have the effect of somewhat checking original effort is feasible, although the popularity of the practice may stimulate authors of romance to cast their plots and shape their characters in moulds rendering transference before the footlights an easier matter than hitherto. Nearly all the novels of Sir Walter Scott and of Charles Dickens have in more than one version been seen upon the stage, but not much trace of far back manners and customs is perceptible in the works lately taken in hand by dramatic adapters. With two exceptions the subjects thus given during the year were of comparatively recent introduction to subscribers to the circulating libraries, and naturally the serious element preponderated. Among the latter were Mr. Rider Haggard's "She," Mr. Fergus Hume's "The Mystery of a Hansom Cab," Mrs. Campbell Praed's "Wedlock" (produced at the Opera Comique under the title "Ariane"), Mr. Hall Caine's "The Deemster" (called on the stage "Ben-my-Chree"), Mr. R. L. Stevenson's "Dr. Jekyll and Mr. Hyde," Mr. F. C. Philips' "The Dean and his Daughter" (with which as "The Dean's Daughter" Mr. Rutland Barrington commenced his managerial campaign at the St. James's Theatre late in the autumn), and Mr. Archibald C. Gunter's "Mr. Barnes of New York." Of lighter substance were "Bootsie's Baby," by the authoress who signs herself "John Strange Winter," and Mrs. Hodgson-Burnett's "Little Lord Fauntleroy." The latter was rather unexpectedly the means of settling a long-vexed question concerning the extent of proprietary rights in a literary work when a theatrical market is obtained for it. Contrary to the desire of the authoress, who was understood to prefer dealing with the story in another way, Mr. E. V. Seebohm in February produced at the Prince of Wales's Theatre an arrangement of "Little Lord Fauntleroy" which, thanks to excellent acting, at once achieved a great success. Litigation followed, and in the result it was decided on the highest authority that although the main theme of a novel or incidents taken therefrom were not exactly private property, it was not permissible to make use of the dialogue of the story. This judgment terminated the existence of the "little lord" at the Prince of Wales's. In May, however, he was destined to reappear with the distinctive prefix "Real" under the guidance of Mrs. Hodgson-Burnett, at afternoon performances at Terry's Theatre, where he remained for a considerable time. Miss Vera Beringer, a child who had distinguished herself in a three-act play called "Tares" (written by Mrs. Oscar Beringer), produced at a *matinee* at the Prince of Wales's Theatre on the last day of January, was coached for the part by Mrs. Kendal, and gave an interpretation of the juvenile lord that was not only bright and intelligent as an independent performance, but was understood to accurately realise the figure, bearing and general demeanour of the noble boy existing in "the mind's eye" of the novelist who had now taken an active share in the stage production. The other arrangements from novels did not occupy the attention of legal luminaries. During an autumn season at the Gaiety, Miss Sophie Byrne made "She" her trump card, and played the wondrous and dazzlingly beautiful Queen with

nerve, dramatic power, and consistency. This clever lady also appeared as *Mariana* in a piece of that name taken from "Mr. Barnes of New York," but previously Mr. Rutland Barrington had made an experiment at the Olympic with another adaptation which was subsequently taken through the provinces with success. Of "The Mystery of a Hansom Cab" the most was made by Miss Grace Hawthorne and Mr. Kelly at the Princess's Theatre, and "Ariane" as played by Mrs. Bernard Beere at the Opera Comique was so warmly discussed that Mr. Burnand (*q.v.*) thought it worth while to write a burlesque on this bold drama of the Divorce Court, which he called "Airy Annie," and produced at the Strand with Miss Alice Atherton, Miss Aynton, and Mr. Willie Edouin as extremely comic mimics of the performers on the other side of the road. For "Bewmyn-Chree," of which Messrs. Hall Caine and Wilson Barrett (*q.v.*) were the authors, a home was for a few weeks found at the Princess's. The play was honest in sentiment, novel in idea, and admirably acted by the company Mr. Wilson Barrett had brought with him from the Globe; but the tone of the work was rather gloomy, and in order to give it a better chance of success the *dénouement* was altered in supposed compliance with the wishes of the public. Notwithstanding this, however, the run of the play in Oxford Street was but brief. Much the same may be said of the adaptation by the Hon. Stephen Coleridge and Mr. Norman Forbes from Nathaniel Hawthorne's fine novel "The Scarlet Letter," which was voted powerful in some places, but rather deficient in dramatic grip in others. Given at the Royalty early in June, an attempt was made to modify the unacceptable climax, but the public did not become enamoured of the piece. "Boodle's Baby" at the Globe fared much better: the pleasing simplicity of the story was set off by bright military costumes, and some of the actors possessed a familiarity with barrack life that was of great advantage to their appearance in uniform, as well as to the spirit with which they attacked their respective assumptions. Whilst Mr. Henry Irving (*q.v.*) was away on his third tour in America, the States, in which theatrical amusement is considerably studied, were ringing with the close, consistent, and energetic dual embodiment by Mr. Richard Mansfield of the philanthropic Dr. Jekyll and the grim murderous Mr. Hyde of Mr. Stevenson's weird romance. Negotiations with the view of Mr. Mansfield's occupancy of the Lyceum during Mr. Irving's provincial tour, which was intended to be of longer duration than had been the case of late years, were entered into, with the result that the famous English actor-manager in closing his season was enabled to announce that he had let his house for several months to the comparatively young comedian who in America had found the opportunity he had vainly sighed for in this country. The other most important item of news Mr. Henry Irving communicated to his enthusiastic audience was that his next revival would be "Macbeth," with original music by Sir Arthur Sullivan, and with Miss Ellen Terry (*q.v.*) as Lady Macbeth, it being, of course, understood that he would play the ambitious Thane, the Shakespearian character that followed his "Hamlet" more than ten years ago, and not since resumed by him. Between the return of the Lyceum company

from their highly successful trip across the Atlantic with "Faust," and four or five other plays, and the end of his season, there was no time to produce a work altogether new to the theatre; so, after playing his still popular version of Goethe's masterpiece with the same cast as before, Mr. Irving fell back upon the promised revival of Mr. A. C. Calmoun's graceful dramatic poem "The Amber Heart," in which Miss Ellen Terry again gave a deliciously refined rendition of the fascinating Ellaline, with the old melodrama "Robert Macaire" as a supplement. Frederic Lemaitre's well-known part was played by Mr. Irving with an accession of reckless comicality; and as an eccentric effort of the most famous actor of his time, the performance evoked considerable curiosity. The undoubted talent possessed by Mr. Mansfield caused his double assumption of Jekyll and Hyde to receive more critical attention than the drama was perhaps worth. The intensity of his style, quick sense of strongly marked character, and the skill displayed in his "make-up," were duly recognised in the gloomy fancy, as also in the less egrossing "A Parisian Romance" (an adaptation of Octave Feuillet) when Mr. Mansfield impersonated that very unpleasant old roué the Baron de Chevalier. Towards the close of his tenure of the Lyceum Mr. Mansfield appeared as Prince Karl, a light comedy part in which he was highly successful. In the autumn Mr. Augustus Harris, putting aside for a while the anxieties of Italian Opera, devoted all his energies to the production at Diury Lane of a drama called "The Armada," in which a romantic story had a background of historical fact. As a magnificent spectacle worthy both of the house and of the industrious manager, the piece at once gained a firm hold of the public. In "Joseph's Sweetheart," given at the Vaudeville in March, and destined to remain a fixture on the bill for many months, Mr. Robert Buchanan again demonstrated his ability to cope with the difficulty of dramatising Fielding so that the spirit of the author might be reflected without the accompaniment of the freedom of expression unsuitable to modern taste and judgment. As honest and simple Parson Adams Mr. Thomas Thorne had a part thoroughly adapted to his reflective vein of humour, of which he made the most. Another very conspicuous dramatic success, and one most honourably won, was Mr. Pinero's domestic drama, "Sweet Lavender," which Mr. Terry was fortunate enough to secure for his own theatre in the Strand. Messrs. Hare and Kendal in the summer dissolved partnership in the St. James's Theatre, after exertions that have exercised a beneficial influence upon the English stage. During their final season they revived some former successes and reproduced the rather antiquated play "The Wife's Secret," the latter failing to realise managerial expectations, despite the splendid acting of Mr. and Mrs. Kendal in the characters of the jealous husband and faithful wife, originally played by Mr. and Mrs. Charles Kean. Mr. Beerboom Tree, when Mr. Robert Buchanan's drama "Partners" had run its course at the Haymarket, produced with superb embellishment "The Pompadour," a sentimental play, by Messrs. W. G. Wills and Sydney Grundy, and afterwards happily lighted upon an exceedingly ingenious and interesting drama called "Captain Swift," a work which gives promise of great things in this line

from the pen of Mr. C. Haddon Chambers. The Adelphi has continued to prosper with picturesque melodrama supplied by Messrs. Henry Pettitt and Sydney Grundy, of which the latest example is "The Union Jack." The new Court Theatre in Sloane Square was opened by Mrs. John Wood in September with a translation by Mr. Grundy of the French whimsicality "*Les Surprises du Divorce*," entitled in English "*Mamma*," and receiving in its dramatic exposition the aid of Mr. Hare. "David Garrick" gained new life at the Criterion from the performances of the comedy by Mr. Charles Wyndham and Miss Moore in Germany and Russia, and when it was withdrawn Mr. Burnand's farcical piece "*Betsy*" filled the vacancy. During the summer Madame Sarah Bernhardt introduced at the Lyceum her latest assumption—"La Tosca," to the English public; and the other distinguished visitors to our shores during the year have been M. Coquelin (Royalty), and Mr. Augustus Daly's American company, headed by Miss Ada Rehan, the latter giving a brilliant performance of "*Katherine*" in an elaborate revival at the Gaiety of "*The Taming of the Shrew*." Mr. Toole has done well both in London and the provinces with "*The Don*," written by Mr. and Mrs. Herman Merivale; and in a somewhat similar field of operations Mr. Lionel Brough found "*The Paper Chase*" (a comicality by Mr. Charles Thomas) remunerative. Mr. John Lart's drama "*The Monk's Room*," after being successfully tried twice at *matinees*, was in October placed in the evening bill at the Globe; and it is probable we may hear again of Mr. Hamilton Aide's "*Incognito*" (at the Haymarket in January), Mrs. Oscar Beringer's "*Tares*" (Prince of Wales's in January), and Mr. Jerome K. Jerome's "*Wood Barrow Farm*" (the Comedy in June), each of which obtained special favour at morning performances. Mr. Willie Edouin and his clever spouse Miss Alice Atherton have laboured assiduously at the Strand with "*Katti, the Family Help*" (by Mr. C. S. Fawcett), "*Run Wild*" (by E. Coffin), "*His Wives*" (by T. G. Warren), and "*Kleptomania*" (by Mark Melford)—all mirthful productions. The entertaining "*Arabian Nights*," continued at the Comedy until the early autumn, had for successor the farcical piece "*Uncles and Aunts*," by Messrs. Lestock and Everard. On Oct. 20th Mr. John Lancaster opened the Shaftesbury Theatre, in Shaftesbury Avenue—one of the most elegant of modern erections of its kind—with a careful revival of "*As You Like It*," in which Miss Wallis made her reappearance in London after a prolonged absence as *Rosalind*. For reasons not quite clear, the performance failed to attract large audiences, and a month later Shakespeare gave way to Lord Lytton and "*The Lady of Lyons*." An unparalleled incident occurred upon the evening fixed for the change of performance. The massive iron curtain designed as a protection against the speedy communication of fire *versus*, could not be raised, owing to some unexpected hitch in the mechanical arrangements, and the assembled public, after patiently waiting for about an hour, dispersed on the official intimation that no performance could take place that night. About the same period decided successes were obtained at the Princess's with Mr. Pettitt's drama, "*Hands Across the Sea*," and at the Gaiety with Messrs. Sims and

Pettitt's new two-act burlesque, "*Faust up to Date*." Both the Alhambra and the Empire have maintained their fame for gorgeous ballets. **Drinking, Excessive.** See CORONERS' INQUESTS.

Dublin University. The University of Dublin, commonly known as Trinity College, Dublin, was founded in 1591 by Queen Elizabeth, who also established in the same year a college under the style of the Holy and Undivided Trinity near Dublin. Its constitution has been altered by numerous Royal charters. In the Treaty of Union between Great Britain and Ireland (1800) it is spoken of as the University of Trinity College. The Chancellor of the University is the Earl of Rosse, and the Vice-chancellor, Right Hon. J. T. Ball, LL.D. The undergraduates exceed 800. Certificates of proficiency granted to women. **Degrees.**—D.D. (hood scarlet cloth, lined with black silk); B.D. (h. plain black silk); M.A. (h. black silk, lined with dark blue silk); B.A. (h. black silk or stuff, lined with white fur); M.D. (h. scarlet cloth, lined with crimson silk); M.B. (h. black silk, lined with white fur); M.Ch. (h. crimson silk, lined with white silk); B.Ch. (h. crimson silk, lined with black silk); LL.D. (h. scarlet cloth, lined with pink silk); LL.B. (h. black silk, lined with white silk); Mus.D. (h. crimson cloth, lined with white silk); Mus.B. (h. blue silk, hemmed with white fur); M.Engin. (h. white silk, lined with green silk); B.Engin. (h. black silk, lined with green silk). **Parliamentary representative.**—Mr. D. H. Madden, Q.C. Some alumni: Isaac Butt; Tom Moore, the poet; Robert Emmett, the Revolutionist; and Burke, the orator.

Du Chaillu. Paul Belloni, b. in Paris 1835. His father was a West African trader, and at an early age Paul commenced his career as an explorer. He published in '61 "*Explorations and Adventures in Equatorial Africa*," and in '67 "*A Journey to Ashango Land*." He subsequently travelled through the United States, and settled in New York. M. du Chaillu has also travelled extensively in Scandinavia, Lapland, and Finland, of which he has given a description in his "*Land of the Midnight Sun*." He has also published a number of books for children, including "*Stories of the Gorilla Country*," "*Wild Life under the Equator*," and "*Lost in the Jungle*."

Dufferin. Frederick Temple Hamilton-Blacklock, P.C., 1st Earl of (creat. 1871); Baron Dufferin (1800); was b. at Florence 1826. His lordship is a lineal descendant of Sheridan. Assumed the name of Hamilton by royal licence (1862); succeeded his father in the English barony and the Irish honours (1841). Educated at Christ Church, Oxford; was a Lord-in-waiting to the Queen (1849-52 and 1854-58); was attached to Earl Russell's special mission to Vienna (Feb. 1855); sent as British commissioner to Syria in relation to the massacre of Christians (1860); was Under-Secretary of State for India (Nov. 1864 to Feb. 1866), and Under-Secretary for War from the last date till June following; Chancellor of the Duchy of Lancaster (Dec. 1868 to April 1872); Governor-General of the Dominion of Canada (1872-78); Ambassador at St. Petersburg (1879-81), when he was appointed to Constantinople. He was subsequently sent on a special mission to Egypt; and in 1884 succeeded Lord Ripon as Viceroy of India; resigned '88. On his return

to England was created a Marquis, with the title of **Marquis of Dufferin and Ava**.

Dufferin Railway Bridge (Benares). See ed. '88.

Dulwich College. Alleyn's "College of God's Gift" at Dulwich. Dulwich College was founded in the year A.D. 1619, by **Edward Alleyn**, the Actor, under Letters Patent of King James I., by which licence was granted to Alleyn to establish a College, "to endure and remain for ever;" and to be called "The College of God's Gift in Dulwich, in the County of Surrey." Reconstituted 1858, and removed to new site and new building '70. Present numbers in the school, 580. No boy may enter the school before the age of 10, or remain after the age of 19. Fees £21 per annum. Endowment about £20,000 a year. Eight exhibitions of £50 each a year for four years to either University. **Distinguished alumni:** P. H. Clifford, M.A., Fellow of Christ's Coll., Cambridge; M. G. Glazebrook, M.A., Head Master of Manchester Grammar School; J. Franks, M.A., Fellow of Univ. Coll., Oxford; L. L. Price, M.A., Fellow of Oriol, Oxford, etc. **Head Master**, A. H. Gilkes, M.A.

Dumas fils (Alexandre), French novelist and dramatist, was b. at Paris, July 28th, 1824. He is the son of Alexandre Dumas père, the well-known author of "Monte Christo." He was educated at the Collège Bourbon, and at the age of seventeen published a little volume of poems, "Pêchés de Jeunesse." He then accompanied his father on travels in Spain and in North Africa. On his return he published numerous novels, the most characteristic being "La Dame aux Camélias," which created a general sensation. His drama entitled "Francillon," was produced Jan. 17th, 1887, at the Théâtre Français. In 1875 he was elected to the French Academy. M. Dumas is a most voluminous writer. He contributed a long letter to the *Daily Telegraph* on Aug. 22nd, '88, on the marriage question. M. Dumas has recently been promoted to the rank of Commander of the Legion of Honour.

Du Maurier, George L. P. B., b. 1834; a naturalised British subject. Coming to England at the age of seventeen, he entered as a student of chemistry at Univ. Coll., Lond., and afterwards returned to Paris to study painting under M. Gleyre. He made his *début* as an artist with contributions of sketches to *Once a Week*, and afterwards contributed to the *Cornhill Magazine* and *Punch*. He subsequently joined the staff of the latter periodical, the pages of which he has enriched with the well-known caricature sketches of society life, as typified by "Mrs. Ponsonby de Tomkyns" and others. Mr. Du Maurier has also illustrated Thackeray's "Esmond"; and "Ballads," and other books. A collection of his original drawings was exhibited in the Fine Art Society's rooms during '87.

D'Urban. Port of Natal (*q.v.*), pop. 17,127.

Durham, Rt. Rev. Joseph Barber Lightfoot, Lord Bishop of. The see was founded in 635. His lordship, the 83rd bishop, was b. at Liverpool April 13th, 1828. Educated at Trinity Coll., Cambridge; B.A., Sen. Classic, 31st Wrangler, and Sen. Chan. Medallist ('51); Norrisian Prizeman ('53); M.A. ('54), is D.D. Cambridge, Durham, and Edinburgh; D.C.L. Oxford; LL.D. Glasgow and Dublin ('86). Deacon ('54), priest ('58); Hon. Fellow of his college ('72). Lord Bishop of Durham ('79).

Hon. Chaplain-in-ordinary to the Queen ('62-79); Canon Resident of St. Paul's Cathedral ('71-79); Margaret Prof. of Divinity at Cambridge ('75-79); As an author and learned theologian his lordship is well known for his numerous commentaries on the Epistles and Apostolic Fathers. Has contributed to Smith's "Dictionary of the Bible" and to "Christian Antiquities"; to *Journal of Philology*, *Contemporary Review*, and other periodicals.

Durham University, founded 1832, comprises University College ('37), Bishop Hatfield's Hall ('46), and Colleges of Medicine and Science at Newcastle-upon-Tyne. Bishop Cosin's Hall ('51), another college connected with the University, was shut up in '64, and the students transferred to University College and Bishop Hatfield's Hall. On Nov. 5th, '88, at Newcastle-upon-Tyne, H.R.H. Princess Louise opened a new building for the faculties of science and engineering of this University. The portion opened, though only a third of the entire structure intended, cost £23,000. The students number about 400. Unattached students first admitted '71. Affiliated are Cordington College, Barbadoes, and Fourn Bay College, Sierra Leone. Warden, the Dean of Durham, W. C. Lake, D.D., who is also President of the College of Science; President of the College of Medicine, G. Y. Heath, M.D. **Parliamentary representative:**—Right Hon. D. R. Plunket, LL.D., Q.C. **Degrees.**—D.D. (*hood* scarlet cloth, lined with black silk); B.D. (*h.* black silk); M.A. (*h.* black silk, lined with palatinate purple silk); B.A. (*h.* black silk, lined with white fur); D.C.L. (*h.* scarlet cashmere, lined with white silk); B.O.L. (*h.* palatinate purple silk, lined with white fur); M.D. (*h.* palatinate purple cashmere, lined with scarlet silk); M.B. (*h.* scarlet silk, lined with palatinate purple silk); Mus.D. (*h.* scarlet silk, lined with purple silk); Mus.B. (*h.* white silk, lined with purple silk); L.Th. (*h.* black silk, faced with velvet and linen with purple silk). Certificates of proficiency in sanitary science and general education also granted. Local University Lectures are also given in connection with D. University.

Dutch Colonies. See COLONIES AND DEPENDENCIES OF EUROPEAN POWERS.

Dutch East Indies. Comprise various islands of the Malay Archipelago; total area 719,674 sq. m., pop. 29,030,102. Divided into Java with Madura, and the "Outposts." The latter are ruled by various officials, and in many cases are practically independent. See JAVA, BORNEO, COLONIES OF EUROPEAN POWERS, etc.

Dvořák, Anton (pronounced Dvorahak). One of the foremost of our younger musicians, is a Bohemian, b. 1841, at Mühlhausen-on-the-Moldau, the son of an innkeeper. He learnt music first from the gipsies, but at sixteen entered the Prague Conservatoire, finally obtaining a living as bandsman and organist. Applying for help to the Minister of Public Instruction, his case was referred to Brahms, who befriended him. Dvořák's symphonies and his Slavonic rhapsodies are very fine original works; but his "Stabat Mater," produced under the composer's direction in London in '83, has stamped him as a really great composer. His "Spectre Bride," composed for the Birmingham Festival of '85, met with a very enthusiastic reception. His oratorio "St. Ludmila" was introduced at the Leeds Festival in October '86.

Dynamite. See ed. '88.

Dynamo. See ed. '86.

E

Earl Marshal, The, is one of the great officers of State, and takes precedence next after the Lord High Constable. The latter office ceased to be hereditary in 1521, since which it has been only temporarily revived for successive coronations, and once for a trial by combat, which, however, did not take place. One of the functions of this exalted personage is, in company with the Earl Marshal, to usher the **King's Champion** into Westminster Hall just before the second course of the coronation banquet. It is usual to appoint to the office some person of high rank and great distinction, and the first **Duke of Wellington** was selected to fill it at the coronations of George IV., William IV., and Her Majesty. The L. H. C. and the E. M. were formerly judges of the ancient Court of Chivalry; but when the former office ceased to be hereditary, the sole jurisdiction in questions of honour and arms was vested in the E. M., who is head of the College of Arms (see **GARTER KING-OF-ARMS**). The office of E. M. is hereditary in the family of the Duke of Norfolk. Office, Queen Victoria Street, E.C.

Early Closing Association and Traders' Parliamentary Alliance. Founded for promoting: (1) An abridgment of the hours of labour in all departments of industrial life, wherever unduly prolonged—especially on Saturday nights; (2) The adoption of a Saturday or other weekly half-holiday; (3) The abolition of unnecessary Sunday labour; (4) The early payment of wages; (5) The promotion, as far as possible, of a profitable employment of leisure hours; (6) To watch over and promote the interests of traders and their assistants in matters requiring municipal or legislative control. Assistants, by subscribing as 6d. half-yearly, are entitled to receive gratuitous medical advice from any of the Society's honorary medical staff—On Nov. 1st, 1886, the **Shop Hours Regulation Act** came into operation, by which the hours of labour of young persons under 18 were limited to seventy-four in a week. Sir John Lubbock, the author of the measure, however, introduced in the first session of 1887 a bill for the compulsory closing of all shops at eight o'clock on five days in the week and at ten o'clock on Saturday, but he was unsuccessful. The income of the Association is about £1,400 a year. Sec., James A. Stacey. Offices, 100, Fleet St., E.C.

Early Closing Bill. See Session '88, sect. 15.

Earthquakes may be defined as disturbances of the earth's crust, generally subterranean, propagated by the elasticity of the rocks. The study of earthquakes is termed **seismology**; and instruments for measuring the earthquake waves are called **seismometers**. The late **Robert Mallet** laid the foundation of modern seismology, and his "Report on the Great Neapolitan Earthquake of 1857" is a classical work. Serious objections have, however, been raised to some of his methods of investigation. The centre of disturbance is known technically as the **seismic focus**, and the point on the surface vertically above the focus is the **epicentrum**. From the focus, which Mallet believed was never seated at a very great depth, waves of elastic compression are propagated in all directions; and he believed that the wave-paths and their angles of emergence at the surface might be determined from observations on the fractures

in walls and buildings, and on the situation of objects which have been overturned by the shock. There seems to be a close connection between seismic and volcanic phenomena, and within the last three or four years both have been unusually violent. **Professor Milne** (*q.v.*) believes that in the empire of Japan alone there occurs, on an average, at least one earthquake per day. The opportunities for studying seismic phenomena are so favourable in Japan that a Seismological Society has been established at **Tokio**. The best English work of reference is Milne's "Earthquakes" (International Science Series, 1886). **Mr. Sakiya**, Professor of Seismology in the Imperial University of Japan, at Tokio, has recently constructed a model showing the actual path of a particle on the earth's surface during a severe earthquake shock from data furnished by Professor Ewing's seismograph. The model shows the great complexity of earthquake movement. **Professor Ewing** has brought the subject before the Royal Institution. In the early part of '88 there was considerable seismic disturbance in Canada, the United States, W. Indies, Algiers, and even in Sweden and Norway. On Jan. 31st shocks were felt in Scotland, and again on April 2nd; and on April 11th in N. Wales.

Easement. See ed. '87, and consult Gale on "Easements."

Eastern Europe Railways. The early summer of '88 saw the completion of the scheme of railways in the East of Europe, by which direct communication may be had between London, Paris, Vienna, and Constantinople. The Berlin Congress decided upon the completion of these railways, but it was not till '83 that the *Conférence à Quatre*, representing Turkey, Austria, Servia, and Bulgaria, met and decided upon a course of action. Austria was to complete the line then in course of construction between Buda-Pesth and Belgrade; Servia to carry this on to Nish, and thence to construct two lines, one to Zaribrod and the other to Vranja for Salonia; Bulgaria was to lay rails from Zaribrod to Vakarel, on the Eastern Roumelian frontier; Turkey was to complete the line by connecting the end at Vakarel with the railway running to Constantinople by Philippopolis and Adrianople. The Buda-Pesth portion, 352 kilometres in length, was finished by Sept. '84, and two months later the portion between Belgrade and Nish, 244 kilometres long, was opened; in '86 the Nish-Vranja, 122 kilometres, was finished, and in Oct. '87 the Nish-Pirot, 95 kilometres. Bulgaria, in spite of her political and financial difficulties, was enabled to follow suit in the spring of '88; and Turkey, seeing this, hestirred herself. The distance from Vienna to Constantinople is 1,602 kilometres, and passengers going straight through should occupy about forty-two hours instead of the sixty hours required by the Varna and Black Sea route; Paris to Constantinople should take three and half days, and from London four days. The Vranja-Salonia line was formally opened on May 21st, but the Turkish arrangements were in a backward state. Under date July 3rd it was reported from Vienna that a draft railway convention, submitted by the Bulgarian Government to the Porte, provided that the junction with the Turkish line should be at Ichtiman, not Vakarel. The opening of

the Zaribrod-Vakarel, or Bulgarian section, was celebrated on August 12th, *Prince Ferdinand* entertaining his guests at the station at Sofia, where they arrived by the Vienna train. The first international through train reached Stamboul station on the morning of Aug. 14th, bringing numerous visitors from Paris, Vienna, Pesth, Belgrade, and Sofia. The *Times* of August 21st published a long description of the Bulgarian Railway and its history. The line is seventy-two miles long, including a long girder bridge at great height in the Kazitchany Gorge, and cost something over half a million sterling.

Eastern Roumelia. Autonomous province created by the Treaty of Berlin in '78; since the revolution of Sept. 17th, '85, united to Bulgaria (*q.v.*), and now usually known as Southern Bulgaria.

Eastward Position. The rubrics which regulate the position of the officiating priest during the Communion Service of the Church of England direct, in the first place, that he shall stand "at the north side of the table," and at the Prayer of Consecration he is spoken of as "standing before the table." The evangelical, or "Low Church" party, generally interpret "north side" as identical with north end, while the "High Church" party hold it to mean the northern part of the west side—north, that is to say, of an imaginary line drawn east and west through the middle of the table. In this latter case the priest faces to the east—or almost so—and away from the congregation. The eastward position is supposed to emphasize the representative character of the celebrating priest, and was on this ground opposed by the Puritans—who, however, did not interpret "side" to mean "end," but altered the position of the table so as to make its sides north and south and its ends east and west. This endeavour was defeated, but the dispute remains. Antiquity, no doubt, is on the side of the Eastward Position; but the legal question is more difficult. In the case of *Hibbert v. Purchas* (1870) the Court of Arches and the Judicial Committee of the Privy Council decided that the Eastward Position at the Prayer of Consecration was illegal; but that judgment has been held to have been given *in personam*, and not *in rem*, and, though enforced by suspension against Mr. Purchas, has never been acted upon by the Bishops, nor has the question been again raised. The present rubric dates from 1552, that of Edward VI.'s first Prayer-Book (1549) having been "the priest standing humbly afore the midst of the altar." A very ancient custom, not wholly extinct even now, was for the holy table to be placed at some distance from the east end of the church, with the officiating priest on the eastern side of it, facing the people across it. In the coronation service of Queen Victoria (1838) the direction ran "the Queen kneeleth down at the faldstool (in the midst of the area over against the altar), and the Archbishop standing at the north side of the altar, saith this prayer or blessing over her." Here "north side" could only mean the northern part of the west side. The adoption of the Eastward Position is every year more common, and is accompanied by less offence, even to those who see no advantage in it.

Ecclesiastical Commissioners. The, owe their origin to the Act 6 and 7 Will. IV., c. 77. Incorporated for the purpose of making schemes to carry out the recommendations of certain

earlier commissions appointed to inquire into the endowment of bishoprics, the state of cathedral and collegiate churches, the best way of providing for the cure of souls, etc. The Act provides that the two Archbishops, the Bishop of London, the Lord Chancellor, Lord President, and First Lord of the Treasury for the time being, as well as a Secretary of State named by the sovereign, with three others therein named, should be of the commission. A subsequent Act added all the remaining bishops in England and Wales, the Chief Justice, and others. Membership of the Church of England has always been an indispensable condition of holding the office. A number of Acts have from time to time imposed fresh duties upon the Commissioners. By an Act of 1856 the Church Building Commissioners had their powers transferred to the Ecclesiastical Commissioners. By Acts of 1843, 1844, and 1856, the Commissioners were empowered to form new parishes wherever necessary, and to contribute out of the funds under their control to the endowment of the livings therein. An Act of 1850 created a Church Estates Commission, whose members acted as an estates committee to the Ecclesiastical Commission as well. To the Estates Commissioners were transferred all the estates held in trust for the Ecclesiastical Commissioners, with all powers of management, etc. In general, it may be said that the function of the Ecclesiastical Commissioners is to provide for the adjustment of Church endowments to the wants of the Church. Office, 10, Whitehall Place, S.W.

Ecclesiastical Courts. These are of three degrees of jurisdiction. First there are the purely spiritual courts, including the Archdeacon's Court, the Bishop's Consistory, and the Archbishop's Court; second, courts of mixed spiritual and secular jurisdiction—*e.g.*, the Court of Arches and the Court of the Official Principal of York; and, third, courts of purely secular constitution—*e.g.*, the Judicial Committee of Privy Council, which is the Court of Final Appeal in ecclesiastical causes. Practically none of these courts now pretends to undisputed authority. The report of the Royal Commission on Ecclesiastical Courts (1831), while vindicating the historical position of them all, bewailed the confusion into which the administration of ecclesiastical law had fallen, and urged the adoption of various reforms. Absolute power, however, meanwhile rests with Lord Penzance, "Judge of the Provincial Courts of Canterbury and York," under the Public Worship Regulation Act, 74, and, as such, Dean of the Arches and Master of the Faculties (see ARCHES, COURT OF). By the issue of writs of *contumace capiendi* clergymen have been, and may be, imprisoned by defying sentences of *monition*, *inhibition*, *suspension*, or *deprivation* decreed by this court. The judgments of the Judicial Committee may be upheld and enforced by any of the High Courts of Justice. The Archdeacon's Court is a survival, and nothing more. It is a court of first instance, and appeals lie to the bishop, but its aid is seldom invoked. That at one time the Court was no sinecure is proved by the fact that the Archdeacon of Cornwall so lately as 1840 had a particular jurisdiction to grant probates of wills.—**Consistory.** Every bishop has his Consistory Court held before his Chancellor or Commissary, in his cathedral church, or other convenient place in his diocese. In this

court are granted *faculties* for the alteration, repair, and renovation of churches. Nothing can be added to, or taken from, the ornaments of the Church (see ORNAMENTS RUBRIC) without a faculty. The Archbishop's Court, distinguished from the Provincial Court, is the canonical tribunal for the hearing of spiritual causes. Until the modification of the Court of Arches by the P. W. R. Act, '74, its revival was not demanded. It is specially prominent just now because the highest secular courts have decided that the Archbishop of Canterbury has power to try in person the Bishop of Lincoln (Dr. King), who is charged with practising and countenancing illegalities of ritual and doctrine. (See ORNAMENTS RUBRIC, and RITUALISM.) **Lord Penance's Court**, or the old Court of Arches modified as stated, unites the powers of the *jus canonium* with new powers conceded by the Church Discipline Act, '41, and the similar Statute of '74, exercising authority in both Provinces. Lastly, the Judicial Committee of Privy Council, as representing the Royal Supremacy, is the absolute though not the canonical court of final appeal. Its judgments have been much criticised, and it has been accused of basing its decisions upon State policy, and not upon law. When a clergyman had administered water to *communio*ants, there being no wine available, he was admonished by the Dean of Arches (Beddoe v. Hawkes, Feb. '88) not to repeat the offence. The correct course, the Court held, would have been to have made a short statement or dismissed the congregation.

Ecclesiastical Law Cases in '88. The right of the patron of a Welsh living to appoint an incumbent unacquainted with the Welsh language was raised in the case of the *Marquess of Aberavenny v. the Bishop of Llandaff* (Queen's Bench Division, Feb.). The bishop had refused to institute, under the Act 1 and 2 Vict., c. 106, sec. 104, and the court gave judgment in his favour. In the case of *Atkin v. Bedding* (Bloomsbury County Court, May), a parishioner questioned the right of the churchwarden to remove her from a free seat. It was held that a churchwarden had power to "place and displace" at pleasure, providing he did not act capriciously. The effect of the City of London Parochial Charities Act 1883, as interpreted by Mr. Justice Kay in the matter of *St. Stephen's, Coleman Street*, and of *St. Mary's, Aldermanbury*, is to transfer a considerable amount of ecclesiastical patronage in the City of London from the parishioners, in whom it has for centuries been vested, into the hands of the Ecclesiastical Commissioners. It was laid down that an advowson was a charity falling within the law relating to charitable trusts. Alleged ritualistic practices have formed the subject of one or two important suits. The Bishop of London having vetoed a representation made to him under the Public Worship Act with reference to the new *rerodas* at St. Paul's, application was made (July) for a mandamus to compel the Bishop to allow the case to go forward. In the result the Court of Queen's Bench granted a rule. The allegation is that a crucifix and an image of the Virgin, forming part of the *rerodas*, are calculated to promote superstition and idolatrous worship, and are unlawful. In the case of *Read and others* (Privy Council, August), the Archbishop of Canterbury had refused to cite the Bishop of Lincoln for alleged ritualistic practices. The court, which included several prelates who acted as ecclesi-

astical assessors, decided to advise Her Majesty to remit the case to the Archbishop to be dealt with according to law.

"Echo, The" (an evening paper, established December 1868, price 3d). Its principles are Liberal. *The Echo* gives daily, in a condensed form, the chief and latest news of the day, foreign, home, and commercial, of which it treats in an independent manner. Several new features have recently been introduced in *The Echo*, special prominence being given to topics of social interest. Office, 22, Catherine Street, Strand, W.C.

Eclipse Stakes of £10,000. See TURF.

Ecuador. A republic of equatorial South America, governed by a President, with the assistance of a Congress composed of a Senate representing the provinces, and a Chamber of Deputies, the people. Area 248,370 sq. miles; pop. 1,004,651. Capital **Quito**, pop. 70,000. Revenue (1885-6) about £339,000; expenditure about £444,000; debt £3,704,680. The foreign commerce is largely with the United Kingdom, and centres in Guayaquil. Exports, cocoa, indiarubber, hides, coffee, ivory. Army about 1,600 men. The history of Ecuador since 1870 presents few features of importance, beyond the civil wars and pronunciamientos, almost normal in the district. Railway extension is in progress. In '88 (March) Señor Antonio Flores was elected President For Ministry, etc., see DIPLOMATIC.

"Edinburgh Review," the well-known quarterly review (6s.), was founded 1802, its first editor being F. Jeffrey, afterwards Lord Jeffrey. The name of Sidney Smith was associated with the *Review*, as also that of Lord Brougham, Lord Macaulay, and other distinguished men in English literature. The *Review* has been edited by Maivay Napier, Sir George (ornwall) Lewis, and the present Editor (since '55), Henry Reeve, C.B.

Edinburgh University, founded 1582, has since become one of the chief medical centres in the world. Of 3,000 students by far the greater number belong to the faculty of medicine. Principal, Sir William Muir, K.C.S.I.; Lord Rector, the Marquis of Lothian (appointed 88). Conjointly with St. Andrews it sends a representative to Parliament; present member Mr. Stommonth Darling. Its Degrees are—**M.A.** (*hood* black silk lined with white silk); **B.D.** (*h.* black silk lined with purple silk, bordered with white fur); **D.D.** (*h.* black cloth lined with purple silk); **LL.B.** (*h.* black silk lined with blue silk, bordered with white fur); **LL.D.** (*h.* black cloth lined with blue silk); **M.B.**, **C.M.** (*h.* black silk lined with crimson silk, bordered with white fur); **M.D.** (*h.* black cloth with appended cape, lined and faced with crimson silk); **B.Sc.** (*h.* black silk lined with green silk, bordered with white fur); **D.Sc.** (*h.* black cloth lined with green silk). Also grants degrees in engineering, public health, mental science, and philology. Connected with it is the **Edinburgh Association for the University Education of Women**, which prepares candidates for the Univ. Pass Certificate Examinations, the equivalent of the M.A. examinations for males. E. U. has recently developed a scheme of **University Extension**. Alumni (some), Sir William Hamilton, Carlyle, Hume; Nasmyth, the engineer; Sir Walter Scott, Mungo Park, James Mill, Owen, the anatomist, Sir C. Wyville Thomson, scientific chief of the

Challenger expedition; Dugald Stewart, Lord Brougham, and R. Louis Stevenson (*q.v.*), the novelist.

Education. The educational system of the United Kingdom is a complex arrangement, the nature of which can only be understood by a reference to the history of its development in its various aspects. In its technical aspect the subject will be found treated in a separate article (see **TECHNICAL EDUCATION**). It remains for us here to deal with it in its three aspects—primary, secondary, and higher education. (1) **PRIMARY, OR ELEMENTARY EDUCATION.**—The history of the movement which led to the adoption of the present educational law, as regards public elementary education, dates from a comparatively recent period. Previous to '32, when the first Parliamentary grant for educational purposes was made, the education of the country was left entirely to private individuals and the religious bodies, and it was not until '39 that Parliament exercised direct control over the administration of the funds periodically voted for education. Early in the century a great impetus was given to the popular demand for instruction by various voluntary associations—the chief of which were the *British and Foreign School Society*, founded through the efforts of Joseph Lancaster, supported by the Society of Friends and the Nonconformist bodies; and the *National Society for Promoting the Education of the Poor*, founded in '11, chiefly through the influence of Lancaster's rival, Dr. Bell. The first grant of £20,000 voted by Parliament, in '32, was towards the building of schools in connection with one or other of these societies. A building grant of the same amount was made annually until '39, when the vote was increased to £30,000, and a committee of the Privy Council (The Committee of Council on Education), was appointed to administer it. In '46 a new departure was made by granting subsidies in augmentation of teachers' salaries. In the same year the *Queen's Scholarships*, for enabling pupil teachers to attend training colleges, which are also aided by Government grants, were instituted. In '53 the capitation grant was instituted. In '58 the *Duke of Newcastle's Commission* was appointed, to inquire into the whole system of education in England and Wales. It was reported that the interference of the State had been beneficial, that the supply of efficient schools was inadequate, that only one in eight of the population attended any school, and of these only one-fourth, consisting of children of the upper classes, were efficiently instructed. Trained teachers were found to be superior to other teachers, and the Committee recommended that examinations should be conducted in every school where grants were to be paid, and that these grants should be apportioned upon the examination of individual children—*i.e.*, on the principle of payment by results. This system is peculiar to this country, and is now condemned by many educational authorities. The Newcastle Commission was also the parent of the Revised Code, drawn up by Mr. Robert Lowe (now Lord Sherbrooke) in '62. Under the Revised Code direct payments of Government grants to teachers were abolished, and school managers, or committees of unpaid local representatives were appointed, and power was given to them, to select certified teachers and to pay to them the grant earned. The Code has undergone subsequent revisions, and that

now in force is known as the *Mundella Code*. It is a schedule of all the elementary education Acts, which together constitute the elementary education law. In '70 the sum voted by Parliament for educational purposes had reached £840,000. The extension of the Parliamentary franchise to the working classes had, however, created the demand for the education of all children of school age, and at that time only a small portion of them were under instruction. The celebrated *Elementary Education Act* (*q.v.*), introduced by the late Mr. W. E. Forster on Feb. 17th, '70, and adopted on Aug. 9th of the same year, was the result of this popular demand. The Act provided that the whole of the country should be divided into school districts, the Metropolis forming one itself, the boroughs another set, and the rural parishes the rest. Under the Act sufficient school accommodation was to be found in every district for all the resident children. *School Boards* (*q.v.*) were established under this Act. The Act was further amended in '73, in '76, when compulsory education was adopted and school attendance committees (*q.v.*) were appointed; and in '80, when children were required to pass a certain standard before they could go to work, and a school authority was everywhere appointed to enforce attendance. Notwithstanding this provision, however, the law relating to compulsion has failed in operation, owing to the refusal of many magistrates to convict parents for non-compliance with it. In '86 a *Royal Commission* was appointed to inquire into the working of these Acts. The Commission consisted of the following members: Lord Cross, chairman; Cardinal Manning, the Duke of Norfolk, Lord Harrowby, Lord Beauchamp, the Bishop of London, Lord Norton, Sir Francis Sandford, Mr. Lyulph Stanley, Sir John Lubbock, Sir Bernhard Samuelson, Rev. Dr. Rigg, Dr. Dale, Canon Gregory, Canon Smith, Rev. T. D. C. Morse, Mr. C. H. Alderson, Mr. J. G. Talbot, Mr. S. Buxton, Mr. T. E. Heller, Mr. Rathbone, the late Mr. H. Richard, Mr. George Shipton, Mr. Mundella, and Mr. B. Molloy (who subsequently retired). The Commission published their report in '88. It consists of nine parts, and is one of the most voluminous documents ever issued. Amongst its numerous recommendations is one which has provoked great opposition, on the ground that it is an attempt to upset the compromise on the subject of religious instruction agreed to in '70. This recommendation is that assistance from the rates should be given to voluntary or denominational schools. This report was signed only by a majority of the Commissioners. A minority report, protesting against this proposal, and objecting to other recommendations of the majority, was signed by Sir John Lubbock, Sir B. Samuelson, Dr. Dale, Mr. Lyulph Stanley, Mr. Henry Richard, Mr. G. Shipton, Mr. Heller, and Mr. S. Buxton. In Scotland an excellent system of elementary education was adopted long before the passing of the *Scottish Elementary Education Act* in '72. Just as in Germany the intellectual impulse was given by Luther, so in Scotland education was born of the reforming energy of John Knox. In 1696 a law was passed establishing a school in every parish of Scotland. The great secession from the Church of Scotland in '43, which led to the establishment of the Free Church, effected the break-down of the parochial school system. The Free Church schools were set up side by side with the schools of the Establishment, and

the division of interests and the means of support was not conducive to educational efficiency. Hence, two years after the adoption of Mr. Forster's Act in England and Wales the Scotch Education Act was passed, establishing a School Board in every Scottish parish, and giving it the control of all parochial schools, not only elementary schools, but also the academies and high schools, and empowering it to erect and maintain new schools, according to the needs of the population. Grants are given to all schools under school boards, except those defined as "high-class public schools." The Scotch Education Act is administered by a Committee of the Privy Council, called the Scotch Education Department. The Scotch Code differs from that of England and Wales, in that it provides for the teaching of more advanced subjects, and differently defines the term "training college." In Scotland many of the training colleges are "non-resident," but in England and Wales they are all "resident." In Ireland national education is under the control of the Commissioners of National Education in Ireland, consisting of twenty members, of whom ten are Protestant and ten Roman Catholic. The Commissioners, who are appointed by the Lord Lieutenant, administer the Government Grants, which are made to Vested Schools, maintained as National Schools, directly by the Commissioners or by trustees; Non-vested Schools, belonging to private individuals, but under the control of patrons or managers; Model Schools, in which young people are trained as teachers; Agricultural National Schools; certain Technical Schools, in which instruction is given in embroidery; Convent and Monastery Schools (Vested and Non-vested); and Workhouse National Schools. The Commissioners have framed regulations for withdrawing any child from religious instruction of which its parents or guardians do not approve. Statistics.—On Aug. 31st, '87, the date to which the last return (published in Sept. '88) is made up, there were in England and Wales 19,154 elementary schools inspected, with accommodation for 5,278,992 scholars. The average daily attendance was 3,527,381. The Government grant amounted to £3,071,547, or 17s. 5d. per scholar in average attendance. This shows an increase over the amount granted in the year previous. An idea of the progress that has been made in the provision of elementary education since '70 may be formed from the fact that in that year accommodation was only provided for 8.75 per cent. of the population, whereas in '87 the percentage was 18.69. Since the adoption of the first Education Act, in '70, the elementary education of the country has been conducted by two powerful organisations—the one consisting of the School Boards, under the direct control of the ratepayers; the other of the Voluntary Schools of the Church of England and various other religious denominations. These schools, though earning the Government capitation grant, are not under the control of the ratepayers. The cost of education per head steadily increased after the passing of the first Education Act. In '71 the cost per head was £1 7s. 5d.; in '81 it was £1 16s. 10d.; and in '85 it was £1 19s. 1½d. See also SCHOOL BOARD FOR LONDON and SCHOOL BOARDS. The amount raised during the year for purposes of public elementary education will be seen from the following table:—

INCOME.

SCHOOLS.	Endowment.	School Board Rates.	Voluntary Contributions.	School Pence.		Government Grant (1885-86).	Other Sources.	Total.
				Paid by Scholars.	Paid by Guardians.

In Scotland, for which the last returns are made up to Sept. 30th, '87, there were at that date 3,111 schools inspected, furnishing accommodation for 677,984 scholars, of whom 491,735 were in average daily attendance. The parliamentary grant amounted to £455,924, or 18s. 6½d. per head. In Ireland in the same year the number of schools inspected was 8,028, providing accommodation for 734,381 scholars, with an average attendance of 497,231.—**SECONDARY EDUCATION.** In Scotland secondary or intermediate education is, as we have seen, to a great extent under the control of school boards, and in Ireland certain inadequate provision for it has been made by the Government. But in England and Wales secondary education is entirely in the hands of trustees of endowments, companies, and private individuals. In Scotland a great step towards systematising secondary education was taken in Jan. '86, when the Scotch Education Department instituted examinations for **Leaving Certificates** in the higher-class schools, the head-masters or rectors of which willingly co-operated in promoting the success of this innovation. In England and Wales, though the state has at present exercised no direct control over secondary education, it has instituted several inquiries into its condition, presumably with the view to future legislation on the subject. In '61 a **Royal Commission**, under the chairmanship of the Earl of Clarendon, was appointed to inquire into the condition of "certain public schools in England." These public schools were nine—viz., Eton, Winchester, Westminster, Charterhouse, St. Paul's, Merchant Taylors', Harrow, Rugby, and Shrewsbury. (See under their several headings.) In '64 another **Royal Commission** was appointed, under the chairmanship of Lord Taunton, to inquire into the condition of all schools other than those receiving the parliamentary grant and the nine great public schools already referred to. The Commissioners divided the schools they examined into (1) Endowed (grammar schools), (2) Private, and (3) Proprietary. They reported that reform must begin with the endowed schools, and drew up a series of recommendations which led to the adoption of the **Endowed Schools Act** of '69. This Act is administered by the Charity Commissioners. The inquiry of the Commission was also especially interesting on account of the evidence they took on the secondary education of girls. Their report gave great stimulus to the movement for promoting this object, and its publication was followed by the formation of "The National Union for improving the Education of Women," of which the leading spirits were the Princess Louise, Mrs. William Grey, and Miss Shirreff. It was under the auspices of this Association that the **Girls' Public Day Schools Company** was established. In Wales the state of secondary education formed the subject of a **Departmental Committee of Inquiry**, under the chairmanship of Lord Aberdare in '80. With regard to secondary schools the committee recommended: (1) That existing endowed schools should be made efficient and suitable. (2) That in the reorganisation of endowments, (a) all schools should be made unsectarian; (b) the governing bodies should be to a large extent properly chosen; (c) schools should be adapted to local requirements. (3) Where there were no endowments available, schools should be provided from other funds. A bill framed on the lines of these recommendations was intro-

duced into Parliament last session.—**HIGHER EDUCATION** is comprehended in the work of the Universities and Colleges of University rank. (See Universities and Provincial Colleges under their several headings, and for the Higher Education of Women see ed. '87.) At the close of the year '88 an important controversy arose on the subject of **competitive examinations**, suggested by a protest signed by a large number of M.P.'s and well-known educationists, published in the *Nineteenth Century* (Nov.). This article produced a rejoinder in the *Universal Review* (Dec.). Important **Conferences on Education** were held in November by the supporters and opponents of State and Voluntary Education. See also for elementary education "Annual Report of the Committee of Council on Education" (generally issued in August), Eyre and Spottiswoode; for higher education the calendars of the various Universities (issued annually), and for the subject generally the *Cyclopædia of Education* (editor, A. E. Fletcher), and the following educational journals: *The Journal of Education* (editor, F. Storr), *The Educational Times* (editor, Dr. Wormell), *The Private Schoolmaster* (editor, E. Markwick) (monthly); *The Schoolmaster*; *The Schoolmistress*; *The School Guardian*; *The School Board Chronicle* (editor, R. Gowing); and *The Teachers' Aid* (weekly).

Education, Commercial. See COMMERCIAL EDUCATION.

Education Commission. See EDUCATION.

Education Department is a committee of the Privy Council, in which are included the President of the Council and the Vice-President for education, assisted by a large permanent staff. The greater share of ministerial work falls upon the vice-president, who is responsible to the House of Commons. The Department distributes the Parliamentary grant, frames the code, appoints a staff of inspectors by whom schools in receipt of the grant are visited and the scholars examined, and training schools for teachers are inspected; it sanctions the borrowing of loans by School Boards on the security of the rates, and may grant provisional orders for the compulsory acquisition of land for school sites. **Council office**, Whitehall, S.W. (See EDUCATION, ELEMENTARY EDUCATION ACTS, SCHOOL ATTENDANCE COMMITTEES, etc.) There is a separate Department for Scotland. **Office**, Dover House, Whitehall, S.W.

Egypt. A state, nominally dependent on Turkey, consisting of the Nile Delta and the valley of the Nile as far south as Wady Halfa (21° 50' N.), under the rule of Mohammed Thewfik, sixth of the dynasty founded by Mohammed Aly, his great-grandfather. The first four rulers bore the title of **Vali** or **Viceroy**, but in '66, Ismail, then ruler, received from the Sultan the title of **Khedive** or king, and the succession was made direct from father to son, instead of descending in accordance with the original treaty to the eldest male of the family of Mohammed Aly. In '73 the right of concluding **commercial treaties with foreign powers**, of **issuing coinage**, and of maintaining an **army**, was also conceded. **Area** of Egypt 394,240 sq. m. **Cultivable area**, 5,143,000 acres. **Pop.** (1882), 6,806,381. **Principal products**, cotton, sugar, and cereals. (For history from 1881 to '88, see editions of '86, '87, '88.) During '88 the **British Army of Occupation** has been reduced to little

over 3,000 men, under the command of Major-General Dormer, garrisoned at Cairo and Alexandria. The vacancy caused by the death, early in the year, of Mr. Justice Wallis, was supplied by the appointment of Mr. Lionel Sandars, as British Judge of the International Courts. Sir Wm. Marriott, Judge, Advocate General, went on a Mission to Egypt, and succeeded in making an arrangement between the ex-Khedive and the Egyptian Government (see EGYPTIAN FINANCE). Prince Hassan, brother of the Khedive, died at Constantinople, and was buried with much pomp in Alexandria. Baron Richtofen (German member of the Caisse de la Dette Publique) and Mr. Hewitt Moxley (secretary to Sir E. Vincent), were sent to Europe on a special mission to arrange a conversion loan (see EGYPTIAN FINANCE). The Derwishes supporting the Successors to the Mahdi (Khalifa Abdalla) harassed the Egyptian frontier at Wady Halfa, but the Egyptian troops there, commanded by English officers, succeeded in holding the position without difficulty. Mr. Allen, of the Anti-Slavery Society, was received personally by the Khedive, and assured of His Highness' personal interest in the Society. Letters were received from Lupton Pasha, an English prisoner of the Khalifa Abdalla, dated Omdurman, Nov. '87. Later rumours, wanting confirmation, assert that he is since dead. The International Court of Appeal at Alexandria gave an important decision, refusing to recognise the validity of so-called "Gordon Bonds," on the technical ground that Gordon had no authority to issue paper money. And further that there was no proof as to how the said bonds came into the possession of the holders, the Treasury at Khartoum having been sacked, and the printing stone and Gordon's seals being in the possession of the enemy. The relations between the Premier, Nubar Pasha, and his English advisers had not latterly been so cordial as was to be desired, but matters had not come to an open rupture, when in June the Khedive at Alexandria took advantage of the absence in Cairo of Sir E. Baring, and abruptly dismissed Nubar Pasha (*q.v.*) without consulting H.M.'s representative, and appointed Riaz Pasha (*q.v.*) in his place. Considering British responsibilities in Egypt, the Khedive would have perhaps shown better taste in consulting Sir Evelyn Baring—who, however, deemed it advisable to accept the *fait accompli*, and the British Government continues to afford its support to the New Ministry (see DIPLOMACY), which, however, was somewhat modified on Sir Evelyn's representations. The Riaz Ministry, though comprising some retrograde members, is doing better than was expected. One unsatisfactory measure they have taken will, however, probably have a bad effect. Yacoub Pasha Artin (*q.v.*) who has been the life of the Education Department, has been removed from the Ministry of Public Instruction, and appointed Egyptian Administrator of the Railways, in place of Agopian Pasha, who died suddenly. During the year considerable progress has been made with the repair of the Barrage, under the superintendence of Sir Colin Scott Moncrieff. A concession has been given for reclaiming the Aboukir Lake, but the Government have refused to allow the concessionaire to cede his concession at a large profit to an English company. The project of Professor Cope Whitehouse to turn the site of

Lake Maris into a reservoir has been considered, but deemed too expensive to be undertaken by Government. The cotton crop for the season '88-89 was until recently expected to be the largest yet known, but unfavourable weather has damaged pods, and crop will be below average. The very low level of the Nile in the summer is likely to throw out of cultivation, for '89, 300,000 acres of grain-growing lands. To remedy the evil effects of low Nile, it has been proposed by the Public Works Department to spend £381,000 in irrigation works spread over three years. The news from the Soudan seems to imply a waning in the power of the Khalifa Abdalla; but the sensational news of the year from this quarter has been the alleged appearance of a "White Pasha" in the Bahr-el-Gazelle province. That there is some foundation for the report, and that it causes alarm in Khartoum, seems certain. While Zuber Pasha and others believe the White Pasha to be Emin Pasha (Dr. Schnitzler) (*q.v.*), some are of opinion that he is more probably Stanley, or Casartí—a lieutenant of Emin's. The first idea seems most probable, but there are a few who attach no value to the report. In the Eastern Soudan the Governor-General, Colonel Kitchener, wounded last year, has been temporarily replaced by Colonels Shakespeare and Rundle, and finally Colonel Halled Smith has been definitely appointed to the post, while Colonel Kitchener becomes Adjutant-General of Egyptian Army. The rebels under the ever-surviving Osman Digna have caused considerable annoyance, and in November were shelling Suakim and threatening its water supply. It has been decided to increase the Egyptian army for the defence of this port and of Wady Halfa by 2,180 men. The Egyptian Government proposed refusing to continue the payment of tribute to Turkey for Massowah, held by the Italians, and Zeyla held by the British; but under advice from the English Foreign Office they have not raised the question.* Under date Nov. 28th it was stated that the 1,500 rebels continued entrenched, with firing at intervals. There were no news of the White Pasha. Lord R. Churchill, Dec. 4th, moved the adjournment of the House to discuss the despatch of a British battalion to Suakim. See EGYPTIAN FINANCE, BARING, NUBAR, RIAZ, etc. For Ministry, see DIPLOMACY.

Egypt Exploration Fund, The. Founded (1883), under the presidency of the late Sir Erasmus Wilson (d. 1884), for the purpose of historical investigation in Egypt, conducted in a scientific manner, with the object of solving some of the many important questions that await the result of excavation. Special attention has been directed to all that can bear on the history of the sojourn and exodus of the Israelites, and the early sources of Greek art. The work is conducted on the principle of careful examination of all details and preservation of the objects found. These objects are of great interest in illustrating comparative art by the influences of Egyptian, Greek, and Syrian styles on one another, the technical processes of metal work, metrology and the ceramic arts. The antiquities found, after the claims of the National Museum at Boulaq have been satisfied, are divided between the British Museum, the Boston Museum (U.S.A.), and various local museums in England and the Colonies. The distribution depends mainly on

the amount of local support which has been contributed by the several districts represented by the museums. Annual volumes are published, giving the results of each season's work, with maps and plates. In February '88 M. Naville, again assisted by Mr. F. Llewellyn Griffith and Count d'Hulst, as well as by the Rev. W. MacGregor, resumed work at Tell Basta, on the site of the famous temple of Bast in the city of Bubastis. They continued, with no less fortunate results, that excavation of the magnificent red granite structure (Herodotus, Bk. II., chap. 138) which in '87 brought its vast ruins to light, and, among the wrecks of the Hypostyle Hall and the Hall of Osorkon II., found innumerable monuments of the VI., XII., XXII., and XXIII. dynasties. These consist mainly of bas-relief sculptures, portrait-statues of all sizes, from miniature to colossal, and a multitude of beautiful lotus and Hathor-headed columns of various periods. These valuable spoils are chiefly divided between the Boulak and British Museums and the Museum of Fine Arts at Boston, U.S.A. The most striking discoveries of the season relate to the mysterious Hyksos rulers who dominated Egypt for 500 years. Bubastis proves to have been a great Hyksos settlement, and there were found two colossal black granite statues of that unmistakable type which is as rare in Egyptian art as its presence is suggestive of some of the most deeply interesting and important racial and historic problems. The heads presumably represent Apepi, the last king of the Hyksos period. But, in addition to these, were found in the hypostyle hall of the temple the lower part of a XIIIth dynasty statue, its feet on the nine bows, and on its throne the cartouches of a hitherto unknown king, whose name may be read as Ra-ian, or perhaps as Ka-ian. According to Arab tradition the Pharaoh under whom Joseph served as prime minister was named Rayyan ibn al-Walid, and this statue has been conjecturally identified as one of that king. The question is yet under discussion, and awaits solution. The latest work published by the Egypt Exploration Fund contains the second part of "Tanis," as well as Mr. Petrie's Memoir on 'Nebesheh (Am), and on Defenneh (Tahpanhes). The second volume of "Naukratis," and the third edition of M. Naville's "Pythion," are in preparation. The offices of the Egypt Exploration Fund are at 17, Oxford Mansion, Oxford Circus. W. President, Sir John Fowler, K.C.M.G.; Sec., H. Gosselin; Hon. Sec., Miss Amelia B. Edwards, LL.D.; L.H.D., etc., Westbury-on-Trym, Bristol.

Egyptian Finance, Commerce, etc. (The figures given throughout are Egyptian pounds, worth 2s. 6d.) The closed accounts for the year '87 show receipts 9,616,358, expenses 9,207,900, surplus 408,458; but a change in the method of keeping the accounts causes a difference of 340,000, so that the actual surplus is only 68,458. In addition to this, 286,545 have been spent out of the International Loan for exceptional expenses connected with the Soudan and public works. The Budget estimates for the current year are revenue 9,600,000, expenditure 9,576,000, showing a surplus of 24,000; but it seems doubtful whether these estimates can be realised, and it will require great care to equalise revenue and expenditure. The total debt of Egypt, on 31st December, '87, was as follows:—Guaranteed loan 9,191,600, privileged debt 22,296,800, United Debt

55,990,250, Domaines Loan 6,909,860, Daira Loan 8,639,480.—Total, 103,028,000. The charge on this debt for '88 is 4,366,579. The exports of goods for '87 were 11,251,353, showing an excess over '86 of 756,483. The imports of goods for the same year were 8,133,007, showing an excess of 285,997 over '86. In specie the imports were 3,666,740, and the exports 1,898,062. Of the total commerce over 60 per cent. is with Great Britain. The prospects for Egyptian finance are fairly encouraging without being brilliant. It has been proved that under British surveillance the resources of Egypt are sufficient, without excessive burden to the fellah, to pay the interest on the large debt, and to cover the expenses of administration in normal years. It is equally proved, however, that this is only possible by strict economy, and even in normal years with great difficulty, while a single bad year upsets the balance. As Egypt is a purely agricultural country, whose fertility depends on the Nile, and as that river is ever capricious, it is obvious that the financial position has always a large element of uncertainty in it. The low Nile of '88 will certainly cause a falling off in Treasury receipts for '89, and it will require all the ingenuity of Sir Edgar Vincent to balance the accounts for that year, the more especially as the funds reserved from the International Loan for extraordinary Soudan expenditure are practically exhausted. The unfavourable features in the outlook of Egyptian finance are (1) the Soudan, which will probably necessitate an increased Army charge; (2) The exorbitant amount of the pension list; (3) The low Nile of this year. The favourable features are (1) the increased cheapness of money, which may render possible conversion of the debt at a reduced rate of interest; (2) The Marriott arrangement, whereby Ismail Pasha commutes his large yearly pension into land, the cultivation of which is a loss to the Government; (3) The public works of Scott Moncreiff, which will gradually bring a large area under cultivation. (4) The possibility of increasing the very low customs dues at present levied on wines, spirits, and luxuries; (5) The fact that in '94 the Egyptian Government will be relieved of the payment of £200,000 annually to the British Governments upon the Suez Canal shares. See EGYPT, BARING, VINCENT.

Egyptology, '88. The literary productions of the year have been as numerous as they have been interesting and important. M. W. M. Groff has been issuing his *Etude sur le Papyrus d'Orbiney*, the text in hieroglyphics, with translation and glossary, of the "Story of the Two Brothers"; Mr. Ch. E. Meldenke has published at New York an English Version of the "Tale of the Two Brothers," a Fairy Tale of Ancient Egypt, being the D'Orbiney Papyrus in Hieratic Characters in the British Museum; Professor E. Amélineau has edited "Mémoires pour servir à l'Histoire de l'Égypte Chrétienne aux IV^e et V^e Siècles," being the fourth volume of "Mémoires publiés par les Membres de la Mission archéologique Française au Oaïre," a former volume of which series, edited by M. Maspero, contains long and important funeral texts from the tombs of Memphis and of Thebes. Almost coincident with the contribution of Professor Amélineau to the history of early Christian monuments in Egypt, has been the issue of another work of the same series, the whole of which is in process of production under the

auspices of the *Ministère de l'Instruction publique*. The work is a magnificent one, and is edited by M. Eugène Lefebvre, title "*Les Égyptes royales de Thèbes*," in which are reproduced, by means of vivid illustrations, the pictures and inscriptions that occur in the tomb of Seti I., a monarch of the XIXth dynasty. It is intended that a part still to come of this beautiful production shall contain the pictures and inscriptions on other of the royal tombs at Thebes. M. Naville has written on Goshen and other topics in connection with the Egypt Exploration Fund (*q.v.*), and Dr. Willem Flegte, the author of "*Essais Égyptologiques*," and a translator, with a commentary of some *Chapitres supplémentaires de la Per-n-Hu, or Livre des Morts*, has, by the publication of his brochure on the "*Oracule of Amen*," elicited from M. E. Réville, by way at once of reply and in extension of the subject, a "*Letter upon Nubian Oracles*." Amongst the works in philology may be mentioned Mr. Le Page Renouf's "*Pro-nominal Forms in Egyptian*," and the monumental production of Signor Simeone Levi, who has at length brought out the sixth and final volume of his "*Vocabolario geragifico egittico-ebraico*," an autographed work published at Turin—the autography in question possessing the advantage of allowing the ready production of the most extraordinary signs, which might otherwise necessitate the casting of special type. The first volume of the new series of the "*Records of the Past*," which, as well as the second volume, was announced in our last edition (see ASSYRIOLOGY, ed. '88) as about soon to appear, is, on the eve of production, Dr. Max Müller, of Nürnberg, who in December '87 published his work on the "*Supposed Name of Judah in the List of Shoshong*," has since published his "*Contribution to the Exodus Geography*" (see June *Proceedings of the Society of Biblical Archaeology*). He considers "that the Egyptian influence upon the Canaanitish and afterwards the Hebrew dictionary (apart from primitive connections of the African and Semitic languages) are much stronger than is commonly supposed." The subject of the "*Book of the Dead*," is one which excludes the idea of finality. No sooner has the result of the splendid and patient labour of M. Edouard Naville been given to the learned world in an "*Ägyptische Totenbuch*," which promised to be for many years, at least, the standard text of the "*Book of the Dead*," than we hear of the discovery at Thebes of a new papyrus of unprecedented dimensions and beauty. This papyrus, which dates from the XIXth or XXth Dynasty, is 77 feet in length by about 15 inches broad—that is, some five feet longer than the longest, up to the time of its arrival, in the British Museum; and, excepting that the longitudinal edges of its uncharacterized margin are occasionally frayed—a drawback which involves no solution of the integrity of the text—it may be fairly pronounced as all but perfect in its preservation. The hieroglyphs are admirable in their form and the preciseness of their definition, and the coloured figures, of every kind conceivable by Egyptian artistic genius, are strikingly vivid in the freshness of their several pigments, the whites, especially, being—or having been, for the climate of London has already been unkind to them—remarkable for the depth and clearness of their almost dazzling purity. At intervals, and especially towards the extremities, the entire breadth of

the papyrus is set apart to the illustration of men, animals, and divinities, in every possible relation, whether as declared or indicated in myth, symbol, or religion, and whether of peace or of antagonism towards each other. The amenities and the discords of existence in all its forms are elaborated or suggested, and the pathos of humanity, living, suffering, dying, and living again, is powerfully exemplified. The happy simplicity of domestic life, and all the phenomena of business, pleasure, mirth, amusements, affection, piety, and devotion, are delineated. Yet everything in life leads up to the inevitable and to the tomb. A husband and wife are shown happily mated, until the sickness of the one demands the delicate and assiduous, but finally unavailing, attentions of the other. The nurse surrenders her charge to death, and the decease of the husband opens up the view to the funeral ceremonies, with the ritual services of quasi-surpliced priests, the lamentations of the mourners, and the introduction of the soul by a divine usher to the judges of the departed. The trustees of the British Museum have ordered the preparation of photographs of this exquisite papyrus, which are to be coloured so as to reproduce as nearly as possible the effect of the original, and which will be available for the public at a price modest and reasonable enough to encourage their wide distribution. The recent discovery of cuneiform tablets in the Valley of the Nile, which tends to sustain the reputation of Egypt as "the land of archaeological surprises," is not the first revelation of the occurrence of Babylonian or other inscribed cuneiform monuments in that country. Five years ago Professor Maspero deposited in the Museum at Boulaq three cylinders of clay inscribed with Babylonian cuneiform characters which he had purchased from an Arab, who stated that they had been found in the neighbourhood of the Suez Canal. The conclusion arrived at by Professor Sayce from all the data of the circumstance, including an inspection of the cylinders themselves, was that they had come from Tel Defennesh, the Pelusiac Daphne of the ancients, which guarded the frontier of Egypt on the east. Some two years after its public expression, in the *Academy* (January 10th, '84), this opinion was verified by the excavations carried on by Mr. Flinders Petrie on behalf of the Egypt Exploration Fund (*q.v.*), in the course of which he discovered the pavement of brick "at the entry of Pharaoh's house in Tahpanhes" (see ed. '88) where Jeremiah hid "great stones" in token that Nebuchadnezzar would hereafter set up his throne above them. "They formed, in fact," says Professor Sayce, "part of a set of four buried at the four corners of the pavilion he erected in the frontier city of Egypt." The tablets of recent acquisition, about 300 in number, are from Tel-el-Amarna, a place, about midway between Memphis and Thebes, in Upper Egypt, which represents the site of the city of "the heretic king," Khu-n-aten, or Amenophis IV., of the XVIIIth Dynasty. It was built during his reign, and deserted soon after his death. So far as Europe is concerned the tablets have been principally secured for the Royal Museum of Berlin, to the extent of about 100 pieces, and for the British Museum, which has acquired 81 specimens. Of these tablets Professor Sayce, however, has formulated some of the more obvious of the relations to be expected from this extraordinary

discovery. "It shows," he says, "that western Asia was a scene of literary activity in the sixteenth century before our era, and that Babylonian at that time occupied the place afterwards taken by Aramaic as the language of diplomacy and science in the civilised East. The form of writing used on the Cappadocian **oneiform tablets** is now explained. It preserved the script once employed as far north as Asia Minor by the educated classes of society." The tablets from Tel-el-Amarna are remarkable for their size, shape, and style of writing. The clay of which they are made is very different from that which is usually met with in tablets bearing cuneiform inscriptions. Some of them have been baked, but the greater part have not. In colour they vary from light to dark dust tint, and from a flesh colour to dark brick-red. A few are of no decided colour, and a few others are light yellow. Many of the tablets are perfectly flat, almost like tiles; only a few have the common "pillow" shape, and some half a dozen have a shape hitherto strange to experts in Assyriology. The writing upon them is no less remarkable. On some it is large and coarse; on one other, at least, it is exactly like that found upon many tablets acquired by the British Museum during the last few years. On some the text is beautifully written, and every character is perfect, whilst on others the writing, though well done, is very small. If the complicated characters are excepted, which are met in such inscriptions as those of **Nebuchadnezzar I. and II.**, there may be found amongst them every class and variety of cuneiform characters known to modern scholars; and it is clear that the scribes were both inconsistent and careless in their writing. The inscriptions were the work of many scribes, and a comparative list of the forms of their handwritings might be a very interesting and instructive piece of work, and one for the accomplishment of which nearly everything necessary is already prepared. The tablets of Tel-el-Amarna incorporate a statement of an **international conubium**, which, being exemplified in personages of the highest rank, had probably a far-reaching influence upon the political and social life, and concurrently upon the vocabulary of the peoples severally of Egypt and Mesopotamia. The Society of Biblical Archaeology proposes to print copies of the texts of all the Tel-el-Amarna tablets acquired by the trustees of the British Museum; and there is some hope that the authorities at Berlin may also print that portion of the same collection of tablets which has been acquired by their own Royal Museum. Gardner Wilkinson's "Manners and Customs of the Ancient Egyptians"; Lenormant and Chevalier's "Manual of the Ancient History of the East"; Dr. E. Richmond Hodges' "Egyptian Hieroglyphics and their Decipherment," in the third edition of Cory's "Ancient Fragments"; Rev. A. H. Sayce's "Fresh Light from the

Ancient Monuments"; Mr. E. A. W. Budge's "Dwellers on the Nile"; etc., etc.

Eiffel Tower (Paris Exhibition, '89). It has been decided to erect in the Champs de Mars, Paris, in connection with the **Exhibition of 1889 (q.v.)**, the highest iron tower yet known. The height is to be 1,000 feet, and the cost about £200,000. To this sum the Assembly in November 1886 voted £60,000, and the remainder of the money is to be found by the contractors, who in return receive a concession of the tower for twenty years, and expect to recoup themselves out of the admission fees. Visitors to Paris will be able to realise the stupendous character of the structure from the fact that it will be three times as high as the Arc de Triomphe (q.v.). **M. Eiffel**, the engineer who originated the project, urges that the column will be of great value for astronomical and meteorological purposes. The form of the erection is that of a square of four arches, sloping inward and upward to a platform upon which rises the iron column, from four feet, sloping into graceful lines very much after the fashion of a lighthouse. At the end of '87 the tower had reached the height of 179 feet the four arches of the base had been joined, and the great platform for the rooms of the first stage was being constructed. On May 19th, '88, it was stated that considerable uneasiness was being felt as to this tower; that the foundations were doubtful, that the labourers were attacked with giddiness, and that they could with difficulty be got to work. On July 4th M. Eiffel entertained the Parisian journalists to breakfast on the first story of the edifice, 60 metres high. A technical description of the ingenious spiral lifts for the carriage of passengers from the second to the third story of the tower, taken from the *Genie Civil*, will be found in the *Engineer* of August 3rd. A strike amongst the workmen took place on Sept. 18th, and a demand was made for an advance of 20 c. an hour in the wages of the 160 labourers engaged on the erection (which was then 140 metres high). M. Eiffel and Campagno met the delegates, and offered a general increase of 5 c. an hour, to be followed in a month by another 5 c. to deserving workmen, while they offered to establish a canteen on the first storey, and sell food at 50 per cent. less than below. It may be observed here that the working day was one of eleven hours, which was reduced to about ten by the ascent and descent from the second storey, which required twenty-five minutes each way. On Sept. 20th M. Eiffel announced the settlement of the dispute; a further 50 c. to be given the carpenters when the season reduced the day to nine hours, and a gift of 50 fr. to all on reaching the third platform. On Nov. 30th the tower had reached the great height of 200 metres, or about 660 feet, and it was expected to be ready for the painters earlier than was contracted for.

Eighty Club, The, was formed by a number of prominent Liberals in 1879, with a view to promoting the success of the Liberal party at the General Election of 1880, from the last two figures of which date the Club takes its name. The Club has no fixed residence, but the members periodically meet to dine together at the Westminster Palace Hotel. Their meetings for the election of candidates and the transaction of general business are held at the National Liberal Club, in Northumberland

Avenue, Charing Cross. Sec., Mr. J. A. B. B. Bruce (National Liberal Club).

Eisteddfod. The name of an annual bardic congress in Wales, having for its objects the preservation of the music and the general literature of the Principality, the maintenance of the Welsh language and ancient national customs, and the cultivation of a spirit of patriotism among the people. Its origin is lost in antiquity, but it is certain that three such congresses were held in the reign of Edward III., one of them being under the patronage of Earl Mortimer. (For history of E. see ed. 88.) On Oct. 23rd, 1566, Queen Elizabeth issued a letter of commission, calling another Eisteddfod at Caerwys for May 26th, 1568. This royal letter is dated from Chester. Fifty-five musical and bardic degrees were conferred at this meeting, entitling their possessors to live by the wandering minstrel profession. So far as we know, the next Eisteddfod which was held was also at Caerwys, in 1798, under the patronage of the Society of "Cyweddigion" or natives of North Wales, a society established in London, which has since developed into the *Gymnasthon* (Aborigines) Society. The Society has established the Eisteddfod as a living and working institution. Frequent meetings were held after this date. The meeting for 1887 was held in the Royal Albert Hall. Financially it was a failure, but in every other respect it was a considerable success. On the fourth and last day of the meeting the Prince and Princess of Wales were present, with their daughters. The preliminary Gorsedd (this word means throne, but in an Eisteddfodic sense it signifies the four-and-twenty stones of the Druidic circle, whence a year and a day beforehand the Eisteddfod is proclaimed "in the face of the sun, the eye of light," and where bardic and musical degrees are conferred), where a year and a day's notice of the event is given, was held July last at Castle Close, Brecon. The Eisteddfod was held in '88 at Wrexham, when Mr. Gladstone attended, and delivered a speech on the power of poetry and song. H.R.H. the Prince of Wales has announced his intention of visiting the E. on its next celebration, at Brecon.

Etkewe. An English newspaper corruption of *Etchewe* (pron. et-show'e), the political centre of British Zululand (*q.v.*).

Election of a Member of Parliament. Under the provisions of the Ballot Act, the returning officer is required, in the case of a county election within two days after the day on which he receives the writ, and in the case of a borough election on the day on which he receives the writ or the following day, to give notice of election. The day of nomination is to be fixed as follows: in the case of an election for a county or district borough, not later than the ninth day after the day on which he receives the writ, with an interval of not less than three clear days between the day on which he gives the notice and the day of nomination; and in the case of an election for any borough other than a district borough, not later than the fourth day after the day on which he receives the writ, with an interval of not less than two clear days between the day on which he gives the notice and the day of nomination. The candidate is nominated in writing, subscribed by two registered electors as proposer and seconder, and by eight other electors, who must also be registered in the same con-

stituency. If at the expiration of one hour after the time appointed for the election not more candidates stand nominated than there are vacancies to be filled up, the returning officer is to forthwith declare the candidate nominated to be elected; but if at the end of one hour more candidates stand nominated than there are seats to be filled up, the returning officer is to adjourn the election and take a poll. The poll is to take place on such day as the returning officer may appoint, not being, in the case of an election for a county or district borough, less than two or more than six clear days, and not being, in the case of an election for a borough other than a district borough, more than three clear days after the day fixed for the nomination. Sundays, Christmas Day, Good Friday, and any day set apart for a public fast or thanksgiving, are not counted. The following calendar, which will probably make the matter quite clear, shows the time for nomination and poll in boroughs and counties, assuming that the writ has been received by the returning officer on the 1st of any given month.

Day of Month.	County.
1	Receipt of writ.
2	
3	Last possible day for notice of election.
4	
5	First possible day for nomination.
6	
7	
8	First possible day for poll.
9	
10	Last possible day for nomination.
11	
12	
13	
14	
15	
16	
17	Last possible day for poll.
	<i>Borough.</i>
1	Receipt of writ.
2	Last possible day for notice of election.
3	
4	First possible day for nomination.
5	Last possible day for nomination.
6	First possible day for poll.
7	
8	
9	Last possible day for poll.

In using either table, regard must be had to the intimation given above, that Sundays, Christmas Day, etc., do not count. Thus, if an election in a county be fixed for the latest possible day, the poll would, on account of the Sundays, be at least two days later, or on the nineteenth, and in some cases three days later, or on the twentieth day. There is a special allowance of time in the case of the constituency of Orkney and Shetland. Where an equality of votes is found to exist between any candidates at an election for a county or borough, and the addition of a vote would entitle any of such candidates to be declared elected, the returning officer, if a registered elector of such county or borough, may give such additional vote, but shall not in any other case be entitled to vote at an election for which he is returning officer. But the returning officer may, if qualified, decline to give the casting

vote; and if he be not qualified, or if he decline to act, the names of the two candidates are endorsed on the writ and a double return made. Neither candidate returned may vote until the right to the seat has been determined. A petition may be presented by a person qualified to vote, a person claiming to have the right to be returned, and by a person alleging himself to have been the candidate; the petition may be presented on various grounds, and it may allege bribery and corruption. Thus, where there has been an equality of votes, and the casting vote has been given by the returning officer, or where a double return has been made, the seat may be claimed on petition. The voting papers would then be scrutinised by the Court, and some deductions would probably be made on the ground of spoiled papers, disqualification of the voter, etc., which would reduce one party's number more than it would the figure of the other. All election petitions are tried by two judges, who determine and report to the Speaker whether the member petitioned against, or what other person, if any, was duly elected, or whether the election was void; and when corrupt practices have been alleged, the judges report also whether any such practices have been committed, and, if so, whether it was with the knowledge or consent of any candidate, and the nature thereof; the names of the persons proved to have been guilty of such corrupt practices; and whether during the election there was an extensive prevalence of corrupt practices. When such a report as the latter is made to the House, it is usual to appoint a Royal Commission, on whose report, if it disclose a serious state of things, the writs for a fresh election may be suspended, so that the constituency remains temporarily unrepresented. Any member returned for two or more places in any part of the United Kingdom is to make his selection for which of the places he will serve within one week after it shall appear that there is no question upon the return for that place. See also WRITS, CORRUPT PRACTICES, PARLIAMENT, HOUSE OF COMMONS, etc.

Elections, Bye, Petitions, etc.

1886.

Belfast (West Div.).—On petition Mr. T. Sexton was declared to be the sitting member.
Birmingham (East).—On Mr. Matthews' accepting office of Home Secretary; no opposition (Aug. 18th).
Brighton.—On Mr. Marriott accepting office of Judge Advocate General; no opposition (Aug. 18th).
 On death of Alderman David Smith, Dr. William Tindal Robertson (C.) returned without contest (Nov. 20th). (No change.)
Bristol (West).—On Sir M. Hicks-Beach accepting office of Chief Secretary for Ireland; no opposition (Aug. 18th).
Edinburgh.—On Mr. J. P. B. Robertson accepting office of Solicitor General for Scotland; no opposition (Aug. 18th).
Cambridge University.—On Mr. Raikes accepting office of Postmaster General; no opposition (Aug. 18th).
Oxford.—On Mr. S. Herbert accepting office of a Junior Lord of the Treasury; no opposition (Aug. 18th).
Devon (North-East Div.).—On Col. Walrond accepting office of a Junior Lord of the Treasury; no opposition (Aug. 18th).

Down Co. (West Div.).—On Lord A. Hill accepting office of Comptroller of the Household; no opposition (Aug. 13th).

Dublin University.—On Mr. Plunket accepting office of First Commissioner of Works, and Mr. Holmes accepting office of Attorney General for Ireland; no opposition (Aug. 13th).

Edinburgh and St. Andrew's Universities.—On Mr. J. H. Macdonald accepting office of Lord Advocate; no opposition (Aug. 13th).

Hampstead.—On Sir H. Holland accepting office of Vice-President of the Council; no opposition (Aug. 11th).

Isle of Wight.—On Sir Richard Webster accepting office of Attorney General; no opposition (Aug. 12th).

Kent (Dartford Div.).—On Sir W. Hart Dyke accepting office of Vice-President of the Committee of Council on Education he was returned without opposition.

King's Lynn.—On Mr. R. Bourke being appointed Governor of Madras (polling Aug. 25th).—

Mr. Alexander W. Jarvis (C.) 1,423

Mr. J. Harris Sanders (G.L.) 1,168

(No change.)

Lancashire (Blackpool Div.).—On Sir F. Stanley accepting office of President of the Board of Trade, with a peerage (polling Aug. 20th).—

Sir M. White Ridley (C.) 6,263

Mr. J. O. Pilkington (G.L.) 2,517

(No change.)

Lancashire S.W. (Newton Div.).—On Sir R. Cross accepting office of Secretary for India, with a peerage, there was a contest (polling Aug. 16th).—

Mr. Thomas Wodehouse Legh (C.) 4,062

Mr. D. O'Connell French (G.L.) 3,355

(No change.)

Leicestershire (East).—On Lord J. Manners accepting office of Chancellor of the Duchy of Lancaster; no opposition (Aug. 13th).

Leith District.—Mr. Gladstone having been returned for Midlothian as well as for this constituency, elected to sit for the county, and there was a fresh election (polling Aug. 20th).—

Mr. Munro Ferguson (G.L.) 4,204

Mr. M'Gregor (L.U.) 1,528

Mr. Jacks (L.U.) 1,499

(No change.)

Lewisham.—On Lord Lewisham accepting office of Vice-Chamberlain of the Household; no opposition (Aug. 11th).

Lincolnshire (S. Lindsey Div.).—On Mr. Stanhope accepting office of Colonial Secretary; no opposition (Aug. 13th).

Liverpool (Walton).—On Mr. J. G. Gibson accepting office of Solicitor General for Ireland; no opposition (Aug. 11th).

Londonderry (City).—Mr. Charles Lewis (C.) was unseated on petition, and Mr. Justin M'Carthy (P.) declared the sitting member (Oct. 25th).

(Parnellite gain of a seat.)

Manchester (East).—On Mr. A. J. Balfour accepting office of Secretary for Scotland; no opposition (Aug. 11th).

Marylebone (East).—On Lord C. Beresford accepting office of a Naval Lord of the Admiralty; no opposition (Aug. 11th).

Middlesex (Brentford D.).—On decease of Mr. O. E. Coope (C.) (polling Dec. 23rd, 1886).—

Mr. James Bigwood (C.) ... 2,572

Mr. J. Haysman (G.L.) ... 1,316

(No change.)

—1,336

Middlesex (Ealing).—On Lord G. Hamilton accepting office of First Lord of the Admiralty; no opposition (Aug. 12th).

Middlesex (Enfield).—On Viscount Folkestone accepting office of Treasurer of the Household; no opposition (Aug. 12th).

Northamptonshire (North Div.).—On Lord Burghley accepting office of Parliamentary Groom in Waiting; no opposition (Aug. 16th).

Paddington (South).—On Lord R. Churchill's accepting office of Chancellor of Exchequer; no opposition (Aug. 12th).

Plymouth.—On Mr. E. Clarke accepting office of Solicitor General; no opposition (Aug. 12th).

Sheffield (Ecclesall).—On Mr. Ashmead-Bartlett accepting office of Civil Lord of the Admiralty; no opposition (Aug. 12th).

Staffordshire (Burton Div.).—On the elevation of Sir M. A. Bass to the peerage (polling Aug. 20th):—

Mr. Sydney Evershed (G.L.) 4,792

Mr. Gerald Hardy (C.) 2,319

(No change.) —2,473

Strand.—On Mr. W. H. Smith accepting office of Secretary for War; no opposition (Aug. 12th).

Tower Hamlets (St. George's Div.).—On Mr. Ritchie accepting office of President of Local Government Board, there was a contest. Polling (Aug. 12th):—

Mr. C. T. Ritchie (C.) 1,545

Mr. Richard Evc (G.L.) 889

(No change.) —656

Wigtownshire.—On Sir H. Maxwell accepting office of a Junior Lord of the Treasury; no opposition (Aug. 12th).

Yorkshire (Buckrose).—On petition Mr. M'Arthur (G.L.), was unseated, and Mr. Christopher Sykes (C.) was declared to be the sitting member (Dec. 12th).

(Conservative gain of a seat.)

1887.

Antrim (North).—On Mr. Macnaghten (C.) being appointed a Lord of Appeal in Ordinary (polling Feb. 12th):—

Sir C. F. Lewis (C.) ... 3,858

Mr. S. C. McElroy (G.L.) 2,526

Mr. W. A. Trail (Ind. C.) ... 474

(No change.)

Burnley.—On decease of Mr. P. Rylands (L.U.) (polling Feb. 19th):—

Mr. J. Slagg (G.L.) ... 5,026

Mr. J. O. S. Thursby (C.) ... 4,481

(G.L. gain.) —545

Camberwell (Dulwich D.).—On Mr. Morgan Howard (C.) being appointed a County Court Judge (polling Dec. 1st):—

Mr. Blundell Maple (C.) ... 4,021

Mr. Henderson (G.L.) ... 2,609

(No change.) —1,412

Cambridge University.—On death of Mr. Beresford Hope (C.), Prof. Stokes (C.) was returned unopposed (Nov. 17th). (No change.)

Carlisle Co.—On death of Mr. J. A. Blake (P.), The O'Gorman Mahon (P.) was returned unopposed (Aug. 24th). (No change.)

Chester (Northwich).—On decease of Mr. R. Verdin (U.L.) (polling Aug. 13th):—

Mr. J. T. Brunner (G.L.) ... 5,112

Lord H. Grosvenor (U.L.) ... 3,983

(G.L. gain.) —1,129

City of London.—On Mr. Hubbard being elevated to the peerage under the title of Lord Addington, Mr. T. C. Baring (C.) returned without opposition (July 27th). (No change.)

Cork (N.E.).—On resignation of Mr. Leamy (P.), Mr. W. O'Brien (P.) was returned without opposition (May 1887). (No change.)

Cornwall (St. Austell).—On resignation of Mr. Borlase (G.L.) (polling May 18th):—

Mr. W. M'Arthur (G.L.) ... 3,540

Mr. Brydges Wiliams (L.U.) 3,329

(No change.) —211

Cornwall (St. Ives).—On Sir J. St. Aubyn (L.U.) being elevated to the peerage under the title of Lord St. Levan, Mr. T. B. Bolitho (L.U.) was returned unopposed (July 9th). (No change.)

Coventry.—On resignation of Mr. Eaton (C.) with a view to his elevation to the peerage under the title of Lord Chylesmore (polling July 9th):—

Mr. W. H. W. Ballantine (G.L.) 4,229

Col. W. Eaton (C.) ... 4,213

(G.L. gain.) —16

Derby (Ilkeston D.).—On decease of Mr. T. Watson (G.L.) (polling March 24th):—

Sir Walter Foster (G.L.) ... 5,512

Mr. Leake (C.) ... 4,180

(No change.) —1,332

Donegal (South).—On death of Mr. B. Kelly, there was a fresh election (polling Feb. 3rd):—

Mr. M'Neil (P.) ... 4,604

Mr. Munster (U.) 933

(No change.) —3,671

Dublin University.—On Mr. Holmes (C.) being appointed a judge of Her Majesty's High Court of Justice in Ireland (polling closed July 12th):—

Mr. Serjeant Madden (C.) ... 1,376

Mr. R. C. Parsons (C.) ... 712

(No change.) —664

Glasgow (Bridge-ton).—On resignation of Mr. E. R. Russell (G.L.) (polling Aug. 3rd):—

Sir G. O. Trevelyan (G.L.) 4,654

Mr. Evelyn Ashley (L.U.) 3,253

(No change.) —1,401

Gloucester (Forest of Dean).—On resignation of Mr. T. Blake (G.L.) (polling July 30th):—

Mr. G. B. Samuelson (G.L.) ... 4,286

Mr. E. Wyndham (C.) ... 2,736

(No change.) —1,550

Hants (N. or Basingstoke).—On resignation of Mr. Selater-Booth (C.) with a view to his elevation to the peerage under the title of Lord Basing (polling July 18th):—

Mr. A. F. Jeffreys (C.) ... 3,158

Mr. R. Eve (G.L.) ... 2,426

(No change.) —732

Hunts (Ramsey).—On Captain Fellowes (C.) succeeding to the title of Lord de Ramsey, not long before conferred upon his late father (polling Aug. 30th):—

Mr. A. E. Fellowes (C.) ... 2,700

Mr. J. H. Sanders (G.L.) ... 2,414

(No change.) —286

Kerry (South).—On resignation of Mr. John O'Connor (P.), Mr. Kilbride (P.) was returned unopposed (Sep. 21st). (No change.)

Lambeth (Brixton).—On resignation of Mr. Baggallay (C.) with a view to his being appointed stipendiary magistrate for West Ham (polling July 19th):—

Marquis of Carmarthen (C.) ... 3,207

Mr. James Hill (G.L.) ... 2,560

(No change.) —738

Lincoln (Spalding).—On Mr. Finch-Hatton (C.) succeeding to the Earldoms of Winchelsea and Nottingham (polling July 1st):—

Mr. Halley Stewart (G.L.) ... 5,110

Admiral Sir G. Tryon (C.) ... 4,363

(G.L. gain.) —747

Liverpool (Exchange Div.).—On death of Mr. D. Duncan (polling Jan. 26th):—

Ralph Neville (G.L.) ... 3,217
Rt. Hon. G. J. Goschen (U.L.) ... 3,210
(No change.) —7

Longford (North).—Mr. Justin McCarthy (P.) having been declared duly elected for the city of Londonderry as well as for this constituency, decided to sit for the former, and Mr. T. M. Healy (P.) was returned for this division without opposition (Feb. '87). (No change.)

Middlesex (Hornsey D.).—On the elevation of Sir J. M'Garel-Hogg (C.) to the peerage as Lord Magheramorne (polling July 19th):—

Mr. H. C. Stephens (C.) ... 4,476
Mr. H. Bottomley (G.L.) ... 2,488
(No change.) —1,988

Paddington (North).—On decease of Mr. L. L. Cohen (C.) (polling July 8th):—

Mr. J. Aird (C.) ... 2,230
Mr. E. Routledge (G.L.) ... 1,812
(No change.) —418.

Sligo (South).—Mr. Sexton (P.) having been declared duly elected for West Belfast, as well as for this division, decided to sit for the former, and Mr. E. J. Kennedy (P.) was returned for this division without opposition (Feb. 7th). (No change.)

St. George's (Hanover Square).—On resignation of Lord A. Percy (C.) in order to provide Mr. Goschen with a seat in Parliament (polling Feb. 9th):—

Rt. Hon. G. J. Goschen (L.U.) ... 5,702
Mr. James Haysman (G.L.) ... 1,545
(a L.U. replaces a C.) —4,157

Taunton.—On Mr. H. C. Allsopp (C.) succeeding to the peerage by the decease of his father Lord Hindlip (polling April 23rd):—

Mr. A. Percy Allsopp (C.) ... 1,426
Mr. J. Harris Sanders (G.L.) ... 890
(No change.) —536

1888.

Ayr Burghs.—On decease of Mr. R. F. F. Campbell (L.U.) there was a contest (polling June 15th):—

John Sinclair (G.L.) ... 2,321
Hon. E. Ashley (L.U.) ... 2,268
(G.L. gain.) —53

Bristol (West Div.).—Sir M. Hicks-Beach, on being appointed President of the Board of Trade, was re-elected without opposition (Feb. 20th).

Deptford.—On resignation of Mr. Evelyn (C.), who disapproved the Irish policy of the Government, there was a contest (polling Feb. 29th):—

C. J. Darling (C.) ... 4,345
W. S. Blunt (G.L.) ... 4,070
(No change.) —275

Dewsbury.—On retirement of Sir John Simon (G.L.) there was a contest (polling Nov. 16th):—

Mark Oldroyd (G.L.) ... 6,071
H. G. Arnold-Forster (L.U.) ... 3,969
(No change.) —2,102

Dublin (St. Stephen's Green Div.).—On decease of Mr. Dwyer Gray (P.) there was a contest (polling May 13th):—

T. A. Dickson (P.) ... 4,819
Mr. Sexton (C.) ... 2,932
(No change.) —1,887

Dublin University.—Mr. Serjeant Madden (C.), on being appointed Solicitor-General for Ireland, was re-elected without opposition (Feb. 3rd).

Dundee.—On the resignation of Mr. Lacaita (G.L.) there was a contest (polling Feb. 16th):—

J. F. B. Firth (G.L.) ... 7,856
Gen. Sir H. Daly (L.U.) ... 4,217
(No change.) —3,639

Edinburgh (West Div.).—Mr. Buchanan (L.U.), having changed his views on the Irish question, resigned, and offered himself for re-election as a G.L. (polling Feb. 18th):—

T. R. Buchanan (G.L.) ... 3,294
T. Raleigh (L.U.) ... 3,248
(G.L. gain.) —46

Edinburgh and St. Andrews Universities.—On Mr. J. H. A. Macdonald being appointed Lord Justice Clerk, Mr. Stormonth Darling (C.), Solicitor-General for Scotland, was (Nov. 6th) returned without opposition.

Finsbury (Holborn Div.).—On death of Col. Duncan (C.) there was a contest (polling Nov. 29th).

Gainsford Bruce (C.) ... 4,398
Earl Compton (G.L.) ... 3,433
(No change.) —965

Glamorganshire (Gower Div.).—On decease of Mr. Yeo (G.L.) there was a contest (polling Mar. 27th):—

D. Randall (G.L.) ... 3,664
J. D. Llewellyn (C.) ... 3,358
(No change.) —606

Hampstead.—On Sir H. Holland (C.) being called up to the House of Peers under the title of Baron Knutsford, Mr. Edward Brodie Hoare (C.) was elected without opposition (Feb. 28th). (No change.)

Kent (Isle of Thanet Div.).—On decease of Col. King-Harman (C.) there was a contest (polling June 29th):—

Rt. Hon. J. Lowther (C.) ... 3,547
E. Knatchbull-Hugessen (G.L.) ... 2,889
(No change.) —658

Lanarkshire (Mid Div.).—On resignation of Stephen Mason (G.L.) there was a contest (polling April 27th):—

J. W. Philipps (G.L.) ... 3,847
J. Bousfield (L.U.) ... 2,917
J. Keir Hardie (Labour) ... 617
(No change.)

Leicestershire (Melton Div.).—On Lord J. Manners (C.) succeeding to the Dukedom of Rutland, the Marquis of Granby (C.) was returned without opposition (Mar. 21st). (No change.)

Limerick City.—On resignation of Mr. H. J. Gill (P.), Mr. F. A. O'Keefe (P.) was elected without opposition (April 17th).

Liverpool (Wilton Div.).—On Mr. J. G. Gibson (C.), Attorney-General for Ireland, being appointed a Judge of Queen's Bench Division, Ireland, Mr. Mattinson (C.) was elected without opposition (Feb. 3rd). (No change.)

Liverpool (West Derby Div.).—On resignation of Lord Claud Hamilton, Mr. W. H. Cross (C.) was returned without opposition (Aug. 10th).

Longford (South Div.).—On resignation of Mr. Connolly (P.), Mr. James G. Fitz Gerald (P.) was returned without opposition (June 30th).

Merthyr Tydfil.—On resignation of Mr. C. H. James (G.L.), Mr. D. A. Thomas (G.L.) was elected without opposition (Mar. 14th). (No change.)

On the death of Mr. Henry Richard (G.L.), there was a contest (polling Oct. 26th):—

Wm. Pritchard Morgan (G.L.) ... 7,149
Ffoulkes Griffiths (G.L.) ... 4,956
(No change.) —2,193

Sligo (South Div.).—On resignation of Mr. E. J. Kennedy (P.), Mr. Leamy (P.) was returned without opposition (July 6th).

Southampton.—On resignation of Admiral Sir John Commerell, V.C., G.C.B., with a view to his appointment as Naval Commander-in-Chief at Portsmouth, there was a contest (polling May 23rd):—

T. H. Evans (G.L.)	...	5,157
A. E. Guest (C.)	...	4,266
(G.L. gain.)		—885

Southwark (West Div.).—On the resignation of Mr. A. Cohen (G.L.) there was a contest (polling Feb. 17th):—

R. K. Causton (G.L.)	...	3,638
A. Beddall (C.)	...	2,444
(No change.)		—1,194

Sussex (Chichester Div.).—On resignation of the Earl of March (C.), Lord Walter Gordon Lennox (C.) was elected without opposition (Mar. 14th). (No change.)

Winchester.—On decease of Col. Tottenham (C.) there was a contest (polling Jan. 5th):—

Mr. R. Moss (C.)	...	1,364
Mr. P. Vanderbyl (G.L.)	...	849
(No change.)		—515

Yorkshire (Doncaster Div.).—On resignation of Mr. W. Shirley (G.L.) there was a contest (polling Feb. 23rd):—

Hon. W. H. Fitzwilliam (L.U.)	...	5,034
J. Spencer Balfour (G.L.)	...	5,423
(L.U. gain)		—211

A table showing the relative strength of parties in Nov. '85, Aug. '86, and on Dec. 1st, '88, will be found at end of COMMONS, HOUSE OF. See also ENGLISH POLITICAL PARTIES.

Electricity. See ed. '88.

Electricity, Execution by. See EXECUTION BY ELECTRICITY.

Electricity on Shipboard. Whatever cause electricians may have for disappointment at the slow progress made in the application of electric light for household purposes, there can certainly be no cause for complaint as to its adoption by the shipowner, the use of electricity on board ship being already very extensive and successful. Even as early as 1880, before the incandescent lamp was perfected by Edison and Swan, attempts were made to light the saloon of the steamer *Chimborazo* by means of **arc lamps**; and less than two years afterwards, the *City of Rome*, with 246 lamps of some 17,000 candle power in all, the *Arizona* and *Alaska*, with nearly as large a number, and the French Transatlantic liner *La Normandie*, with a total of 402 lamps, showed that the problem of ship lighting was fairly solved. Since that date ('82) the progress made has been wonderfully rapid. The firm of Siemens Bros. & Co. have alone fitted up no less than 250 steamers, and from the monster **ironclads**, with their provision of four gigantic **search lights**—the Atlantic "greyhounds," *Umbra* and *Etruria*, each with their 800 to 900 incandescents, down to the tiny **torpedo boat** with her toy dynamo that might almost be stowed in a hat-box—the adoption of electric light for purposes of peace or war has become well-nigh universal. Until '87 there was but little difference between the details of the apparatus used for lighting steam vessels, and that with which every one is familiar on shore. The same **fast-running dynamos** were employed, driven by belting or other gearing, or by the various kinds of uneconomical and often very noisy fast-running engines; the only variation of importance being the intro-

duction by the firm of Siemens Bros. of their system of single wiring, whereby one of the pair of cables commonly provided was suppressed, and in its place the metallic structure of the ship used to convey the return current. Though at first met with a storm of opposition from rival contractors, this system has made its way in favour since it has become known that, in addition to other advantages, it affords an almost perfect guarantee against scamped workmanship, the least fault being at once apparent; whereas under the old system it was a common practice to vamp up a cheap installation in which only an expert could detect the defects, but which in a couple of years required extensive if not complete renewal. The **exigencies of shipping work**, the value of space on board the steamers, and the necessity for **economical and noiseless machinery**, soon led to a great revolution in the dynamo arrangement. High speeds were gradually giving way to more moderate speeds when the P. & O. Co. boldly initiated (in their Jubilee steamer *Victoria*) the system of **reducing the speed of the dynamo down to that of the ordinary type of engine** made by such firms as Tangye Bros. of Birmingham—viz., about 200 revolutions per minute. The contract for the work was undertaken by the Anglo-American Brush Corporation, and carried out with such perfect success that the lead has already been largely followed by other shipowners, and there can be no doubt that **slow-running dynamos** will be the rule for the future. To the same great shipowning company belongs the credit for the introduction of **electric light for the passage of the Suez Canal by night**. The P. & O. steamer *Cithara* made the first trials early in '85, and since then the extensive use made of the system has largely relieved the congestion of traffic in that great international highway.

Electric Light, Fires from, and Insurance in Relation to the. When proper precautions are taken in the installation of the electric light, there is less danger in buildings being fired by such than from gas, otherwise serious fires may occur from the new illuminant, as many have both in this country and abroad, whereby several buildings have been destroyed both wholly and partially. Some steamships have also been ignited by faulty electric light plants, including a first-class Atlantic liner and a British man-of-war. Off one of the coasts of the United States an American ship was fired by the dropping of white hot particles of carbon from an arc light on a cargo of cotton. According to the *Review*, an American insurance newspaper, the frequent and costly fires that occur throughout the United States in electric light plants, have so discouraged **insurance companies** that many are declining to insure buildings illuminated by electricity. A considerable part of this hazard is undertaken by "outside" companies. The main causes of electric light fires in buildings appear to result from bad installation, poor quality of material, defective workmanship, faulty insulation, soft spluttering carbons in the plant, and spontaneous combustion. The multiplicity of rival regulations for fixing the plant has been the cause of many electrical fires in buildings, which would otherwise not have occurred, as unscrupulous contractors have taken advantage of such various directions, and done cheap and scamped work. By far the most satisfactory means adopted to safely instal the electric

light in buildings are those provided by the Phoenix Fire Office, and known as the "**Phoenix Rules**," which were drawn by Mr. Musgrave Heaphy, C.E., Consulting Electrician to the above named office. A Committee of Representatives of British Fire Insurance Companies contemplate bringing out a set of new rules for safely installing the electric light in buildings which will be adopted by all, or nearly all, of the companies. Better precautions are required for fixing electric light plants in ships than in buildings, to avoid fire risks. By the method originated by Mr. Charles Hall, M. Inst. C.E., Consulting Electrician to the P. & O. Company, such additional precautions are used by requiring safety fuses to every lamp, and the exclusion of transformers and other means. Many steamers have been installed by this method, and no fire or breakdown of the electric light plant has taken place in any ship in which it has been used. Consult articles in the *Commercial World* for May '88, and *Marine Engineer*, July '88.

Electric Lighting. See LIGHTING.

Electric Lighting Act. See SESSION '88, sect. 15a.

Electric Safety Lamps. See LIGHTING.

Electric Tramways. The first electric tramway for public use in the United Kingdom was that from Portrush to the Giant's Causeway, designed by the late Sir W. Siemens, and opened in the autumn of '83. It is six miles long. Then followed the lines on Ryde pier, on Brighton beach, and at Blackpool. All these are intended for passenger traffic only, and so far they have yielded results which are full of promise for the future of this mode of transit. The most important electric tramway yet constructed in the United Kingdom is the **Bessbrook-Newry Line**. It is over three miles in length, extending from Newry to Bessbrook, and is adapted to convey passengers and goods. The dynamos are driven by water power. It was opened Oct. 1st, '85, and during the first six months of its existence 70,000 passengers and 7,000 tons of goods were carried over it, and the cars ran 14,000 miles. The traffic has been maintained ever since, and tables have been recently supplied by Dr. E. Hopkinson, showing, among other particulars, the cost of construction, and subsequent working expenses. These latter have attracted some attention, as the question of the cost of electric traction is by no means satisfactorily determined. The Electric Traction Syndicate, as the result of most satisfactory experiments between Brighton and Shoreham, have now electric trams running a distance of four miles. There is also a line one mile long at Glynde clay-pits, worked on the telephage system, the motive power being water in this case. The North Metropolitan Tramway Company have electrically-propelled cars running between Stratford and Manor Park, a distance of four miles, the **Elison cars** being used, and steam the generating power. Many thousands of passengers have been carried on this line. Experiments are being carried out at various places, notably at Chiswick, on the **Ganning Town Plaistow tramway**, and on the **Barking Road**, but the question has many practical difficulties. Considerable interest was aroused in the autumn by the proposals to establish electric traction on the **Metropolitan Railway**, which have been favoured, among other proprietors, by Sir E. W. Watkin. The motive power of electrically propelled cars

is applied in various ways. The three methods of overhead conduction, underground conduction, and storage batteries may be instanced. The overhead system has been largely favoured, especially in America; in the last named each car carries its own stored supply of energy. Electric traction is now extensively adopted on the Continent, in the Colonies, and in the United States, where quite a number of electrically propelled cars are running. Consult "**Proceedings**," Inst. Civil Engineers, vol. xci., and the *Electrician* '88.

Elementary Education Acts, '70-80. These Acts contain all the statute law regarding the public provision of elementary education in England. The administrative area for the purpose of elementary education is either the borough or the parish. Any area may have a school board if those who would have votes for a school board apply to the Education Department; and any area must have one if the school accommodation already provided is not sufficient. The board is elected outside the Metropolis by the burgesses of the borough or the ratepayers of the parish; within the Metropolis by those who would be entitled to vote for common councilmen in the City of London, or for vestrymen in other districts. Each voter has as many votes as there are members to be elected, and may give them all to one candidate. Outside the Metropolis the school board must number not less than five, nor more than fifteen. Members hold office for three years. In any area in which there is no school board there must be a school attendance committee, of not more than twelve nor less than six, annually appointed out of their own number, by the town council if it be a borough, or by the guardians of the union if it be a parish. The school board, or school attendance committee, must see that every child of school age receives sufficient elementary instruction in reading, writing, and arithmetic, and that no person employs (a) any child under the age of ten years; (b) any child under the age of fourteen years who has not obtained a certificate of proficiency (unless such child comes under the provisions of the Factory and Workshops Act, 1878). The school board, moreover, is to provide for any deficiency of school accommodation, and for that purpose has powers of compulsory purchase. It may establish a free school anywhere within its district, having first satisfied the Education Department that such a school is needed. It may contribute to, or, with the consent of the Education Department, establish an industrial school. It may take over, upon certain conditions, any elementary school already established in its district. A parent who is unable to pay the school fees may apply to the guardians of the poor, and if he prove his inability they are to pay the fees without his thereby incurring any disqualification. All fees, parliamentary grants, sums borrowed, etc., must be carried to the school fund, out of which all expenses are to be defrayed, and any deficiency be met out of the rates. The school board is to serve on the rating authority its precept requiring payment of a sum therein specified, which the rating authority must pay to the school board treasurer. Should the rating authority make default, all its rating powers may be exercised by officers appointed for that purpose by the school board. No religious catechism or formula distinctive of any denomination is to be taught in a board

school, nor is a child to receive any religious instruction contrary to the wish of his parent, nor is a Government Inspector to examine any child in any religious subject. For other provisions see text of Acts. The Acts are supplemented by the Code annually issued by the Education Department, which is laid upon the tables of both Houses of Parliament, and, if not objected to within a certain time, has the force of law. The Acts are further supplemented by the bye-laws made by the several school authorities. The Report of the Royal Commission was issued in '88, and at once led to a revival of the dormant discussion as to voluntary schools receiving aid from the rates. The controversy, which for a time engaged public attention, soon died away on the announcement by the Vice-President of the Council in the House of Commons that it was not the present intention of the Government to act on the Majority Report of the Commissioners.

Emilio, Rev. William Gray, M.A., D.D., Professor of Hebrew and Old Testament Exegesis in the College of the Presbyterian Church of England, was b. 1848, at Insh, Aberdeenshire; graduated at Aberdeen University in '68 with highest honours; while studying Theology at Edinburgh New College, Prof. E. succeeded in obtaining the first Travelling Fellowship, and thereafter studied in Berlin and Paris. Ordained minister at Willesden in '75; and was appointed to the Chair of Hebrew in '83. Received the honorary degree of D.D. from Aberdeen University in '88. Is a frequent and favourite preacher in Nonconformist pulpits, and was selected to preach before the Congregational Union of England and Wales at their autumnal meeting at Nottingham (Oct. '88).

Ely, Rt. Rev. Lord Alwyne Compton, Lord Bishop of. The diocese was founded 1109. The present income is £5,500. His lordship, the 59th bishop in order of succession, son of the late Marquis of Northampton, and brother to the present Marquis, was born July 18th, 1825. He was educated at Trinity College, Cambridge, where he graduated as 14th Wrangler (1848), and proceeded D.D. (1879). Ordained (1850). Formerly his lordship was rector of Castle Ashby, Northamptonshire (1852-79), Hon. Canon of Peterborough (1856-79), Rural Dean of Preston and Archdeacon of Oakham (1874), Dean of Worcester and High Almoner to Her Majesty (1879), Prolocutor of the Lower House of Convocation of Province of Canterbury (1880). Consecrated Lord Bishop of Ely (1886), is Visitor of the Colleges of St. John, Jesus, and St. Peter, Cambridge, and of Ely Theological College. His lordship married (1850) Florence Caroline, daughter of the late Rev. Robert Anderson, vicar of the now famous Trinity Church, Brighton.

Ember Days. The derivation of the term is doubtful, but it probably has no connection with penitential "ashes" or "embers." In the early Christian centuries a week in each of the four seasons was set apart for fasting and prayer on behalf of the fruits of the ground. The English Church keeps the Wednesday, Friday, and Saturday in these weeks as days of abstinence and prayer for a blessing on those about to be ordained ministers of the Church. These days are taken after the First Sunday in Lent, Whit Sunday, September 14th, and December 14th.

Emigrants' Information Office. Was opened by the Government in October '86, to

collect and diffuse impartial information as to the prospects of emigrants to the British Colonies. The classes chiefly required in the Colonies at present are farm labourers, female domestic servants, and farmers with a little capital. Hardly any assisted passages are now granted, Queensland giving the most encouragement. The importance of the subject is shown by the fact that the exodus from Great Britain has averaged during the last decade about 800,000 persons annually, of whom about three-fourths now go to the United States. The emigration during '87 considerably exceeded that during '86. (See table below.) Printed particulars, which are revised frequently, are exhibited at every post-office, or can be obtained, with fuller details, on application by post or personally at the Office, 31, Broadway, Westminster, S.W. See also SELF-HELP EMIGRATION SOCIETY.

Emigration and Immigration. The official statistics issued last year give tables relating to emigration and immigration from and into the United Kingdom during the year '87.

Emigration '85, '86, and '87.

	Total, including Foreigners.	Emigrants of British and Irish Origin only.
No. of emigrants in '87	396,494	281,487
" " " '86	330,801	232,900
" " " '85	264,385	207,644
Increase in '87	65,693	48,587
" " '86	66,416	25,256

In '86 the increase in the number of emigrants was specially marked in the case of those of foreign origin; while in '87 it occurred chiefly among the British and Irish emigrants, the numbers of these rising from 232,900 in '86 to 281,487 in '87—an increase of nearly 21 per cent., as against 12 per cent. only in '86. The total number of foreigners who emigrated from ports of the United Kingdom in '87 was 108,572, as against 94,370 in '86—an increase of only 15 per cent., while the advance of this class of emigrants in '86 as compared with '85 was one of 75 per cent. The number of British and Irish emigrants in '87, 281,487, is the largest yet reached in any year since the nationality of emigrants has been distinguished, with the exception of '83; for the ten months ended Oct. 31st, '88, show a total emigration of 366,926, as against 388,524 for the corresponding ten months of '87.

Immigration in '85, '86, '87.

	Total, including Foreigners.	Immigrants of British and Irish Origin only.
No. of immigrants in '87	119,013	85,475
" " " '86	108,879	80,018
" " " '85	113,549	85,468
Increase in '87	10,134	5,457
Decrease in '86	4,670	5,450

This shows an increase in number both of foreign and of British immigrants in place of the decrease noticeable last year. This increase in immigration, coupled with a continued increase in emigration, is in exact accord with the rule to which attention has been called in previous reports,—“An increase of immigration accompanies generally an increase of emigration, and reaches its maximum in those years when the emigration begins to fall off from the maximum it has itself reached, and then in the succeeding years emigration and immigration both decline; the minimum, however, in the case of emigration preceding the minimum in the case of immigration, which, as a rule, occurs in the first year after the emigration, having declined, begins again to increase.” The importance of a record of immigration is obvious, as, in order to properly estimate the extent to which a transfer of population takes place in any year from the United Kingdom to other countries, the number of immigrants should, of course, be deducted from the gross number of emigrants. The net emigration for the last three years, as thus calculated, is seen from the following table:—

Excess of Emigrants.

	Total Number of Pas- sengers.	Passengers of British and Irish Origin only.
No. of Emigrants in '87	396,494	281,487
„ Immigrants „	119,073	85,475
Excess of Emigrants '87	277,481	196,012
Corresponding excess in '86	221,922	152,882
Corresponding excess in '85	150,836	122,176

The total surplus emigration (*i.e.*, including foreigners) thus increased during '87, though not to the extent observable in '86, when the effect on the balance of population of an increase of emigration over '85 was enhanced by a simultaneous small decline of immigration. On the other hand, the net emigration of persons of British and Irish origin only increased even more than in '86, the '87 figures representing an advance of 28 per cent. over those for '86. There has latterly been an increase in the number of emigrants going to British North America, and a decrease in the number going to the Australasian Colonies.

Emin Pasha (Eduard Schnitzler) was b. March 28th, 1840, in Oppeln, Silesia. He is of Protestant parents; his father having been a merchant. In '42 his family moved to Neisse, where Emin's mother and sister still reside. He was educated at the Neisse Gymnasium, commencing the study of medicine in '58 at Breslau, and finishing in '64 at Berlin. He then set out for Turkey, where he fell in with Hakki Pasha, whom he accompanied on official journeys through Armenia, Syria, and Arabia. In '75 he returned home, only to stay, however, for a few months; for in '76 we find him acting as surgeon in the Egyptian army as Dr. Emin Effendi, and in that capacity he was ordered to Khar-toum. In '78, when General Gordon was Governor of the Soudan, Emin was appointed

Governor of the Equatorial Province of Egypt, where he still remains. In '86 he appealed for help. In consequence of this appeal a relief expedition, under the explorer Stanley (*q.v.*), was sent out in Jan. '87. The expedition was organised by Mr. Mackinnon, of Balliwakill, and the Egyptian Government subscribed £10,000 towards it. (See *infra*.) Consult “Emin Pasha in Central Africa” (*Philip and Son*), '88.

Emin Pasha Relief Expedition. Early in '87 an expedition was formed to relieve Emin Pasha (Dr. Schnitzler), an Austrian who took service under the Khedive, and was appointed Governor of the Lake Regions province of what was once the Egyptian Soudan. Emin has been cut off from communication with the civilised world since the Mahdist rising, but has kept together a garrison sufficient to hold his province. His chief station is Wadelai, on Lake Albert Nyanza, and he has two steamers on the lake. The command of the relief expedition was given to Mr. H. M. Stanley by the Egyptian Government, and his plans have been sanctioned and aided by the Administration of the Congo Free State. Taking with him Major E. Barttelot and other European officers, with a force of several hundred Zanzibari and Soudanese soldiers and carriers, Stanley made his way up the Congo, and then up its great tributary the Aruwahm. Some 150 miles up this last river he established a camp, which he left in charge of Major Barttelot, who has since been killed. Thence Stanley and the main body set forth to march overland to the Albert Nyanza. Meanwhile Tippoo Tib, an influential Arab trader whom Stanley had attached to the expedition, was sent with a strong force up the Congo to Stanley Falls. Here he was to re-establish a station destroyed by slave-traders, suppress them, restore order, and if practicable, to march overland, so as to support Stanley by another route. It is worth noting that Emin Bey, in letters, has repeatedly declared that he will not leave his “people.” All that he requires is medicines, arms, and ammunition, so that even if Mr. Stanley reaches him, he will not bring him back. The present position of Mr. Stanley is much debated. Recently (Nov.) an expedition, conducted by Lieut. Wissmann, has been organised to proceed to the relief of the distinguished traveller.

Employers' Liability Act, '80. Before the passing of this Act, a master was not liable to his servant for injury caused by the negligence of a fellow-servant. The Act provides that where injury has been caused to a workman by reason of any defect in the works, machinery, etc., or of the negligence of any person in his employer's service intrusted with superintendence or with authority over the injured man, or of any act or omission done or made in obedience to the orders or byelaws of the employer, or of the negligence of any person in charge of railway signals, points, etc.; the injured workman, or if the injury results in death, his personal representatives, shall have the same right of compensation against the employer as if he had not been in the employer's service. Certain exceptions are made, to protect an employer morally innocent of the injury. An action under the Act must be brought within six months from the time of the accident, or twelve months from the time of death, as the case may be, and notice that injury has been sustained must be given within six weeks. The compensation

recoverable is not to exceed the equivalent of three years' earnings of a person in the same employment and district. Any money payable by the employer to the workman as a penalty under any other Act of Parliament is to be deducted from the compensation recovered under this Act. Actions under the Act are to be brought in the county court, but may be removed into a superior court in the same manner as other actions. The Act came into operation on January 1st, 1880, and remains in force seven years.

"Encyclopædia Britannica." A popular and scientific exposition of the most advanced views upon every subject of art, literature, and science known to be current in the world. The first edition, in 3 vols., edited by William Smellie, was published 1771; the eighth edition, in 21 vols., appeared 1853; and the ninth, in 24 vols., was commenced in 1875, and completed November '88. The work has been edited by the late Prof. T. Spencer Baynes, LL.D. (d. May 30th, 1887), and W. Robertson Smith, LL.D., assisted by upwards of 1146 contributors, belonging to almost every European nationality. Each volume costs 30s., and contains about 850 quarto pages. There will be an index volume published in '89. (A. & C. Black.)

Endowed Schools Acts. For concise report of a Select Committee of the House of Commons, appointed in '86 to inquire into the operation of the Endowed Schools Act, '69, and the amending Act, and to consider and report how far it might be expedient to amend the powers exercised under them by the Charity Commissioners, see ed. '88.

Energy, Laws of. See ed. '88.

Engineering. Details of some of the most important of the great industrial engineering schemes either in progress or planned out in different parts of the world at the present time are given under their respective alphabetical headings.

English Church Union, The, was formed in 1859 for the purpose of uniting clergy and laity. "In defence of the doctrine and discipline of the Church of England, and of the rights and liberties of her faithful children." Viscount Halifax is the president, and the vice-presidents include 22 Bishops and Archdeacon Denison, the Rev. Canon Carter, Lord Addington, the Earl of Limerick, the Earl of Glasgow, the Earl of Devon, Sir Charles Turner, Sir Theodore Hope, and Mr. Shaw Stewart. Amongst the members of the council are the Deans of Manchester, Durham, and Bangor, Canons Bodley, Chilton, Cooke, Perry, Hockin, Gray, and Malcolm MacColl, the lay members including the Duke of Newcastle, Lord Sackville Cecil, Lord Edward Churchill, and Sir Walter Phillimore. Those only who are communicants of the Church of England, or of churches in communion with her, can be elected and enrolled. The Union comprises 22 bishops, 3,220 other clergy, and 20,100 laity. Its object is to defend and maintain unimpaired the doctrine, discipline, and ritual of the Church of England against Erastianism, Rationalism, and Puritanism. Of late years the litigating business of the Union has materially decreased, owing to the "policy of peace" inaugurated by the late Archbishop of Canterbury, and supported by the late Bishop of London. Another reason for this decline in defensive litigation is that the Union has refused to recognise the jurisdiction of Lord Penance in spiritual matters, and clergy-

men who have been prosecuted by agents of the Church Association (*q.v.*) since the passing of the Public Worship Regulation Act have mostly neither appeared in person nor been represented by counsel, but have allowed judgment to go against them by default. In 1877 the **Sustentation Fund** was created to supply the loss of income incurred by those who had been proceeded against; and amongst those to whom grants have been made are the Revs. T. P. Dale, R. W. Enraght, S. F. Green, the late A. H. Mackonochie, Arthur Tooth, J. Baghot de la Bere, etc. The president and council emphatically repudiate any political bias or party character in the organisation. Evening communions are not approved of by the English Church Union, but the use of Vestments and other Ritual adjuncts is encouraged, as being, in their view, sanctioned by the Ornaments Rubric of the Prayer Book. **Organ, The Church Union Gazette.** Offices, 35, Wellington St., Strand. Sec., Col. John Brathwaite Hardy.

English Harbour. A West Indian naval station. See ANTIGUA.

English Political Parties. It may be assumed that, under the universal household franchise now established by law, the various political parties in the country find their fair measure of representation in the popular branch of the Legislature. Upon this premise an analysis of the composition of the House of Commons will afford the best test of the strength of the respective schools of political thought throughout the three kingdoms. The present House of Commons was elected in July-Aug. '86, and consisted of 670 members, of whom 393 were Unionists and 277 Home Rulers. The leading principle of the first-named party is the maintenance of the union of the parliaments of Great Britain and Ireland as settled by the Act of Union of 1801. The Home Rulers, on the contrary, advocate the abrogation of the Act of Union and the restoration to Ireland of a separate parliament. This main division of parties dates only from the summer of '86, when Mr. Gladstone, up to that time the acknowledged head of the whole Liberal party, declared himself in favour of Irish Home Rule, and united his forces, or so many of them as he could carry with him in his new departure, with those of the Irish Nationalists led by Mr. Parnell. A considerable minority of Liberals, resenting Mr. Gladstone's sudden change of front, declined to continue their support, and combined with the Conservatives to form that Unionist majority which succeeded in defeating the Home Rule Bill, first in the House of Commons, and afterwards and more decidedly at the polling-booths. The anti-Home Rule Liberals, although cordially working with and supporting the Conservative Government which necessarily resulted from the successful combination, retained their independence, and formed themselves, indeed, into a separate party, with a separate organisation, separate leaders, and separate whips. They called themselves **Liberal Unionists**, but were described by the Gladstonians as **Dissentient Liberals**. Their principal leaders were Lord Hartington, Mr. Goschen, and Mr. Chamberlain, the former two representing those who had belonged to the Whig section, and the latter those who had been included in the Radical section of the old Liberal party. The **Liberal Unionists**, or **Dissentient Liberals**, numbered 77, and the **Conservatives** 316, thus bringing up the

total of Unionists to 393, and giving them a majority of 116 over their opponents. As the Conservatives did not of themselves form a majority of the whole House, the Government could only exist by reason of the support of the Liberal Unionists. The 377 Home Rulers were made up of 128 English, Welsh, and Scotch Liberals and Radicals (led by Mr. Gladstone, with Sir W. Harcourt and Mr. John Morley as his principal lieutenants), and (including the seat subsequently gained on petition at Londonderry city) 88 Irish Nationalists, or Parnellites—so named after their leader, Mr. Charles Stuart Parnell. Of these 85 sit for Irish constituencies, and one, Mr. T. P. O'Connor, for the Scotland division of Liverpool. By their opponents the Home Rulers are often termed **Separatists**, although they warmly repudiate the imputation that the measures they advocate involve the separation of the two countries. In the Home Rule total are also comprehended a number of members who for certain subsidiary purposes form separate parties—such as the **Labour representatives**, the advocates of **Church Disestablishment**, and some five or six gentlemen returned by Scotch constituencies specially to watch over the interests of the **Highland Crofters**. Strange to say, the Social Democrats, who have been making some stir in the Metropolis and elsewhere, have not a single representative in Parliament. The Conservatives, or, as they are sometimes called, **Tories** or **Constitutionalists**, form a more homogeneous party than their Liberal opponents, having fewer and less conspicuous internal divisions. Their professed policy is the maintenance of the Empire at all cost, the preservation of the Constitution as represented by the three estates of Crown, Lords, and Commons, the union of Church and State, and the upholding of the rights of property. Subject to these principles, the Conservatives have shown themselves to be as well disposed towards useful legislation and the reform of abuses as any other party in the State. The Gladstonian Home Rulers base their claim to public support on the superiority of their legislation, the greater purity of their administration, and their devotion to the principles of peace, retrenchment, and reform. They are divided in opinion as to the maintenance of the State Church and the House of Lords. The sole programme of the Parnellite party consists of the demand for an Irish Parliament. They treat every other political question as of subordinate importance. Since the last General Election there has been a slight diminution in the Unionist strength. The Liberal Unionists have sustained at successive bye-elections a net loss of two seats, and the Conservatives a net loss of four seats, while Sir T. Grove, Mr. Hingley, Sir H. Vivian, formerly Liberal Unionists, now usually vote against the Government on questions of Irish policy. The present relative strength of parties is (Dec. 1, '88), allowing for these changes, about as follows:—Liberal Unionists 71, Conservatives 312, total Unionist strength 383; Gladstonians 201, Parnellites 86, total 287; Unionist majority 96. (For further details see summary at end of Commons, House of, and Elections, BYE). Despite their slight falling off in numbers, the Liberal Unionists are still masters of the situation, the votes of even thirty of them being sufficient to give the Government a majority. The party as a body, has, however, consistently

voted with the Government on all vital questions, and early in '88 Mr. Parnell was forced to recognise that on any matter affecting the Union the Home Rulers could not hope to break the ranks of their opponents in the House of Commons as then constituted. Attempts to compose the difference between the Liberal Unionists and Gladstonians have been made, notably at the Round Table Conference (*q.v.* ed. '88), but without success. Lord R. Churchill's resignation placed the Government in a somewhat critical position, but the acceptance by Mr. Goschen, with the sanction of Lord Hartington, of the Chancellorship of the Exchequer, and the brilliant financial proposals which he has since laid before Parliament have more than compensated for a defection of his lordship. During the session of '88 obstructive tactics were abandoned except in the case of a few measures, the relations between parties, though bitter enough at times, lost a little of their former acerbity, and the Opposition must be credited with having given cordial assistance in the settlement of the question of procedure (*q.v.*), and of many important details of the Local Government Scheme.

Engraving, Automatic. For the various processes see ed. '87.

Ensilage. Since the adoption of ensilage as a food for stock by the leading English agriculturists, it has been found by practical experience that there is scarcely anything which grows on the farm which may not be made into ensilage,—from maize to mangold-tops, from beans to beetroot, from tares to thistles and nettles. The utilisation of waste substances is, in fact, a salient feature of the ensilage system. It is, however, essential that the crop should not be permitted to get over-ripe when intended for ensilage. The four cardinal virtues claimed for the process of ensilage appear to be (1) its safety in all seasons, its efficiency, and notably the avoidance of loss in the preservation of green crops; (2) the value of its products as food for animals, and its beneficial effects on the health of all stock to which it is given with discretion; (3) its utilisation of substances almost valueless or otherwise waste; and (4) the elasticity the system affords for cropping, and in providing a succulent food available all the year round, by which an increased number of stock per acre can be maintained. There are two systems of making ensilage, one in (1) a silo or building, and the other (2) a stack. The advantages of (1) are a minimum of waste, and a permanent structure which is available for other uses when not occupied by silage; while on the other hand there is foremost the question of cost. (2) avoids outlay, though at the expense of some waste on its exposed sides. The labour of carting green stuff is also saved, as the stack may be erected on the field where the crop is grown. Sweet ensilage is found to be more easily made in a stack than in a silo. A crop of green fodder that would produce 14 tons of hay to the acre is estimated to make about 5 or 6 tons of stack ensilage, at a cost of about 3s. per ton. That the system of ensilage is making considerable progress is proved by the agricultural returns. In '82 it was calculated that six silos were in existence in Great Britain, while in '88 there were 2,667 silos in use, giving a total capacity of 7,407,215 cubic feet, with an average capacity of 2,777 cubic feet to each silo. In addition to the total number of silos,

11,275 persons are stated to have made ensilage in stacks.

Envelope Inscriptions. See ASSYRIOLOGY. **Envoys and Plenipotentiaries.** See DIPLOMATIC.

Eras, The Five. These are the Greek (Olympiads); the Roman; the Christian; the Julian Period; and the Mohammedan Era.

Erzeroum. An important Turkish strategical centre in Armenia, which, since the annexation of Kars by Russia (1878), has become the principal frontier fortress and point of resistance to a Russian advance from the Caucasus to Constantinople. It is about 60 miles south-west of Trebizond, on the great commercial highway leading from that town over the plateau to the Persian frontier, and is a chief halting place for pilgrim caravans from Teheran to Mecca. The population is variously estimated at from 30,000 to 60,000, and as the administrative capital of a Turkish vilayet, covering 27,000 square miles, with population 65,000, it attracts a fair amount of trade. It has a Catholic bishop of the Armenian rite, and since 1878 the Russianised Armenians at Tiflis have been desirous for its incorporation with Russia, which seems likely to be its ultimate destination.

Esher, William Balloil Brett, 1st Baron (creat. 1885); b. 1815. Educated at Westminster, and at Corpus Coll., Camb. (B.A., senior opt., 1836, M.A. 1840). Called to the bar at Lincoln's Inn (1846), made Q.C. (1860); was Solicitor-General (1868), a justice of the Common Pleas (1868-75), a judge of the High Court of Justice, Common Pleas Div. (1875-6), and a Lord Justice of Appeal (1876-83), in which latter year he was appointed Master of the Rolls. Was M.P. for Helston (1866-68). His lordship presided at the trial of the London gas stokers for conspiracy some years ago. Since Lord E.'s appointment as Master of the Rolls, he has on more than one occasion held *conversazioni* at the Public Record Office, for the purpose of displaying its interesting treasures.

Esparto Grass. See ed. '88.

Esquimault. (Pron. *ess-kwi-malt*.) A harbour and naval station on the south-east of Vancouver Island, about three miles from Victoria, capital of the province of British Columbia in the Dominion of Canada. Since the opening of the Canadian Pacific Railway its importance has become evident, and it is now being fortified and provided with strong armaments and all the necessaries of a first-class naval arsenal. A large graving-dock has recently been constructed, and the place is connected by rail with the large coal mines at Nanaimo. Both the British and Canadian Governments have voted large sums for the creation of a *place d'armes*, and the latter is raising a permanent artillery force for its defence. The connection of Esquimault with Australia by cable is spoken of. See BRITISH COLUMBIA, and CANADA.

Essequibo. One of the three counties of British Guiana (*q.v.*).

Established Church. See CHURCH OF ENGLAND.

Eton and Harrow Cricket Match. See CRICKET.

Eton School. Founded 1440. Endowment exceeds £20,000 per annum. Pupils consist of King's scholars or "Collegers" (of whom there are 70, and who enter college between twelve and fourteen years of age), and of Oppidians or

"Town-boys," who enter between ten and fourteen years of age. Exhibitions and scholarships to both Universities, ranging from £50 for four years downwards. **Head Master,** Rev. Edmond Warre, D.D. **Motto—***Florat Etona.* **Alumni** (some distinguished)—Horace Walpole; Bolingbroke; Porson; Hallam; Gray, the poet; Shelley; Wellington; Pitt; Canning; Fox; Lord North; Chénery, the late editor of the *Times*; Dean Milman; W. E. Gladstone; Dr. Pusey; Lord Idlesleigh; Rowland Hill; Lord Brabourne; Sir John Lubbock; Goldwin Smith; Lord Salisbury; and A. J. Balfour. **Consult** *The College Calendar.* A mission is supported by past and present Etonians at Hackney-wick.

Euphrates Valley Railway. Projects for shortening the journey to India by means of a railway along the valley of the river Euphrates have been repeatedly brought before the notice of the public during the last thirty years. The rival routes probably number a score. (For the earlier history of this matter see ed. '88.) It was announced on Sept. 13th, '86, that Baron Wilhelm Pressel, engineer, and the heads of a syndicate, had been requested to proceed to Constantinople to conclude the negotiations for a concession including a vast network of railways in Asia Minor. From Constantinople it was reported (Jan. 29th, '87) that the Council of Ministers had drawn up and forwarded to the Palace for the Sultan's sanction a plan for the extension of the railway from Scutari to Ismid, as far as Angora, and then on to Diarbekr. The financial group which had been negotiating included some of the most powerful banking houses in London, Paris, and Berlin, and it was said they were ready to begin operations at once. It was not till Aug. 7th, however, that an Imperial decree was issued on the matter, and then the contract for the extension and the network of Asiatic lines was granted to an English Syndicate represented by Messrs. Alt and Seefelder. The convention gave the Company power to extend the line to Bagdad, the works to be completed in ten years, and the gauge to be fixed at 1 metre 44 centimètres. On Oct. 4th it was reported that the Palace had referred to a military commission, the *mazbatta* specifying certain modifications made in the convention by the Council; and in a report dated Oct. 11th it was stated that before granting the necessary *irade*, the Porte desired to be satisfied of the Company's financial position. Under date Constantinople, April 25th, '88, it was reported that the Ottoman Government had entered into negotiations with a French Company for a concession for a line to Angora, but the Ottoman Bank, with other strong financial houses, also asked for the same line. A group of English and German financiers had asked for a line from Suedia, *via* Aleppo, to Orfa. This demand was approved, and a *mazbatta* sent to the palace for Imperial sanction. It was reported from Vienna, August 14th, that M. Gaillard had offered to the Porte on behalf of a financial group a new scheme for the construction of the *Haider Pasha-Ismid Railway* in Asia Minor. Some time previously another company offered £1200,000 for the concession, requiring a State guarantee of 6 per cent. interest on its shares. The value of a Turkish pound is about 18s. 3d. M. Gaillard's group offered £1400,000 for the concession, asked a guarantee of 4 per cent., and offered to pay the Porte one-fourth of any net

revenue exceeding an average of 7,500 fr. per kilometre, further undertaking to finish the line in four years. It was reported from Constantinople, Nov. 24th, that a dispute had arisen in consequence of the *Porte* having signified an intention to take possession of the Haidar Pasha-Ismid section out of the hands of the British and Austrian lessees, who held it under a special Convention, and that the Ambassadors of those countries had presented strong protests against any arbitrary proceedings. Certain German competitors offered 6,000,000 francs for the delivery of the line into their hands, but the lessees in possession were willing to pay the same sum and accept the terms of the German Convention. In the House of Commons, on Nov. 30th, Sir J. Ferguson said H.M. Government had no information as to M. Caillard's interests as to these lines, or as to the nature and scope of the latest concession. In the *Engineer* of Oct. 5th is published a report of the United States Consul at Sivass, on a proposed line from Constantinople to Bagdad, 1,400 miles long, and to cost £15,500,000.

Evangelical Alliance, The. Founded '45-6, to enable Evangelical Christians of different denominations, and of all countries, to manifest their true unity in the essential doctrines of the Gospel, and in the defence of religious liberty. International meetings of the Alliance have been held in London, Paris, Berlin, Amsterdam, New York, Geneva, Basel, and Copenhagen, besides Annual Conferences in the chief centres of religious thought in the United Kingdom. A Week of Universal Prayer is observed in the early part of January each year throughout the whole world.

Evans, John, hon. D.C.L. Oxford, and LL.D. Dublin, Treasurer and Vice-President R.S., F.S.A., F.G.S., etc., b. 1823. Author of several works on the ancient coins, implements, weapons, and ornaments of Great Britain and Ireland, and has contributed a variety of papers in the *Archæologia*, and in the *Numismatic Chronicle*, of which he is one of the editors. President of the Geological Society (1875-6), and of the Anthropological Institute (1878-9); Pres. Numismatic Society since 1875.

"Evening News." A daily paper (4d.), founded July 1887, of Conservative principles. It gives the latest political, general, and commercial intelligence of the hour, and makes a special feature of sporting news. Office, 12, Whitefriars St., E.C.

"Evening Standard." See "STANDARD." **Evolution.** A scientific doctrine that has a wide and also a more restricted significance. In the limited sense the name is applied to the generalisation that all animals and plants have been evolved or developed from pre-existing forms. In this sense, Evolution is opposed to the doctrine of special creation, according to which every species of plant and every species of animal came into existence as the result of a special act of creation. In this connection Evolution is often inaccurately spoken of as the Darwinian theory. (For a full account of Evolution as concerning living things, see ORIGIN OF SPECIES.) In the second, wider significance, Evolution means the continuity of all phenomena: of physics, astronomy, chemistry, geology, as well as those of biology, which are to the Evolutionist one continuous and natural whole, following certain purely natural laws. As Evolution, in the special sense, is opposed to the idea of special creation

of forms of living things, so, in the general sense, it is opposed to the idea of interposition from without in the whole series of the phenomena of nature, whether these concern bodies living or non-living.

Exchequer, The, is said to be at least coeval with the Norman Conquest, and to have been from its earliest institution looked to as a check upon the Lord High Treasurer, and a protection for the king, as well as for the subjects, in the custody, payment, and issue of the public money. The chief financial officer, the Chancellor of the Exchequer, formerly sat in the Court of Exchequer above the barons. The exchequer receipts—i.e., the public revenues—were paid into the Bank of England, or the Bank of Ireland, to the account of the Exchequer, and form the Consolidated Fund. In '66 an Act was passed to consolidate the powers and duties of the Comptroller of the Exchequer and of the Commissioners for auditing the public accounts, to unite in one department the business hitherto conducted by the separate establishments under them, and to make other provisions for the more complete examination of the public accounts. Under this Act was founded the Exchequer and Audit Department, at the head of which is the official known as the Comptroller and Auditor General, but whose full title is Comptroller General of the Receipt and Issue of H.M. Exchequer and Auditor General of Public Accounts. He cannot sit in Parliament, nor be removed from office except upon a joint address by the two Houses (present Comptroller and Auditor General, Sir Charles Lister Ryan, K.C.B.). He is advised daily of all issues or transfers made from the Exchequer accounts; and when money has been granted by Parliament for the public services he, on receipt of a royal order under the sign manual countersigned by the Treasury, grants the necessary credits on the Consolidated Fund. He and the department under him also audit the accounts of all other departments, and see that the expenditure of each is in accordance with the authorities received from the Treasury. See TREASURY AND FINANCE.

Excise. See FINANCE, NATIONAL.

Execution by Electricity. Some attention has recently been given here to this method of capital punishment, through the Governor of the State of New York having sanctioned and signed a bill for its adoption. The new law is the outcome of the following recommendation of the Governor in '85:—The present mode of executing criminals, by hanging, has come down to us from the dark ages, and it may well be questioned whether the science of the present day cannot provide means for taking the lives of such as are condemned to die in a less barbarous manner. I commend this suggestion to the consideration of the Legislature. In '86 a commission was appointed to report upon the existing system, with the result of recommending a change. The law comes into operation in Jan. '89. The condemned man is placed in a portable hut; he stands upon a metallic plate connected with a battery, a second connection being made near to and over his head, so that when the circuit is closed an electric shock passes through the body. The effect of the electric discharge is an instantaneous extinction of life; but it must be said that this result is not in all cases a foregone conclusion. Experi-

ments by Dr. B. W. Richardson on certain animals have shown that an electric shock has proved fatal. An instructive article upon this new method of capital punishment appeared in the *Asclepiad* for June '88, from the pen of Dr. Richardson. The reception of the decision in this country was anything but favourable to the scheme, the electrical press being unanimously against it.

Executor. It is the custom in making a will in personal estate to name an executor or executors. Immediately upon the testator's death the executor becomes entitled to all the testator's personal property. He is bound first of all to bury the deceased and prove his will, then to pay out of it any debts due by the testator; and then to distribute the property, so far as it will go, in accordance with the will. Should there be more than one executor, each can exercise all the powers of the office, except that all must join in bringing any action respecting the estate. The office continues to the survivors or survivor. Should the executor renounce, or die, before taking out probate, or not appear when cited to take probate, his rights of executorship cease entirely. But when the last surviving executor dies, then his executors are also executors of the original testator. If the executor is an infant, the Probate, Divorce, and Admiralty Division of the High Court will grant administration to his guardian or some other person who becomes administrator *durante minore etate* (during the minority). An executor merely in virtue of his appointment is released from any debts due from him to the testator, and may retain out of the assets any debt due from the testator to him in priority to all other debts of the same degree; but this provision is so guarded in equity as to be practically of no effect. Any person who takes upon himself to be executor without having been appointed, is said to be an executor *de son tort* ("of his own wrong"), and is not allowed to derive any benefit from the office. Should no executor be available, the Court will grant letters of administration *cum testamento annexo* (with the will annexed), as distinct from the ordinary letters of administration granted when a person dies without making a will.

Exeter, Rt. Rev. Edward Henry Bickersteth, Lord Bishop of. The see was founded in 1046, the earlier prelates taking the title of Bishops of Devonshire from the year 909. The present income is £4,200. His lordship, the 63rd bishop in succession, was b. 1825, and is the nephew of Lord Langdale and only son of the late Rev. Edward Bickersteth, rector of Walton, Herts. Educated at Cambridge, Trinity College. Was Chancellor's English Medallist three years in succession (1844-5-6), graduated B.A., Sen. Opt., and 3rd class Classical Tripos (1847), M.A. (1850), and took the Seatonian prize (1854). Hon. D.D. (1885). Deacon (1848), and priest (1849). Vicar of Christ Church, Hampstead (1855-85); and rural dean of Highgate (1878-85). Appointed Dean of Gloucester (1885), and in the same year consecrated Lord Bishop of Exeter. As an author and editor his lordship is well known. Among his chief works are "The Blessed Dead" (1863), "Jesus and the Resurrection" (1870), "Poems" (1849), "The Reef and Other Parables" (1874—2nd edition 1885), "Yesterday, To-day, and For Ever—a Poem in Twelve Books" (1866: 15th

edition 1884). His Lordship has edited many of his father's discourses; a volume of "Family Prayers for Working Men" (1879), the "Hymnal Companion to the Book of Common Prayer" (1870-71-80), and has written beside a "Commentary on the New Testament."

Exeter Hall, Strand, London. Erected in 1830-31 by Deering, for the holding of religious and philanthropic meetings. Celebrated as the scene of the religious meetings held in the month of May. Now the property of the Young Men's Christian Association, having been purchased and presented to that body by six gentlemen at a cost of £25,000. The E. H. Gymnasium in Long Acre was opened in '88 by the Prince of Wales.

"Ex officio." See ed. '88.

"Ex parte." See ed. '88.

Explosive Substances Act, '83. For summary of this Act see ed. '86.

Explosives, New. Every year sees some addition to the explosive mixtures already competing for use in mining operations, tunnelling and quarrying. *Carbo-dynamite* is the invention of Mr. W. F. Reid and Mr. W. D. Bolland. It consists of 90 parts of nitro-glycerine, absorbed by 10 parts of an extremely porous variety of carbon. Very successful experiments were made last spring with this explosive in South Wales. It is claimed to be much superior to ordinary dynamite, and that it can be used in fiery mines; while no noxious fumes are given off. The "*Favier*" explosive, a new Belgian production, has been written upon a good deal; beyond this not much progress has been made with it. The like may be said of *Flameless Powder*, which was brought out early in '88 by the Flameless Explosives Company, Limited. *Bomite* is the invention of a Swede named Sjöberg. It is a chlorate compound, and said to be safe in transport, use, and manufacture. *Ballite* is a Swedish high explosive consisting of ammonium nitrate, and di-nitro-benzol, which, when melted together at 176°—194° F., is mixed with saltpetre. Consult Annual Reports of H.M. Inspectors of Explosives.

"**Expositor, The,**" was founded 1875, under the editorial care of *Rev. Samuel Cox, D.D.* The first and second series, consisting of twenty volumes, were completed 1884. The third series, under the editorship of *Rev. W. R. Nicoll, M.A.*, was commenced 1885. The *Expositor* is intended to give the results of the best scholarship of the day, derived from the clergy and theologians of all denominations, in addition to Bible studies and exegesis.

"**Ex post facto.**" See ed. '88.

Extradition Acts, '70, '73. See ed. '86.

Extradition Acts, Law on, '88. The case of *Guerin* (Queen's Bench Division, November), raised an important question as to the legality of the practice of a metropolitan police magistrate in disposing of extradition cases in which only part of the evidence has been taken by himself. In the result the magistrate's order extraditing the prisoner was affirmed, as being based on sufficient evidence actually heard by himself at the adjournment; but the practice of any magistrate's acting on evidence not heard before himself in any criminal case stands condemned by judicial censure as irregular and contrary to natural justice.

F

Factory and Workshop Act, '78. This Act consolidates a series of statutes for the regulation of factories and workshops extending from the commencement of the century down to the present time. It contains practically all the law dealing with this subject, and extends to a hundred and seven sections. The first part contains the general provisions for drainage, ventilation, and fencing of dangerous machinery, vats, etc., as well as the rules regulating the hours of labour for women, young persons and children. In textile factories the hours of labour for women and young persons are not to exceed ten, and Saturday is to be a half-holiday. The hours of labour for children are fixed at half of those allowed to women or young persons. These rules are modified in their application to other factories and workshops. Provision is made for holidays; for insuring the attendance at school of children employed in factories or workshops; for certificates of fitness for employment to be obtained by children and young persons; for giving notice of accidents to inspectors and certifying surgeons appointed under the Act. The second part contains special provisions relating to particular classes of factories and workshops—e.g., to insure lime-washing, etc.; restriction upon the employment of women, young persons or children in special industries, and exceptions relaxing the law in favour of certain industries, etc. The third part regulates the appointment and functions of inspectors and certifying surgeons, fixes penalties and provides for their recovery before a court of summary jurisdiction. The fourth part contains miscellaneous provisions, and defines a "child" as any person under fourteen years of age, and "young person" as any person between the ages of fourteen and eighteen years.

Faculties, Court of. A court of the Archbishop of Canterbury, presided over by the Master of the Faculties. To him must be made all applications for admitting notaries to or removing them from their office. The judge of the Provincial Courts of Canterbury and York is *ex-officio* Master of the Faculties. Consult Phillimore's "Ecclesiastical Law."

Faer, Thomas, R.A., b. 1826; devoted himself first to water-colours; subsequently he commenced painting in oils. Associate of the Royal Scottish Academy (1849), and produced a popular picture, "Scott and his friends at Abbotsford." Settling in London in 1852, his work "The Mitherless Bairn," shown at the Royal Academy Exhibition in 1855, was spoken of as "the picture of the season." He subsequently contributed several pictures to the Royal Academy Exhibitions. Elected R.A. '64.

Faeroe Islands ("Sheep Islands"). A group in the North Atlantic forming a Danish dependency. Area 514 sq. m., pop. 11,220. Capital Thorshavn, on Stromoe Island. The islands are lofty table-rocks. There is no timber, but abundant peat. Raw and moist climate, and winters so mild that cattle and sheep are never housed. Barley and rye crops successful in some years. People of Danish and Norse origin, chiefly employed collecting elder down, whale fishing and seal hunting. The islands (22 in number, 17 inhabited) are represented in the legislature of Denmark by a deputy, named by the king.

Fahrenheit. (From Gabriel Daniel Fahrenheit, best Danzig 1686, d. 1736.) The name of one of the three scales used in thermometers. The freezing-point of water is on the Fahrenheit scale marked 32°, the boiling-point 212°. The space between the freezing- and the boiling-points is divided into 180 (212 - 32) equal parts, each of which is called a degree. Fahrenheit's reasons for using the numbers 32 and 212 respectively for the freezing- and boiling-points of water was that 180 was a number breaking up easily into aliquot parts, and that the lowest temperature attained by him, by mixing ice water and sal ammoniac, corresponded with 32 of such 180 degrees below the freezing-point of water. To express the number of degrees of temperature registered on the Fahrenheit scale in terms of the Centigrade, subtract 32, multiply by 5 and divide by 9. Thus 212° F. are equivalent to 212 - 32 = 180 $\times 5 \div 9 = 100^\circ$ C. To turn Fahrenheit to Réaumur subtract 32, multiply by 4, and divide by 9. Thus 212° F. are equivalent to 212 - 32 = 180 $\times 4 \div 9 = 80^\circ$ R.

Faith Healing Home, called "Bethanah." See ed. '86.

Faithfull, Miss Emily, b. at Headley rectory, Surrey, 1835. Soon after attaining her majority she started a "composing" room in Great Cornam Street, for the training of females in the mysteries of type-setting. The Queen approved of her undertaking, and granted her a warrant appointing her printer and publisher in ordinary to Her Majesty. In the *Victorian Magazine* and other periodicals, Miss Faithfull has been a powerful advocate of the claims of women to remunerative employment. She is the author of a capital novel, "Change upon Change." For many years she was a lecturer very much sought after. She was the founder of the *West London Express*, in the printing of which she employed a large number of female compositors. Recently Miss F. has received a pleasing mark of Royal favour in the shape of an autographed portrait of the Queen.

Fallding, Rev. F. J., was b. in Yorkshire; educated at Rotherham College, and at Glasgow University, where he graduated M.A. (1845). Became pastor of the Congregational Church, Wellington, Shropshire ('45), removing to Bury in '49. After a preliminary experience as principal for a short time, he accepted the professorship of classics and mathematics in '51, and a year later became Principal of Rotherham College. Glasgow University conferred on him, as a "distinguished student," the degree of D.D. in '53. Dr. F. took a prominent part in the efforts to amalgamate the Colleges of Airedale and Rotherham; and, on the ultimate decision of a joint committee (Feb. '80), that the work of the united colleges should be carried on in Bradford, Dr. F. was unanimously appointed Principal of the new Institution, which is to be known as the *United Yorkshire Independent College*. The Chairman-elect (Rev. J. Griffith John) having expressed his inability to leave the missionary work which he is conducting in China, Dr. F. was elected *Chairman of the Congregational Union of England and Wales* (q.v.) for '89.

Falkland Islands. Otherwise called *Las Isles Malouines*. A British colony situated in the

South Atlantic, about 240 miles east of Magellan's Straits. Area of the group 6,500 sq. m., pop. 1,843. Capital and port Stanley, on East Falkland, which island contains 3,000 sq. m.; West Falkland has an area of 2,300 sq. m., and lesser islands about 1,200. South Georgia, an island 800 miles E.S.E., has been annexed to the colony. Its area is 1,570 sq. m., but it is snow-covered, sterile, and uninhabited. The Falklands consist of low, hilly grass and moorland. The flora and fauna are Patagonian. Trees will not grow nor corn ripen, but the grasses and herbage afford luxuriant and first-rate pasturage.

Cattle, horses, goats, pigs, hares and rabbits abound in the wild state; water-birds and fish are numerous. The settlers own some 2,700 horses, 11,500 head of cattle, and about half a million sheep. The products of these, together with sealskins and oil, form the exports. Frozen mutton is now sent to England. Climate healthy but peculiar: summer cool and uncertain, with much rain and wind; winter very mild—seldom colder than 30° Fahr. The Governor is assisted by an Executive and a Legislative Council; administration being that of a Crown colony. For financial statistics see BRITISH EMPIRE, etc. (table). There are three places of worship—English Episcopal, Presbyterian, and Roman Catholic—each with an elementary school. The islands were discovered by Davis in 1592, visited by a French vessel from St. Malo in 1770 (and named Isles Malouines), and annexed by Britain in 1833. The people are of British and Spanish America descent.

Falmouth (Lord), Evelyn Boscawen, 6th Viscount, b. 1819. Educated at Eton and Ch. Ch. Oxon. Called to the bar Mid. Temple '46. No name is more respected on the turf than that of Lord Falmouth, whose well-known colours (black, white sleeves, and red cap) have been carried to victory in most of our principal races. He won the Oaks in '62 with Queen Bertha, in '75 with Spinaway, in '78 with Jannette, and in '79 with Wheel of Fortune. He was successful in the Derby of '70 with Kingcraft, and in '77 with Silvio; in the St. Leger of '77 with Silvio, '78 with Jannette, and '82 with Dutch Oven; in the Two Thousand of '74 with Atlantic, of '79 with Charibert, and of '83 with Galliard; and in the One Thousand of '62 with Hurricane, of '73 with Cecilia, of '75 with Spinaway, and of '79 with Wheel of Fortune.

False Imprisonment. See ed. '88, and consult Addison on "Torts," p. 128, ed. 5.

Familistère, The. See CO-OPERATION and ed. '86.

Famines in India. See ed. '88.

Farmers' Alliance, The. The objects of the Farmers' Alliance are these. (1) To secure the adequate representation of tenant farmers in parliament,—not necessarily by tenant-farmer members, although it is desirable that several practical tenant farmers should sit in parliament, but by members representing fairly the views of the Alliance. (2) To stimulate the cultivation of the land by obtaining full security for the capital of tenants invested in the improvement of their holdings and greater freedom in the cultivation of the soil and the disposal of its produce—that is, such security as would entirely abolish the legal power of a landowner to appropriate his tenants' improvements without paying for them. (3) To promote the reform of laws relating to the ownership and transfer of land. "Landed property should be as easy to sell and cheap to

transfer as a ship." (4) To encourage an increase in the number of small holdings, so as to provide for a natural growth of the rural population. (5) To obtain the abolition of the law of distress. (6) To procure the further reform of the game laws. (7) To secure to ratepayers their legitimate share in county government—that is, by the direct representation of the ratepayers on county boards. (8) To obtain a fair apportionment of local burdens between landlord and tenant. (9) To obtain a readjustment of the tithe rent-charge and the abolition of extraordinary tithe; the extraordinary tithe rent-charge has proved to be an injurious tax on enterprise, and the ordinary rent-charge should be collected from the owners and not from the occupiers of land. (10) To watch over the interest of farmers in connection with railway charges; especially as to excessive and illegal charges, and as to unfair and illegal preference to the foreigner. (11) To obtain and secure the enforcement of effective regulations in respect of cattle disease—that is, such regulations as will be effectual in keeping diseased foreign animals from conveying infection to British and Irish live stock, and suitable provisions for stamping out epidemics which have broken out in the country. (12) To advocate legislation for preventing the sale of spurious butter as a genuine commodity, or beer made with other materials than malt and hops, without proper notice to that effect. Subscription, 5s. per annum, or £5 for life. During '89 several Conferences and Public Meetings in connection with the F. A. were held at Bridge House Hotel, having reference chiefly to the Tithe Rent Charge Bill (*q.v.*), the Local Government Bill, and other legislative measures affecting the agricultural interest. President, Mr. W. J. Henman, Caversham, Reading; Hon. Sec., Mr. Albert Bath, Sevenoaks.

Farming, Co-operative. See CO-OPERATION.
Farrar, Frederick William, D.D., F.R.S., Archdeacon of Westminster, was b. at Bombay 1831. Educated at Cambridge, where he graduated with first-class classical honours, and became a Fellow of Trinity College. He obtained the Chancellor's prize for English verse. Ordained '57. Subsequently assistant master at Harrow, and Head Master of Marlborough School. Chaplain in Ordinary to the Queen. '73. Canon of Westminster and rector of St. Margaret's (1876); also Archdeacon of Westminster and Rural Dean, 83. Canon Farrar is an eloquent preacher and writer, his chief works being "Life of Christ" (1874), "Life of St. Paul," "The Early Days of Christianity," "Everyday Christian Life, or, Sermons by the Way" ('87), etc. Canon Farrar visited the United States in 1885, where he met with a most enthusiastic reception. He is a temperance reformer, and in his address at a recent Vegetarian Conference spoke favourably of the adoption of their principles in a modified form. Dr. F. contributed an article in the Dec. ('88) number of the *Contemporary Review* on Westminster Abbey and the new schemes brought forward by Mr. Shaw-Lefevre.

Fasting. See ed. '88.

Fawcett, Mrs. Henry, the widow of the late Rt. Hon. Henry Fawcett, Postmaster-General, was b. (1847) at Aldeburgh, Suffolk. She is the author of several works, amongst which may be mentioned "Political Economy for Beginners," and "Tales in Political Economy." Mrs. Fawcett possesses oratorical powers of a very high order, and she is a frequent speaker

at social meetings in London. A few years ago there was a considerable enlargement of the female staff at the Postal Telegraph Office, and it is understood that Mrs. Fawcett was instrumental in bringing about this increased employment of female labour. Mrs. F. is an advocate of **Higher Female Education**, and has always taken a great interest in the movement for extending the **parliamentary franchise to women**. She has recently greatly interested herself on behalf of children employed in theatres and music halls, the neglect of whose education she brought under the notice of the Education Commission which sat in '87. In Nov. '88 Mrs. F. delivered a lecture at Toynbee Hall, which attracted much attention.

"F. C. S." See LLOYD'S CLAUSES.

Federation, Australasian. See IMPERIAL FEDERATION.

Federation, Imperial. See IMPERIAL FEDERATION.

"Felo de Se." See ed. '88.

Fenians. Members of a secret society formed originally in America, to overthrow the authority of the Queen in Ireland and establish an Irish republic. Its founders were James Stephens and John O'Mahony. Recruited from the Irishmen who had served in the civil war in America, it at one time included a large number of members, and had branches in almost every part of Ireland. See ed. '86.

Ferdinand, Prince of Bulgaria. b. in Vienna, 1861, youngest son of Prince Augustus of Saxe-Coburg and Princess Clementine of Bourbon-Orleans, a daughter of Louis Philippe. The Prince served as an officer in the Austrian army, and possesses large estates in Hungary. After the dethronement of Prince Alexander of Bulgaria there was some talk of electing Prince Ferdinand, who received a deputation from the **Sobranje** in '87, offering him the vacant throne. He accepted the offer, and on the 14th August took the oath to the **Bulgarian constitution** at **Tirnova**. His tenure of power, however, is believed to be very precarious, as it is known that **Russia** is firmly opposed to his continuance on the throne. His reception by the Bulgarian nation has been most enthusiastic during '88. See BULGARIA.

Ferghana. A province of Turkestan, the former Khanate of Khokand (*q.v.*).

Fernando Po. A volcanic island in the Gulf of Guinea, 35 m. long and 22 m. broad, pop. about 2,000. Belongs to Spain and is used as a place of exile for political offenders. Capital **Clarence Cove**, originally an English settlement, established in '27. **Clarence Peak**, a perfect cone, wooded to the top is 10,190 feet high. Dense forests, luxuriant vegetation, picturesque scenery. The natives, Anyo or "Boobies," stupid and repulsive in appearance. Exports, india rubber and palm oil. Discovered in 1471, by a Portuguese sailor of same name, and ceded by Portugal to Spain in 1778.

Fernley Lectures. These lectures are in the singular position of having no local habitation, but are delivered "in connection with the assembling of the Wesleyan-Methodist Conference," which they follow or accompany in its migrations to and from the various cities or towns which are successively chosen to be the temporary centres of the Wesleyan administration. The first of the **Fernley Lectures**, which was given at **Hanley, Staffordshire**, July 25th, '70, by the **Rev. George Osborn, D.D.**, had for its

subject, "The Holy Spirit, His Work and Mission"; and subsequent Lectures have been delivered at **Camborne '74**, **Nottingham '76**, **Bristol '77**, **Bradford '78**, **City Road, London '80** and **'86**, **Newcastle-on-Tyne '85**, and **Manchester '87**. They owe at once their foundation and their name to the late **John Fernley, Esq.**, of **Southport, Lancashire**; who, in addition to munificent benefactions to various agencies at work within the circle of Methodism, instituted these Lectures in his lifetime, for certain well-defined purposes in connection with the apologetics and the propaganda of his denomination. Their object is authoritatively described as that of "explaining and defending the theological doctrines or the ecclesiastical polity of the Wesleyan-Methodist Connexion, with special reference and adaptation to the necessities of the times, and with a view to the benefit of the candidates who are about to be ordained at the Conference to the ministry, and also of the laymen who usually attend the Conference committees." Some of the ablest and most noted of the leaders of Methodism have held this Lectureship; the second incumbent of which, in '71, was the **Rev. William Burt Pope**, of **Didsbury College, Manchester**. In '74, the **Rev. John Dury Geden**, Tutor in Hebrew and Classics in the same institution, treated "The Doctrine of a Future Life as contained in the Old Testament Scriptures." In '75 no Lecture was delivered, in consequence of the sudden death of the Lecturer-designate, the **Rev. Luke Houlst Wiseman**, one of the General Secretaries for Missions. The Lecture for '78, which was by the **Rev. George William Oliver, B.A.**, Principal of **Southlands College, Battersea**, whose subject was "Life and Death, the Sanctions of the Law of Love," excited considerable controversy. In '83, the **Rev. William Arthur** lectured "On the Difference between Physical and Moral Law." The year '87 was illustrated by the delivery of a lecture on "The Creator, and what we may know of the Method of Creation," by the **Rev. William Henry Dallinger, LL.D., F.R.S. (q.v.)**, who has recently retired from the office of Governor and Chaplain of **Wesley College, Sheffield**; and the Lecture for '88 was delivered by the **Rev. Theophilus W. Davison, M.A.**, Classical Tutor in the Theological Institution at **Richmond, Surrey**, on "The Christian Conscience a Contribution to Christian Ethics."

Ferrier, David, M.D., LL.D., F.R.S., Physician to King's Coll. Hospital and the Hospital for the Paralyzed and Epileptic, and an eminent authority on the functions and diseases of the brain and nervous systems, was b. in **Aberdeen** 1843. Educated at the **Aberdeen and Edinburgh Universities**, where he brilliantly distinguished himself. Dr. F. claims to have practised vivisection with important results, and has thereby aroused the opposition of the anti-vivisectionists. He is the author of "Functions of the Brain."

Ferry, Jules François Camille, distinguished French juriconsult and statesman, b. at **St. Dié, Department of the Vosges**, 1832. He was called to the French bar 1854. Making himself conspicuous by his opposition to the Empire, and as one of the "thirteen," he was, in 1864, tried and condemned. In 1866 he was returned for the **Corps Legislatif**, and became, from that time a prominent member of the Left under the Empire. The revolution of Sept. 4th, 1870, made him a member of the Government of National Defence. In 1871 he was

returned to the National Assembly for his native department of the Vosges. He was afterwards **Prefect of the Seine**, but soon resigned. From 1872 to 1873 he was appointed **French Minister at Athens**. He was returned at the general election for his native *arrondissement* (1876-7). In May 1878 he was one of the vice-presidents of the Budget Committee, and in 1879 **Minister of Public Instruction and the Fine Arts**. As **Minister of Education** he brought in a bill directed against the **Jesuits** and their influence in schools. The Chamber of Deputies passed the bill by large majorities, but the Senate rejected it (1879 and 1880). The cabinet revived disused laws and expelled the **Jesuits** by decree. Difference of opinion arose, and the Ministry fell. M. Ferry was **Prime Minister** (1880-81), his cabinet resigning on the question of the **Expedition to Tunis**. He became **Prime Minister** again (Feb. 1883), but his ministry was overthrown (1884) by an adverse vote relative to the war with China. M. Ferry was, with M. de Freycinet, the leading candidate for the **Presidency** on the resignation of M. Grévy, but he, as well as M. de Freycinet, was distrusted, especially by the Reds, on account of his policy in Tunis and Tonquin; and it was to prevent either of these ministers from becoming chief magistrate of the Republic that the different factions united in favour of M. Carnot. Soon after the Presidential election, M. Ferry had a narrow escape from assassination (Dec. '87) by a madman named Aubertin.

Feuillet, Octave, French novelist; b. at Saint-Lô (Manche), August 11th, 1820. His first literary production was "Le Grand Veuillard," a novel under the *nom de plume* of "Désir Hazard," which appeared in the columns of the *National*. "Le Roman d'un Jeune Homme Pauvre" (1854) raised Feuillet to the first rank of the novelists of the day; this work was also dramatised. Feuillet was elected member of the Academy in 1852. In 1864 he was made an Officer of the Legion of Honour. Under the Empire, Feuillet was the librarian of the imperial residences.

Field, Sir William Ventris, b. 1811, practised as a solicitor in London 1836-43, but was called to the bar (1850). He gained a large practice both in commercial cases and before the Privy Council. Q.C. (1861). He subsequently became a benchet of his Inn (Inner Temple), and leader of the Midland Circuit. In 1875 he was nominated a judge of the Queen's Bench division.

Fieri facias. Writ of. A writ of execution, that is to say, a writ issued for the purpose of giving effect to the judgment of a court of justice. It is a command to the sheriff that of the goods and chattels of the party, he cause to be made (whence the Latin name of the writ), the sum recovered by the judgment, with interest thereon at 4s. per cent. from the day of judgment or order (or from the day on which the money was directed to be paid, or from which interest was directed to run and the case may be), together with the costs and the interest thereon similarly accruing, and that he have the money and interest in court immediately after such execution to be paid to the party who sued out the writ, and that he have the writ itself before the court, immediately after execution.

Fiji. An island group and British Crown colony in the South Pacific. Name a corruption of Viti, the native name. Consists of two

considerable islands: **Viti Levu**, 4,250 sq. m.; **Vanna Levu**, 2,600 sq. m.; and 225 smaller. Total area 7,740 sq. m.; total pop. 127,444. Capital **Suva**, in **Viti Levu**; second town **Lavaka**, in **Ovalau**. Port of call for steamers is **Kamavu**, the southernmost island of the group. Colony divided into sixteen provinces. Island of **Rotumah** (pop. 2,400), to the north, annexed to Fiji in 1881. The islands are mountainous, well wooded, with luxuriant vegetation and fertile soil, tropical, the larger being of volcanic origin, the smaller of coral formation. Peaks attain 5,000 feet. Reefs and rocks abound in the seas. Various important rivers: the **Rewa**, in **Viti Levu**, is navigable 40 miles up. Forests contain valuable timber. Birds and fishes abundant, but hardly any animals except stock introduced. Minerals are iron, with, it is said, copper and gold. Natural productions are fruits, pearl-shell, *bêche-de-mer*, timber, dye and scent woods, etc. Climate tropical, but healthy and favourable to Europeans.—Fiji is a **Crown Colony** under a Governor, who is also Her Majesty's High Commissioner and Consul-General for the Western Pacific. The Legislative Council consists of six official and six unofficial members appointed by the Governor. The Colony is represented in the Federal Council of Australasia. Two provinces and Rotumah are administered by English commissioners; fourteen provinces are locally governed by chiefs called **Koko Tui**. Religion and missionary work divided among Church of England, Roman Catholic, Wesleyan, and Presbyterian. Prior to the introduction of Christianity, cannibalism and human sacrifices prevailed to a most alarming extent. Two State-aided public schools. For defence a body of about one hundred native constabulary. Industries are growing sugar, coffee, cotton, coconut, arrow-root, tapioca, etc., which form the exports. For financial statistics see **BRITISH EMPIRE**, etc. (table). Natives Polynesian with Papuan intermixture; are peaceable, orderly, becoming christianised and civilised. Europeans number 3,507, and there are some 10,000 Indian and Polynesian labourers. During the American civil war European cotton growers first appeared in Fiji. The principal chief, "king," **Thakombau**, then offered sovereignty to England, which was refused. White adventurers mingled in his government about 1870, and disturbances ensued. In 1874 the "king" and chiefs gladly ceded the group to England. An epidemic of measles soon after carried off one-third of the native population. Boundaries determined in 1880. During '88 trade continued to decline, the total trade in '87 being about one-half of that in '83, due to the disorganised condition of the labour market, and the falling off of imports from the other Pacific Islands. Consult **Horne's "Year in Fiji"**; **Cooper's "Coral Lands"**; **Petherick's "Catalogue of the York Gate Library"**; **Gordon and Gotoh's "Australian Handbook"**; **The Torch**; "Coral Lands of the Pacific," by **H. Stoneham Cooper**; *The Statesman's Year Book*; *Almanach de Gotha*, etc. For Executive Council see **DIPLOMATIC**.

Finance. National. The public revenue is now derived from customs and excise duties, probate and legacy, etc., duties, stamps, and tax, house duty, property and income tax, the post office, the telegraph service, the hereditary revenues of the Crown from woods, forests, and land, and a number of miscellaneous

sources, including fee and patent stamps. Little more than half a century ago, scarcely a necessary of life, not to mention luxuries, escaped taxation; and an idea of the extent to which the system was carried may be gained from the statement that whereas the total number of articles and subdivisions of articles in the English Tariff of Import Duties was 53 in 1875, in '80 it was 207, and in '80 no less than 1,046. [Figures showing the revenue and expenditure in each year from 1870-1 to 1888-7 are given in our '88 edition, with some statistics showing the very large extent to which the increased taxation has fallen on payers of direct taxes.] The public expenditure may be classed under two heads:—(1) Consolidated Fund Services, or sums the payment of which from the Consolidated Fund has been already authorised by Acts of Parliament, and which are issued at the proper time without the annual intervention of Parliament; and (2) Supply Services, which are the numerous items brought forward every year in Committee of Supply. Under the first head are included the charges for interest and management of the National Debt, the Civil List and Annuities to the Royal Family, and many salaries and pensions which are set forth in some detail below, and which in the national balance-sheet are included under "Other Consolidated Fund Charges." The total expenditure for Consolidated Fund Services in '87-8 was £27,971,995, and for Supply Services, £59,451,650. When the Address in reply to the Queen's Speech has been agreed to in the House of Commons, the House decides that it will on a future day resolve itself into a Committee to consider of the Supply to be granted to Her Majesty, and into a Committee to consider of Ways and Means for raising the supply granted to Her Majesty (see SUPPLY and WAYS AND MEANS). The financial year ends on March 31st, and generally after but sometimes before that day the Chancellor of the Exchequer makes the financial statement of income, expenditure, and national indebtedness, known as the Budget. Although all bills granting supplies and imposing taxation must, like other bills, go through the House of Lords and receive the royal assent, they can, according to constitutional usage, originate in the Commons alone. Not only are the aids and supplies to the sovereign in Parliament the sole gift of the Commons, but bills embodying them may not be amended by the Lords; and although the Lords have exercised the power of rejecting bills of several descriptions relative to taxation by negating the whole, yet the exercise of the power by them has not been frequent, and is regarded by the Commons with peculiar jealousy. There is a standing committee of the House of Commons for the examination of the accounts showing the appropriation of the sums granted by Parliament to meet the public expenditure; and the Comptroller and Auditor-General, who has the duty of auditing all public accounts, reports to this committee whether or not the expenditure has been in accordance with the purpose for which it was granted.—The Civil Service votes, given in detail below, will be found well worthy of study. In these estimates are included a large number of grants in aid of local taxation, and charges transferred from Local to Imperial Funds (including certain charges in respect of public vaccination). Among the grants made during '87-8 were those for Rates on Govern-

ment Property, Metropolitan Fire Brigade, Disturbed and Main Roads, Poor Law Unions (for salaries of teachers, moiety of salaries of medical officers, etc., paid out of the Local Government Board vote), Pauper Lunatics, Metropolitan Police, Police (counties and boroughs), Prisons, Reformatories, etc. Appended are the totals of these grants in aid in '87-8 and the estimates for '88-9 (see also Budget, opposite):—

	1888-89.	1887-88.
England and Wales	£ 3,527,066	3,767,583
Scotland	542,124	568,547
Ireland	2,091,354	2,071,031
Total for Great Britain and Ireland	£ 6,160,544	6,407,161

These grants in aid of local rates will, so far as England and Wales are concerned, disappear in '89-90 from Imperial Finance under the Local Government Act (see *post*, also Session '88, sect. 27). On the opposite page is given the National Balance Sheet for the year ending March 31st, '88, with the Budget Estimate for the current financial year which commenced on the 1st April. Taking the heads of revenue received during '87-8 in their order, the following is a detailed statement of the net produce from Customs:—

Beer, Mum, Spruce, etc.	£ 10,213
Chicory	71,012
Cocoa and Chocolate	82,940
Coffee	187,562
Currants	317,511
Figs	29,244
Plate (Gold and Silver)	9,746
Plums (Dried or Preserved)	10,122
Prunes	5,158
Raisins	176,696
Spirits (Colonial and Foreign):	
Rum	2,034,286
Brandy	1,307,817
Geneva	125,511
Other Sorts	756,732
Tea	4,613,312
Tobacco and Snuff	8,713,944
Wine	1,085,046
Miscellaneous	38,425

The following is the net produce of the different heads of Excise duties:—

Beer	£ 8,711,532
Railways	314,933
Spirits	13,028,204
Chicory	1,744
Tobacco (Home-grown)	160
Coffee Mixture Labels	2,857
Licences, viz.:	
Auctioneers, Appraisers, etc.	79,300
Beer and Cider, and Beer and Wine	186,574
Brewers	19,280
Dog	354,278
Establishment, viz.:	
Armorial Bearings	74,526
Carriages	549,525
Male Servants	136,287
Game	179,143
Gold and Silver Plate	47,019
Gun	86,317
Hawkers and Pedlars	26,942
Medicine Vendors	5,396
Pawnbrokers	35,722
Refreshment House	7,140

Spirits:	£
Distillers and Rectifiers	4,242
Dealers	121,194
Publicans, including Grocers in Scotland and Ireland	1,485,936
Tobacco	84,855
Wine and Sweets	67,366
Other than the foregoing	10,310

Stamps.—Appended are the net amounts received under the different heads of duty:—

Probate and Account Duty	£ 4,596,620
Legacy Duty	2,814,559
Succession Duty	830,502
Total Death Duties	8,421,683
Corporation Duty	42,521
Deeds and other Instruments not included under the following Heads	2,385,602
Bills of Exchange	561,431
Receipts, Drafts, and other <i>id.</i> Stamps	992,325
Bankers' Notes	285

Composition for the Duties on the Bills and Notes of the Banks of England and Ireland, and of Country Bankers	£ 121,720
Cards	16,291
Gold and Silver Plate, viz.:	
Gold	22,655
Silver	54,445
Licences and Certificates	158,234
Life Insurances	43,555
Marine Insurances	124,728
Medicines (Patent)	191,475

The Items Land Tax and House Duty speak for themselves. In regard to the Property and Income Tax, which was at the rate of 7d. in the £ with arrears of the prior year at 8d. in the £, an approximate appropriation of the net sum produced under the different schedules, if based on the statistics of assessments for '86-7, would be:—Schedule A, Lands, Tenements, etc., £4,879,901; Schedule B, Occupation of Lands, Tenements, etc., £329,735; Schedule C, Annuities, Dividends, etc., £1,290,168; Schedule D, Professions, Trades, etc., £6,872,641; Schedule E, Public Offices, etc., £903,057.—The gross Post Office receipts were composed of postage collected by postmasters in the country and Metropolis, postage stamps sold, commission on money orders (£133,446), commission on postal orders (£159,879), and other items; and the payments out included £397,225 to railway companies and to H.M.'s Customs on account of parcel post. The figures given in the balance-sheet above show the net receipts. The sum which appears against the heading of Crown Lands is the net produce of the Woods, Forests and Land Revenues of the Crown, which is paid over and consolidated with the rest of the public revenue in return for the Royal Civil List. Under the head of Interest on Advances for Local Works are included the following items:—Menai Bridge, £1,508; Public Works Loans, Great Britain, £725,710; Public Works Loans, Ireland, £182,344; Irish Land, £13,303; Land Law (Ireland) Act, 1881, £15,441; Irish Land Commission in respect of the Land Act, Tramways and Public Companies Act, and Purchase of Land Act, £11,718. The interest on the Sardinian Loan amounted to £29,650, on the Cape Railway Loan to £14,000, and the interest on the purchase money of Suez Canal Shares received from the Egyptian Government, was £198,829. "Miscellaneous" contains numerous features of interest. Small branches of the hereditary revenue, under which is

included £1,740 for "Rents and Royalties of Guano, etc., Islands," brought in £31,906; in the total of £1,268,296. Receipts by Civil Departments are included, £400,123 fees and fines received at County Courts, £553 received at the Foreign Office for passport fees, £868 received in fees at the Friendly Societies Registry, £5,686 received at the Home Offices for fees on appointments, naturalisation, under the Explosives Act, from pedlars in the Metropolis, and for chimney-sweepers' licences in the Metropolis; £22,669 received in fees at the House of Commons, £24,773 net, fees received at the House of Lords, £64,439 Supreme Court of Judicature, England; Mint (including £200,447, seigniorage on silver purchased for coinage, £36,205 profit on bronze coinage, and £4,730 repayment of expenses of coinage and specimen dies for Colonial and Foreign Governments, etc., and £174 gold and silver sweep) £242,253; admission fees to the National Gallery, £1,091; fines and fees at the Police Courts, London, Chatham, and Sheerness, £11,837; South Kensington Museum, admissions and fees, £4,509; Stationery Office (including sale of publications, £42,019; sale of waste paper, £9,573, sale of ordnance maps, £11,387, income of London, Edinburgh, and Dublin *Gazettes*, £6,849—which sum is in addition to £20,171 revenue of the London *Gazette* collected in stamps), £95,449; fees received from visitors to the Jewel House, Tower of London, £1,758; candidates' fees, University of London, £11,841. The Revenue Departments (including Packet service) contributed to Miscellaneous Revenue £478,475, which was made up of such items as rent of Crown premises, and of goods deposited in bonded warehouses; £17,481 in respect of fines, seizures and penalties credited to Inland Revenue; and £273,827 received by the Post Office from the National Debt Commissioners on account of charges of management of Post Office Savings Banks and Government Annuities and Insurances. Under the head of Post Office Savings Banks is shown £67,002 surplus of interest accrued to 31st December, 1886, from securities to the credit of the Post Office Savings Bank Fund, beyond the interest paid and credited to the depositors, etc. The last great item under the head of Miscellaneous is £748,521, for Fee and Patent Stamps. Among the large sums which went to make up this total were Companies' Registration, £43,215; County Courts, Ireland, £31,028; District Audit, £29,352; Judicature, England, £369,913; Judicature, Ireland, £36,173; Metropolitan Police Courts, £8,648; Patents for Inventions, £125,511.—Turning to the **Expenditure for '87-8**, some references to the **National Debt Charges**, and to the capital of the Debt, will be found lower down. Analysing item 2, "**Other Charges on the Consolidated Fund**," there is first the sum of £410,470 issued on account of the **Civil List**, which is made up of £69,000 for Her Majesty's Privy Purse; £131,260 for salaries of Her Majesty's household and retired allowances; £172,500 expenses of Her Majesty's household; £13,200 for Royal Bounty, Alms, and Special Services; £8,040 unappropriated; and £25,470 for pensions on the Civil List limited to £1,200 per annum (see **CIVIL LIST PENSIONS**). Next comes a charge of £158,000, being the amount of the **annuities to the Royal Family**. In addition there is a list of **pensions for military and naval services**, the amount and

the duration of the grants being: Lord Rodney (and all the heirs male to whom the title shall descend), £2,000; Earl Nelson (and to whom the title shall descend), £5,000; Duke of Wellington (for life of the present duke), £4,000; Viscount Combermere (to present viscount and next heir male on whom the title shall descend), £2,000; Viscount Exmouth (and to the heirs male on whom the title shall descend), £2,000; Lord Seaton (present baron and next heir male who may succeed to the title), £2,000; Lord Keane (for life of present baron), £2,000; Viscount Hardinge (to present viscount and next heir male who may succeed to the title), £3,000; Viscount Gough (to present viscount and next heir male who may succeed to the title), £2,000; Lord Raglan (for life), £2,000; Sir H. Havelock-Allan, Bart. (for life), £1,000; Lord Napier of Magdala (to present baron and his heir male), £2,000; and the heirs of the Duke of Schomberg, £720: total, £29,720. **Pensions for political and civil services** amounted during the year to £19,047, and the recipients include the Countess of Elgin and the Countess of Mayo, widows of Governors-General of India; Mr. S. P. Walpole, £2,000; Mr. Childes, M.P., £1,133; Mr. C. P. Villiers, M.P., £1,200; Mr. Shaw-Lefevre, £1,200; Lord Enly, £1,200. Viscounts Eversley and Hampden each received £4,000 a year as late Speakers of the House of Commons. **Pensions for judicial services** (England) amounted to £47,970; among the recipients being the Earl of Selborne, £5,000; Lord Herschell, £5,000; Lord Blackburn, £3,750; Sir J. Baron, the late Sir H. Keating, Lord Bramwell, the late Sir R. Baggallay, Lord Penzance, and Sir M. F. Smith, retired judges, each £3,500; Sir W. Grove, £1,198 (part of a judicial pension of £3,500), and many retired county court judges—who as a rule received £1,000 each. A large sum is paid by way of **compensation**, some amounts being issued to persons formerly attached to the old Courts of Requests, the Marshalsea, and the Ecclesiastical and Prerogative Courts. Other sums were paid as judicial **pensions to retired judges** in Scotland and Ireland; and there were a few **pensions for diplomatic services** granted prior to 1869, the pensions granted for these services since that time being now voted in the Civil Service Estimates. The **miscellaneous pensions**, amounting to the comparatively small sum of £5,123, include charges formerly on the Civil List of George III. The **salaries and allowances** comprise the sums of £5,000 paid to the Speaker of the House of Commons, £20,000 to the Lord Lieutenant of Ireland; the salaries of the judges, the Lords of Appeal in Ordinary receiving £6,000 per annum each; the judges of the Court of Appeal, of the Chancery Division, and of the Queen's Bench Division receiving £5,000 each, with the exceptions of the Master of the Rolls, whose salary is £6,000, and the Lord Chief Justice, who is paid £8,000; the salaries of the county court judges, who are paid £1,500 a year each; the salaries of the Metropolitan police magistrates, one at £1,800 and twenty-two at £1,500 per annum; the salaries of the Scotch judges, sheriffs and sheriffs' substitutes, and of the Irish judges. Miscellaneous services charged on the Consolidated Fund include £62,910, being the amount of annuities for ten years payable to the National Debt Commissioners, and created to redeem perpetual annuities and pensions (see **PER-**

PETUAL PENSIONS). Several other items on the Expenditure side of the balance-sheet speak for themselves; reference to the cost of the "Army" and "Navy," will be found under those headings; and the following is a list of the Civil Service Votes granted during the financial year '87-8, with the estimates for '88-9:—

	1888-89.	1887-88. (Grants in Session of 1887.)	1888-89.	1887-88. (Grants in Session of 1887.)

Up to the adjournment in Aug., '86 of the above had been voted, leaving 130, besides five votes for the Revenue Departments, to be passed at the autumn sitting. The National Debt was instituted by William III., whose first regular loan, obtained in 1694, consisted of £1,200,000. Since that time other advances have been made by the Bank, and also by the Bank of Ireland, and enormous loans have been negotiated for the Government. Thus, at the accession of Anne the debt had grown to nearly thirteen millions; when George III. ascended the throne it amounted to more than a hundred millions; at the conclusion of the American War, in 1784, it stood at £249,851,000, and though there was a small decrease during the period of peace, 1784-93, additions amounting to £601,500,000, were made during the French War, and after the battle of Waterloo the debt reached the startling figure of £885,000,000. Since that year it has been considerably reduced. Thus, at the end of the year 1856-7 the total debt funded (including stock held on account of unclaimed dividends), unfunded, and the capital value of terminable annuities in £3 per cent. stock at par, was £837,144,579; at the end of '66-7 it was £802,210,413; end of '78-80, £772,934,938; '76-7, £770,014,723; end of '79-80, £771,605,908; end of '85-8, £742,282,411; end of '86-7, £736,278,688; and at the end of the last financial year (March 31st, '88) £705,575,073. The gross totals of debt on March 31st, '87, and March 31st, '88, were made up as follows:—

	1887	1888
(1) Funded Debt . . .	£637,637,640	£609,740,743
(2) Terminable Annuities . .	81,123,148	78,449,230
(3) Unfunded Debt . . .	17,517,900	17,385,100

Total National Debt (D) £736,278,688 £705,575,073

(1) This consisted of the perpetual annuities payable on the various stocks which have been issued by the Government from time to time—viz., 3½ per cents., consols (3 per cents.), reduced 3 per cents., new 3 per cents., 2½ per cents., etc.; and the debts to the Banks of England and Ireland at 3 per cent. (2) These are annuities in which the payment is made for lives or terms of years, after which it ceases altogether, the return made being increased as the period of time is shortened; in other words a portion of the principal is repaid with the interest in each year while the arrangement continues. In estimating the amount of the Debt, the capital value of these annuities is calculated on 3 per cent. stock at par. (3) This consists of temporary loans raised upon the security of bills and bonds issued by the Exchequer and Treasury. The State has for nearly a century made advances of money to bodies and individuals in furtherance of objects approved by Parliament, which advances have been managed by the Treasury, Public Works Loan Commissioners and West Indian Incum-

bered Estates Commissioners, the Irish Board of Works and the Paymaster of Civil Services, and the Irish Land Commissioners. Up to March 31st, '88, there had been advanced in this way a total of £110,000,995,4, of which £59,751,832 had been repaid, £12,020,323 had been remitted, and £63,587 had been written off from the account of assets, the assets on the above date being estimated at £37,694,211. The Local Loans Debt was always treated as a part of the National Debt until, under the Act of '87, Mr. Goschen separated the accounts, while in the course of the year '86-7 he reduced the National Debt by £26,558,959, being stock exchanged for Local Loans stock and cancelled. This must be taken account of in comparing the totals of Debt given above. The Public Works Loans Act '88 provides for issue for the purpose of loans by the Public Works Loan Commissioners of £2,000,000, of loans by the Public Works Loans Commissioners, Ireland, of £1,000,000, and of loans by the Scotch Fishery Board of £30,000; but this, as will be gathered from what appears above, was not added to the National Debt. To the figure (D) of £705,575,073 there are to be added certain capital liabilities amounting to £1,152,508, and deducted certain assets (including the nominal value of the Suez Canal shares, £3,532,040), amounting to £5,522,917; also the balances at the Banks of England and Ireland, amounting on March 31st, '88, to £7,647,072. With these readjustments the net balance of the Debt stood on March 31st, '88, at £693,557,592, as compared with £700,846,465 on the corresponding day of the preceding year, both estimates being made upon the same basis. The total charge for the service of the Debt was, in 1816, £32,457,000; in '86-7, £26,074,871; '73-4, £26,706,726; '76-7, £27,992,834; '79-80, £28,762,874; '85-6, £23,449,678; '86-7, £27,958,023; '87-8, £26,213,911. The amount of the charge in any year depends upon the sum required for interest plus the sum, if any, devoted by the operation of terminable annuities and sinking funds to the repayment of capital. In 1875 Sir S. Northcote fixed a sum for the annual service of the Debt inside the Permanent Annual Charge of the Debt, which fixed sum included all charges connected with the Debt except such as related to that part of the funded and unfunded debt which had been specifically created for local loans and other reproductive purposes. The sum payable for interest was considerably within this fixed charge, and the balance was to be applied to reduction of capital; and as the amount required for interest decreased year by year the annual reduction would in course of time have grown very large. Although the scheme was, owing to extraordinary financial requirements, partly suspended at times, large reductions of capital were effected by it. [For details see '88 ed.] Mr. Goschen in his '87-8 Budget reduced the fixed charge from £28,037,000 to £26,000,000. This left £5,000,000 a year applicable to the redemption of Debt, which he then said would redeem at par £600,000,000 in about fifty-two years, and £700,000,000 (practically the whole Debt) in about fifty-seven years. The most material change made for many years in regard to the service for the Debt was, however, effected under the National Debt (Conversion) Act, '88, which provided for a reduction of interest from 3 per cent. to 2½, and ultimately to 2½. The holders of New Threes who could be paid off at any time without notice were offered a 3 per cent. dividend for the year ending

April '89, if they brought in their stock for conversion; and proprietors of Consols and Reduced were, in addition, offered a bonus of 5s. per cent. on condition that they forewent their claim to a year's notice before redemption. Recognised agents who brought in these two latter classes of stocks for conversion received 1s. 6d. per cent. brokerage. Nearly all the holders of New Threes accepted the scheme, and the few who refused to come in were paid off. On July 5th, out of £558,000,000 of Three per Cents. outstanding when Mr. Goschen took the work in hand, £512,000,000 had been converted, so that all that remained to be dealt with were £40,000,000 Consols and £8,000,000 Reduced. These sums may be by the National Debt (Supplemental) Act be paid off at par on or after July 8th, 1889, by payments of not less than £500,000 at one time. The Conversion Scheme does not materially affect the Budget for the year 1888-9, but from April '89, holders of converted stock will receive 2½ per cent. interest (instead of 3 per cent.) until 1903, and afterwards 2½ per cent., the new stock being guaranteed against redemption until 1923. The saving to the country by the operation will be about £1,400,000 a year from 1889 to 1903, and from 1903 of about £2,800,000 per annum. Mr. Goschen unfolded his Budget for '88-9 on March 26th, or some few days before the close of the financial year '87-8, so that certain of his figures for that year were necessarily conjectural; we, however, give the exact returns as made after the close of the year. In the year '87-8 his estimated surplus of £288,706 had from various causes been turned into a final excess of income over expenditure of no less than £2,378,609, or the largest since 1872-4. [The Budget Estimate for '87-8 will be found in our '88 edition, and may be compared with the actual receipts given in the first column of income and expenditure in the table printed above.] With regard to the current financial year ('88-9), he estimated his total expenditure on the basis of existing liability at £86,909,944, and his revenue on the basis of existing taxation at £89,287,000, which would give him an estimated surplus of £2,377,056. The financial proposals Mr. Goschen made in connection with the Local Government Bill were of a temporary character so far as the year under consideration was concerned, but were to be followed by a permanent arrangement which was to take effect in '89-90, after the first election of the County Councils. He redeemed the ministerial promise to assist local taxation by a substantial aid from personality, by handing over one-half of the Probate Duty, of which half 80 per cent. would be the share of England and Wales. This was the permanent arrangement, and he estimated that under it the local authorities would in 1889-90 receive £2,130,000, of which the share of England and Wales would be £1,704,000. In the current year the local authorities would receive one-third of the duty, which he estimated would produce £1,420,000, of which the share of England and Wales, 80 per cent., would be £1,136,000. He also proposed the following new license duties:—Vans exceeding 10 cwt. in weight to pay a duty of £1, agricultural carts used upon a farm for purposes of husbandry, and not for haulage, being exempt; carts of over 2 cwt. as 6d. per wheel, the wheel duty to be leviable upon heavy waggon in addition to the £1 duty—estimated produce £150,000 for heavy carts and £150,000 wheel tax; £1 each upon pleasure horses, £5

each upon racehorses, horse dealers to pay a composition duty of £15—estimated yield, £540,000; total, £840,000. These new licence duties were to be collected by the Commissioners of Inland Revenue, but the proceeds were to be paid in aid of local taxation, so that they do not affect the Imperial Budget. In '89-90 the County Councils are to take over the proceeds of a number of existing licence duties, but this proposal obviously does not affect the figures of '88-9. The proposals affecting the Imperial Budget were (in addition to that regarding the probate duty) as follows:—A new scale of carriage duties by which all two-wheeled carriages will, as before, pay 15s.; four-wheeled carriages drawn by one horse, £1 1s.; four-wheeled carriages drawn by two or more horses, £2 2s.; hackney carriages, 15s.; and carriages let on hire by jobmasters for less than three months, 15s.;—estimated loss, £30,000; repeal of the hawkers' licence duty; exemption from income tax of lands cultivated by the owner for husbandry only, and on which no profit is made, and one penny off the income tax; a tax of 5s. per dozen upon champagne and other imported bottled wines; increase of $\frac{1}{2}$ per cent. on the Succession duty; a more stringent enforcement of the Stamp duty upon deeds; an adhesive stamp of 1s. per cent. per annum upon the nominal value of all securities to bearer which are now circulated without having paid a registration stamp of 10s. upon being issued; an increase of the stamp on contract notes from 1d. to 6d., and an ad valorem duty of £1 per thousand upon registration of limited liability companies, whatever the amount of the nominal capital may be. A grant in aid of main roads included in the first estimate of expenditure was otherwise provided for. The following shows the financial effect of the above proposals:—

First projected surplus	£ 2,377,056
Tax on bottled wines	125,000
Increase to succession duty	50,000
Increased stringency in collection of stamps	50,000
Tax on foreign securities and bonds to bearer	200,000
Tax on contract notes	50,000
Tax on companies' issue	110,000
Grant in aid of distrikted main roads (otherwise provided for)	205,000
	3,257,056
	—
Deduct:—	
Revision of carriage tax	30,000
Repeal of hawkers' licences	25,000
Probate duties to be handed over to local authorities	1,420,000
Income tax:—	
Allowance in respect of Schedule A	20,000
Remission of 1d. to 6d.	1,550,000
	3,045,000
Final estimated surplus	212,056
	3,257,056

Mr. Goschen subsequently, at the suggestion of Mr. Whitmore, agreed, instead of abolishing the hawkers' licence duty, simply to reduce it from £4 to £2. He also introduced a bill limiting the additional duty of 5s. on imported bottled wines to sparkling wines, while in order to meet the case of Saumur and other cheap sparkling

wines power was taken to reduce the duty to 2s. per dozen where the wine could be proved to be worth less than 30s. per dozen on its arrival in England. The duty on this basis would, he estimated, give him at least £100,000, and probably the full £125,000 originally estimated. No material modification was therefore made in the above figures. Effect to these Ministerial proposals was given in the Customs and Inland Revenue Act and Customs Wine Duty Act. With regard to the relations between Imperial and local finance, under the temporary arrangement for the year 1888-9, as first proposed, the local authorities in England and Wales would receive, in addition to the grants in aid above mentioned, the estimated sums of £1,135,000 Probate Duty, £300,000 Van and Wheel Tax, and £540,000 Horse Tax; total £1,975,000. Under the permanent arrangement the grants in aid local taxation would disappear, but certain licence duties already in existence, and the new licence duties to be created by the Excise Duties Local Purposes Bill, would, with the contribution from the Probate Duty, more than replace them.

The estimate was that the local authorities would lose by the disappearance of grants in aid £2,582,454, and gain by the Probate Duty contribution and from new and transferred licence duties, £5,595,873; net gain £3,013,419. A strong agitation being raised against the Van and Wheel Tax, the Chancellor of the Exchequer in April so far modified his proposals as to provide that no vehicle under 10 cwt. in weight should be taxed, and that the duty on vehicles of over that weight should be—two wheels 10s., four wheels or more £1. Mr. Goschen estimated that he would lose by his modifications £100,000 out of the £300,000 which in the first instance he judged the Van and Wheel Tax would produce. The Excise Duties (Local Purposes) Bill, by which legislative effect was to be given to this scheme, was set down to be further proceeded with at the autumn session. On Nov. 28th the First Lord of the Treasury intimated that, owing to the great delay which had recently taken place in the progress of public business, the Government were compelled to give up all hope of passing the Van and Wheel Tax Bill (Excise Duties (Local Purposes) Bill) during the current session; and on Nov. 29th the Chancellor of the Exchequer said the withdrawal included the proposed tax on pleasure-horses and racehorses, which were dealt with in the same bill. As to the future, the best course would be to take the opinion of the county councils and of the local representatives as to what would be the best means of reinforcing local finance by the £700,000 which the ratepayers lost owing to the fact that it had been found impossible to pass the measure. See Session, sections 14, 25, and 27.

Fire Brigade, Metropolitan. See METROPOLITAN FIRE BRIGADE.

Fire Extinction. Various methods will be found under this heading in ed. '86.

Fire Insurance, '88. See INSURANCE.

Fire Insurance, Law on, '88. In the course of Walker v. the London and Provincial Fire Insurance Co. (Irish Court of Exchequer) in the plaintiff's policy there was a condition exempting the defendants from liability "for any loss occasioned by or in consequence of incendiarism." The owner of an adjacent house having set it on fire, the flames spread to the plaintiff's premises, causing heavy damage.

The Irish judges held that this loss fell within the exemption clause, and that the plaintiff could not recover.

Fireworks, Sale and Public Use of. The Explosives Act 1875, secs. 31 and 39, prohibits the sale of any explosive, including fireworks, to any child apparently under the age of 18 years. Penalty £5. A similar penalty by sec. 80 is also incurred by anyone throwing, casting, or firing any firework, in or into any highway, street, thoroughfare, or public place.

First Commissioner of Works is chief of a nominal commission which has in charge the royal palaces, parks and pleasure gardens, Tower of London, Houses of Parliament, Government offices, county court buildings, Metropolitan police courts, Science and Art Department buildings, British Museum buildings, and certain diplomatic and consular and other buildings, for the repair and maintenance of which Parliament makes an annual grant. He is also guardian of certain Ancient Monuments (*q.v.*). By the London Parks and Works Act 1837 (*q.v.*) certain Metropolitan open spaces were removed from his charge. 12, Whitehall Place, S.W.

Fish Commission, United States, The. See MARINE BIOLOGICAL LABORATORIES.

Fish Culture. The art of fish culture is divided into two branches: (1) that in which the natural conditions under which fish live and thrive are brought up to the highest pitch of perfection—without, however, interfering directly with the ordinary processes of nature; and (2) that in which artificial interference is so far-reaching as to change the character of the natural circumstances under which fish exist, if not actually to supersede them altogether. The first branch of fish culture has been practised ever since the time when the Romans used to import oysters from Britain, and place them in Lake Fusaro, where special provision was made for their reception, and for the rearing of the spat; and when they introduced exotic fish, such as the *carpes*, from the waters of the *Ægean* Sea into those of the Italian coasts. The abbots and monks of the Middle Ages also practised this branch of fish culture when they bred and fattened carp and other fish in ponds or "stews" which they invariably constructed in the immediate neighbourhood of their monasteries and abbeys. The second branch of the art is of much more recent date. It originated in the discovery that the eggs of fish—those of salmon were first experimented upon—can be taken from the body of the parent fish, impregnated with the milt from the male, and "hatched" in tanks through which a continual flow of water passes. So far, indeed, can nature be departed from in the case of fluvial fish eggs, that whereas under natural conditions the female fish deposits her eggs upon gravelly locations or upon aquatic plants, where they are immediately afterwards impregnated by the milt of the male fish, the ova can be taken from one fish and deposited in an open vessel, and the milt may be taken from another fish, and provided it be meanwhile excluded from the air, the two may be mixed together many hours—even days—afterwards, and impregnation will be effected as successfully if no water is used as if the whole process were conducted under natural conditions. After the ova become fertilised, they are placed in suitable vessels, either with or without a layer of gravel at the bottom (in imitation of the bed of a stream), or on glass grids. According to

the temperature of the water, so the development of the embryo fish proceeds, but the usual time occupied in the process of incubation is from about ninety to a hundred days. The fry exist without taking food from exterior sources, being nourished by the *umbilical sac* attached to them. After the sac is absorbed the allvins are turned into ponds or streams, and, when necessary, they are regularly supplied with food, but they are often turned into waters and left to look after themselves under natural conditions. The two branches of fish culture may thus be likened in one respect to agriculture in the open field, where art only interferes to keep down weeds and destructive enemies, and to encourage or supplement the natural supply of nutriment; and, in another respect to the culture of tropical plants, where art supplants nature altogether and supplies everything that is needed. As in agriculture, so in fish culture, the two systems may be combined; and like seedlings artificially forced and afterwards planted in the open, the young fish artificially bred may be turned out into the natural stream. The development of salmon and trout eggs may be retarded, by keeping them at a reduced temperature (just above freezing point), sufficiently long to enable them to be transported to Australia or New Zealand; and in this way trout have been introduced into the waters of the Antipodes, to which they are not indigenous. The ova of marine forms, such as the mackerel, cod, herring, and other fish have also been artificially impregnated and hatched; but the difficulties attending the process are greater than those accompanying the propagation of trout and salmon. In America the practice has been carried out on a very large scale both by the Canadian and the United States Governments, and has been productive of practical results. The growth of the science of pisciculture in this country, although tardy, is steady. The **Midland Counties' Fish Culture Establishment**, founded and owned by Mr. William Burgess, at Malvern Wells, is the largest of its kind in England. It contains 100 ponds and two hatcheries, each capable of accommodating six millions of ova. In order to assist Fishery Boards and other public bodies in developing fish life in the waters under their control, Mr. Burgess is hatching ova for them free of charge, and turning the fry into their respective rivers and streams. During '88 20,000 salmon of one year old were deposited in the Severn, having been hatched and reared gratuitously for that river. As many as 7,000,000 perch and other coarse fish were hatched out during the year, and as many salmonids. The **United States Fish Commissioners** have notified their willingness to co-operate with Mr. B.'s undertakings, and to forward early in '89 consignments of the whitefish ova (*Coregonus albus*), a very valuable food form. Elaborate arrangements have been made for their reception, and a pond measuring 200 feet long and 100 feet wide, having a considerable depth, has been constructed for that purpose. The golden orfe, of Bavaria, and the German carp, are also being cultivated. In consequence of the demands being made upon the establishment, it is being still further enlarged. **London office**, New Inn Chambers, Wych St., Strand, W.; sec., Mr. W. August Carter. **Fisheries Preservation Association—Office**, 11, Seymour Street, Portman Square, W.

Fisheries Question. The history of the fishery disputes between England and the United

States is a long one. In 1783 a treaty was concluded by which Americans had liberty to take fish of every kind on such parts of the Newfoundland coast as were fished by British subjects, but not to dry and cure them on that island. They could, however, dry and cure their fish in any of the unsettled bays or creeks of Nova Scotia and Labrador; but only so long as these creeks were unsettled. After the war of 1812, which Great Britain declared abrogated the fishery compact of 1783, a long controversy between the two Governments took place, which culminated in an arrangement in 1818 by which one part of the in-shore fisheries was left open to Americans as before. But from the other they were excluded, except that they were to be admitted to bays or harbours for purposes of shelter, or for obtaining food or water only; and they were put under restrictions as to taking, drying, or curing fish therein. For eighteen years there was no dispute; but in '36 Nova Scotia passed an Act authorising officers to board foreign vessels within the three-mile limit, to order them off, or in the event of refusal to bring the vessel into port and fine the master £100. Constant disputes followed, which were finally settled by the *Reciprocity Treaty of '54*; and for ten years Americans were allowed to fish as of old, while there was free trade in many articles between the two countries. This treaty terminated in '65; and in '68 the Dominion Parliament passed an Act which contained many provisions objected to by Americans, and many seizures and consequently disputes followed. Another arrangement was made at Washington in '71, but it did not put an end to the wrangling between the two countries. This arrangement came to an end three years ago. Since then many American vessels have been seized on the British North American coasts, and others have been prevented from buying bait or ice. The Dominion Parliament two years ago passed a law giving power to seize foreign vessels entering the Dominion waters for any purpose other than what is provided by treaty. It was to put an end, if possible, once for all, to such seizures and disputes that a commission met towards the close of '87 in America, with the *Rev. Hon. Joseph Chamberlain* acting as Commissioner for England. The Commission, including several adjournments, sat for about three months, and ultimately agreed to a Treaty, which was signed by the representatives of England, Canada, and the United States, and also by President Cleveland. It was of course in the nature of a compromise, but it promised to put an end to the too-frequently recurring disputes between the American and Canadian fishermen. The treaty provided for a rectification of what is known as the three-mile limit, which in future was to be reckoned not from headland to headland, but in bays and creeks from an imaginary line drawn across the entrance at the first point where the width did not exceed ten miles. The Treaty also extended the original permission to American fishermen to enter Canadian ports and harbours for certain specified purposes. American fishermen by the new arrangement were allowed to load, re-load, and replenish supplies, free from the limitations of the 1818 Treaty. As to the vexed question of buying bait in Canadian ports, the Treaty provided that this would be conceded to American fishermen provided the United States abandoned the taxes on fish products of Canada sent into the United States. The Senate at

Washington, however, refused to ratify the Treaty, which remains a dead letter. This abortive conclusion to the negotiations was very keenly felt in Canada, where threats were made to put the old laws in force with more severity than ever. President Cleveland then threatened retaliation, and in a message to Congress asked for a legislative Act conferring upon the United States executive power to suspend by proclamation the operation of all laws and regulations permitting the transit of goods, wares, and merchandise in bond across or over the territory of the United States to Canada. A bill to this effect was drafted, but on the part of the Canadians it is maintained that before such a bill can be put in force, ten years' notice must be given. By-and-by it is still hoped that a Treaty which was regarded as fair by all parties may be resuscitated, and thus lead to a settlement of the difficulties between the two countries. At a banquet given at Ottawa, Oct. 18th, by the working men of Canada to the Hon. J. A. Chapleau, Secretary of State, Sir John Macdonald, who was among the guests, made a speech in which, referring to the Fisheries Treaty, he expressed the belief that when the Presidential election in America was over, and the people of the United States had regained their characteristic calm and coolness, they would look with more favourable eyes upon the Treaty, and would have another arrangement based upon the same lines. If not, continued the Premier, then the course of the Canadian Government was plain. They would rely upon the Treaty of 1818, and let the law take its course. If any difficulty arose as to the construction of that Treaty, Canada must find some way, by arbitration or otherwise, to determine its true and legal meaning.

Flax University, Nashville, Tenn., U.S. The chief collegiate institution of the great S.W. for coloured people. The "Jubilee singers" were students there. See ed. '86.

Flax was first planted in England in 1532-3, and in 1783 bounties were paid to encourage its cultivation. Two years later we imported 17,695 tons of hemp and flax from Russia; while in 1842 an import tax was imposed on all foreign flax, but this was taken off three years later. Flax growing has made but little progress in England, and of late years the acreage has been getting less and less, for in '67 the area was 20,000 acres, while now it is only 1,856 acres. The Irish returns give 253,257 acres in '67, and 89,225 acres in '84, the acreage being divided as follows:—Ulster, 87,917; Leinster, 893; Connaught, 204; Munster, 211. The decline is chiefly attributed to the encroachment of the very cheap fabrics made from cotton, and also the substitution of wool, which is being used largely instead of linen for outer clothing in foreign countries. In '87 the area was 130,282 acres, but in '88 it is only 123,586 acres, or a decline of 16,696 on the '87 acreage. The total production in Ireland in '87 was estimated at 16,357 tons, and the British supply was 465 tons. During the past ten years Irish production averaged 20,762 tons, British, 880 tons, and the imports 82,911 tons, or a total of 104,553 tons. Ireland is essentially a flax-growing country, owing to its insular position, and the moisture of the climate, which is the first condition to successful flax culture. The *Rev. E. M. Barrington, M.A., LL.B.*, in an address on the drought of '87, referred to the effects of

moisture on the flax plant. Subsequent information obtained proved that the larger the rainfall the higher the yield. Donegal, for instance, with over 80 per cent. of rain over one half, and 60 to 80 per cent. over the other half, yielded 27 stones to the acre. Antrim, with two-fifths of its surface, above 80 per cent. rainfall, and on three-fifths 60 to 80 per cent. gave 24 stones per acre, while Cavan and Monaghan, having each about 50 to 60 per cent. and one-half 40 to 50 per cent. rain, yielded but 16 stones. Other counties show proportionate returns. It is difficult to ascertain the number of hands employed in the manipulation of the raw material, as the habit in Ireland has been for a large class of farmers to conduct the operations with the aid of their own families. The number of persons employed in the flax mills and factories in Ireland was returned in '85 as 61,749, from children under thirteen years of age and upwards. There are now sixty spinning mills, two concerns having been broken up in '86, which reduces the number of spindles from 873,780 to 843,590 in '87; sixty weaving factories containing 27,300 power looms, making in all 120 concerns. The Scotch Mills in Ireland show a falling off of 59.6 per cent. in Leinster, Munster, and Connaught during the past ten years, reducing the number to twenty-one, while the number in Ulster is 1,033, or a decline of 12.5 per cent.

Floating Grog Shops. See COOPERING AT SEA, and SESSION '88, sect. 38.

Floquet, Charles Thomas, President or Speaker of the French Chamber of Deputies; b. Oct. 28th, 1823, at St. Jean Pied de Port, in the Lower Pyrenees. Called to the Paris bar (1851), and practised for many years; he was also a frequent contributor to the democratic press of Paris. After the fall of the empire he became deputy mayor and member of the National Assembly, but resigned both positions during the Commune. For suspected participation in the latter he was arrested at Biarritz, and interned at Pau until the end of 1871. He subsequently became president of the Municipal Council, and member of the Chamber, where he sat with the Extreme Left. In Jan. 1882, he succeeded M. Herold as **Prefect of the Seine**, a position he resigned a few months later in consequence of a dispute with the Government. Again elected to the Chamber in Oct. 1882, he twice became its **vice-president**, and on M. Henri Brisson forming a cabinet, M. Floquet was elected **president**, an office he filled with tact and dignity. He sits as one of the 38 members for Paris, having been returned second on the list. He was nominated for the **Presidency of the French Republic** on M. Grévy's retirement, but received very scant support. On the resignation of the Tirard Cabinet in April last M. Floquet undertook the task of forming a Ministry, he himself taking the offices of **President of the Council and Minister of the Interior**. M. Floquet is the ablest of the many Prime Ministers France has had of late years, but in the heat of debate allowed himself to be so far provoked by General Boulanger as to challenge him to a duel, which was fought with rapiers in Comte Dillon's grounds in July '88, and resulted in a victory for M. Floquet who inflicted a serious wound in the neck of his adversary. M. Floquet in October introduced a bill for the revision of the French Senate.

Florin. See ed. '88.

Flotsam, Jetsam, and Ligan. These terms are defined by Stephen in his "Commentaries," (vol. ii., p. 545), as follows: "**Flotsam** is where goods are cast into the sea, and there continue swimming on the surface of the waves; **jetsam** is where they sink and remain under water; **ligan** is where they are sunk in the sea, but tied to a cork or buoy, in order to be found again. When found, such goods may be returned to the owner if he appear; if he do not, they are the property of the Crown."

Flower Sermon, The. An annual sermon, preached at St. Katharine Cree, Leadenhall St., E.C., by the rector, Rev. W. M. Whittemore, D.D. Instituted by him in 1853. The discourse is founded upon some floral subject, in harmony with the occasion.

"Flying Roll, The." See JEZREELITES, ed. '88.

Folk Lore—originally the lore (learning) of the "folk" or people, i.e. the natural or uncultured classes of mankind as opposed to the cultured (later literary) classes—is a science the ultimate object of which is the investigation of the primitive mind of man in its various phases towards God and nature. It is thus the handmaid of comparative mythology, and bears directly on psychology and anthropology. Its methods are to collect, collate, and classify all surviving relics of primitive beliefs and superstitions, and to extract the essential and original elements from popular customs, usages, festivals, and games; proverbs, enigmas, saws, and jests; recipes, astrological and weather prophesings; and folk tales and songs. The scope of folk lore is frequently enlarged to include also witchcraft, religious symbolism, and similar subjects; but it is better to restrict the term to traditional lore, and to leave the remainder to the comparative mythologist. The word was first coined by Mr. W. J. Thoms (*d.* 1885), though on the Continent the term *Volkkunde* has been the name of an accepted science since Grimm first wrote, at the commencement of this century. In 1878 a **Folk Lore Society** was established by Mr. Thoms, and it has since published several important collections of folk-tales, etc., and regularly issues a periodical. **President, Mr. Andrew Lang (q.v.). Hon. sec. Mr. J. J. Foster, 36, Alma Sq., St. John's Wood, N.W.**

Football. Although of some antiquity, football was, twenty years back, chiefly confined to our public schools and colleges, and was practically unknown to the general public. Now, however, all is changed. Besides international matches, one division of the country now plays against the other, county meets county, and town meets town; and although the game has been censured as rough and brutalising, and has probably met with more opposition than any other of our pastimes, yet none has grown so rapidly in popularity during the last decade. The great contests under both codes decided during the past year have been as full of interest as ever, although much disappointment was felt that the season of '87-88 closed without the decision of any **Rugby International matches** in which England was engaged, in consequence of the differences which have unfortunately arisen between the **Football Union** and the **Unions of the three other countries**. This difficulty really arose about two years ago, when the Rugby Union decided to alter the mode of scoring, but although the International fixtures were arranged for last winter, and the English Union offered to play them according to the

rules in vogue in the country in which the matches were to be decided, the action of the **International Board**, which consists only of delegates from Scotland, Ireland, and Wales, precluded the possibility of England taking part in any of these contests; whilst the manner in which the latest proposals of the Rugby Union have been met by the Board has banished the hope, at one time entertained, that the usual Rugby matches between England and the sister countries will be revived this winter. In default of international matches the chief interest was centred in the contest between the **North and South of England**, which came off at Blackheath on Feb. 4th. The game, which was one of admirable quality, ended in favour of the South by one goal and one try to a goal. The **International contest** between **Scotland, Wales, and Ireland** came off as usual, and each, curiously enough, won and lost a match. **Wales** defeated **Scotland** at Newport on Feb. 4th, for the first time, by a try to nil, their best previous essay being a draw in '84. **Ireland** defeated **Wales** decisively, also for the first time, by two goals and a try to nil; the contest taking place at Dublin on March 3rd, whilst **Scotland** beat the representatives of the **Emerald Isle** at Edinburgh, after a splendidly contested game, by a goal to nil. **Wales** will meet **Scotland** again on Feb. 2nd, '89, and **Ireland** a month later, whilst **Scotland** and **Ireland** have also an engagement on Feb. 15th. County engagements have been more frequent in all parts of the kingdom, not even excepting the Metropolitan district, where probably less interest is taken in county football than in any other part of the country. Although this is the case, **Middlesex** may fairly claim to be the champion county, as their fixtures included engagements with the strongest counties in England, and they came through the ordeal with an unbeaten record. On Feb. 6th, the Metropolitan county wrested the victory from **Yorkshire** at West Kensington by two goals and a try to a try. **Middlesex's** next success was over **Somerset**, whom they met for the first time upon the occasion of the Charity Festival at the Oval, where they beat the Western shire by one goal and two tries to one goal and one try. The last engagement of **Middlesex** was with **Lancashire**. This contest came off at Manchester on March 7th, and resulted in a victory for the visitors by a goal and one try to two tries. In the North, **Yorkshire** seemed scarcely so strong as in the preceding year, and for the first time since the institution of their match with **Cheshire**, the **Cestrians** proved successful. **Lancashire** were little inferior to former years, and during the month of January victories were recorded by them over **Somerset** and **Durham**. **Cheshire** showed a marked improvement, whilst **Durham** were not so successful as in the previous season. In the West, **Somerset** not only maintained their reputation of being the strongest county, but clearly demonstrated their ability of putting into the field one of the most powerful fifteens in the country. During the present season they will doubtless miss the assistance of **Mr. H. Fox**, of Wellington, who contributed in no little degree towards the late successes of his county. Nothing has been heard of this gentleman since August 20th, when, in company of two Swiss guides, they set out from a valley in the Caucasus, to explore the Beringian glaciers, and as heavy snow fell after their departure, it is feared that they were over-

whelmed by it. **Club matches** have been as numerous, and, if anything, more interesting than in former years. As each season comes round the rivalry between the leading organisations increases, whilst the attendances at crack club-meetings have consequently largely increased. In the South the **Richmond First Fifteen** were again *facile principes*; neither **Blackheath** nor **Queen's**, however, were so successful as in the previous year, but the **London Scottish** fairly held their own. Of other clubs, the two **Universities**, **Bradford**, **Halifax**, **Swinton**, **Huddersfield**, and **Dewsbury** had fairly successful seasons. In the spring a team of **English Rugbeians** left England to make a tour in the **Antipodes** under the management of the well-known cricketers, Messrs. **Shrewsbury**, **Shaw**, and **Lillywhite**. In **New Zealand**, where the laws of the Rugby Union govern the game, they won the majority of the matches; but in **Australia**, and playing the Victorian game, they were scarcely so successful. The tour was unfortunately marred by the death of **Mr. Seddon**, the captain of the team, who lost his life by drowning at Matland on August 15th. In the autumn a team of **New Zealanders**, consisting of six pure **Maoris**, fifteen half-caste, and three colonials born in New Zealand, arrived in England to play a series of matches during the present winter. This is the first occasion upon which the exponents of the game have come from the colonies to measure their strength with English clubs. The tour is under the direct patronage of the Rugby Union, and is therefore a strictly amateur affair, contrasting strongly with the tour of the Englishmen in the colonies. A long and varied programme has been arranged for the **New Zealanders**, and it is expected their tour will extend to April '89. Turning to the **Association Section**, the game has made rapid strides during the past twelve months in districts where only a few years ago the Rugby code had the sole monopoly. The first important contest played under the auspices of the **Football Association** was the annual match between the two divisions of the country. This fixture, which at one time threatened to fall through, came off at the Oval on January 14th, when the **North** beat the **South** by three goals to one. **Wales** was the first to oppose **England** in the **International contests**, the match taking place at Crewe on Feb. 4th, instead of in Wales, where it should have been played. The contest was by far the best ever played between the two countries, though the Englishmen secured the victory by five goals to one. On the 17th of the following month, the principal event of the year—the meeting between **England** and **Scotland**—took place at Hampden Park, Glasgow, and ended in favour of England by five goals to none. **England** and **Ireland** met at Belfast on April 7th. The representatives of the **Emerald Isle** showed decidedly better form than in previous years, but nevertheless the Englishmen won by five goals to one. Though vanquished by England, **Scotland** proved stronger than either **Wales** or **Ireland**, and defeated both countries by five goals to one and ten goals to two respectively; whilst the remaining **International—Wales v. Ireland**—resulted in the success of the Welshmen by eleven goals to none. **Inter-Association matches** were robbed to a great extent of their interest by the fact that in not a few instances the elevens were by no means representative. London had to admit

defeat from Birmingham at the Oval, on Feb. 4th, the Midland team winning by five goals to none. The Londoners, however, proved stronger than Glasgow, whom they defeated at the same venue, a month later, by three goals to none; still the Scotchmen were a fairly strong lot, and victory awaited them in their encounter with Sheffield at the cutlery town in January, by three goals to two. The meeting in the Midlands between Sheffield and Birmingham, in March, also ended disastrously for the Sheffielders, who were beaten by ten goals to none. In no year since the institution of the trophy, in '71, has the competition for the Association Challenge Cup created so much interest as during last winter. Probably the greatest excitement was evoked in the meeting between Preston North End and Aston Villa, the then holders, in the ante-penultimate round of the struggle at Birmingham. The number of spectators present (about 26,000) exceeded all anticipations and was unprecedented. Unfortunately the arrangements made proved inadequate, the barriers being forced and the game interrupted on more than one occasion. Under these circumstances, it was felt by the visiting team that they could not do themselves justice; so they lodged a protest, and the referee declared the match should not be considered a cup tie. Eventually the Lancashire team won the contest by three goals to one, and notwithstanding the protest made by them they subsequently claimed the match should be considered a cup tie. The matter was submitted to the Association executive, who, while upholding the decision of the referee, awarded the match to the Prestonians upon the ground that their rivals should have made sufficient arrangements for the occasion. In the semi final round Preston North End defeated Crewe Alexandra, and West Bromwich Albion beat Derby Junction. Thus Preston North End and West Bromwich Albion were left to do battle in the concluding match of the competition. The two met at Kennington Oval on March 24th, in the presence of about 26,000 people. The Preston eleven had not met a single reverse since the beginning of the season, nearly seven months previously, so that their prospects of carrying off the cup were exceptionally brilliant. Yet in the one match of all others which they would have desired to win they did not play up to form, and had consequently to admit the superiority of their Midland rivals, who won the contest and gained possession of the trophy by two goals to one. Of the Association cups, the Old Westminster won the London, Aston Villa the Birmingham, Wolverhampton Wanderers the Staffordshire, Sheffield Wednesday the Sheffield, Accrington the Lancashire, and the Swifts the London Charity cup. Under the Association rules, Oxford beat Cambridge at West Kensington by three goals to two, and of the fifteen matches so far played between the universities, Cambridge had won ten and Oxford five. The Oxford Inter-collegiate Cup was secured by Oriol, whilst Trinity Rest proved successful in a similar competition at Cambridge. The most notable doings of the Football Association have been the introduction of a new scheme for the challenge cup competition. Under the revised rules, which came into force with the present season, there will be a qualifying competition and a cup competition. The latter will not commence until February next, and will be limited to thirty-two clubs, made up

as follows:—The four clubs competing in last season's semi-finals; eighteen clubs selected by the Association council; the clubs not selected as above have been formed into a qualifying competition, and will play in ten districts geographically convenient, and as nearly equal in numbers as possible, until one club is left in each district; the winner in each of these divisions will be entitled to enter the competition proper, thus making up the allotted number to compete for the cup.—Towards the end of August a visit was received of a team of Canadian Association Footballers, who made a tour in Ireland, Scotland and England. The players were selected from the best exponents of the game in the Dominion, and their skill and combination exceeded expectations. They played 23 matches, of which they won 9 and lost 9, the remaining five being drawn. Major Marindin, R.E., C.M.G., is president of the Association, and Mr. C. W. Alcock secretary; Mr. A. Budd is president over the Rugby Union Council, the secretary being Mr. G. Rowland Hill.

Footpath Preservation Society. See NATIONAL FOOTPATH PRESERVATION SOCIETY.

Forced Draught. As a means of accelerating the propulsion of steamships this new agent is much used in warships, and extensively adopted in mercantile steamers. The air for combustion is supplied by fans to the boiler furnaces. Much economy in fuel can be effected by F. D., as very inferior coal can be burnt by it, which could not be used with natural draught. By the former system also more perfect combustion of the fuel is obtained, which results in an important saving of coal when that burnt by F. D. is compared weight for weight with the large and better coal consumed with natural draught. When F. D. is used a less size and weight of boilers are required, whereby a greater space is available for cargo carrying. The *Critia* of the White Star Line after F. D. had been applied, had her boilers reduced from ten to eight. Better control over the steam and excellent ventilation of the stove-holes and engine-rooms in hot weather are additional advantages of the F. D. Among the leading objections which have been advanced against the use of F. D. are that boilers will be deteriorated by its adoption. The fear has been very recently banished by Mr. Wm. Parker, chief engineer surveyor at Lloyds, and other leading authorities. The former stated at the last spring meeting of the Institution of Naval Architects that the *New York City* had been running with F. D. for five years without injury to her boilers. The Inman Company had spent several thousand pounds in experiments in one of their ships as to the advisability of using F. D. The result has been the application of such to their new liners—the *City of New York* and the *City of Paris*. The Oceanic Steamship Company, owners of the White Star line, have also, it is said, expended about the same sum with equally satisfactory results, so that they are having F. D. fittings in their large liners now being built for the Atlantic passenger traffic. Mr. Parker regards F. D. as the next great step in marine engineering practice. The system is also adopted in more than sixty steamers of the Florio-Rubattino, now styled the General Italian Navigation Company. Although triple-expansion engines have considerably retarded the use of F. D. in merchant steamers, owing to the economy effected in high pressure steam by using natural draught, the recent depressed condition

of the shipping industry has been an important cause for the non-adoption of F. D., as ship-owners have been reluctant to incur the additional expense which its use would entail for the necessary fans and engines, alterations, and additions to the stokeholes, or the furnaces of the boilers of their ships. Their interests will, however, require them to adopt it; otherwise they will not be able to compete with steamers in which it is used. F. D. is required for widely different purposes in the navy and the mercantile marine. In men-of-war it is required to give sudden extraordinary speed, and the water-gauge has to indicate a pressure of 2 ins., while in merchant ships it is wanted constantly with a draught pressure of not more than $\frac{1}{2}$ to $\frac{3}{4}$ in. on the water-gauge. The boilers of warships had been worked without injury at 2 ins. of water-gauge pressure. For maritime purposes F. D. was first used in torpedo boats and in men-of-war about seven years ago—viz., for the *Yang Wei* and *Chow Yung* cruisers of the Chinese, and for the *Tsukushi*, a cruiser of the Japanese navy. Shortly afterwards F. D. was used in the *Polyphemus*, and in 1882 in the *Satellite* and *Conqueror* of the British navy. Not only has its use in torpedo boats and torpedo cruisers been very marked on their trial trips, but also in men-of-war of large dimensions. This has been most remarkably proved in the tests made by the new draught in the propulsion of the cruiser *Dogali*, belonging to the Italian navy. This steamer, which has a great displacement, and whose boilers are worked at 150 lb. pressure, indicated 3,045 horse power under forced, and only 5,347 under natural draught. It is authoritatively stated that F. D., notwithstanding its general adoption is disputed, has done more than any other improvement towards causing war ships to be more efficient than previously. Distinct systems of this new agency have been introduced by Ferrando, Fothergill, Howden, and Martin. F. D. has recently received much attention from the North-East Coast Institution of Engineers and Shipbuilders. Two papers during the year were also read and discussed at the spring meeting of the Institution of Naval Architects. Many articles in its favour have also been published in engineering newspapers.

Foreign Enlistment Act, '70. The object of this Act is to regulate the conduct of British subjects during the continuance of hostilities between foreign states with which this country is at peace. It provides against (1) illegal enlistment, and (2) illegal shipbuilding and expeditions. See ed '87.

Foreign Exchanges. The Foreign Exchanges are the rates at which the money of one country is exchanged into that of others. For instance, the intrinsic value of £1 sterling in French money is 25 $\frac{2}{3}$ francs, and this is called the "Mint par of exchange." In actual business this rate is constantly changing—sometimes it is higher and sometimes lower—and to study the exchanges means to study the causes which bring about these fluctuations. If I want to transmit £1,000 to Paris, he must either send the gold to Paris and exchange it there into French money, or he must send a cheque drawn on somebody in Paris. It is obvious that the cheque can be transmitted through the post much more cheaply than the gold, and hence every one who wishes to make payments abroad always tries first to buy a cheque or bill. If there are plenty of cheques

in the market the sender may be able to secure the Mint par of exchange, or even more, for each of his sovereigns; but if, on the other hand, cheques are scarce and the demand for them strong, the holders of cheques will naturally sell them more dearly—that is, give less than the Mint par of exchange for the sovereign. The extent to which this fall in the exchange below the Mint par can be carried, however, is limited. It costs about ten centimes per sovereign to transmit gold from London to Paris, so that if the holder of a cheque on Paris, when such cheques are scarce, reduces the exchange to less than 25 $\frac{1}{3}$ francs, or ten centimes below the Mint par, it is obvious that it would be cheaper for a merchant on this side to remit gold than to buy a cheque. The exchange is said to have touched the unfavourable "specie point" when it reaches this level of 25 $\frac{1}{3}$ francs. By the same line of reasoning it is easy to show that the exchange between London and Paris cannot rise higher, when specie payments are maintained in both countries, than about 25 $\frac{3}{4}$ francs, or ten centimes higher than the Mint par. This point is called the favourable "specie point." Thus, suppose that there is an abundance of cheques on Paris in London, and few buyers of them, in such case the holders of cheques would be anxious to give more francs and centimes for the £1 sterling than the Mint par, for otherwise they could not convert their cheques on France into English gold. If, however, holders of English gold demanded more than 25 $\frac{3}{4}$ francs per £1 sterling, it would be obviously cheaper for these holders to send their cheques to France, get them cashed in gold there, and the gold remitted to this side. Another important point which should be clearly understood whilst dealing with the Foreign Exchanges is that the price in London of cheques, say, on Paris, and the price in Paris of cheques on London, always tends to be identical. The two kinds of cheques may seem different things, but in reality they are the same, for they merely represent so much gold. In short, the fixed article dealt with is the number of grains of gold contained in the English sovereign. In practice the prices of French cheques in London and of English cheques in Paris are of course constantly differing, for news as to the future prospects of exchange may reach either city hours before the other. People speculate in exchange in exactly the same way as they do in Stock Exchange securities. It is this circumstance that opens up the question whether, when we have debts to pay to a foreign country, it is better for us to buy cheques or bills on that country and remit them, or to ask our correspondents to draw upon us and sell the cheques or bills so drawn in their own market. For instance, if the cheque on London was quoted in Paris at 25 $\frac{1}{3}$ francs, and the cheque on Paris was quoted in London at 25 $\frac{3}{4}$ francs, a little consideration would show that buying bills on London in Paris would be preferable to drawing on Paris, whilst buying cheques on Paris in London would be preferable to drawing on London. What we have so far established is:—(1) That the prices of cheques fluctuate according to the laws of supply and demand; (2) That cheques tend to rise above the Mint par if the demand for them be less than the supply, and that they tend to fall below the Mint par if the demand exceeds the supply; (3) That the fluctuations in an exchange, either above or below the

Mint par, cannot exceed the cost of transmitting gold, and that the extreme points which the exchanges can touch are styled the specie points; 4) That theoretically the cheque exchanges between two centres, as quoted in the two markets, tend to be identical at all times. We have hitherto, in order to simplify matters, considered most transactions as having been done in cheques. In actual practice this is not the case, bills drawn payable at various dates taking the place of cheques to an immense extent. This introduces two new elements which have their effect upon the rate of exchange. In the first place there is the consideration of the credit of the drawer and acceptor of the bill, and in the second place the question arises what deduction should be made from the price in consequence of the bill, which is bought for ready money, not being payable until a certain date. Presuming that credit is excellent, the difference between the quotation for cheques, and for, say, a three months' bill, represents the rate of interest for three months in the city where the acceptor resides. Thus, London may quote three months' bills, on Paris 25.45 francs, and if the discount rate at Paris is 4 per cent. this would make the short London quotation on Paris 519 francs, the difference between these two rates being the interest on £1 at three months. It is, however, the prices of short bills or cheques, and not those of bills which have some time to run, which determines the course of bullion shipments. Most of the primary elements of value affect long and short bills equally, but the rate of interest and the question of credit exercise an additional influence upon the former, and so modify the fluctuations in price as to render them unreliable as indications of the currents of gold. If there is a demand for bills on any particular city, the price of such bills, whether long or short, will rise—that is the general tendency. If, however, in any city in question the rate of interest were at a high point, it is evident that the price of long bills would not rise in the same proportion as that of short, for the purchaser must bear the discount which has to be deducted from the sum of the bill before it can become available as a short bill; and for any increase in this discount he requires to be compensated by a so much cheaper price. Every quotation of exchange between two places is given by taking the money of one place as fixed, and that of the other as variable. We have, therefore, to make a distinction between the quotations when the English money is giving the fixed amount, and when the English money receives the fixed amount in foreign money. An example of the former is the Paris exchange, in which £1 is quoted as worth so many francs and centimes, and of the latter the Russian exchange, in which the rouble is quoted as worth so many pence. When we talk of the Foreign Exchanges being favourable, we mean that the £1 sterling is worth more francs, more marks, or more dollars. On the same principle, if the Russian exchange were to show a rise, it would in reality be unfavourable to this country, for the rouble would be worth more pence and the sovereign worth less roubles. In countries where the currency is not on a metallic basis, as the Argentine Republic, or where the leading bank of the country has, under certain circumstances, the power to refuse gold in exchange for its notes, as in France, the exchanges often

fluctuate beyond the limits of the specie points, the reason being obvious. The most important centres to this country as regards exchange business are Paris, Berlin, and New York, and the exchanges and bullion movements between London and those centres have always a very powerful influence upon the course of our money market.

It should be noted that English money of each denomination is current in most British Colonies, also that the rate of exchange for all coins varies from time to time. Some silver coins vary according to the price of standard silver. Some countries are also labouring under the evils of a forced paper currency. Consult Tate's "Modern Cambist" (Effingham Wilson), 20th ed.

Foreign Office. The minister responsible to Parliament for this department is the **Secretary of State for Foreign Affairs**. He recommends persons to the Crown for appointment as ambassadors, ministers, and consuls to represent the nation abroad; he negotiates treaties with other states, either personally with foreign ministers in London, or through British ministers at foreign courts; and he superintends generally all our transactions and relations

* Varies according to price of silver.

with other states. The protection of British subjects abroad who may require it and the issue of passports are among the departmental duties. Valuable information as to trade abroad is obtained by the commercial branch of the department through British consuls abroad, and published periodically. See SECRETARY OF STATE, MINISTRY, etc.

Foreign Trade. See TRADE, FOREIGN.

Forestry. A concise history of forestry is given in our 1886 edition, and for summary of report of the Committee on Forestry see ed. '88.

Forests of Europe. According to the returns recently issued by the French Ministry of Agriculture, the total area of Europe laid out in forest (exclusive of Turkey, Bulgaria, Bosnia, and Herzegovina, omitted in the official statement) is set down at 286,989,000,000 hectares (about 708,862,000,000 acres). Thus about 18·7 per cent. of the total area of Europe is forest land. Great Britain and Ireland has 4 per cent. of its surface, amounting to only 0·036 hectare, or 0·0089 acre—i.e., considerably less than the tenth of an acre to each inhabitant. Denmark has 4·8 per cent., or 0·09 hectare to each inhabitant. Portugal has 5 per cent., or 0·11 hectare to each inhabitant. Holland has 7 per cent., or 0·05 hectare to each inhabitant. Russia in Europe has 200,000,000,000 hectares—i.e., 37 per cent. of its whole area, or 3·37 hectares to each inhabitant. Sweden, with 17,569,000,000 hectares of forest, has 39 per cent. or 3·84 hectares of forest to each of its inhabitants. Norway, with 24 per cent., has 4·32 hectares per inhabitant. Hungary has 20 per cent., or 0·58 hectare of forest to each inhabitant. France, with 9,883,000,000 hectares of forest, or 17·7 per cent., has 0·25 hectare of forest to each of its inhabitants.

Forfeiture of Property for Crime. See ed. '88.

"Forma Pauperis." Formerly a person who had a just cause of action, but had no money to pay costs, has counsel assigned him on making oath that he was not worth £5. Any person can now sue in *forma pauperis*.

Forms of Address. See ADDRESS, FORMS OF.

Forster, The Right Hon. W. E. Life of. (*Chapman & Hall*). Mr. Wemyss Reid's "Life" of the late Mr. Forster was the ablest, the most important, and indeed the only notable contribution to the biographical literature of '88. Appearing as it did at the period when the public mind was excited to the utmost by the *Parnell-Times* controversy, the work attracted universal attention, although, of course, it contained no "revelations" on the question of the hour. To write an unbiased "Life" of Forster was a difficult task, and if Mr. Wemyss Reid has not been able to keep an absolutely even keel he may at all events be felicitated upon having reached a remarkable degree of impartiality. Apart from the fact of its being a trifle pro-Forsterian, the author has succeeded in presenting an admirable portrait of an upright, honest, and competent statesman. As a piece of literary work Mr. Wemyss Reid's biography has permanent value.

Forth Bridge. The greatest work of its kind in the world. The construction is still in progress. The main feature will be the extraordinary spans, for a rigid structure, of a third of a mile in length, each of which is made by two cantilevers of 680 feet long, united by 350 feet of girder. When finished the structure will

carry the railway high above the sides of the valley of the Forth, the piers indeed being nearly the height of St. Paul's Cathedral. Sir John Fowler and Mr. B. Baker, C.E., are the engineers, and the work has progressed from the first without serious mishap. (For progress in 1885-7 see ed. '88.) It may be added that it is calculated that the wind pressure will not be more than 56 lb. per foot, amounting to 2,600 tons on one span, and the rolling load 600 tons, not more than two trains being allowed on any part of the bridge at the same time. It is considered that these stresses are far more than provided for. The work was continued with untiring energy throughout '87. At the half-yearly meeting of the Forth Bridge Railway Company on Aug. 21st, '88, the chairman (the Marquis of Tweeddale) said that the estimates of the work to be done had so far proved correct that they had every reason to believe the bridge would be completed not later than October '89. The lines connecting the bridge with Edinburgh on one side and Fife on the other, had made such progress that it was expected they would be completed simultaneously with the bridge itself. The engineers' report stated that the monthly average tonnage erected exceeded 1,400 tons, with a maximum of 2,350 tons. The total amount of steel work manufactured for the bridge was 42,667 tons, and including the approach viaduct girders, about 44,500 tons had been erected. A paper on the Forth Bridge was read on Aug. 22nd by Mr. F. E. Cooper, resident engineer, before the Iron and Steel Institute at their Edinburgh meeting, and the members visited the works.

"Fortnightly Review" (2s. 6d.), so named from its having at first been issued twice a month. Founded 1865. First editor, Mr. G. H. Lewes, succeeded by Mr. John Morley, M.P. (1867-82); Mr. T. H. S. Escott (1882-85); present editor Mr. Frank Harris (1886). Originally a philosophical Radical review. It has now assumed a wider scope, discussing social and political questions on a broad basis, and giving occasional reviews of the leading books. Offices, 11, Henrietta Street, Covent Garden.

Fourth Dimension. See ed. '86; also consult "Flat Land," and "What is the Fourth Dimension?" by C. H. Hinton.

Fourth Estate. The. This term was first used by Carlyle, in his "French Revolution," as applicable to the editors whose talents and skill considerably helped to make the revolution of 1789 successful. The First, Second, and Third Estates were comprised in the National Assembly, respectively (1) the commons, (2) the nobles, and (3) the clergy. The power of the press, through the ability of its editors and contributors, subsequently manifested itself, and earned from Carlyle the appellation of the "Fourth Estate."

"F. P. A." See LLOYD'S CLAUSES.

France. A republic governed by a President and National Assembly under constitution of 1871, revised in 1875 and 1884. The legislative power resides in the Assembly, sitting in two houses: viz., the Senate of 300 members, elected by delegates of municipalities; and the Chamber of Deputies of 557 members, elected by universal suffrage. The initiative in legislation is exercised by the President or either house. Executive power is confided to a president, elected by the two houses united in National Assembly. War can be declared by the President only with consent of the two houses. All religions

are on a legal equality; every sect being entitled to a grant from the State if its numbers exceed 100,000.—Area 204,177 sq. m.; pop. 38,218,903. **Estimated revenue and expenditure for 1888**, £152,439,381; public debt, £1,440,000,000. **Imports** (86), £204,664,000; **exports**, £169,836,000. (For army and navy see **ARMIES AND NAVIES, FOREIGN**.) The colonies include Algeria, Cochinchina, Senegambia (including the territory of that name and other colonies and protected states on the west coast of Africa), Réunion, Pondicherry, etc., in India, Martinique and Guadeloupe in West Indies. These colonies are politically part of France, and are represented in the National Assembly. France has also three protected states: Tunis, Annam, Tonquin. (For history from 1870 to 1888, see former editions.)—**Political.** The past year ('88) has been characterised by varied relations to other powers. The **Damascus incident** (Jan.) arising out of the violation of the French consulate by Turkish official and party in search of two Algerians, who claimed the protection of France, was settled amicably with the Porte (March). France's sympathy with **Russia** was manifested on several occasions, as in the Republic's support of Russia's views respecting the deposition of Prince Ferdinand. The speech of Prince **Bismarck** (Feb.) on the German Army Bill (see **GERMANY**), and its allusion to France, caused considerable excitement in Paris. The accession of the Emperor **Frederick** (March 9th), and his pacific tendencies, gave promise of a more harmonious feeling between the two nations; but his death (June 15th) and the accession of the new Emperor **William**, whose views were known to be in accord with those of the German Chancellor, induced a sense of uncertainty, which the omission of all mention of France from the Emperor's speech (June) accentuated. The visit of the Emperor to the Czar (July) was much commented upon, and regarded with uneasiness. The increase of the military forces of Germany was followed by the proposed improvement of the defences of Cherbourg, Brest, and Toulon; Admiral **Kranz**, Minister of Marine, being authorised (April) to bring in a bill for the credit of 62,000,000 fr. for constructive and defensive works (see **NAVIES, FOREIGN—FRANCE**). A **Military Bill**, fixing the duration of military service at 25 years, of which 3 years are in active service, 6 in the reserve, 6 in the territorial army, and 3 in the territorial reserve, was submitted by the Government (April). **Extraordinary war estimates**, to the extent of 500,000,000 fr., to secure the defence and independence of France, were also sanctioned during the year. The **tariff war**, consequent on the lapse of the commercial treaty, and the **Mas-sowah question**, occasioned friction with Italy, and circular notes were issued (Aug.) by M. Goblet on the subject of the latter—France denying the legality of the Italian occupation, and the alleged right of Italy to impose municipal taxes on foreign subjects or protected persons. Signor **Crispi's** (q.v.) reply was characterised by much acrimony, and gave rise to a strong anti-French tone in the Italian press. A riot at **Aries** (March 12th) between a band of Italians and Zouaves, two of the latter being killed, caused some excitement, but did not occasion hostility between the two governments; nor did the removal of the imperial arms affixed to the German consulate at Havre (Oct.) lead to a serious misunderstanding, the French authorities making the

amende honorable. Correspondence with the **United States** (May) arose on the subject of enforcing military service in France on naturalised Americans of French birth, who may return again to France. This question was also amicably settled. The speech of **M. Tirard** (see **AUSTRIA-HUNGARY**) caused some excitement (May 31st). The **internal political events** of the Republic during the year have been unusually numerous. The trial of **M. Wilson** (Feb.) for his alleged connection with the **decoration scandals** (see ed. '88) was followed by that of **General Caffrel** and **Mme Limousin** (March); but the interest arising from these events was diverted to **General Boulanger**, who (Feb.) was voted for in seven constituencies. On the ground of his having come to Paris without permission while commanding the 13th Army Corps, a court of inquiry (March) placed the General on the retired list—a step equivalent to banishment from the army. Great excitement ensued, and various demonstrations were made in his favour. In April General B. was elected for the Nord (next to Paris the most populous Department of France) by a great majority; and on reading a letter from the General resigning his seat in the Dordogne, **M. Floquet** (q.v.) took occasion to state the position of the Government in view of the prevailing agitation; a vote of confidence in the Government (which succeeded) to that of M. Tirard, which fell March 30th, M. Floquet becoming the new Premier, with M. Goblet as Foreign Minister, and M. de Freycinet Minister for War; being passed by 379 to 177. The entrance of the General into the Chamber was the occasion for another demonstration of his friends, but his defeat in the Haute Savoie and Isère (April 25th) caused his popularity somewhat to wane. In May he published his book, "The History of the War of 1870," and in company with **Count Dillon** visited his constituents at Dunkirk, Douay, and Lille; at the last town and at Anzin he was the subject of a counter demonstration. A banquet arranged in his honour at **Ste. Mandé** (May) proved a *fiasco*, the General not appearing on the scene. A little earlier, M. Laguerre, a friend of General B., brought on a motion in the Chamber for urgency for the revision of the constitution, the battle cry of Boulangerism; but although supported by a coalition of Bonapartists, Royalists, and extreme Republicans, it was rejected by 268 to 211 votes. General B.'s election for the Nord was confirmed by the Chamber (June 18th) by 287 to 228 votes. A letter was addressed by the General to the electors of the Charente in support of M. Deroulède's candidature, and on June 4th General B. addressed the Chamber, and a debate ensued on his demand for revision, urgency being voted for by 377 to 186. The speech of **M. Floquet** in reply was ordered to be placarded "throughout France." In the Senate (June 5th) the **Panama Canal Loan Bill** was passed (see **PANAMA CANAL**). A Bill to curtail the profit of the beet-root sugar refineries was adopted by the Chamber by 342 to 208 votes. Bills for regulating the labour of women and children, and for obtaining a water supply from the springs of La Vigne and Verneuil at a cost of 35,000,000 fr., were submitted by the Government. Boulangerism sustained a repulse by the defeat of **M. Deroulède** in the Charente election (June 18th). By the election of **M. Hurard**, deputy for Martinique, as Secretary of the Chamber, for the first time

a mulatto was appointed to a post of honour in the French Legislature. The application of the Institute to rescind the decree banishing the *Duo D'Aumale*, although submitted by M. Floquet to the Cabinet Council, was not received. The Senate unanimously censured M. Ferrouillat for transferring the Deputy Public Prosecutor for Carcassone (M. de Croysal) to L'Orient. The Municipal Council of Paris adopted (July) a resolution in favour of a treaty with the United States, referring all disputes to arbitration. On the resignation of Gen. Boulanger of his seat in order to stand again for the Nord, he made a speech in the Chamber, to which M. Floquet replied; a quarrel ensued, which was followed by the now famous duel in which Gen. B. was wounded. President Carnot's tour to Savoy and Dauphiné elicited great enthusiasm, which was repeated later on in the year at Normandy (Sept.), and when he visited Annecy (Oct.). The annual *Bonapartist banquet* was attended by 1,500 persons, and an address was voted to Prince Victor. Gen. B. was returned (Aug.) again for the Nord, but polled 130,000 votes to 172,000 votes in April. He was returned also for Charente-Inférieure, the cry for dissolution and revision being again repeated. Experiments in naval mobilisation were carried out with great success at Toulon (Aug.). The decree on immigrants (Oct. 4th), requiring foreigners under certain conditions to register themselves, caused some excitement. A revision committee having been appointed, Gen. Boulanger was examined before it (Oct. 24th). M. Freytag's *Income-tax Bill*, submitted Oct. 22nd, was referred to a separate committee, Dec. 4th, by 270 to 239 votes. Gen. B.'s election for the department of La Somme was confirmed by the Chamber of Deputies, as was also his election for the Nord, for which he decided to remain the deputy (Nov. 27th). He was the subject of a hostile demonstration at the Château d'Eau theatre (Oct. 26th), but received a great ovation at a banquet given in his honour by the Patriotic and National Revision League. His popularity appears again to be on the increase; and the revolutionary demonstration (Nov. 30th) at the tomb of Baudin, in which the Municipal Council joined by the Radical deputies took part, was in reality a Boulangerist manifesto. A curious incident occurred (Nov. 26th) on the occasion of M. Wilson attending the Chamber for the first time since the "decoration scandal" (*v. supra*), when the sitting was adjourned for one hour, by 345 to 60 votes, to mark the Chamber's sense of disapprobation. The case of M. Numa Gilly, the Mayor of Nismes and one of the deputies of the Gard, who had libelled, it was alleged, in his newspaper the Budget Committee, is at the present date (Dec. 5th) attracting Parliamentary attention, several actions against him being on the tapis.—General. Amongst the more prominent objects of general interest in '88 were the various riots arising out of Boulanger demonstrations; a riot at Père la Chaise on the occasion of the procession to the tombs of Blanqui and other Communist leaders. The funeral of Gen. Eudes was also characterised by conflicts between the police and the Anarchists (August). A great strike among Parisian navvies and joiners occurred in August, followed by a strike of the workmen employed on the Eiffel Tower (*q.v.*), and by one of miners at Ste. Etienne (Sept.). A terrible catastrophe took place at Dieppedalle, when the petroleum steamer

Asturiano, with 3,840 barrels of petroleum, took fire, causing death and destruction (July). There was also a serious railway accident between Blaisy and Lyons (Sept. 5th), in which some English passengers were injured. Storms and floods of exceptional severity inundated the French basin of the Rhone (Oct. 3rd). The causes célèbres of the year included the trial of Eugène Altmayer, an audacious swindler (Sept. 3rd); the trial of Fritz Killian, a German spy (Oct. 27th); and that of Prado, for the murder of Marie Aguetant, which, after a long hearing, ended in his conviction (Nov. 14th).—Social. The forthcoming Paris Exhibition (*q.v.*) has during the year been a leading topic of interest. The Bastille Exhibition in the Champ de Mars was opened (May) by M. Floquet; and in connection with the Centenary Exhibition it was announced (Dec. 5th) that a Museum of the Revolution would be held in the Louvre. The unveiling of the Gambetta memorial in the Cour du Carrousel by President Carnot took place in July. A statue of Shakespeares was also unveiled (Sept.). The Pasteur Institute opened its doors Nov. 14th, President Carnot assisting at the opening ceremony. The Duc and Duchesse de Chartres celebrated their silver wedding in Paris (June). The betrothal of Princess Letitia, daughter of Prince Napoleon, to the Duke of Aosta, ex-king Amadeo of Spain, and the wedding of Mlle. Boulanger to Captain Driant, also excited some interest; and the divorce proceedings which were recently stated to have been instituted by M^{me}. Boulanger occasioned much surprise. A most enthusiastic reception was accorded to M^{me}. Adelina Patti (*q.v.*) by a brilliant audience at the Opera-house, on her appearance in M. Gounod's opera "Romeo and Juliet" (Nov. 28th), when the composer conducted in person. Consult "France" (Story of the Nation Series), Reclus (Eliée) "La France," Vol. II. of "Nouvelle Géographie Universelle," *Journal Officiel* ('88), *The Statesman's Year Book*, *Almanach de Gotha*, etc.

Franchise. The following, which is issued by one of the large political organisations, gives a good general idea of the different classes of males of full age who are entitled to be registered, and, when registered, to vote at parliamentary elections. There are, in addition, some ancient franchises, such as those enjoyed by the liverymen of the City of London. No man can be registered who has within the twelve months preceding July 15th received parochial assistance other than medical relief, or who is an alien (see ALIENS). In counties the qualifications are as follows: Freehold of inheritance or by purchase of the clear annual value of 40s. or upwards. Freehold for life must be of the clear annual value of £5, unless the same comes by descent, marriage, devise, or promotion to any benefice or office, in all which cases 40s. clear annual value is sufficient. Freeholders by purchase are required to be six months in possession previous to July 15th; by descent, etc., no length of possession is necessary. Copyhold of the clear annual value of £5 or upwards. Copyholders are subject to the same terms of possession as freeholders. Leasehold, if created originally for a term of not less than sixty years, of the clear annual value of £5 or upwards; if for a term of more than twenty, but less than sixty years, the clear annual value must be £50. Leaseholders by purchase are required to be twelve months in

possession previous to July 15th; by descent, etc., no length of possession is necessary. Persons qualified in respect of any of the foregoing qualifications must send in their claims to the overseers on or before the 20th of July. [No person can claim in respect of a rent-charge, other than the owner of the whole of the tithe rent-charge of a rectory, vicarage, chapelry, or benefice, to which an apportionment of the tithe rent-charge shall have been made in respect of any portion of tithes. No more than one person can claim in respect of any estate in land or tenement, unless the same shall be derived by descent, succession, marriage, marriage settlement or will, nor unless the owners occupy the land or tenement, and are *bona fide* engaged as partners carrying on trade or business thereon.]—**Counties and Boroughs:** Occupation as owner or tenant of any land or tenement of a clear yearly value of not less than ten pounds. Occupation as owner or tenant of any dwelling-house. [The term "dwelling-house" includes part of a house in which the landlord or superior tenant does not reside. When he does reside, his under-tenants are held to be lodgers.] Occupation by virtue of any office, service or employment, of any dwelling-house which is not inhabited by a person under whom such office, service or employment is held. [In the above three classes of occupiers the occupation need not be of the same premises, but may be of different premises, occupied in immediate and unbroken succession in the same constituency.] Occupation as lodger of any lodgings of a clear yearly value, if let unfurnished, of £10. [Successive occupation is also allowed in the case of lodgings, but it must be from one part to another part of the same house.] In all cases of occupation, whether as owner or tenant, servant or lodger, twelve months' occupation is required up to the 15th day of July in any year. Occupiers need not send in claims unless they find that their names are omitted from the list published by the overseers on the 1st of August, or that in the entry on such list there be a misdescription of some essential particular or particulars, and, in case of such omission or misdescription they must send in their claims to the overseers on or before the 20th of August. Lodgers must claim every year, and when claiming for the first time must send in their claims to the overseers on or before the 20th of August. After the first year, lodgers continuing in the same lodgings and desiring to continue on the register may send in their claims to the overseers from the 16th to the 25th of July inclusive, and their names will then appear on the list published by the overseers on the 1st of August. [The declaration annexed to the claim of a lodger is held to be *prima-facie* evidence of his qualification.] The revised register comes into operation on the 1st of January in each year.

Francis, John, and the "Athenæum" This book, which contains a deeply interesting narrative of the connection existing for so many years between the late Mr. John Francis and the *Athenæum*, has proved a very mine of literary recollections concerning past and present distinguished *littérateurs*. The accuracy of the *Athenæum's* criticism of rising poets, such as Tennyson and Montgomery, was amply verified by the careers of both. The discussion which took place between the review and Lord Ashley (afterwards the Earl of Shaftesbury)

on ragged schools will possess a peculiar attraction for many. Many other particulars of much interest and value are also pleasantly and graphically recorded.

Francis Joseph I., Emperor of Austria, and King of Hungary and Bohemia, b. 1830. His father was the late Archduke Francis Charles (d. 1878). The present emperor succeeded his uncle, Ferdinand, on the throne when he abdicated (1849). The beginning of his reign was marked by important events. Hungary was in a state of rebellion, which was quelled by the help of Russia. His Italian dominions were saved by the genius of General Radetzky. The Emperor Francis Joseph made strenuous efforts to prevent the Crimean war, and refused to join France and England. After the Austro-French war (1859), he was compelled to sign the treaty of peace of Villafranca, by which Lombardy was ceded to Italy. In 1866 he lost the duchy of Holstein, obtained by the convention of Gastein, and in the same year as the result of the war with Prussia, also Venetia. That year was fatal to the supremacy of Austria in Germany, the contest being decided in favour of Prussia by the treaties of Nikolsburg and Prague respectively. The Turkish provinces of Bosnia and Herzegovina were, by decision of the Berlin Congress (1878), placed under the administration of Austria-Hungary. In 1854 the Emperor Francis Joseph married the Princess Elizabeth Amalie Eugénie, daughter of the Duke Maximilian Joseph of Bavaria. During '88 the Emperor of Austria entertained a number of royal personages, including the Emperor William II. and H.R.H. the Prince of Wales. On Dec. and the fortieth anniversary of the Emperor's accession was quietly celebrated in Austria, and was the subject of friendly references in the foreign press. By the Emperor's express desire the anniversary was principally commemorated by the bestowal of charity.

Fraser, Alexander Campbell, D.C.L., LL.D., b. at Ardchattan, Argyllshire, 1819. Educated at Glasgow and Edinburgh Univs. He was awarded the Edin. Univ. prize for an essay on "Toleration," in '42. Elected '56 to succeed Sir William Hamilton (the "modern Aristotle") as Professor of Logic and Metaphysics in the Univ. of Edinburgh. He is Dean of the Faculty of Arts of the Univ. For some years he edited the *North British Review*. Prof. Fraser has been an Examiner in the Moral Science Tripos of Cambridge, and in Moral Science and Logic for the India Civil Service. He is an eminent authority on the philosophy of idealism, and his literary labours have been devoted chiefly to the annotation and criticism of the writings of Bishop Berkeley. He has published in the Clarendon Press Series a "Collected Edition of the Works of Bishop Berkeley, with Dissertations and Annotations." Hon. LL.D. Univ. of Glasgow '71, and an hon. D.C.L. Oxford '83.

Frederick William Louis, Grand Duke of Baden; b. 1826. He succeeded his father, the Grand Duke Leopold, 1852. By right of succession the government of the duchy belonged to his brother Louis, who was older than himself; but Duke William had to assume the government, his brother being mentally incapacitated. As a ruler he has proved himself a firm ally of Prussia, and in the war of 1870-71 against France he fought side by side with Prussia, and took a prominent part in the struggle. In home politics he declared himself a stern

opponent of the Jesuits, and in 1855 he put an end to their existence as an organised ecclesiastical community, by banishing them from the duchy. Presided at the Quincentenary of Heidelberg University (1886). His wife is a daughter of the late Emperor William of Germany.

Frederick William III., late Emperor of Germany; b. Oct. 18th, 1817; succeeded to the throne on the death of the Emperor William I., on March 9th, '88; died June 15th, '88. He was made a Lieutenant-General in 1866, and attached to the staff of Marshal Wrangel in the time of the **Danish war**, in which he took an active part. In the war with **Austria** (1866) he commanded the army of the Oder, and in the **Franco-Prussian war** he led the third German army corps. With a superior army he beat that under Marshal MacMahon at Reichshofen; following up this success, he quickly overtook MacMahon at Sedan, inflicted another defeat upon him, and finally forced Napoleon III. to surrender with an army of 83,000 men. At the **siege of Paris** he held the left bank of the Seine until the city capitulated (Jan. 19th, 1871). In 1858 he married the **Princess Victoria** of England, Her Majesty's eldest daughter. The announcement early in '87 that he (being then Crown Prince) had been attacked by a serious **affection of the throat** created the greatest anxiety not only in Germany, where he had made himself immensely popular, especially amongst the Liberal party, but also in England, which he always spoke of as his second home, and where his popularity was scarcely less than in his own country. He recently visited England on the occasion of the **Queen's Jubilee** ('87). The medical advisers of the Prince were called in to diagnose the disease, which they feared was a cancerous growth. Dr. (now Sir) **Morell Mackenzie** (*q.v.*) on the recommendation it is believed of Queen Victoria, was called in, and pronounced the opinion that the growth was a wart without cancerous symptoms. By a skilful operation Dr. Mackenzie succeeded in cutting it out; and the Prince, after placing himself for a time under the Doctor's care at Norwood, returned to Germany, it was thought, quite cured. He proceeded to Italy, to winter at **San Remo**. Shortly after his arrival another throat formation appeared, which the medical advisers generally agreed was cancerous, and the Prince's life was despaired of until, a few weeks subsequently, a remarkable modification of the growth induced them to change their opinion with reference to its real nature. The confident hopes that were again entertained of his recovery were destined to be disappointed, for subsequently to his accession to the throne he suffered a **series of relapses**, but bore up against them with heroic patience and fortitude, transacting the business of the empire up to within a few hours of his death (June 15th, '88). The late Emperor was distinguished by the highest qualities of kingship, and won universal admiration for the goodness of his heart as well as for the force of his intellect, for his liberal views as a statesman and his genius as a military commander. The **diary** which he kept during the Franco-Prussian war, which has recently been published, has caused a great sensation in German official circles, and has led to a government prosecution of Dr. Geffcken, who, it is alleged, communicated the information to the *Deutsche Rundschau*. Consult "The Emperor's Diary" (edited by H. W. Lucy); "Frederick, Crown Prince and Emperor," by K. Rodd.

Fredericton. Capital of **New Brunswick** (*q.v.*), pop. 7,000, on St. John river.

Free and Open Churches. The terms **free** and **open** imply two widely different sets of facts, though they are usually linked together in the minds of those who have agitated in their favour. **Free churches** involve the abolition of pews, and of all appropriation of seats in the body of parish churches; **open churches** are those which are open to the public during the day for "rest, meditation, and prayer." Early in the days of the **tractarian movement** these reforms of existing practices in the Church of England were made the subject of unceasing advocacy. Nevertheless, their adoption was neither rapid nor concurrent with the adoption of other points in the Anglo-Catholic programme. To this day several Ritualist churches are pewed and appropriated, but as a rule they are open for private devotion. On the other hand, the popular advantages which accrued from the opening and freeing of churches soon won to their side many clergymen of the Evangelical and Moderate schools of thought. Both practices have received a great impulse during the past year by the publication of a correspondence between the Archbishop of Canterbury and the Earl of Carnarvon, in which these eminent churchmen, representing alike clergy and laity, urged their adoption wherever practicable. The **law relating to pews** is somewhat complicated. No person has a legal right to occupy, in the parish church, any pew or seat exclusively, except by **prescription** or by **faculty**, or with the permission of the **churchwardens**. It has been decided that when a parishioner has been placed in a seat or pew by the churchwardens, or has been suffered for some time to occupy it, he is said to have a **possessory right** in it, which he may maintain against a stranger; but he is liable, when occasion shall require, to be displaced by the churchwardens, in whom the assignment of all seats is vested by the ordinary. The clergy of the church have no power to interfere. Recent decisions have also upheld the common law maxim that the body of the church shall be free to all parishioners. **Prescription** is acquired by immemorial use, as appurtenant to a particular house. **Faculty ownership** of a pew is when a parishioner, in the Chancellor's Court, obtains a faculty from the ordinary for the erection of his own pew; but the pew cannot legally be let or sold unless by Act of Parliament (Burn's "Ecclesiastical Law"). The common mode of letting seats in churches and chapels dates from the middle of last century.

Free Church of England. A Protestant episcopal organisation, originated in 1844 (enrolled in Chancery 1863) as a counteracting movement to the Oxford Tractarianism. Being free from state control, the Free Church claims the liberty to enter a parish where ritualistic practices prevail, and establish a liturgical service on the basis of the Evangelical party in the National Church, with which section it is in ritual practically identical. It is governed by Convocation and bishops, consecrated in the line of the Canterbury succession by the Rt. Rev. Bishop Cummins, of the American Protestant Episcopal Church, whose bishops were consecrated at Lambeth Palace 1877. The churches, although not numerous, are widely spread. **Convocation** held yearly (June). **Bishops**: Revs. B. Price (Primus) and H. O. Meyers. **Hon. Sec.**: Rev. E. J. Boon, Worcester. **Registrar**:

Mr. F. S. Merryweather, New Malden, Surrey. Offices: 3, Westminster Chambers, S.W.

Freeman, Prof. E.A., D.C.L., LL.D., was b. at Harborne, Staffordshire, 1823. Educated at Trin. Coll., Oxford, Scholar (1841), Fellow (1841), Hon. Fellow (1880). Has filled several offices of distinction in his university, including that of **Regius Professor of Modern History** (1884), Rede Lecturer at Cambridge (1872), D.C.L. Oxon (1870), LL.D. (1874), Fellow of Oriel (1884). Holds numerous foreign distinctions and orders. A voluminous writer; his works, chiefly on historical, political, and architectural subjects, possess a high reputation. Amongst them may be mentioned "**History of the Norman Conquest**," "**The Ottoman Power in Europe**," "**The Historical Geography of Europe**," "**Lectures to American Audiences**," "**The Chief Periods of European History**," etc. Mr F. is one of the most distinguished representatives of philosophical Radicalism, and has recently assisted in promoting the organisation of an Irish Home Rule party in the Univ. of Oxford.

Freemantle. Port for Perth, capital of Western Australia (q.v.). At Swan River mouth.

Freemasonry. The masons of the Middle Ages, like many other craftsmen, formed organised corporations which they governed by their own rules, and the numbers of which they kept up from their apprentices. They were called "free" because by several papal bulls they were exempted from laws regulating common labourers and from burdens borne by the working-classes in England and on the Continent. Roman Catholicism therefore acknowledged the craft, and it is only within the time of the present generation that it has opposed it. The masonry of the present day is famous for two things: conviviality and charity. The latter was recognised 160 years since by the formation of a committee of charity in connection with the Grand Lodge in 1725. In 1788 Chevalier Ruspini, surgeon-dentist to George III., established the **Freemasons' Girls' School**, now known as **The Royal Masonic Institution for Girls**, and ten years later the **Boys' School** was started. **The Institution for the Aged** is the youngest of the three, the Institution for the Men not having been established till 1842, and for the Widows not till 1840. English Masonry has first of all a fund called **The Fund of Benevolence**, to which every one initiated in a lodge under the English constitution contributes a sum on his initiation; and as long as he is a subscriber to a lodge in London £4 a year is paid by his lodge for him to this fund, and 2s. if he subscribe to a country lodge, another 2s. going to the fund of his province. **The Board of Benevolence** assists cases of distress, and during the year just ended it did so to the extent of about £10,500; the **Girls' School** boards, clothes and educates 243 girls, and the **Boys' School** 263 boys; while the Benevolent Institution grants annuities to 428 persons: £40 a year to men, and £32 a year to widows. But all this great work is of very recent date. No extensive strides have been made in Masonry's great work of charity till within the last thirty years. Even from the

Fund of Benevolence the grants used to be so small that ten years ago the accumulations of income under this head exceeded £50,000. The grants, however, have since been so liberal, that not only is the income of the fund exceeded, but the accumulations are encroached upon, reducing the accumulated fund in 1887 to £40,000. The voluntary subscriptions to, and other sources of income of, the three Masonic charitable institutions have been increasing enormously every year for the last twenty years. Before that time they were comparatively small, but they now amount in the aggregate to more than £50,000 annually. In '87 the total was £61,059 os. 11d., the Benevolent Institution obtaining £28,968, the Girls' School £16,429; and the Boys' School £15,661 16s. 1d. But each of these institutions had £2,000 voted to it by the Grand Lodge during the year '87 in addition to these amounts, and that sum has been handed over to them. Down to the 10th Nov. '88 the Girls' School alone had received in the year £51,500, but the receipt of this extraordinary sum was due to the fact that the Craft had resolved to celebrate the **Centenary** of the existence of the **Institution** in a special manner. The festival was held on the 7th June at the **Royal Albert Hall**, when the Grand Master, the **Prince of Wales**, presided, who was supported by the **King of Sweden** and nearly all the Provincial Grand Masters of England and Wales. Some 5,000 persons were present. The Benevolent Institution received about £18,000 up to Nov. 10th, and the Boys' School £11,000. In the seven years ending 31st Dec., '87, the total amount received by the three institutions was £357,940 1s. The English Freemasons celebrated **Her Majesty's Jubilee** on 13th June, '87, at the **Albert Hall**, the **Prince of Wales** in the chair, Grand Lodge bearing all the expenses and handing over the whole receipts for admission, £6,321, which has been equally divided between the above three institutions. The United Grand Lodge of England recognises only two species of Freemasonry—the **Craft** and the **Royal Arch**, both of which are exceedingly powerful. Scotch, Irish, American, and Continental jurisdictions acknowledge higher degrees; but these, with the exception of the **Mark Degree**, are not universal—that is, they are Christian degrees, and the Jew, the Turk, the Mohammedan and the Parsee will not join them. Strong endeavours were made thirty-five years since to induce the Grand Lodge to recognise the **Mark Degree**, but the attempts were unsuccessful, and the **Mark Masons** established a Grand Lodge of their own in 1856. By dint of hard work and a strong sincerity of purpose the **Mark brethren** have raised this degree to the position of one of the great powers in Freemasonry. It has already over 400 lodges in England and Wales and the colonies and dependencies of the British Crown; it numbers 24,637 **Mark Masons** as subject to its authority; has a large Benevolent Fund, out of which it relieves distressed **Mark Masons**, or the widows and families of deceased **Mark Masons**; has an Educational Fund, which pays for the education and clothing of 27 children in the localities where they live; and out of the interest of its annuity funds grants £26 a year to decayed **Mark Masons** and £21 a year to widows, with a present to each annuitant of £5 at Christmas. The work of English Freemasonry does not end here, because there are several provincial organisations which grant

annuities to local brethren and widows, and pay the expense of educating Masons' children. In connection with Freemasonry there exists a lodge, the *Quatuor Coronati (q.v.)* (founded 1884), whose membership is restricted to persons possessing either literary or artistic qualifications.

French Carlists. See FRENCH POLITICAL PARTIES.

French Colonies, The. See FRANCE, and COLONIES AND DEPENDENCIES OF EUROPEAN POWERS; also under various headings.

French Political Parties. Political parties in France may be roughly divided into two camps—**Republicans** and **Reactionaries**. There are, however, both inside and outside the Chamber of Deputies, several groups in each of these two divisions. The common principle which unites the Reactionaries in the Chamber is opposition to the Republic; and they sit together to form **The Right** or **Opposition**, although representing at least two distinct parties, viz., **Bonapartists** and **Monarchists**, while these again are further divided into **Victorians**, or followers of Prince Victor, **Jeromists**, or adherents of Prince Jerome, **Legitimists**, who incline towards Don Carlos, or his son Prince Jaime, **Fusionists**, **Philippists**, and **Compromise Royalists**. The Right increased its representatives in the Chamber of Deputies from 88 in the last parliament to some 200 in that which met for the first time on Nov. 10th, 1885. Through losses at bye-elections, however, the strength of the Right does not now exceed 180. The Republicans, although agreed on the cardinal points of their political creed, were less united than their opponents at the poll on Oct. 4th, 1885; the moderate and extreme sections vigorously opposing one another, to the consequent loss of both, and gain of the Reactionaries, who, for electoral purposes, adopted the name of **Conservatives**. The system of election in France is that known as *scrutin de liste (q.v.)*, which by a vote of the Chamber in the last session of the late parliament (June 1885) was substituted for *scrutin d'arrondissement (q.v.)*. There are, for electoral as for administrative purposes, 87 departments in France, returning 568 members to the Chamber of Deputies. There are, further, three departments in Algeria, returning six members, all of whom are Republicans, besides the distant colonial possessions, which are represented in the present parliament by ten Republicans. The total number of deputies is thus 584. The number of seats allotted to each department naturally varies according to its population, the territory of Belfort returning fewest members (2), and the department of the Seine—i.e. Paris—the greatest number (38). The next largest department is that of the Nord, which is represented by twenty deputies, the remaining departments returning from three to twelve. To secure election it is indispensable that at least a fourth of the electors on the register record their votes; and return is further conditional on obtaining an absolute majority of the votes recorded. The principle of election is by universal suffrage. The Chamber of Deputies is elected for a period of four years, and the Senate, apart from life members, for nine years, one-third retiring every three years. As

aforesaid, the **Monarchists** and **Bonapartists** now number some 180, the remainder of the Chamber consisting of **Republicans** of various shades. The latter may be subdivided as follows:—**Opportunists**. This is the most numerous and influential section of Republicanism, and owes its creation to Gambetta. It has seriously decreased, however, both in numbers and in comparative influence, since the death of its founder, under whose guidance it attained a perfection of organisation and political importance exceeding that of any party since the establishment of the Republic. During the first three years of M. Jules Grévy's presidency, Gambetta was all-powerful in France, and was the virtual master of the Chamber. Ministries were made and unmade at his pleasure, and none could exist without his support. When a Gambettist cabinet succeeded that of M. Jules Ferry (*q.v.*), in Nov. 1881, Opportunism was looked upon as the type of modern Republicanism, and a brilliant career was anticipated for the "ministry of all the talents," as it was called. It fell, however, in Jan. 1882, two months and a half after its formation, by an adverse vote on the *scrutin de liste* bill, which Gambetta had insisted upon attempting to carry. The overthrow of the ministry was a severe blow to Opportunism; and it sustained an even more serious one by the death of Gambetta, on the last day of the year 1882. But although shorn of his vivifying influence, the Opportunist party (which is now virtually led by M. Jules Ferry) is still a strong one, numbering some 150 in the Chamber, and it has remained true to its original principles as laid down by Gambetta. Among its prominent members are MM. Brisson, Ranc, and Spuller. The organs of Opportunism are the *Republique Française*, and the *Temps*.—**Left Centre**. This party represents rather a state of mind than a present power either inside or outside the Chamber, its parliamentary following, drawn from the Centre, being at most sixty, while some of these can only be said to accept the Republic on trial. As a healthy Republican germ, however, and a possible bulwark against the inroads of Royalist or Bonapartist reaction, Conservative Republicanism to some extent holds a balance, and so commands greater consideration than it would otherwise obtain on the ground of its numerical strength. It accepts as its political motto the dictum of M. Thiers, "*La République sera conservatrice, ou elle ne sera pas*;" and it follows, therefore, that it opposes all measures or ideas approaching an imitation of the first Revolution. At its head stand M. Jules Simon, a former prime minister and an able but much suspected statesman; and M. Ribot, a man of ministerial aims and a disciple of M. Dufaure.—**Extreme Left**. Not much more than a name in the last parliament, the **Extreme Left**, which is composed of at least four different groups, is a not inconsiderable power in the present one, commanding a united strength of some 160. Of this number, however, less than 100 are to be depended upon for all emergencies. Its chief strength is Paris, which is almost solely represented in the Chamber by Radicals. As a party it can scarcely be said to have a head, although M. Clémenceau (*q.v.*) more nearly occupies this position than any other of its members. M. Clémenceau is designated as a future minister, and at no distant date; although his personal chances of success are

held to be destroyed by his programme, which includes an elective magistrature and the immediate separation of church and state. Being powerless of itself in the Chamber, the Extreme Left has hitherto obtained its chief force by a coalition with the Right. This, however, would naturally cease under a Clémenceau ministry, when support was required to carry Radical measures. The Extreme Left may be thus sub-divided:—Advanced Left, led by MM. Goblet and Brisson; Radicals, led by MM. Floquet and Clémenceau; Rational Radicals, led by M. Henri Maret; and Extreme Radicals, led by M. Millerand. Prominent also amongst the members of the party are M. Lockroy, the "premier élu" of Paris, and M. de Freycinet (*q.v.*).—**Intransigeants.** Numerically insignificant, the Intransigeants make up for their lack of numbers by vigour of action. In the Chamber the heads of the faction are M. Camélinat and M. Basly, deputies for Paris. In the middle of Dec. '87 the two last-named deputies, in conjunction with sixteen others, for whom the programme of the Extreme Left was not sufficiently advanced, formed themselves into the **Republican Socialist** party. The new group drew up a lengthy programme, which includes the transformation of permanent armies into sedentary militias, equal rights for natural and lawful children, abolition of ecclesiastical subsidies and of monastic communities, the progressive nationalisation of property, the individual enjoyment of it being rendered accessible to every worker, abolition of inheritance in the collateral line, and the establishment of superannuation and accident funds at the expense of the State. To the Intransigent group must also be added the extra-parliamentary and noisy factions known as Collectivists, Possibilists, Social Revolutionaries, and Anarchists, to all of which the generic name of **Communist** may be applied. These groups, however, have strong antipathies to one another, although they would probably coalesce for purposes of disorder. Among the Republican groups must also be counted the Boulangists, or self-styled **National** party. Although at present they number in the Chamber scarcely a score, their following outside the Chamber is indisputable. General Boulanger, in August of last year, having been simultaneously returned by large majorities in three constituencies. There is good reason to believe, however, that a very considerable section of the extra-parliamentary following of the general is composed of Monarchists, Bonapartists, and other anti-Republicans. An unknown but much feared power in the country, the Boulangists, are powerless in the Chamber. Prominent among the followers of General Boulanger are M. Laguerre, M. Maquet, M. Rochefort, and Comte Dillon.—**Monarchists.** As stated above, the Monarchist, or Royalist party, is composed of four sections, which comprise the former Orleanists, and those followers of the late Comte de Chambord who have accepted the Comte de Paris as his successor. Prominent among them are the Duc de Broglie, the Duc de la Rochefoucauld, the leader of the **Fusionists**, the Duc d'Andiffret Pasquier, and the Comte de Mun, who stand at the head of the **Philippists**, the Baron de Mackau, and M. Pion, who head the **Compromis Royalists**, and General Cathelineau, and the Comte d'Andigné, who are the chief adherents

of the self-styled "**Legitimists**," who aim at the accession of Don Carlos or his son to the throne of France by a series of abdications. The party comprises some two-thirds of the Right. The chief difficulty of French Royalism has been the absence of a serious Pretender. Since the expulsion of the Orleans Princes, however (June 24th, 1885), the Comte de Paris has unquestionably adopted this position.—**Bonapartists.** Of this party there are, as stated, two distinct sections—the "Imperialists" or "Victoriens," and the "Jeromists." To the former the young Prince Victor, the son of Prince Napoleon and the Princess Clotilde, stands in the light of the future Emperor. The political leaders of the Victoriens are M. Jolibois, a former legal functionary of the Empire, and M. Paul de Cassagnac (*q.v.*). Prince Victor has hardly a serious following, but may rather be said to be surrounded by a coterie. His present policy is one of inaction. The **Jeromists**, or adherents of Prince Napoleon, affect to accept the present form of Republic so long as this is the expression of the national will, but aim more or less overtly at what they designate a "Consular Republic." Of this Prince Napoleon is to be the chief, giving a pledge not to employ any unconstitutional act of violence to convert the Consulate into an Empire. The **Jeromists** are scarcely represented in the Chamber. Both Prince Victor and his father are in exile under the decree of June 22nd, 1885, expelling the direct descendants of former reigning houses.—The **Naundorffists** are another insignificant Royalist section, unrepresented, however, in the French Chamber. They support the claims of a pretender who assumes to be a lineal descendant of Louis XVII. The Pretender is known by them as the Dauphin. In Oct. '87 the head of the Naundorff family, calling himself Adalbert de Bourbon, died at Bergen-op-Zoom. He was a captain in the Dutch army, and is succeeded by his son, who is a cadet in a Dutch military school.—The **Army** must also be taken into account in dealing with the political life of France. A large number of the superior officers are still Reactionary, and a not inconsiderable proportion of the remainder, particularly in the cavalry, entertain similar views.—The **Navy** is also Reactionary in the main, but has seldom counted for much in French political struggles.

Freycinet, Charles Louis de Saulces de, French senator and statesman, b. 1828 at Foix. Educated as an engineer at the Polytechnic School, he held several important mining appointments. Engineer-in-chief to the Chemin-de-Fer du Midi (1855-60), during which period he initiated important reforms in the working of that railway company. His talents led to his employment by the Imperial Government to make observations in his own and foreign countries. Appointed (1864) an ordinary engineer of the first class, he was until 1870 a member of the council of the Tarn-et-Garonne. After Sedan M. Freycinet became Prefect of the same Department. He was coadjutor of M. Gambetta in the Ministry of War (1870-71); Senator for the Department of the Seine (1876-82). His other official appointments are as follow: Minister for Foreign Affairs (1877-79); President of the Council and Minister for Foreign Affairs (1879-80), January to July 1882, and 1885, after the resignation of M. Jules Ferry. On the fall of the Brisson cabinet (Dec. 29th, 1885),

There are probably about 70,000 in the United States and Canada, besides small numbers in other countries. There is also in America a numerous body of Friends called "*Hickaites*" (from their founder, Elias Hicks), who about sixty years ago separated from the orthodox community, and hold views somewhat bordering on Unitarianism.

Frith, William Powell, R.A., b. 1819, and gained considerable reputation from the pictures which he contributed to the British Institution (1839-46). His "*Village Pastor*" (1845), secured his election as A.R.A. Two of his subsequent pictures, "*The Derby Day*" and "*The Railway Station*," are well known. The former created immense interest at the Royal Academy Exhibition (1858). His "*Before Dinner at Boswell's Lodgings in Bond Street, 1769*," shown at the Royal Academy (1868), was sold (1875) for £4,567, the highest price ever given for any picture during an artist's lifetime. Since his election as a full Academician (1852), Mr. Frith has been a constant and much-valued contributor to the annual exhibition of the R. A. Published his "*Autobiography*" in '87. Mr. F. issued (Nov. '88) a third volume of his Autobiography, entitled "*Further Reminiscences*," which proved as interesting as the previous volume.

Froude, James Anthony, LL.D., was b. 1818. Educated at Westminster and Oriel Coll., Oxford; graduated (1840); Vice-Chancellor's prizeman and Fellow of Exeter (1842). Gained (1844). In consequence of his book "*The Nemesis of Faith*" (1848) he withdrew from the Church and resigned his Fellowship. Contributed to *Fraser's Magazine*, of which for a time he was editor (1871-72), and the *Westminster Review*. Elected Rector of St. Andrews University and LL.D. (1869). Made a tour to the United States (1874), and visited (1874-75) the Cape of Good Hope on a mission to inquire into the Kaffir insurrection, and subsequently the Australian colonies. Mr. Froude holds a prominent and distinguished position as an historian, his historical researches having been chiefly devoted to the Tudor period, upon which he has thrown much new light, especially with regard to the character and policy of Henry VIII. In addition to his history, his principal works include "*Short Studies on Great Subjects*" (67), "*English in Ireland in the Eighteenth Century*" (74), "*Julius Cæsar*" (76), "*Reminiscences of the High Church Revival*" (81), "*Thomas Carlyle*" (82). His latest works are "*Oceana, or England and her Colonies*" (86), and "*The English in the West Indies; or, The Bow of Ulysses*" (88).

Fruit Farming. Of late years the consumption of fruit has greatly increased in this country, having risen from 1s. to 2s. 8d. per head of population in the last twenty years; and consequently fruit growing might be carried on more extensively and profitably in many parts of England than it is at the present time. The area of land under fruit in Great Britain has only been enlarged by 32,118 acres since 1873. In that year the area of arable or grass land used also for fruit trees was 169,808 acres, whilst in 1886 7

it was returned as 202,234 acres. During the same period the area used for market gardens shows an increase of 24,786 acres. (See ed. '88.) Consult articles from the pen of Mr. Charles Whitehead, F.L.S., F.G.S., a well-known authority on fruit farming, published in the *Royal Agricultural Society's Journal*. In '88 a National Fruit Growers' League was established, with the object, amongst other things, to furnish home growers with valuable and reliable information respecting culture of choice and saleable varieties of such fruits, vegetables, and flowers as command a ready sale at remunerative rates. The League also seeks to obtain such alterations in the land laws as will be beneficial to fruit growers and horticulturists generally. See, Henry Clark. Office, 59 and 60, Chancery Lane, W.C. A Conference on fruit farming, attended by representatives from all parts of the country, was held at the Crystal Palace, and also at St. Albans in September last. The Royal Agricultural Society for the first time ('88) offered prizes for the cultivation of fruit.

Fry, Rt. Hon. Sir Edward, b. at Bristol 1827. Called to the bar (1854); Q.C. (1869). Appointed a judge of the High Court (1877). Six years later, on Lord Justice Brett's elevation to the Mastership of the Rolls, Mr. Justice Fry was made a Lord Justice of Appeal. Has written a valuable treatise on "Specific Performance," as well as certain theological works.

Funchal. Cap. of Madeira (q.v.), pop. 20,000.

Furniss, Harry, the distinguished caricature artist, who since 1880, when he joined the staff of *Punch*, has been familiar to the public as the author of the clever Parliamentary illustrations of that periodical, is the son of English parents, and a grandson of Enneas Mackenzie, of Newcastle, but was "born out of his native country," at Wexford, Ireland, 1854. Previous to his accepting his engagement with *Punch*, he had for some years been connected with the *Illustrated London News*. An edition de luxe of his *Parliamentary Views* in *Punch* was published in '84. Mr. F. has also contributed illustrations to *Harpur's Magazine* and other periodicals, as well as to books for children, of which the best known, perhaps, is "*Romps*," published '85-6. An exhibition of Mr. F.'s "whimsical sketches" was held at Old Bond Street in '87. His most recent book is "*M.P.'s in Session*" (December '88).

Furnivall, Frederick James, M.A., Ph.D., b. at Egham, Surrey, 1825. Educated at University Coll., Lond., and Trin. Hall, Camb., B.A. 46. Dr. F. has edited numerous works, chiefly those belonging to the Early English period, including "Percy's Folio MS. of Ballads and Romances," editions of Chaucer's "Minor Poems," Caxton's "Book of Curtesey," and an edition of Shakespeare's works in one volume, entitled "The Leopold Shakespeare." He is also the founder of several literary societies—notably the Early English Text, the Chaucer, the Wyclif, the Browning, and the Shelley Societies. Dr. F.'s services to literature and Early English scholarship have received State recognition in the form of a Civil List pension.

G

Gaboon-Ogowé Region, or Gaboon and French Congo. A district of Western Africa north of the lower Congo. The Gaboon is strictly only a great estuary by which several minor streams discharge their waters. The **Ogowé** is a large river, which reaches the Atlantic by several mouths, forming a great delta, not far south of the Gaboon estuary. France has possessed the Gaboon estuary and district since 1843. Since 1884 the French possessions have been extended over a vast territory, back to the middle Congo, gained for her by the great explorer **Savorgnan de Brazza**, amounting to 174,000 sq. m., with pop. at least 500,000. A railway from the head of navigation on the Ogowé, to connect with waters navigable from Stanley Pool on the Congo, is projected. Some enlargement of the boundaries was effected in 1887. See CONGO FREE STATE.

Galle. Port of call for steamers, south point of Ceylon (q.v.).

"Gallican Church." See OLD CATHOLICS.

Gallipoli. A town of about 21,000 inhabitants, situated on the Dardanelles, chiefly known as the place whither English ships were sent during the Crimean war.

Galton, Francis, F.R.S., F.G.S., b. 1822, is the grandson of Dr. Erasmus Darwin, author of "Zoonomia," and cousin of the late Charles Darwin, the naturalist. Educated at King Edward's School, Birmingham, Birmingham Hospital, King's Coll., London, and Trinity Coll., Cambridge, where he graduated (1844). He subsequently travelled much, especially in North and South Africa; received the Royal Geographical Society's Gold Medal; and was appointed for the Royal Society a member of a committee of the Board of Trade, which inquired into the past and future duties and administration of the Meteorological Office. From 1863 to 1868 he was General Secretary of the British Association; and has been President of the Geographical and Anthropological sections. His writings include several works of great importance on the latter subject, his most recent addition to Scientific Anthropology being his paper on "Hereditary Stature." By his rigid application of scientific method Mr. Galton has been able to fix down and formulate what, hitherto, have seemed "the most intangible and evanescent characteristics of humanity."

Galvanic Battery. See ELECTRICITY, ed. '88.

Gambia. A British colony on Gambia river, West Africa. Area, 69 sq. m.; pop. 14,150, mostly negroes. Capital, **Bathurst** (pop. 6,138). Consists of St. Mary's Island, with Combo on south, Albreda, Barra, and Ceded Mile on north bank. Up river are several stations, of which McCarthy's Island, 187 miles from mouth, is the highest. Produces ground-nuts, hides, beeswax, rice, cotton, maize, grain, etc. It is stated to be the healthiest European settlement in Western Africa, and has a flourishing trade. Ruled by Administrator, who is subordinate to Governor of Sierra Leone, officially styled Governor of West African Settlements. First founded, 1788. On Dec. 3rd, '88, it was announced that **G. T. Garter, Esq.**, had been appointed Administrator of the Colony. For financial statistics see BRITISH EMPIRE, etc. (table).

Game, Close Time for. See table, ed. '86.
Game Laws. Animals *feræ naturæ* (wild animals) are not in English law subjects of property, and therefore are not protected by the law of larceny. Special statutes, accordingly, have been enacted for the preservation of game, and these are known as the game laws. Game, as a legal term, comprises hares, pheasants, partridges, grouse, heath or moor game, black game and bustards (1 and 2 Will. IV., c. 32, s. 2). By the Ground Game Act, 1880, it is provided that the occupier of land (the tenancy of which has been created since Sept. 7, 1880) shall have the right to kill ground game (hares and rabbits) thereon equally with the landlord, and shall be unable to alienate this right; but he may authorise certain others to kill his game. See more fully, ed. '87.

Garnett, Richard, LL.D., for some years the well-known Superintendent of the Reading Room at the British Museum—from which he retired in '84, in order to devote more attention to the printing of the Catalogue—was born at Lichfield in '35. He received his first appointment in the Museum, as assistant in the Printed Book Department ('51). Under Dr. G.'s superintendence (which dates from '75) many improvements have been introduced. The most important of these is the commencement of the colossal work of re-editing and printing the Catalogue. This is being done under Dr. G.'s superintendence. Dr. G. has been a frequent contributor to periodical literature, and is the author of "The Life of Carlyle" ('87), and "Life of Emerson" ('88); also of "The Twilight of the Gods," a collection of tales ('88). He is LL.D. Edin. ('83.)

Garnishee. Where a creditor has obtained judgment, debts owing to the debtor may be attached by a process known as a garnishee order, which compels the debtor's debtor to pay to the judgment creditor the amount owing. Formerly legacies owing to judgment debtors were held not to be attachable debts, but the better opinion now seems to be that a legacy can be garnisheed in the hands of the executor.

Garter King of Arms. The holder of this office of dignity and historic interest is within the College of Arms above all other officers. His powers include the adjustment of arms in England and Wales, and the power of granting arms under the authority of the Earl Marshal in conjunction with the provincial Kings of Arms, according to their several jurisdictions, to persons qualified to bear them, and the creation of arms, crests, cognisances, and devices, as well as the power and authority to grant armorial bearings. He has under the Earl Marshal the regulation of the proceedings at State ceremonies, and the guidance of coronations; and he controls and manages all matters concerning the Order of the Garter. At the commencement of every session he lays on the table of the House of Lords the roll of the lords temporal, and he assists at the introduction of all newly created peers (see PEERAGE). The present holder of the office, **Sir Albert Woods, C.B., F.S.A.**, is son of the late Sir William Woods, Garter King of Arms, and entered the College of Arms (Queen Victoria Street, E.C.) as Pursuivant 1838, was appointed Lancaster Herald 1847, and assumed his present office 1869.

Garter, The Most Noble Order of the. Was originally established by King Edward III. in 1349. As reconstituted in 1831 it is limited to the Sovereign, the Prince of Wales, and such descendants of George I. as may be elected to be members of it, and to twenty-five Knight Companions; but sovereigns and princes of other realms, and other foreigners of distinction, may be admitted by special statutes. Its abbreviation is K.G., and it is the highest order of knighthood. Its insignia and habit are most elaborate and imposing and include the *George*,—a gold medallion of St. George and the Dragon, suspended from a blue ribbon; the *Garter*, which is worn below the knee of the left leg, and is made of dark blue velvet, edged with gold, its motto being "*Honi soit qui mal y pense*" (Evil to him who evil thinks"); a mantle of blue velvet lined with taffeta, with the star of the order embroidered on the left breast; a hood and surcoat of crimson velvet, and a hat of black velvet; a collar of gold weighing thirty ounces, and the star with the cross of St. George in the centre, encircled by the Garter. There are at present fifty-four K.G.'s in all, including the Sovereign, and the following is a full list of them, the date of creation being prefixed in each case:—

THE SOVEREIGN.

- 1875. Cambridge, H.R.H. the Duke of.
- 1867. Connaught, H.R.H. the Duke of.
- 1878. Cumberland, H.R.H. the Duke of.
- 1863. Edinburgh, H.R.H. the Duke of.
- 1841. Wales, H.R.H. the Prince of.
- 1883. Wales, H.R.H. Prince Albert Victor Christian Edward of.
- 1884. Wales, H.R.H. Prince Geo. Frederick of.

- 1867. Austria, the Emperor of.
- 1887. Austria, the Crown Prince of.
- 1885. Battenberg, H.R.H. Prince Henry of.
- 1866. Belgians, the King of the.
- 1871. Brazil, the Emperor of.
- 1865. Denmark, the King of.
- 1877. German Emperor William.
- 1873. Hellenes, the King of the.
- 1862. Hesse, the Grand Duke of.
- 1866. Holstein, H.R.H. Prince Christian.
- 1878. Italy, the King of.
- 1862. Mecklenburg-Strelitz, the Grand Duke of.
- 1882. Netherlands, the King of the.
- 1873. Persia, the Shah of.
- 1865. Portugal, the King of.
- 1881. Russia, the Emperor of.
- 1844. Saxe-Coburg and Gotha, Duke of.
- 1882. Saxony, the King of.
- 1882. Sweden and Norway, the King of.

THE TWENTY-FIVE KNIGHT COMPANIONS.

- 1885. Abergavenny, Marquis of.
- 1883. Argyll, Duke of.
- 1867. Beaufort, Duke of.
- 1880. Bedford, Duke of.
- 1865. Cleveland, Duke of.
- 1865. Cowper, Earl.
- 1884. Derby, Earl of.
- 1858. Devonshire, Duke of.
- 1862. Fitzwilliam, Earl.
- 1883. Grafton, Duke of.
- 1856. Granville, Earl.
- 1862. Grey, Earl.
- 1885. Kimberley, Earl of.
- 1873. Leicester, Earl of.
- 1888. Londonderry, Marquis of.
- 1886. Norfolk, Duke of.

- 1885. Northampton, Marquis of.
- 1885. Northumberland, Duke of.
- 1867. Richmond and Gordon, Duke of.
- 1869. Ripon, Marquis of.
- 1878. Salisbury, Marquis of.
- 1885. Sefton, Earl of.
- 1864. Spencer, Earl of.
- 1864. Sutherland, Duke of.
- 1870. Westminster, Duke of.

The Bishop of Winchester is Prelate, and the Bishop of Oxford Chancellor of the Order. Sir Albert W. Woods, C.B., F.S.A., is Garter Principal King of Arms, and the Hon. Sir J. R. Drummond, G.C.B., is Gentleman Usher of the Black Rod.

Geffcken, Professor. See GERMANY.

Geikie, Dr. Archibald, F.R.S., b. at Edinburgh 1835. Educated at the High School and the University. Appointed to the Geological Survey in 1855. He is a Fellow of the Royal Societies of London and Edinburgh, of the Geological Society of London, etc.; and is the author of numerous geological memoirs and works. Dr. Geikie was associated with Sir Roderick Murchison in working out the true geological structure of the Scottish Highlands. On the extension of the Geological Survey in 1867 he was appointed director of the survey of Scotland, and in December 1870 was nominated by Sir Roderick Murchison as first occupant of the new chair of Mineralogy and Geology, founded in the University of Edinburgh by Sir Roderick and the Crown. The University of St. Andrews conferred on him the degree of LL.D. (1872). In 1881 he was appointed *Director-General of the Geological Survey of the United Kingdom*, and Director of the Museum of Practical Geology, London.

General Assembly. The highest court of the Presbyterian State Church of Scotland, and consists of representatives, clerical and lay, from all the presbyteries of the Church in Scotland and Ireland, also delegates from the universities and Scottish royal burghs. It meets annually in Edinburgh in May, and sits about ten days. Its deliberations are presided over by a moderator, and are also attended by an officer representing the State (the Lord High Commissioner), who, however, has no voice in its procedure or decisions. During the sitting of the Assembly the Lord High Commissioner, a Scottish nobleman, holds semi-regal state in the palace of Holyrood.

Gentlemen-at-Arms. A bodyguard to the sovereign instituted by Henry VIII., and the oldest corps in H.M. service except the Yeomen of the Guard. It is only mustered for duty on such occasions as drawing-rooms, levees, and great state ceremonies. The captain of the corps changes with the Ministry (*q.v.*).

Geographical Progress, '88. Geography is taking an increased hold on us as a nation, and the appointment of a *Reader of Geography at Oxford*, and the lectures of the *President of the Royal Geographical Society at Cambridge*, to be followed by the appointment of a *reader* there, also mark an important step forward in the recognition of geography as a science worthy of being studied. The news of additions being made to our geographical knowledge during '88 are many and various, but the palm, both for the importance of the work and the pluck and determination displayed in carrying it out, must be given to the *journey of Lieutenant Younghusband of the King's Dragoon Guards from Manchuria and Peking to Kashmir over the*

Mustagh Pass. Throughout this journey of 7,000 miles Lieutenant Younghusband took topographical notes and made a route survey which have been reduced in the Surveyor General's office in India, and must prove of great value, while they explain and supplement the previous work of Carey and General Prejevalsky. During this same period this last explorer had been busy, but did not succeed in reaching *Laasa*, the objective point of his last expedition, news of his death having been received November '88. Other Russian travellers, *Potanin* and *Skassi*, have explored much of *Mongolia* and *Kan Su*, and made large additions to our knowledge of the botany and geology of these regions; while *Garnak* and *Bessine* have filled in the blanks left by previous travellers in the *Khingan* range, between *Manchuria* and *Mongolia*. On the northern frontier of India the pundits employed by the Indian Survey have been busy and done much to extend our knowledge and determine more accurately the upper course of the *Brahmaputra*. An expedition has been sent by the Indian Government across the *Patkoi Hills* into *Upper Burma*, and demonstrated the existence of a feasible road in that direction. This is only a confirmation of our historical knowledge, for it was across this range that the Burmese kept up their communication with Assam when that province was subject to their rule. In *Burmah* itself our topographical knowledge is being rapidly improved by our occupation of the country; and in the neighbouring country of *Siam* *Mr. J. McCarthy* has made known the results of his six years' work as superintendent of surveys to the Siamese Government. The work of the exploration of *British New Guinea* is proceeding but slowly, though now it is made a Crown Colony more rapid progress may be certainly expected. The *Borneo Company* is steadily examining and mapping the country under its rule, and *Mr. Daly* and *Admiral Mayne* have read papers to the *Geographical Society* explaining the work done. In the *Solomon Islands*, *Mr. Woodford* has added largely to our knowledge of the ethnology and zoology of this interesting group. *Greenland* is again being attacked, and *Mr. Mansen* has successfully crossed its icy plateau from the east coast to *Disco*, in spite of almost unparalleled difficulties. In *Labrador*, *Mr. Holme* has done good work; but perhaps the most interesting work in *North America* is the exploration of the mountain ranges of *Alaska*. In *South America* the basin of the *Rio Doce* has been thoroughly examined by *Mr. Stearns*, while the German traveller *Dr. von Steinen* is exploring the *Kingu*, one of the great southern tributaries of the *Amazon*, and the head waters of the *Orinoco* have received a good deal of attention. The *Hydrographical Department* of the Navy is pursuing its labours in various parts of the world, and the results obtained under the talented direction of *Captain Wharton*, the *Hydrographer*, are most valuable.

Geol. Topog. See ed. '87.
Geological Survey. This organisation was founded by *Sir E. T. De la Beche*, who commenced work single-handed in the south-west of England about 1830. The Geological Survey was officially recognised as a branch of the Ordnance Survey in 1834. In 1845 it was placed under the office of *Woods and Forests*, and in 1854 under the department of *Science and Art*. The entire geological survey of England on the one-inch ordnance maps (scale 1: 63,000) has

just been completed; the six-inch scale (1: 10,560) has been used for coal-fields and other important districts. The drifts were formerly neglected; but of late these have been mapped, and hence many sheets are issued in two editions—one showing the solid geology, while the other, or drift-map, shows the superficial deposits. The maps are illustrated by horizontal and vertical sections, and by explanatory memoirs. The geological survey of *Scotland* was commenced in 1854, and that of *Ireland* in 1845. The survey of each country is placed under a director, and the three surveys are united under a director-general. The successive directors-general have been *Sir E. T. De la Beche* (1845-55), *Sir R. Impey Murchison* (1855-72), *Sir A. C. Ramsay* (1872-81), and *Prof. A. Geikie* (1881). For further information consult "The National Geological Surveys of Europe," by *W. Topley* (Trübner & Co., 1885).

Geology. The science which deals with the structure and history of the earth. (See ed. '86 for concise outline of Geology.) The great event in geological circles during '88 was the triennial meeting of the *International Geological Congress*, held in *London* during the week commencing Sept. 17th. *Prof. Prestwich* delivered the presidential address, which traced the history of the Congress and suggested future work. The discussions initiated by the *Nomenclature Committee* dealt chiefly with the *Cambro-Silurian controversy*. For the general group *Mr. Marr* proposed the term *Barrandian*, in recognition of *Barrande's* work in *Bohemia*. The general feeling was in favour of recognising three divisions, the lowest being called *Cambrian*; the intermediate series might be distinguished by *Prof. Lapworth's* name *Ordovician*, from the ancient tribe of the *Ordovices* in *North Wales*, but the opinion of many was in favour of retaining the *Murchisonian* term *Lower Silurian*; while the uppermost of the three groups would be called *Silurian*, or "Upper Silurian" if the middle group were termed "Lower Silurian." The Map Committee produced the first sheet of the *International Map of Europe* on the scale of 1: 1,500,000, printed at *Berlin*, and coloured in accordance with the convention of the Congress. An important discussion arose on the nature and origin of the crystalline schists—a subject on which the most eminent Continental authorities had contributed papers. The work of the *Geological Survey* (q.v.) especially of *Messrs. Peach and Horne*, in the *Scottish Highlands*, was submitted to the Geological Society, and formed the most important paper of the session. Detailed mapping has confirmed the general conclusions of *Prof. Lapworth*, and revealed the intense dynamic metamorphism which occurred in pre-Cambrian times. *Prof. Blake's* work in *Anglesey* has led him to recognise a great group of rocks older than the *Cambrian*, yet not *Archæan*, which he terms the *Monian system*, in consequence of its development in *Monia*. A deep boring for water at *Streatham*, described by *Mr. W. Whitaker*, is of much interest as affording the latest contribution to the discussion on the question whether coal is likely to be found under *London*. The boring has reached a depth of 1,238 ft. No *Lower Greensand* was found beneath the *Gault*, but the borer passed directly into oolitic rocks, on the horizon of the *Forest Marble*, beneath which were mottled strata, either *Triassic* or *Devonian*. Consult *Lyell*, *Geikie*, *Judd's*, and *Prestwich's* *Geology*. Besides the *Geological Society* (*Bur-*

lington House, W.), there exist **The Geologist's Association**, and the **London Geological Field Club** for the systematic study of the London district.

George, Henry, was b. in Philadelphia, 1839. After a chequered career in early life, he applied himself to the "land question," and in 1871 published a pamphlet entitled "**Our Land and Land Policy**," setting forth in vigorous language his particular views on this subject; and he subsequently started a penny paper, in which the same matters were also treated, he himself writing the editorial articles. After passing through some vicissitudes in his journalistic career, he came to England in '81. He lectured in '82 in Dublin on the land question, and becoming an object of suspicion on the part of the Irish Government, he was arrested. On his release he wrote a letter to the President of the United States, couched in vigorous terms, complaining of the treatment to which American citizens were subjected in this country, etc. In 1880 he had published a work in the United States entitled "**Progress and Poverty**," in which all the social problems affecting property in land principally—together with others touching the social condition of the labouring classes—are dealt with from Mr. G.'s point of view. One of the results arising from the publication of this work was the formation of the **Free Soil Society of America**. It was subsequently published in this country, and contributed to the foundation of the **Land Reform Union** in 1883. He became ('86) a candidate, as the representative of the Labour Party (see **AMERICAN POLITICAL PARTIES**), for the Mayoralty of New York, in opposition to Mr. Hewitt, democrat, and Mr. Roosevelt, republican, and, although unsuccessful, polled 60,000 votes. Though a prominent leader of the **Labour Party in America**, Mr. G. has incurred the opposition of a considerable section, owing to his anti-Socialistic views. Mr. G. is also an active supporter of the **Free Trade Party** in the United States. In Nov. '88 Mr. G. addressed some meeting in London on the land question.

Georgetown. Capital of **British Guiana** (q.v.). On Demerara river; pop. 49,000.

Georgetown. Capital of **Penang**, one of the **Straits Settlements** (q.v.).

German Clerical Party. See **AUSTRIAN POLITICAL PARTIES**.

German Colonisation. For detailed history see ed. '87. In Africa this has received a rude check by the resistance of the Arabs and others on the east coast to the assumption of authority over them by the **German East African Company** (q.v.), under agreement made with H.H. the Sultan of Zanzibar. What steps the Germans intend to take for the restoration of their authority are not yet known, but at present it is not safe for a German to venture beyond the protection of the guns of the German Squadron. The cause of this resistance is stated by those best qualified to judge to have arisen from the overbearing manner in which the natives have been treated by the new-comers; but the Germans themselves say that it arises from the intrigues of the slave dealers, and have asked the **British Government** to join them in a blockade of the **Zanzibar coast** to prevent the exportation of slaves and the importation of guns and ammunition. The British Government has joined in the blockade, but has caused it to be understood that they will take no part

in operations on shore. It is a matter of doubt whether the Government at Berlin will do more than assist in the blockade, for they have no troops available for distant expeditions. On the west coast of Africa, though the Germans have not succeeded in winning the affections of their negro subjects, they, except in the south, have managed to pay their expenses; and to meet the deficiency in Damara and Namaqualand their home government has voted a grant of money. German Colonisation on both coasts of Africa is, however, an entirely artificial process, and it is more than probable that ere long the attempt to carry it on will be abandoned. See **COLONIES OF EUROPEAN POWERS**, and under various heads.

German Confederation. See **GERMANY**.
German East African Company. By a treaty concluded in 1886 between Germany, Great Britain, France, and **Zanzibar** (q.v.), this Company have acquired rights over territory extending from **Kilimanjaro** (q.v.) southward to the Rovuma river, including the basins of the Pangani, Wamo, Kingani, Rufiji, and Ruhuhu, the lands of Usambara, Nguru, Usecuha, Usagara, Uzaramo, Ukhuu, Mahenga, Manwera, and Makonde—an area computed at not less than 600,000 sq. m. Dr. Karl Peters states that there are plateaux suitable for white colonists. But in the lowlands the problem is how to find labour, the natives being inveterate idlers. Consult Thomson's and Stanley's works, and the official *Preisbuch*.

German Political Parties. The centre of political life in the German Empire is the **Reichstag** or **Imperial Diet**, in which, together with the **Bundesrath** or **Federal Council**, are vested the legislative functions of United Germany. There are sharply defined limits, however, to the power of both. The Reichstag's decisions may be overridden by the Emperor, to whom is intrusted the supreme direction of military and political affairs. The Emperor has the power of declaring war if for purely defensive purposes, of making peace, of contracting treaties, and appointing ambassadors and envoys, without the consent of either legislative body. To declare war for other than defensive purposes, however, the assent of the **Bundesrath** is required. The latter body, which represents the individual states of the Empire, as the Reichstag represents the German nation, consists of fifty-eight delegates. Of these, seventeen, including Prince Bismarck (q.v.), sit for Prussia, six for Bavaria, four each for Württemberg and Saxony, three each for Baden and Hesse, two each for Mecklenburg-Schwerin and Brunswick, and one each for the remaining states, including the free towns of Hamburg, Lübeck, and Bremen. Of its functions, it may be said that the Bundesrath is mainly a confirming body, although it has the privilege of rejecting measures passed by the Reichstag. It has also a limited initiatory power, which it occasionally exercises. Members of the Bundesrath have the right of appearing in the Reichstag, and of speaking on any question in which the State they represent is directly interested. Members of the one chamber, however, are not eligible for election to the other, although they may sit in their respective provincial diets. The Reichstag is composed of 397 members. Of these 236 constitute the elected of Prussia, 48 represent Bavaria, 23 Saxony, and the remainder the other states in due proportion,

ranging from 1 to 17. The present Reichstag was elected on Feb. 21st, '87, having been dissolved on the 14th January previous, owing to its rejection, by 186 votes against 154, of a bill for increasing the peace effective of the army for seven years. It is split up into eight distinct groups, exclusive of the Independents or "Wildes," who number seven in the present Parliament, and the one Dane, who found a seat in Schleswig-Holstein. The largest individual party is the Centre, or Ultramontane, which obtains its chief strength in the Rhine districts and South Germany. It was returned at the '87 election 101 strong—since which time it has lost two seats—and is the most compact and obedient of all the parties in the House. The Centre aims at securing the complete repeal of the May Laws, which is the name given to the present measures regulating the relations between Church and State in Prussia. The chief measures are those passed on May 11th, '73, and May 4th, '74. At one time very stringent in their provisions, the May Laws have been more than once modified of recent years, and notably by a bill passed in April '87. Measures for their complete repeal, however, though passed by the Reichstag, have been twice rejected by the Bundesrath. Alternately cajoled and threatened by Prince Bismarck, the Centre party, which is admirably led by Dr. Windthorst, gives it to be clearly understood that its support of the Chancellor's own schemes must be paid for by concessions. As a consequence there is a more or less constant barter going on between the party and the Imperial Chancellor. Next in point of strength comes the National Liberal party, which, as the result of the general election of '87, numbers 96 in the present parliament against 51 in the previous one, having thus regained the prominent position it occupied before it split in '79, on the question of protection. The leader of the party is Herr von Bennigsen. The next strongest party in the Diet is that of the German Conservatives, who number 75 in the present parliament, against 77 at the close of the last. They constitute the nucleus of the Ministerial party, chief among their number being Count von Moltke, Herr von Puttkamer, and Herr von Kleist-Retzow. Closely allied to the German Conservatives are the "Reichspartei," or Imperialists, who number 39, against 28 in the last parliament. Their name sufficiently indicates their politics; and although differing from the German Conservatives on one or two minor points of detail, they also go to form the Ministerial party. Dr. Delbrück and the Duke von Ratibor are among the chief members of the party. During '88 the National Liberals and the two Conservative parties, so far merged their principles as to adopt the name of the "Cartell" parties. Next comes the "Deutsche Freisinnige," or German Liberal party, which is composed of the old Secessionists and Progressists (see ed. '87). In the last Reichstag the German Liberals numbered 65, having fallen to that figure from 105 at the time of the fusion. At the election in February '87 the party was even more unfortunate at the polls, and now counts only 36 votes. Its leader is Herr Eugen Richter, and among its prominent members are Professor Virchow, Dr. Hänel, and Dr. Bamberger. The German Liberals are in chronic opposition to Prince Bismarck, as are the remaining groups yet to be dealt

with. These are the Alsace-Lorrainers, the Poles, and the Social Democrats. The Alsace-Lorraine party has the same number (15) in the present Reichstag as it had in the last, and nearly the same representatives. The Poles, who numbered 16 in the late Reichstag, have 13 in the present one. Both are parties of protest, and being for the most part Roman Catholic, they invariably vote with the Centre party. Their *raison d'être*, however, is opposition to the Empire, and they would certainly forsake the Centre if the latter became a National party. The Social Democrats, like the German Liberals, sustained a severe loss at the '87 election: 23 strong in the last parliament, they now number only 10. They have therefore lost the power they exercised in the previous Diet, of introducing measures of their own, for which the signatures of 15 members are required. The Social Democrats are the especial antipathy of Prince Bismarck, who has repeatedly tried to crush them. It is owing to them that several of the chief towns of Germany, and among them Berlin, have for a long time past been placed under the minor state of siege. The chief stronghold of the party is Berlin, where, at the last election, its candidates polled 90,107 votes, or some 20,000 more than in '84, when they received 68,910. Their previous records in Berlin were: 1867, 67; '71, 2,058; '74, 11,279; '77, 31,522; '78, 56,147; and '81, 30,178—the falling off in the latter instance being alleged to be due to the rigorous application of the Anti-Socialist Law. The total poll of the Socialists for all Germany was in Feb. '87 774,128, against 549,936 in '84. Of the 7 members of the Volkspartei (see ed. '87) in the last parliament, not one was returned to the present House. Of the 7 Independents in the present Diet, one is an anti-Semite, a second an agrarian member, and a third a Guelph.

Germany. The German Empire is a confederation of German states under the presidency of the Emperor William of Hohenzollern, king of Prussia. By the constitution of the 16th April, 1871, all the states of Germany are to form an eternal union; direction of political and military affairs vested in an elective emperor, who may declare war, but if not defensive, consent of Federal Council required. The legislative functions of the empire vested jointly in a Federal Council (Bundesrath) of 58 members appointed by and representing the individual states, and in a Chamber of 37 members elected by ballot and universal suffrage, representing the German nation. The following states are included in the confederation:—The kingdoms of Prussia, Bavaria, Württemberg, and Saxony; the imperial province of Alsace-Lorraine; the grand duchies of Baden, Mecklenburg, Brunswick, Oldenburg, and fourteen smaller principalities. Area (including Alsace-Lorraine), 211,106 sq. m.; pop. ('85), 46,855,704. The expenditure upon federal objects—army, navy, diplomatic, postal and telegraphic services, etc. (for '87-8 £37,260,871)—to be approved by the Reichstag, and provided for by the contributions of the members of the confederation in specified shares. Estimated revenue and expenditure for '88-9, £46,884,457. (For army and navy see ARMIES AND NAVIES, FOREIGN.) Funded debt ('87), £28,828,600, and unfunded debt, £6,043,423; but on the other hand there is a sum of £33,312,055 invested for various federal purposes. Special imports ('86), £144,420,000; special exports, £149,280,000. In '70 the North

German Confederation comprised all the German states north of the Maine, under the headship of Prussia, united in military alliance with Bavaria, Württemberg, and Baden. (For history 1870-88 see previous editions.)—**Political.** Great interest during '88 has naturally centred round the throne which, as a fact almost unparalleled in the history of nations, witnessed the death of two emperors and the accession of a third. The aged Emperor William, who almost to the last manifested the wonderful vigour so characteristic of the man, was seized with an alarming illness at the beginning of March, which proved fatal on the 9th. His funeral, which was conducted with great pomp and magnificence, was attended by royal and distinguished representatives from all the courts of Europe; and Germany, with singular unanimity, manifested its deep sorrow at the death of its Kaiser. The Emperor Frederick, who succeeded his late father, had been for some time suffering from a severe affection of the throat; and, after a period alternating between recovery and relapse, underwent an operation of tracheotomy, which was successfully performed (see **FREDERICK WILLIAM**). His accession (occurring on the 700th anniversary of the coronation of his great predecessor, Frederick Barbarossa) gave promise of European peace and of important constitutional reforms, his sympathies being known to be in favour of pacific progress and liberty. His proclamation as Frederick III., and his rescript to Prince Bismarck (*q.v.*), caused universal satisfaction in European capitals. After passing an address in reply to the Imperial message, Parliament was prorogued. As indicating the universal esteem in which the new king was held, the autograph letter from the Pope expressing his deep sorrow at the death of the Emperor William may be noted. In consequence of the delicate state of health of the Kaiser, an Imperial rescript signed by the Chancellor authorised the Crown Prince William to participate in the government—a proceeding equivalent to a co-regency (March 23rd). A **Royal Prussian Amnesty**, which is always granted by kings of Prussia on their accession, to all suffering punishment for certain offences—chiefly political—was published March 31st. The toast proposed by the Crown Prince, on the occasion of the banquet in honour of Prince Bismarck's seventy-third birthday, created much comment, from its supposed opposition to the Emperor's policy. Immediately succeeding this event occurred the "Chancellor crisis," Prince Bismarck having employed his influence to frustrate the proposed alliance between the Princess Victoria, the second daughter of the Emperor, and Prince Alexander of Battenberg (*q.v.*). At one period the resignation of the Chancellor seemed imminent, and the semi-official press, supposed to be inspired by Prince Bismarck, manifested a hostile attitude, specially directed against the Empress Victoria, to whom an address of loyalty and sympathy, signed by more than 10,000 women of Berlin, was presented. An interview is stated to have taken place between Prince Bismarck and the Emperor and Empress (April), which culminated in the abandonment of the proposed betrothal. A little later Queen Victoria visited Charlottenburg on account of the illness of the Emperor, and while there conferred with Prince Bismarck. The unhappy quarrel between Sir Morell Mackenzie (*q.v.*) and Professor von

Bergmann respecting the accuracy of their relative diagnoses resulted in Prof. Bergmann's withdrawal from attendance on the Emperor, which culminated, after the fatal issue of the case, in bitter and hostile denunciations of the English doctor in the German press. The Emperor Frederick succumbed at length, notwithstanding his long heroic struggle against the disease, death ensuing June 15th, to the universal regret of all classes in the realm. As on the occasion of the funeral of his father (*v. supra*), the obsequies of the Emperor Frederick, although performed with great simplicity, called forth the affectionate regret of the nation, all the foreign Powers expressing their sympathy by the attendance of representatives of the various courts. The proclamation of the Emperor William II. occasioned some uneasiness in France (*q.v.*), owing to the absence of any reference to that republic or to England, and tended to revive a feeling of disquiet which the speech of Prince Bismarck in February had aroused when speaking on the general political situation of Germany and its relation to France and other foreign powers on the introduction of the **New Military Organisation Bill**. Prior to this speech, the publication of the **treaty of alliance between Austria and Germany**, published in Berlin and Vienna (February 3rd), indicated the Chancellor's determination to defend German interests, while maintaining an attitude of peaceful watchfulness. Except for occasional hostile outbursts on the part of the press, more or less officially inspired, against Russia and France, there were no serious disputes with any foreign powers, Prince Bismarck having declared in his famous speech (*v. supra*) his indifference to the fate of Bulgaria, provided the peace of Europe was not imperilled (see **BULGARIA**). The relations with Italy were of a cordial character, which the interview between Signor Crispi (*q.v.*) and Prince Bismarck (Aug.) assisted to strengthen. Germany's alliance with Austria was also firmly maintained, and a visit was paid by Count Kalnoky (*q.v.*) to Prince Bismarck at Friedrichsruh (Sept.). The visits paid by the Emperor William to many of the crowned heads of Europe, and their reciprocal visits to Berlin, have tended generally to promote a friendly understanding among the various Powers, although in the case of the Emperor's visit to the Vatican (October) the result has been the contrary. Germany, in conjunction with England, has recently (Nov.) agreed to the blockade of the east coast of Africa, with a view to the more rigid prevention of the slave trade.—**Internal Politics.** The principal measures of the year have been the **Loan Bill**, presented to the Reichstag (Jan.), for 28,355,562 marks for an increase of war material, necessitated by the New Military Organisation Bill, and the law substituting quinquennial for triennial Parliaments in Prussia, which occasioned some friction between the Crown Prince and the Cabinet (May). The result of the first elections to the new Quinquennial Diet has been to strengthen the Government party. The Imperial Parliament, on the death of the Emperor Frederick, met for a brief and informal session. The Prussian Diet was opened by the Emperor William (June 27th), when he took the oath to observe the constitution of the monarchy, and in his speech declared that he had no intentions to curtail popular rights, and made reference to financial matters and the inundations. The

Diet was again prorogued, after each Chamber had voted loyal addresses to the Emperor in answer to his speech from the throne. In July, the official report on the late Emperor Frederick's illness was published. On the Emperor's return to Berlin in August, and later on in October, after his visit to Rome and the Vatican, he was received with much enthusiasm by the inhabitants of Berlin. On the latter occasion the incident which took place between the Emperor and the deputation from the Berlin Civic Council was a subject of much comment. The appointment of Herr Bannigsen (leader of the National party) as Ober-President of Hanover was regarded as an indication of the new Emperor's conciliatory domestic policy. During the year Hamburg entered the Customs Union.—General. Severe storms and inundations marked the early year (March). The overflow of the Vistula and the bursting of the Nogat dyke caused the submergence of many villages and part of the town of Elbing. Thousands fled for their lives, and great destruction of property ensued. A fund for the relief of the sufferers was raised, to which the King of Italy sent a donation of 40,000 fr. Subscriptions were also raised in London by a special committee, presided over by the Lord Mayor. The Kaiserin herself visited Posen to aid the sufferers. Snowstorms also of unusual severity occurred (Feb. and March). The town of Hunfeld (Oct. 29th) was nearly destroyed by fire. The foundation-stone of the new Supreme Court at Leipzig was laid by the Emperor.—Social. The most important social events of the year have been the visits of foreign potentates to the capital, the marriage of Princess Irene with Prince Henry of Prussia, second son of the Emperor Frederick; the visit of the Prince of Wales to personally "acquire" the Blücher Hussars, of which he is the honorary colonel; the promotion of the Duke of Edinburgh to the honorary rank of general of infantry in the German army; the decoration of Sir Morell Mackenzie (q.v.) with the cross, collar, and star of the Hohenzollern Order by the Emperor Frederick (April); a similar presentation of the star and cross of a Commander of the same Order to Professor von Bergmann by the Emperor William (July); the birth of a prince, fifth son of the Emperor William; and the death of Prince Louis of Baden. To these may be added the interesting discovery of Dr. Gädertz at the Royal Library of a valuable manuscript and drawing relating to a London theatre, of the date of 1506; the Luther Festspiel performed in Berlin by the students (June); the retirement of Count von Moltke (q.v.), who received, together with an autograph letter of thanks for past services, the appointment of President of the National Defence Commission; and the succession of General von Waldersee (q.v.) to the vacant post. Much excitement was caused in court and political circles by the publication in the *Deutsche Rundschau* of a portion of the diary stated to have been compiled by the late Emperor Frederick (October), and led to the confiscation of the paper and the prosecution of Dr. Geffken, who, it was alleged, had supplied the information. The publication of Sir M. Mackenzie's book, "The Fatal Illness of Frederick the Noble" in Germany aroused much hostility, and led to its confiscation. This restriction was removed later on (November).—Commercial. Germany's action with regard

to the Sugar Bounties Convention will be found under that heading. An important meeting (May) of leading merchants and manufacturers of Rheinland and Westphalia was held at Düsseldorf, and resolved to bring about steamship communication between Germany and India. The International Congress on inland navigation, which was held at Frankfurt-on-the-Main, discussed the questions of ship-canal and railways. Its next meeting will be held in '90 at Manchester. For Ministry, etc., see DIPLOMATIC. Consult "Germany" (Story of the Nations Series); Baring-Gould's "Germany, Past and Present"; *The Statesman's Year Book*; *The Almanach de Gotha*, etc. Germ Theory of Disease. The term applied to the theory which attributes certain morbid processes to the presence of living organisms. See ed. '86; also BACILLI, ed. '88, and ANTI-SEPTIC TREATMENT, ed. '87.

Gerome, Jean Leon, French artist, was b. at Vesoul, Haute Saône, '24. Went to Paris in '41, entered the studio of Paul Delaroche, and studied at the Ecole des Beaux Arts. Exhibited for the first time in Paris at the Salon in '47, and visited the East. In '63 appointed Professor of Painting in the Ecole des Beaux Arts. Obtained the Cross of the Legion of Honour in '55, and in '65 nominated *membre de l'Institut*. At the Exposition Universelle of '67, where his principal paintings since '55 were exhibited, he obtained the *grande médaille*, and was nominated "Officier de la Legion d'Honneur." Some of his principal works are "Virgin, Infant Jesus, and St. John," "Interior of a Greek Household," "The Plague at Marseilles," "Prayer" (in the East), "Slave Market of Cairo," "Promenade of the Harem," etc. He has also contributed some historic subject, remarkable for singularity of conception and the striking effect of the execution. Gibraltar. Name a corruption of *Jabal el Tarik*, the Mount of Tarik. Anciently Calpe, one of the pillars of Hercules. Is a rocky promontory on the south of Spain, connected with Andalusia by a low isthmus, and is a British fortress and the "key" of the Mediterranean. Area 2 sq. m., pop. 18,381, exclusive of garrison, 5,000 or 6,000. The rock rises to 1,500 feet, and is impregnable fortified. The town lies within the bay, on the western side. Anchorage is bad. The port is free, but there is little commerce. For financial statistics see BRITISH EMPIRE, etc. (table). Ruled as a Crown colony by a military Governor. Here the Saracens landed in the beginning of the eighth century. After much vicissitude it was captured by a British force under Sir C. Rook in 1704, since when it has successfully sustained various attacks and prolonged sieges on the part of France and Spain. Since the establishment of the Overland Route, Gibraltar has acquired a new value, as one of a chain of posts connecting England with her Indian possessions. For Governor, etc., see DIPLOMATIC. Giers, Nicholas Carlovitch de, Russian statesman and Minister for Foreign Affairs to the Emperor Alexander III.; b. 22. In '48 M. de Giers was attached as a diplomatist to the staff of General Lurders when operating with an army in Transylvania. As a reward for his intelligence and activity he obtained the Fourth Class of the Order of St. Stanislas. In '50 he became First Secretary to the Russian Embassy at Constantinople. Appointed ('53) Director of the Chancery

of the Commissary-Plenipotentiary in Moldavia and Wallachia. He was in the Ministry of Foreign Affairs during the Crimean war. In '56 he was raised to the rank of a Councillor of State. After occupying various consular posts, he ('63-'69) represented Russia in Teheran, Russian Minister at Berne ('69-'70), and at Stockholm. In '75 the post of Adjunct to the Minister for Foreign Affairs and Director of the Asiatic Department was conferred upon him. In the years '76-'78 M. de Giers presided at the Foreign Office—a position he has since continued to fill.

Gifford Lectures. These lectures are a posthumous and particular expression of the lifelong interest which their founder, the late Lord Gifford, a Judge of the Court of Session, Edinburgh, from '70 to '81, when he retired from the Bench, took in all questions affecting the social, moral, intellectual, and religious life of the community. The lectures are substantially endowed from the interest of a considerable sum of money bequeathed for the purpose; and they are founded in connection with each of the four Scottish Universities—St. Andrews, Glasgow, Aberdeen, and Edinburgh. The appointment of the first Gifford lecturer took place in March '88, when Mr. Andrew Lang (q.v.) was elected by the Senators of the University of St. Andrews, with a view to the performance of his duties during the academical session of '88-'89; and subsequently, with the like intention, the Universities of Glasgow and Edinburgh elected Professor Max Muller and Dr. James Hutchinson Stirling to their respective lectureships on the Gifford foundation. The conditions of the incumbency of these lectureships are as large and unfettered as can readily be imagined. The lectures are to be devoted to the exposition of "Natural Religion, in the widest sense of that term"; and the lecturers are to be "subjected to no test of any kind," and "may be of any denomination whatever, or of no denomination at all." The lecturers hold their appointments for two years; but they are eligible to be re-appointed for other two periods of two years each. No person is to be allowed, however, to hold the lectureship longer than six years. The lecturers are expected to deliver a course of not fewer than about twenty-five original lectures, which are to be conveniently distributed over the academical session.

Gilbert, Sir John, R.A., b. 1817, is President of the Royal Society of Painters in Water Colours, to which position he was elected in 1871. He first exhibited in 1836, since which time he has constantly contributed to the Royal Academy and other exhibitions. He has been well known for many years as an illustrator of books and pictorial magazines. Many of the best editions of the British classics have been enriched by his art, and he was for many years engaged in illustrating an edition of Shakespeare. Knighted 1871. Elected A.R.A. (1872), R.A. (1876). He is a Chevalier of the Legion of Honour, and a member of various home and foreign art societies.

Gilbert, William Schwenck, b. '36. Barrister of the Inner Temple. Entered the literary world as a contributor of "Bab Ballads" to *Punch*, and several magazines. Came into note as a play writer on production of his pieces "Palace of Truth" and "Pygmalion and Galatea" ('70-'71). Mr. Gilbert has written the librettos of a series of comic operas, which have been set to music

by Mr. (now Sir A.) Sullivan. The list comprises "Trial by Jury," "Sorcerer," "Pinafore," "Pirates of Penzance," "Patience," "Iolanthe," "Princess Ida," and the Japanese opera "Mikado," produced at the Savoy Theatre, London, all of which have attained great popularity. Mr. Gilbert's other notable productions are "Dan'l Druce," "Engaged," "Sweethearts," and "Ruddigore." The latest joint work of Mr. Gilbert and Sir A. Sullivan is "The Yeomen of the Guard," produced at the Savoy Theatre, Oct. '88.

Gilchrist Educational Trust. A fund left by the late Dr. John Northwick Gilchrist (1759-1841) to trustees, "for the benefit, advancement, and propagation of education and learning in every part of the world, as far as circumstances will permit." The income is applied to the support of scholarships for young men and young women, awarded on the result of competitive examinations; in occasional grants to Educational Institutions under special circumstances; and to the delivery of high-class scientific lectures for the people, at a charge for admission of 1d. each per lecture. Sec. of the Trust: 4, The Sanctuary, Westminster, S.W.

Gipsies. See ed. 88.

Glacial Period. See ed. '87, and consult Professor J. Geikie's "Great Ice Age" ('77); and for a discussion of its probable causes, Dr. J. Croll's "Climate and Time" ('75).

Gladstone, The Rt. Hon. William Ewart, M.P., P.C., statesman and man of letters, b. at Liverpool Dec. 24th, 1809. The son of a Liverpool corn merchant—Sir John Gladstone, M.P., sometime of Leith—and of Ann Robertson, daughter of Mr. Andrew Robertson, of Stornoway, and Provost of Dingwall, the greatest Liberal statesman of his time has ever been proud to boast of his Scottish nationality and middle-class origin. He was educated at Eton, and Christ Church, Oxford, and at both places early developed High Church tendencies, and those Tory principles he apparently inherited from his father; at school contributing largely to the *Eton Miscellany*, and subsequently taking an active part in the discussions of the Oxford Union. Shortly after the passing of the first Reform Bill, in 1832, Mr. Gladstone made his entry into public life at Newark, where he was elected, as the Duke of Newcastle's nominee, in the Tory interest, defeating Sir Robert Peel, the popular candidate. It was on May 17th, 1833, that he delivered his maiden speech in the House of Commons, in reply to Lord Howick, on the slavery question, when he expressed himself as opposed to slavery, but not in favour of hasty and wholesale enfranchisement. On the dissolution of the Melbourne ministry, at the end of 1834, Sir Robert Peel called Mr. Gladstone to his first public appointment as Junior Lord of the Treasury, which post he resigned in February of the following year for that of Under-Secretary for the Colonies. A month afterwards (March 1835), however, Lord John Russell introduced his motion with regard to the temporalities of the Irish Church, which Mr. Gladstone vigorously opposed; but the ministry were beaten and Lord Melbourne again came into power. The death of William IV., in June, 1837, caused another general election, when Mr. Gladstone was once more returned for Newark. In 1841, on the accession of Sir Robert Peel, after the defeat of Lord John Russell in the House of Commons, Mr. Glad-

stone accepted office as **Vice-President of the Board of Trade and Master of the Mint**. He took an active part in the **Corn Law debates of 1841-2**, and although opposed to Mr. Villiers, the champion of the Repeal party, the revised tariff scheme was said to be chiefly Mr. Gladstone's work. He became **President of the Board of Trade in 1843**; but at the commencement of 1845 he resigned, owing to his opposition to the extension of the Maynooth Grant and the establishment of non-sectarian colleges. In 1846, it having been announced that an immediate revision of the Corn Laws was pending, Sir Robert Peel resigned, finding that certain members of his government would not go with him; but Lord John Russell declining to form a cabinet, Sir Robert returned to office with Mr. Gladstone as **Colonial Secretary, and member for Oxford University**. On the death of Sir Robert Peel, in 1850, Mr. Gladstone paid his memorable visit to **Naples**, which laid the foundation of his future friendship with Cavour and Garibaldi. During this period he finally severed himself from the Tories, although holding aloof from the Liberals for a time; and in 1852 became **Chancellor of the Exchequer** in Lord Aberdeen's administration, but fell with the collapse of that cabinet after the Crimean war. Subsequently he was appointed, by the Earl of Derby **Lord High Commissioner to the Ionian Islands**. In 1859 he accepted the **Chancellorship of the Exchequer** in Lord Palmerston's Government. His budgets were always looked forward to with absorbing interest; but no little sensation was caused by that of 1861, which announced the total repeal of the much debated paper duty. On the dissolution of 1865, Mr. Gladstone was rejected at Oxford, but was returned for **South Lancashire**, receiving great ovations at Manchester and Liverpool. On the death of Lord Palmerston, in the autumn of that year, Earl Russell became Premier; his old foe, Mr. Gladstone, being the leader of the lower house. During the debates on the new Reform Bill a "cave" (see **ADULLAMITES**) was formed in the Commons, and the ministry fell in 1866, to be succeeded by the Earl of Derby's government, with Mr. Disraeli as leader in the Commons, who passed a Bill in 1867, by the operation known as "dishing the Whigs." It was in this year that Mr. Gladstone made his famous declaration in favour of disestablishing the Irish Church. In February 1868 Mr. Disraeli became Prime Minister, but parliament was dissolved in the following November, when Mr. Gladstone, rejected in South-West Lancashire, was elected for **Greenwich**. In the parliament of 1869 he became **Premier** for the first time, and thence up to the dissolution of 1874 a number of important measures were placed on the statute book. The Irish Church having been disestablished, and while Europe was distracted with the Franco-Prussian war, the Liberal Government carried the **Elementary Education Act (q.v.)**, the **Irish Land Act**, the **Abolishment of Purchase in the Army** (by Royal warrant), the **Act for abolishing University Tests**, and the **Ballot Act**; but they were beaten on the Irish University Education Bill in 1873, and Mr. Disraeli returned to power in 1874. Mr. Gladstone then decided to resign the leadership of the Liberal party, but in 1875 aroused much public indignation by calling attention to the

alleged horrors being perpetrated in Bulgaria by the Turks. In 1879 he made his first visit to **Midlothian**, and on the dissolution of 1880 issued his great Liberal manifesto, which was followed by the second Midlothian campaign and his return for that constituency. For the **second time Premier**, with a Liberal majority in the House of Commons of fifty over the Conservatives and Home Rulers combined, with Mr. Disraeli as **Lord Beaconsfield** in the House of Lords, and Sir Stafford Northcote as his opponent in the Commons, Mr. Gladstone again succeeded in carrying many important Acts up to the dissolution of 1885. Amongst these are included the **Employers' Liability Act**, the **second Irish Land Act**, the **Hares and Rabbits Act**, a reform in the Land Laws, and chief of all, the **third Reform Act and Redistribution Act (q.v.)**. After the dissolution of the autumn of 1885, Mr. Gladstone again came forward for Midlothian, and was re-elected by an enormous majority. On the fall of the Salisbury administration, January 26th, 1886, Mr. Gladstone was summoned by the Queen to again take office. He then held as **Premier** the office of **First Lord of the Treasury and Keeper of the Privy Seal**. In consequence of a divergence of views between some of the leading members of the Liberal party and Mr. Gladstone with respect to his proposed Irish policy, several of his old colleagues, notably Lord Hartington and Sir H. James, did not join his cabinet,—Mr. Chamberlain and Mr. Trevelyan, who accepted office, resigning March 27th. Mr. Gladstone gave notice (29th) of his intention to introduce bills relating to the government and land of Ireland. The former (see **HOME RULE**) was introduced in a great speech on April 8th, and the Sale and Purchase of Land (Ireland) Bill on April 16th. But in the meantime the revolt of a large section of the Liberal party, who were known as Unionists, became pronounced, and on April 14th a great Unionist meeting was held at Her Majesty's Theatre to protest against both the Home Rule and the Land Purchase Bills, which, the Premier had announced, were indissolubly tied together. Earl Cowper presided, and amongst those who took a prominent part in the proceedings were the Marquis of Salisbury, the Marquis of Hartington, Mr. Goschen, M.P., and Mr. Rylands, M.P. On May 3rd Mr. Gladstone issued (in the *Edinburgh Daily Review*) a lengthy address to his constituents of Midlothian, the opposition to his Irish proposals meanwhile having been actively carried on all over the United Kingdom. On May 10th the second reading of the Government of Ireland Bill was moved in the House of Commons, and a lengthy debate commenced. On May 27th a meeting was called by Mr. Gladstone at the **Foreign Office**, the invitation being issued to "all members of the Liberal party who are desirous, while retaining full freedom on all the particulars of the Irish Government Bill, to vote in favour of the establishment of a legislative body in Dublin for the management of the affairs specifically and exclusively Irish." More than 200 members attended. On June 8th, about one o'clock in the morning, the vote of the House was taken on the Home Rule Bill, when the Government were defeated by a majority of 30—there being 311 ayes and 341 noes—a result which caused a scene of wild excitement. At a Cabinet Council on the same day the Government resolved to

resign, the announcement being made in Parliament on June 10th, the Sale and Purchase of Land (Ireland) Bill being on the same evening withdrawn. On June 14th Mr. Gladstone issued his election address, and on June 17th left London for another Midlothian campaign, his progress to the north being yet again marked with every sign of enthusiasm. After his return to Hawarden, the right hon. gentleman proceeded to Manchester, June 25th, and to Liverpool, June 28th, and addressed large gatherings in those cities. In a supplement of the *London Gazette* of June 26th Parliament was dissolved by proclamation. On July 2nd Mr. Gladstone was elected for both Midlothian and Leith, and chose to sit for his old constituency. The result of the general election was to deprive him of power, and as a mark of sympathy a Gladstone Presentation Fund was opened in the United States, but was not generally taken up. On July 3rd Mr. Gladstone published a letter he had addressed to Mr. John Bright in reply to the latter's great speech at Birmingham in favour of the Union; and to this Mr. Bright made a reply on July 6th. (For further events of '86 and those of '87 see ed. '88.) In spite of advancing years the past twelvemonth, '88, again found Mr. Gladstone hard at work. He returned from his visit to Italy (see ed. '88) on Feb. 8th, and after being cordially received at Dover an address from Folkestone was read at Shorncliffe station, to which a reply was made on the way to London. On Feb. 17th the right hon. gentleman took part in the discussion on Mr. Parnell's amendment to the Address, in the House of Commons, and on the 22nd of the same month on Mr. Labouchere's amendment, while on the 24th he joined in the discussion on the rules of procedure, and again on March 6th. Under date Feb. 23rd Mr. Gladstone wrote a letter to Lady Anne Blunt on behalf of the candidature of her husband (then in prison in Ireland) for the representation of Deptford. Having been presented with an address in favour of Home Rule by 250 clergymen of the Church of England, the venerable statesman made a characteristic reply by letter to the Dean of Winchester, under date March 2nd. Mr. Gladstone took part on March 9th in the debate on the introduction of Mr. Goschen's "Conversion" scheme (National Debt), on March 23rd on the Perpetual Pensions question, and on the 27th with reference to the Bill for renewing the Irish Land Commission. A meeting of the leaders of the party was held on the latter date to discuss the Local Government Bill and the ex-premier presided. On April 9th he took part in the debate on the Budget resolutions, and on April 17th was entertained along with Sir W. Harcourt and Sir G. Trevelyan at a banquet at the National Liberal Club by Sir Walter Foster, M.P. Under date April 9th Mr. Gladstone received an address signed by a number of his constituents criticising and asking explanations as to his Irish policy, to which he replied; and on the 16th he addressed a meeting of the Marylebone Women's Liberal Association. In the House of Commons, April 23rd, the right hon. gentleman, on the motion for the second reading of the Customs and Inland Revenue Bill, moved an amendment with regard to the Death Duties, but was defeated by 320 to 227 (he also spoke on the Bill on May 4th). An indignant speech was delivered by him in the House on April 24th, on the

subject of the increase of sentences on appeal in Ireland, and he spoke on the Customs and Inland Revenue Bill on the 26th. On May 2nd Mr. Gladstone opened a new library bearing his name at the National Liberal Club. The *Times* on May 4th published an interesting letter of the right hon. gentleman's addressed to a correspondent on his "past Toryism." A great meeting of Nonconformist ministers was held at the Memorial Hall, Farringdon Street (May 9th), when an address approving of his efforts on behalf of Home Rule, and signed by 3,730 ministers of various churches, was presented and responded to. Under date May 13th Colonel Turner, divisional magistrate for Clare and Kerry, wrote a letter to the *Times* criticising Mr. Gladstone's remarks at the above-mentioned presentation, with reference to a recent disturbance at an Ennis meeting. On May 22nd some 600 Liberals of the Otley division visited Hawarden, when Mr. G. delivered them a short speech. A protest against a document signed by 1,200 members of the Society of Friends in favour of the ex-premier's Irish policy appeared in the *Times* of May 24th, with the signatures of several well-known Friends affixed. Some 700 Liberals from the neighbourhood of Rochdale paid a visit to Hawarden on the 26th, and listened to a speech touching the licensing clauses of the Local Government Bill, and they were followed by visitors from Blackpool on the 30th. Mr. G. on June 13th published a letter in the *Times* in reply to one by Lord Hartington, chiefly in reference to Home Rule, and spoke on clause 3 of the Local Government Bill in the House on June 15th. Mr. G. spoke in support of Mr. John Morley's vote of censure on the Government for their conduct of Irish affairs on June 26th. On the following in favour of the Channel Tunnel (q.v.); he also spoke in the Commons on the same day in favour of the Bill; and on the 30th addressed a garden party held at Branch Hill, Hampstead Heath. Mr. G. joined in the discussion on the business of the House, raised on a motion for Government precedence on July 10th. At the residence of Sir W. Lawson, M.P., on July 18th a dinner was given to the members for Northumberland and Cumberland, at which the ex-premier was the principal speaker. Mr. G.'s next important speech in the House was on July 23rd, when he followed Mr. Parnell in the debate on the second reading of the Members of Parliament (Charges and Allegations) Bill, and again on the 31st. On July 25th an interesting presentation took place at Spencer House in celebration of Mr. and Mrs. G.'s golden wedding. A number of Liberals from Burslem and other pottery towns visited Hawarden on Aug. 20th, and were addressed by Mr. G. to whom they presented a handsome vase, locally known as "The Gladstone Vase"; the speech led to a correspondence in the *Times* with reference to the treatment of Irish prisoners under the Coercion Act, and that pursued in Naples under "Bomba." On the 23rd he attended the Hawarden Flower Show, and delivered an interesting address on horticulture. In the September number of the *Nineteenth Century* Mr. G. published an article which appeared as a kind of reply to Mr. Wemyss Reid's account of the "Kilmanninham Treaty," in his life of the late Rt. Hon. W. E. Forster (q.v.). A curious correspondence arose on the occasion of Mr. G.'s visit to the National Bistedd at Wrexham, Sept. 2nd. It

was announced that he would deliver a political address in the town on the same day, and the Elsteddof committee drew attention to the fact that their annual gathering was not of a political character. Mr. G. in reply pointed out that the meeting he was asked to address was organised by the local Liberal Association; and an understanding was come to on the basis that the two gatherings were distinctive in character. In the *Times* of Sept. 21st, Lord Selborne published an important letter criticising Mr. G.'s above-mentioned paper on "Mr. Forster and Ireland," and inclosing copies of letters written at his request by the following members of Mr. G.'s cabinet in '82: Mr. Bright, Mr. Chamberlain, Lord Hartington, Lord Northbrook, Lord Carlingford, and Lord Monk Bretton (Mr. Dodson). On the same day the same paper published an account of a recent interview at Hawarden between Mr. G. and a representative of the Nizam of Hyderabad, the conversation naturally turning upon Indian affairs. The ex-premier at once telegraphed an acknowledgment of Lord Selborne's letter and inclosures. On Nov. 5th, Mr. G. left Hawarden on a visit to the Midlands. He was the guest of Sir W. Foster, M.P., in the neighbourhood of Birmingham, and besides addressing several deputations, delivered a great speech in Bingley Hall on the evening of Nov. 7th, the structure being packed, and many paying high prices for reserved seats. There was no enunciation of new policy, but the position of the party on the Irish question was emphatically enforced. On the following day he left for Wombourne Wodehouse, the seat of the Hon. P. Stanhope, M.P., and on the 10th left by way of Wolverhampton for Oxford. On Nov. 10th Mr. G. moved an amendment to a new Land Purchase (Ireland) Bill introduced by the Government, his proposal being that it was more expedient, in view of recent evictions, to extend the provisions of the Land Act of '87 so as to empower the Land Courts to reduce or cancel arrears, as in the case of the Scotch Crofters Act. The amendment was rejected by a majority of 84 on the following night. In Committee of Supply on Dec. 3rd, whilst the vote for the Chief Secretary's (Ireland) office was under discussion, Mr. Gladstone warmly attacked that official (Mr. A. J. Balfour), and complained of his style of language and invective. In the course of the debate raised by Lord R. Churchill on the sending out of British troops to Suakin, Mr. G. also spoke (Dec. 4th). During this busy public life of over fifty years (his political jubilee was celebrated in December '82), Mr. Gladstone has made many valuable contributions to the literature of the country. In '39 Mr. Gladstone married Miss Catherine Glynné, daughter of Sir Stephen R. Glynné, of Hawarden Castle, Flintshire. Consult Barnett Smith's "Life of Gladstone," etc.

Glaisher, James, F.R.S., the well-known aeronaut, was b. 1803, and when a youth was employed in a subordinate capacity at the observatory at Madingley, near Cambridge, and has since acquired considerable fame as a meteorologist. In recognition of his experiments above the clouds in his balloon voyages he was chosen a F.R.S. (1849). In '63 he made, in company with Mr. Coxwell, the famous ascent (nearly seven miles) to the highest altitude ever reached. Appointed (1865) to succeed Admiral Fitzroy in the control of the Meteorological Department of the Board of

Trade. His name is appended to a work entitled "Travels in the Air: a Popular Account of Balloon Voyages and Adventure, with Recent Attempts to accomplish the Navigation of the Air" (1870). Mr. Glaisher is president of the Royal Aeronautical Society and of the Photographic Society. On the death of Mr. Simmons, through an accident to his balloon in August last, Mr. Glaisher wrote a forcible letter to the *Times*, deprecating balloon ascents for other than scientific or military purposes.

Glasgow Central Railway. On July 31st, '88, a bill for the construction of this railway passed a Select Committee of the House of Commons, coming down from the Lords Committee after an investigation of three weeks duration. The main object is to connect the east and west ends of Glasgow, at a cost of £1,250,000. The line will begin with a junction with the Dalmenack branch of the Caledonian line, going to the east of the city, proceed underground along the line of two of the main streets, Argyle Street and Trongate, and then continue on to the village of Maryhill. Although the scheme is in the hands of independent promoters, it will be of great advantage to the Caledonian, which will thus come into direct communication with the Lanarkshire pits.

Glasgow International Exhibition, '88. This was opened by the Prince and Princess of Wales on May 8th. The Exhibition was one of the finest of the kind held in Great Britain, and contained a thoroughly representative display of the products of Clyde industry. Shipbuilding, marine engineering, mill machinery, mechanical appliances for the work of iron and coal, the production of mineral oil, the manufacture of thread, glass and pottery, carpet weaving, dyeing and printing, and all the industries that have their centre in Glasgow, were illustrated in a complete and instructive manner. The Exhibition was held in extensive grounds beautifully laid out and intersected with a running stream; it was immensely popular in the north, and attracted large numbers of southern visitors. Other countries than our own were represented. The Indian Courts were large and well-arranged. Canada made the best show of any of the British Colonies, and Ceylon was well represented. Various European countries sent exhibits. The picture and sculpture galleries were filled with excellent work. One section of the Exhibition was devoted to women's industries, and there all kinds of female handwork were arranged, and practical illustrations given by native women of Venetian lace-making and straw-plaiting, and also of glove-making. The most striking feature of the exhibition was the magnificent display of machinery showing the combination of mechanical industry for which Glasgow is famous. The Exhibition was visited by Her Majesty the Queen on Aug. 22nd, a visit that called forth a remarkable exhibition of loyalty by the inhabitants of the commercial capital of the north.

Glasgow University. Founded 1493, received a new charter 1577. The number of students in all the faculties was last session 2,188, of whom the half were students in Arts. Lord Rector, The Earl of Lytton. Principal, John Caird, D.D. (appointed '73). Parliamentary representative, J. A. Campbell, LL.D. Degrees. B.A. (hood black silk bordered inside with red purple silk, colour of bell heather); M.A. (black silk lined with red purple silk); B.Sc. (black silk lined with gold-coloured silk

colour of whin blossom); **D.Sc.** (*h.* black velvet lined with gold-coloured silk); **B.L.** (*h.* black silk, bordered inside with Venetian red silk colour of clove carnations); **LL.B.** (*h.* black silk lined with Venetian red silk); **LL.D.** (*h.* black velvet lined with Venetian red silk); **M.B.** and **C.M.** (*h.* black cloth lined with scarlet silk); **M.D.** (*h.* black silk lined with scarlet silk); **B.D.** (*h.* black silk bordered with black velvet, lined with red purple silk); **D.D.** (*h.* black velvet lined with black silk, or, if the graduate be Master of Arts, with red purple silk. Among the distinguished alumni are Adam Smith, Archbishop Tait, Principal Sharp, Rev. R. S. Candlish, and Sir Wm. Thompson.

Globe Lands Act. See SESSION '88, sect. 17.

Glee. A vocal musical composition for solo voices (one to a part), or, in the case of some of Bishop's glees, for solo voices and chorus. The best writers are Webbe, Cooke, Danby, Horsley, Stevens, Stafford Smith, Mornington, Bishop, Spofforth, Goss. See ed. '88.

"Globe, The." Established 1803, and subsequently incorporated *The Traveller*. It was started by the old Whig party, and always was recognised as an authority on political matters, its contributors including some who held high office in the State. It retained its Whiggism until 1866, when a new proprietary, recognising the changed times, made it an outspoken though independent Conservative organ, reducing its price from fourpence to twopence, and eventually to one penny. It is now a recognised evening journal of the Constitutional party, and enjoys a very large and influential circulation. Editor: **Captain G. C. E. Armstrong.** Offices: 467, Strand, W.C.

Gloucester and Bristol (united 1856), **Right Rev. C. J. Elliott, D.D.**, Bishop of, was b. 1819. Educated at St. John's Coll., Cambridge, where he graduated with distinction (1841); Fellow of St. John's (1844). Rector of Pilton (1848); resigned his benefice to prosecute his critical studies at Cambridge (1854); Professor of New Testament Exegesis at King's Coll., Lond. (1858); Dean of Exeter (1861); appointed Bishop of Gloucester (1864) by Lord Palmerston. **Chairman** of the Company of **Revisers** of the **New Testament** on the death of the late Bishop of Winchester. Bishop Elliott holds high rank as a commentator, and has published commentaries on the Galatians and other Pauline Epistles, Hulsean Lecture (1866), "Historical Eclipses on the Life of our Lord"; edited Cassell's "Popular Commentary on the Bible," and is the author of several other works.

Goa. A port-town and territory between the boundaries of Madras and Bombay, India. Once the seat of great trade, now decayed and ruinous. Belongs to Portugal. See **COLONIES OF EUROPEAN POWERS.**

Goblet, René Marie, b. Sept. 26th, 1828, at Aire, in the Pas-de-Calais. M. Goblet is a lawyer, and has been *bâtonnier* of the Order of Advocates, and *Procureur-Général*, or Public Prosecutor, at Amiens. He belongs to the party of Progressist Republicans. In the latter days of the Empire, he assisted in founding the democratic *Progrès de la Somme*. In 1871, he was elected to the National Assembly, where he sat with the Left. He voted for M. Thiers in the crisis of May 24th, 1873, and opposed the motion of Nov. 17th of the same year, converting the Presidency into a septennate. He was elected to the Chamber of

Deputies for Amiens in Oct., '77, re-elected (1881-2), and became Minister of the Interior in the ministry of M. de Freycinet. On the formation of the Brisson cabinet (1885), M. Goblet became Minister of Public Instruction and Fine Arts. He also held the portfolio of the Interior in the succeeding ministry of M. de Freycinet. On the defeat of the latter, in Dec. 1886, he became President of the Council. He is a good speaker and a sound politician. He was asked by M. Carnot to form a Ministry immediately after the Presidential election, but did not succeed, but accepted the post of Foreign Minister in M. Floquet's administration. M. G. conducted a correspondence with Signor Crispi in August '88, on the Massowah question. See FRANCE AND ITALY.

Gold and Money. See MONEY MARKET.

Gold Fields and Production. Gold is found in every quarter of the globe: in reefs or veins among quartz, from which it is separated by quarrying, crushing, washing, and treatment with mercury; in alluvial deposits, from which it is extracted by washing, in dust, grains, laminae, or nuggets. **Alluvial deposits** are of several kinds—namely, (1) beds of running rivers, involving the employment of dredging apparatus; (2) superficial or not deep deposits, capable of being worked by diggers single-handed; (3) deep alluvial beds, often underlying hard rock, necessitating thorough mining; (4) deposits of gravel, schist, and disintegrated rock, often on hill-sides, now generally washed gradually down by means of hydraulic engines. Mining in quartz entails the employment of large capital, machinery, etc. The present annual production of gold throughout the world is estimated as follows:—

Epoch.	Production in Austr.-dia.	Production in America.	Total production in the World.
	£	£	£
'51-55	49,717,711	60,950,412	135,144,641
'56-60	58,520,527	52,892,560	137,199,753
'61-65	53,674,499	45,769,628	124,726,881
'66-70	49,374,613	50,148,751	130,243,810
'71-75	41,517,872	46,252,066	115,667,933
'76-80	29,882,889	39,955,992	107,924,351
'81-85	29,384,790	31,528,925	97,971,659
'86	5,343,346	7,231,495	19,564,007
'87	5,343,346	7,747,934	20,080,536

For topography of the various gold districts of the world, see ed. '88.

Gold Coast Colony. A British Crown colony on the Guinea Coast, West Africa, consisting of towns, forts, and stations, with the country around, formerly styled the Protectorate; whole area, 13,784 sq. m.; pop. 651,000. Capital, **Capo Coast Castle**; other ports, Accra, Axim, Dixcove, Secondee, Elmina, Annamaboe, Winnebah, Adidah, and Quitta. In them the few whites reside. Chief rivers, the Prah and Volta. Forests separate from Ashanti, behind which rise Kong Mountains. The shores are flat and sandy, without harbours. Inland is much grass and forest land. Products are chiefly palm-oil, gold, ivory, copal, monkey skins, caoutchouc, camwood, Guinea grains, palm kernels, etc. Administration in the hands of a Governor and Councils. For financial statistics see BRITISH EMPIRE, etc. (table). First settled 1664. Danish forts purchased 1850, Dutch in 1872. Three serious wars with

Ashantis in 1824-7, 1863, 1873. After their final defeat and burning of Kumassi, the former Protectorate was changed into a definite colonial government. The soil is exceedingly fertile, but the climate is very sickly, even for the natives. Consult Keith Johnston's "Africa," "Her Majesty's Colonies," *The Torch*, etc. For Executive Council see DIPLOMATIC.

Golf. This ancient Scottish game of club and ball was at various periods in the early days of its history prohibited by law, but it still flourishes in the North, and in recent years a number of clubs have been established in the South of England. At the West Lancashire competition in '88, at Liverpool, the Silver Challenge Cup was won by C. Hutchings, with a score of 83; and on the same links, Aug. 20th, for the Job Cup, J. W. Fowler was credited with the remarkable scratch score of 80, the winner, however, being Mr. J. Shepherd. The Oxford v. Cambridge contest resulted in favour of the Light Blues by 20 holes to 12. At St. Andrew's Club competition, Mure Ferguson won the King William IV. Medal at 85 strokes; and C. Chambers the Club Medal at 86. In October, at St. Andrew's Green, Hugh Kirkcaldy completed the round with the extraordinary score of 74—going out in 33 (a record), and returning with 41. The Golf championship is held by J. Burns (Warwick) who, at the St. Andrew's Links, on Oct. 6th, was successful against 51 opponents, with a score of 171; among those beaten being Willie Park, the previous champion.

Gondar. Capital of Abyssinia (q.v.).

Goodall, Frederick R.A. b. 1822. Exhibited his first picture in the Royal Academy at the early age of seventeen. Subsequent visits to Normandy, Brittany, and Ireland supplied him with material for a long series of popular pictures, which secured him the encouragement of distinguished art patrons of the day. One of his early pictures, "The Return from Christening," gained a prize of £50 from the British Institution. His subsequent productions, which were largely drawn from old English life, increased his fame. His later pictures, dealing with Eastern subjects, are the outcome of a visit to Egypt in 1858-59. Elected R.A. 1863. Among the best of Mr. Goodall's pictures on religious subjects is his recent picture, "For of such is the Kingdom of Heaven," and "Misery and Mercy." He exhibited his portrait of Sir Moses Montefiore at Messrs. Graves' Gallery, in Aug. '88.

Good Templars, The Independent Order of, is a temperance fraternity which originated in New York in 1851. In 1868 it was extended to England by Joseph Malins, who, by 1870, had instituted the Grand Lodge of England, from which the Order has spread round the world. It administers a pledge of lifelong abstinence from intoxicating beverages, and advocates the legal suppression of their common sale. It seeks to protect the abstinent and reclaim the inebriate. It admits both sexes to equal privileges and office. Only a small fee of sixpence or one shilling per quarter is exacted, as it is non-beneficiary in basis; but an auxiliary provident fund is allowable. It enrolls by a brief service, of a somewhat religious character, including scripture reading, counsel, singing, and prayer; and all meetings are opened and closed with prayer and praise. It consists of (1) local "subordinate" lodges, meeting weekly; (2) county "district" lodges, meeting quarterly;

(3) national "grand" lodges, meeting annually; and an international "Right Worthy Grand Lodge." In '76, when the Right Worthy Grand Lodge met in Kentucky, a disruption occurred on "the Negro question"; and there have since been two Orders—one mainly American, and the other mainly British. In '86 the American leaders invited the British to a Reunion Conference, which was accordingly held at Boston, Massachusetts, Sept. '86. A basis for reunion, declaring illegal any exclusion on account of colour or race, was unanimously drafted and sent to all jurisdictions, and was indorsed by each. As then agreed, both international courts met separately at Saratoga, New York, May '87, completed unfinished business, ratified the basis of reunion, and then amalgamated. The officers installed at Saratoga reside in the United States, Canada, England, Scotland, Norway, India, and Cape Colony. The Hon. John B. Finch, of Illinois, was elected chief; but by his subsequent sudden death the post devolves upon Mr. Ed. W. Turnbull, of Glasgow, the second post being taken by Dr. Oronhyatekha, of Canada, a Mohawk Indian, who edits the Right Worthy Grand Lodge monthly organ. The Order publishes about forty newspapers and magazines in various languages. The Right Worthy Grand Lodge has met in the United States, Canada, England, Ireland, Scotland, Wales, and Sweden, and next meets at Chicago, U.S.A., in May '89. The united Right Worthy Grand Lodge has a membership of over 600,000, in about 13,000 branches, governed by 100 different Grand Lodges. There are in the United Kingdom nearly 200,000 adult and junior members, of whom 60,000 adults and 40,000 juniors are under the Grand Lodge of England, whose permanent offices are in Edmund Street, Birmingham. This Grand Lodge has over 1,500 lodges, of which 70 are in the army and navy. The Grand Lodge meeting in the Assembly Hall, Sunderland, Easter '88, was attended by 1,000 representatives and officers; and 100 temperance sermons were preached on that Easter Sunday in Sunderland and the neighbourhood. Although ordinary lodge meetings are confined to members, yet thousands of public meetings are held annually; while the rules, etc., of the Order are quite public. Most lodges publish programmes, showing that by addresses, debates, essays, music, recitals, and parties the members mutually improve and entertain each other—their greatest festival being an intermittent *Crystal Palace fête*, when some 40,000 or 50,000 persons attend. There is also attached a *Juvenile Order*, enjoining abstinence from strong drink, tobacco, gambling, and profanity, and which has 70,000 British members, in 1,000 branches. The members have founded a *Temperance Orphanage* at Sunbury, at a cost of about £10,000. The Grand Lodge of Scotland has 630 adult and 260 junior branches; its office is 72, Great Clyde Street, Glasgow, and its monthly organ is *The Good Templar*. Ireland and Wales have about 500 adult and junior branches, and publish English and Welsh organs. The organ in England is *The Good Templar's Watchword*, 1d. weekly; and several local monthlies are issued, besides much literary matter from the Grand Lodge printing-presses.

Goodwood Race Meeting. See TURF.

"Good Words" (6d. monthly, illustrated). Founded January '60. Provides good healthy literature, including stories, biographies, travel

science, practical and religious papers, by the best writers of the day. The aim of its first editor, **Dr. Norman Macleod**, was to provide a periodical that should "embrace as great a variety of articles as those which give deserved popularity to publications professedly secular, but having its spirit and aim distinctively Christian." It is conducted on exactly the same lines by the present editor (**Dr. Donald Macleod**), and *G. W.* numbers among its contributors almost all the leading writers and artists of the period. Many good books have been collected and reprinted from *G. W.*

Gordon's Letters to his Sister (*Macmillan*). This volume of letters, eminently characteristic of General Gordon, attracted a good deal of attention, both on account of their intrinsic merits and as being—so far as his family are concerned—probably the last contribution to the literature which has gathered round his singular personality. In connection with this book there was published a remarkable letter which the Queen had addressed to Miss Gordon. In this document her Majesty alluded to the "stain on England" caused by his not having been rescued, and alluded to promises alleged to have been made for his deliverance as not having been kept.

Gorsedd. See EISTEDDFOD.

Goschen, Rt. Hon. George Joachim, M.P., P.C., was b. in London 1831. Educated at Rugby, under Dr. Tait, and at Oriel Coll., Oxford; but left without taking a degree, in consequence of his being unable to conform to the religious test then in force. He was returned without opposition as a Liberal for the City of London at a bye-election in 1863, and at the general election in 1865 was re-elected at the head of the poll. In the same year he was appointed Vice-President of the Board of Trade, and (1866) Chancellor of the Duchy of Lancaster. His tenure of that office, however, was only of brief duration, as Lord J. Russell's ministry retired in June of the same year. On Mr. Gladstone's accession to power, in 1868, Mr. Goschen became President of the Poor Law Board, and subsequently succeeded Mr. Childers as First Lord of the Admiralty. He was again returned for London in 1874, but only as the minority member, and in 1880 did not seek the suffrages of his old constituents, but accepted an invitation to stand for Ripon, which he represented until the general election of 1885, when he was returned for one of the divisions of Edinburgh. On the elevation of Sir Henry Brand to the peerage, Mr. Goschen was offered the speakership of the House of Commons, but declined the honour on account of his defective eyesight. Mr. Goschen on several occasions has been unable from conscientious motives to move with his party, and broke from them on the question of the extension of the county franchise. He was dispatched by Lord Beaconsfield on a special mission to Egypt with reference to the financial difficulties of that country. He is the author of several financial and political pamphlets, and of the well-known work on "*The Theory of Foreign Exchanges*." When Mr. Gladstone launched his Home Rule bill, in 1886, Mr. Goschen was among the first to enrol himself in the opposition, and added much to his reputation as an argumentative orator by the successive onslaughts he made upon the measure and its supporters. He delivered in Edinburgh and elsewhere by far the most

eloquent and vehement philippics against the Home Rule proposals of the Government, and was speedily recognised as, next to Lord Hartington, the most authoritative and influential of the Liberal Unionists. His eloquence, however, failed to secure him his seat in Edinburgh at the July election, when he was beaten by a large majority by Dr. Wallace. Since that defeat Mr. Goschen has been constantly before the public in connection with the anti-Home Rule movement. On the resignation of Lord R. Churchill in December 1886, and when Lord Salisbury had failed to induce Lord Hartington to join his Government, Mr. Goschen was prevailed upon to accept the *Chancellorship of the Exchequer*, though he declined the leadership of the House. He accepted the post with the full sanction of Lord Hartington. Mr. Goschen holds his position in the Government as a Liberal Unionist. He was a candidate for the Exchange Division of Liverpool, but was defeated by Mr. Neville, Gladstonian Liberal, by seven votes (Jan. 26th, '87). A vacancy having been caused by the retirement of Lord Algernon Percy from the St. George's Hanover Square Division, Jan. 31st, Mr. Goschen was elected to the seat Feb. 9th, '87. The *Budget* which he introduced in '88 was vigorously attacked by Mr. Gladstone because of its proposals with reference to the death duties and the imposition of a wheel tax. Mr. Goschen's scheme, however, for the reduction of the interest on the national debt, was cordially accepted by all parties. Mr. G. delivered an address on "*The Love of Works*" to the students of *Aberdeen University (q.v.)* in February. He also spoke at a banquet given to bankers at the *Mansion House* (March).

Gosse, Edmund William, Clark Lecturer in English Literature at Trinity Coll., Camb., and the author of several well-known poems and literary criticisms, b. in London 1849. Educated privately. His work "*From Shakespeare to Pope*," published in '85, provoked a vigorous criticism by Mr. Churton Collins in the *Quarterly Review* (No. 326). "*The Masque of Painters*," which was performed with great success by members of the Royal Institute of Painters in Water Colours in May '86, was written by Mr. Gosse.

Gothenburg Licensing System. See ed. '87, and consult "Gothenburg System," and "Appendix," Dr. S. Wieselgren, Gothenburg.

Gounod, Charles, b. 1817. He was destined to music from his boyhood. When eighteen, he entered the Conservatoire at Paris, and won the great "Rome" prize in '39, entitling him to residence in Italy, where he worked hard at the finest early Italian church music. The consummate mastery of strict ecclesiastical writing, which he thus gained, forms the basis of all his work, sacred and secular. After writing some operas, on his return to France Gounod became the conductor of the Paris division of the *Orphéonists*. His successful opera of *Faust* ('59) placed Gounod at the head of operatic composers. Other operas followed, among which we may mention the charming "*Mireille*" ('64), "*Roméo et Juliette*," "*Cinq Mars*" ('77), and "*Polyeucte*" ('78). Besides his male-voice masses, Gounod has written a splendid "*Messe Solennelle*"; a fine motet, commemorating the grief of France in 1870, called "*Gallia*," and other choral works universally popular. His songs, especially "*Nazareth*," "*There is a green hill far away*," and "*Serenade*" (Victor Hugo), are well

known. In '82 Gounod struck fresh ground with his grand oratorio of the "Redemption," written for the Birmingham Festival, followed in '85 by "*Mors et Vita*." Her Majesty, in '86, honoured M. Gounod by attending a special performance of "*Mors et Vita*" at the Albert Hall. M. Gounod has recently been engaged in the production of a new opera "*Charlotte Corday*." The revival of his opera, "*Romeo et Juliette*," in which M^{me}. Patti (*q.v.*) enacted the part of Juliette, took place in Nov. '88.

Government Publications. See PARLIAMENTARY PAPERS and STATIONERY OFFICE PUBLICATIONS.

Grace, Dr. W. G., the renowned cricketer, was b. at Downend, Bristol, 1848; made his first appearance in important match in West Gloucestershire *v.* Bedminster, at Mangotsfield. Between '64 and '79 he made 20,842 runs in a total of 475 innings. His exploits as a batsman, fielder, and bowler, became so celebrated, that the title of "*champion*" was spontaneously conferred upon him. No amateur or professional has ever reached the batting averages credited to Mr. Grace, who comes of a cricketing family; and on July 22nd, 1879, at Lord's, the enthusiasm of his admirers took the form of a presentation of the value of £1,400. Some years ago he partially retired from cricketing pursuits and devoted himself more closely to his profession as a medical man, but his subsequent averages clearly show that he is still amongst the greatest of living cricketers. In *Sussex v. Gloucestershire* he made for the latter, in May '88, 215 runs of his own bat.

Graham, Major-General Sir Gerald, R.E., V.C., K.C.B., b. 1830. Served in the Crimean campaign, was twice wounded at the siege of Sebastopol, and displayed signal gallantry in the assault on the Redan. Severely wounded in the Chinese war, in the attack on the Taku forts. Commanded the second brigade of the first division of the expeditionary force in Egypt in 1882, in the actions of Mahuta, Kassassin and Tel-el-Kebir. Had command of the expedition to Suakim in the early part of '84, with the object of relieving Tokat and other places besieged by Osman Digna, and won two hard-fought battles at El Teb and Tamasi.

See ed. '88.

Grand Committees. "Since 1837," says Sir T. E. May in his "*Parliamentary Practice*," (p. 443, ed. 9, 1883), "the annual appointment of the ancient Grand Committees for Religion, for Grievances, for Courts of Justice, and for Trade, has been discontinued. They had long since fallen into disuse, and served only to mark the ample jurisdiction of the Commons in Parliament. When they were accustomed to sit they were, in fact, constituted like committees of the whole House, but sat at times when the House itself was not sitting." In 1882 the pressure of public business induced the House of Commons to revive the Grand Committees in a new shape. By Standing Orders of December 1st, 1882, two standing committees were appointed to consider—the one all bills relating to law and courts of justice; the other, all bills relating to trade, shipping, or manufactures; the procedure to be that of select committees—the public, however, not being excluded; the committees not to sit whilst the House was sitting unless by order of the House; twenty members to form a quorum; the number of each committee to be not less than sixty

or more than eighty members, to be nominated by a committee of selection, regard being had to the classes of bills committed, the composition of the House, and the qualifications of the members selected; the chairman's panel, of not less than four nor more than six members, to be nominated by the same committee of selection, and to appoint from among themselves the chairman, three being a quorum for that purpose. A bill which had been committed to one of these standing committees was when reported to the House to have been proceeded with as if it had been reported from a committee of the whole House. The above standing orders were to remain in force until the end of the session 1883; and under them the committees began to sit in April 1883. The Committee on Trade, etc., passed the Bankruptcy Bill and the Patents Bill, both of which subsequently became law; but the proceedings of the Committee on Law and Justice did not prove quite so expeditious as had been hoped. The standing orders were prolonged in duration until the end of the session of 1884, when they lapsed, and only the Committee on Law and Justice met in that year. At the commencement of the session of 1887 the Government proposed to revive the resolutions of 1882 relative to these two grand committees, and to add a third for the consideration of bills relating to agriculture. At the commencement of the session of '88 the resolutions relative to the two Grand Committees were revived, and it was decided that the Committee on Trade should also consider bills relative to agriculture and fishing. See SESSION, sections 67, 68, and 69, and PARLIAMENTARY PROCEDURE.

Granville, George Leveson-Gower, K.G., P.C., 2nd Earl (obit. 1833); b. 1815. Educated at Eton and Oxford (graduating 1834). Entered the public service as attaché to the British Embassy at Paris, of which his father, 1st Earl Granville, was the head. Elected to parliament for Morpeth (1836), and afterwards for Lichfield. Appointed (1840) Under-Secretary of State for Foreign Affairs. He attached himself from the beginning with great zeal to the Liberal party. In 1846 he succeeded to the peerage. He was appointed vice-president of the Board of Trade in 1848, and he succeeded Lord Palmerston as **Secretary of State for Foreign Affairs** (1851), but retired with the Russell Ministry in 1852. During this last year he took an active part in connection with the Hyde Park Exhibition as vice-president of the Royal Commission, which led to his being nominated chairman of the Exhibition of 1862. He held successively the offices of Master of the Buckhounds, Paymaster-General of the Forces, Chancellor of the Duchy of Lancaster, Treasurer of the Navy, and President of the Council, and became **ministerial leader** of the House of Lords in 1855. In 1856 he was despatched to St. Petersburg to represent the British Crown at the coronation of the Czar Alexander. When Lord Palmerston formed a ministry, in 1859, Lord G. was appointed President of the Council, and in 1865 he was nominated Lord Warden of the Cinque Ports. In 1868 he became Secretary for the Colonies in Mr. Gladstone's first administration, and finally

succeeded Lord Clarendon as Secretary for Foreign Affairs, holding this office until the retirement of the Liberal ministry, in 1874. Upon the fall of Lord Beaconsfield's Government, in 1880, and Mr. Gladstone's accession again to office, Lord G. resumed office a second time as Secretary for Foreign Affairs, retaining this post until Lord Salisbury came into power, 1885. In the last Gladstone administration he held office as Secretary of State for the Colonies (Feb. 1886). Lord G. has been one of Mr. Gladstone's most powerful supporters since the split in the Liberal party on the Irish question. His lordship is Chancellor of the University of London. He was entertained at the Liverpool Reform Club, Oct. '88.

"Graphic, The," founded 1869, by Mr. W. L. Thomas, its present manager, is an illustrated weekly of high-class character, and treats of current events. Its Christmas and Summer numbers are especially excellent, and have a very wide circulation. Office, 190, Strand.

Graphophone. This apparatus is for the purpose of recording vocal and other sounds, and acts in much the same way as the phonograph (*q.v.*). It is the invention of Mr. C. S. Tainter, of America, and is sometimes spoken of as the Tainter-Bell graphophone, from the fact of Mr. Chichester Bell, the son of Mr. Bell, of telephone fame, having been associated with its production. It anticipated the improved phonograph in many important particulars, not the least of which was the adoption of a waxed cylinder to receive the traces made by the style under vibration, in preference to tinfoil. The apparatus is worked by a treadle, as in sewing machines; and there is an arrangement by means of which any conversation can be transferred to paper by a type-writer, whilst the operator is listening to the graphophone reproducing it. The form of instrument now in this country was brought out in the spring of '87 by the American Graphophone Company. It is used in Congress at Washington, and it is stated that a large number are now being turned out. One of the machines was exhibited in August '88 to the Queen at Balmoral. The capacity of a wax cylinder 6 inches long and $1\frac{1}{2}$ inches in diameter when spoken to at the rate of 150 words per minute is about 700 words, while the groove cut in the wax by the style is about $10\frac{1}{2}$ ths of an inch wide.

Gray's Inn, the smallest of the four Inns of Court, consists of the old Manor of Portpole, which belonged at one time to the family of de Grays. It was in the possession of the lawyers in the reign of Edward III. The priors and monks of Shene owned the property till the dissolution of monasteries by Henry VIII., when it was seized by the Crown, to whom a rent of £6 13s. 4d. was afterwards paid. The Treasurer for 1887 was H.R.H. the Duke of Connaught, and Master George Francis acted as Deputy-Treasurer; the treasurer for the present year is not yet appointed, but the next in rotation is Hugh Shield, Q.C.

Gray's Telautograph. See TELAUTOGRAPH. Great Britain. See UNITED KINGDOM.

Great Cryptogram, The (Sampson Low). Mr. Ignatius Donnelly's curious views on the authorship of Shakspeare's plays had been heralded, and to some extent too fully expounded for the book's sake, in the columns

of the *Daily Telegraph*. At all events, when his *magnus opus* appeared, it may almost be said to have fallen flat. Mr. Donnelly's contention is that he has discovered in the "so-called Shakspeare plays" a cipher story enfolded in the text, and holding certain uniform relation to the paging of the Great Folio 1623, and the beginnings and ends of acts, scenes, etc. His theory is that the plays were written by Sir Francis Bacon, commonly called Lord Bacon, assisted possibly by Shakspeare. The public generally manifested very little interest in Mr. Donnelly's zealous attempt to "dethrone" Shakspeare. Consult Sir Theodore Martin's "Shakspeare or Bacon?"

Great Gutter Theory. See ed. '88.

Great Metropolitan Stakes. See TURF.

Great Officers of State are:—(1) The Lord High Steward, (2) The Lord High Chancellor, (3) The Lord High Treasurer, (4) The Lord President of the Council, (5) Lord Privy Seal, (6) Lord Great Chamberlain, (7) Lord High Constable, (8) Earl Marshal, and (9) the Lord High Admiral. They are always of the Privy Council, and the first five take precedence of all dukes who are not of the blood royal, while the others have place of all peers of their own degree. Nos. 1 and 7 when existing, and Nos. 6 and 8, have no share in the government of the country, and the duties of Nos. 3 and 9 have long been performed by commission. See CHANCELLOR, TREASURY ADMIRALTY, NAVY, and other headings.

Great Tithes. See TITHES.

Greece A kingdom under George I., of Glucksburg. Area about 25,017 sq. m.; pop. 2,200,000. By the constitution of 1864, legislative power is vested in a single chamber (Boule), elected by ballot and manhood suffrage for four years. Boule, which numbers 245 members, meets annually for not less than three nor more than six months sitting; not valid unless at least half the members are present, and no law can pass without absolute majority of members. Executive vested in king and responsible ministers. Greek orthodox Church state religion; other sects tolerated: complete liberty of worship. **Estimated revenue** (1888), £3,812,000; **expenditure**, £3,700,000; amount yet due of total funded debt, £21,197,000. Greece annually exports £2,000,000 of currants, —about two-thirds to the United Kingdom. During '88 irritation was caused by the proposal of the French Chamber to raise the tax on currants. Tension also arose with Turkey, but the relations of Greece with other powers continued generally cordial. On the question of **Massowah** (*q.v.*), however, communications passed (July) between the Greek and Italian Governments relating to the expulsion of several Greek subjects, owing to their refusal to pay the taxes demanded, and also on account of their alleged stirring up of rebellion. Intense and almost unprecedented heat was experienced (July). Violent shocks of earthquakes, causing great destruction to property, were experienced at Vostiza (Sept.). **Great floods**, as the result of heavy rain, interrupted railway communication between Athens and Corinth. The royal jubilee was celebrated amid great rejoicing, the fleets of the Great Powers assembling at the Piræus to do honour to the King (Oct.). In the course of the year the death of M. Lombardis, Minister of the Interior, occurred. The King and Queen of Greece visited several of the European capitals, and received illustrious visitors in return. For

history '72-88' see earlier editions, and for army and navy see ARMIES, FOREIGN, and NAVIES, FOREIGN.

Greek Orthodox Church. See ed. '88.

Greek Political Parties. The Greek Legislative Assembly, or Boule, consists of 150 members, having been reduced to this number from 245, by a measure introduced by M. Tricoupis, the present premier, in the early part of '86. The system of election is by *scrutin de liste* (*q.v.*), as in France. The existing Legislative Assembly has sat since February '87, a general election, which resulted in an overwhelming majority for the Government, having been held in the preceding month. Since the death of M. Coumoundouros, the party leaders in Greece have been M. Tricoupis and M. Deliyannis, who have alternated as Presidents of the Council of Ministers, as did MM. Coumoundouros and Tricoupis during the lifetime of the former. The present Tricoupis ministry succeeded in May '86 to the troublesome legacy left by M. Deliyannis, who, after squandering 100,000,000 drachmas, or nearly £4,000,000 sterling, in a costly and useless mobilisation, consequent on the proclamation of the union between Bulgaria and Eastern Roumelia, reduced the country to the verge of bankruptcy. M. Deliyannis continued, however, to lead the opposition, and at the '87 election offered violent opposition to M. Tricoupis at the polls. The latter courageously appealed to the country, on perhaps the least attractive programme ever submitted to a Greek electorate. He demanded a considerable increase of taxation for the honest payment of the public debt, and the abolition of the privilege hitherto accorded to Greek deputies to demand armed assistance for the protection of their supporters at the polls. He also caused it to be known that the Government would not, as its predecessor had done, seek to obtain support by making concessions to local interests, or by remitting taxes for similar reasons. The result showed the courage of the Greeks to face a crisis when the issue was put squarely before them. All the ministers were re-elected, and the Government obtained a majority of a full two-thirds. During the existence of the present Assembly many measures of financial and administrative reform have been successfully carried, and the country shows marked signs of increasing prosperity. The great curse of Greece, a want of administrative stability, seems in a fair way of a permanent cure, while the *morale* of the Legislative Assembly, which had fallen so low that jobbery and corruption were openly practised, many of the deputies being dependent upon the 1,800 drachmas allowed for each session, has already greatly improved. This latter result is, no doubt, in great measure due to the substitution of the *scrutin de liste* for individual nomination, which, by sundering the personal connection between voters and deputies, has rendered the latter less subject to the importunities of their constituents, who for generations have been taught to respect the creed that to the victors in the elections belong the spoils of office.

Greenbacks. Paper currency issued at the time of the war of the Rebellion in the United States, prior to the establishment of the National Bank system still in vogue. They received the name by which they are popularly known from the colour of the ink used in printing their backs. They were not issued in any lower

denomination than one dollar. The "greenbacks" (many of which are still in circulation) are the size of the ordinary Treasury or National Bank note.

Green Books. The official books of the Italian Government.

Greenland. An extensive region or island on N.E. of America, extending into Polar regions. Interior is all ice, but part of south and west coast are habitable, with verdant pasturage, some shrubbery, and mossy valleys. These constitute a Danish dependency, with a stated area of 46,740 sq. m., and pop. 9,780, mostly Eskimos, with a few Danes, Icelanders, and Moravian missionaries. Godthaab is capital of the southern inspectorate; Lievele, on Disco Island, that of the northern. Other settlements are Frederikshaab, Julianshaab, and Upernavik. Principal exports: oil of seals and whales, fox, seal, and reindeer skins, eider down, leathers, and cryolite. The chief trade is with Denmark. Greenland was discovered 981, and soon after colonised from Iceland. It was rediscovered by Davis in 1587. M. Mansen has recently (Oct. to Nov. '88) crossed the icy plateau of Greenland.

Gregory, Rev. Robert, Canon and Treasurer of St. Paul's, b. at Nottingham, 1819. Graduated at Corpus Christi Coll., Oxford. Ordained curate of Bilsley, Gloucestershire, '43. He subsequently held the curacies of Panton and Wragby, Lincolnshire, and the parish church of Lambeth. Since he became Canon of St. Paul's, '68, he has been an active promoter of various religious and educational movements. He is treasurer of the National Society for the Education of the Children of the Poor in the Principles of the Established Church. Member of the London School Board '73-76. He served on the Ritual Commission, the City Parochial Charities Commission, and the Education Commission of '86-88. He signed the Majority Report of that Commission, published in '88, advocating the support of Denominational Schools out of the rates.

Grenada. An island in the West Indies forming part of the British colony of the Windward Islands. Area (including Grenadines), 133 sq. m., pop. 46,425. The capital is St. George, which is also the seat of the Federal Government, and is situated upon a spacious and secure harbour. There are some smaller towns, and the island is divided into six parishes. Several bays and creeks afford good anchorage. Grenada is one of the most beautiful of the West India islands, rugged and picturesque in the interior, being traversed by a mass of volcanic mountains 3,000 ft. high. In the centre, 1,700 ft. above sea level, is a circular lake, 2½ miles in circumference, enclosed by lofty mountains. Products are sugar and rum, cacao, cotton, coffee, fruits, spices, and turtles. Government is administered by the Governor of the Windward Islands and Council, and is, since reconstitution in 1885, practically that of a Crown colony. For financial statistics see BRITISH EMPIRE, etc. (table).

Grenadines. A cluster of islets lying between Grenada and St. Vincent, and forming a dependency of Grenada. Exports: fish oil, wood, sugar, corn, and cotton. Area, 86 sq. m.; pop. 6,400.

Gresham Lectures and College. These Lectures are delivered in Gresham College, Basinghall Street, where they have been regularly given since November 1843; having

for many years previous to that time, and pending the erection by the Gresham Committee of a completed building for the headquarters of the College, been read in a room over the Royal Exchange. There was a certain fitness in the temporary establishment of the lectures under this roof; for the Gresham Lectures, as well as the College in which they are delivered, owe their institution to the munificence of Sir Thomas Gresham, the "Royal Merchant" of Queen Elizabeth. By his will, dated July 5th, 1575, Sir Thomas bequeathed certain rents growing out of the Royal Exchange, which he built, in trust severally to the Corporation of the City of London, and to the Master and Wardens of the Mercers' Company, for the "erecting and maintaining of divers lectures in sundry faculties"—divinity, law, physic, geometry, astronomy, music, and rhetoric. The bequest of Sir Thomas Gresham who died Nov. 20th, 1579 (did not come into effect until the death of his widow, Dame Anne Gresham (December 1596); and the lectures were organised and commenced in June, 1597. Sir Thomas further left for the professors, who should be appointed under his will, his house in Bishopsgate Street, with its gardens and other appurtenances, "for them and every of them there to inhabit, study, and daylie to read the said severall lectures." The buildings of Gresham House, which had thus become Gresham College, were pulled down in 1768, and the General Excise Office erected on the site, the property having been acquired by the Crown for an annuity of £500. Sir Thomas enjoined that the Lecturers of his College should be unmarried at the time of their appointment, and also that marriage, subsequently contracted, should void their preferment. This injunction, after many years of neglect or abeyance, was formally set aside by Act of Parliament. In '76, whilst the Earl of Selborne was Master of the Mercers' Company, the Gresham Lecturers submitted two schemes for the improvement of the Lectures, and the recommendations under this head were adopted, the principal being that all the Lectures should be delivered in English instead of Latin and English, twelve lectures to be given by each Professor. The Lectures are free to the public. On Monday Oct. 15th, '88, the Right Hon. G. J. Goschen (Chancellor of the Exchequer) presided at the first of a course of lectures held at Gresham College promoted by the London Society for the Extension of University Teaching (see UNIVERSITY EXTENSION). The names of the present Gresham Lecturers are as follows:—*Physic*, E. Symes Thompson, M.D.; *Rhetoric*, J. E. Nixon, M.A.; *Astronomy*, Rev. E. Ledger, M.A., F.R.A.S.; *Law*, J. T. Abdy, LL.D.; *Geometry*, Very Rev. B. M. Cowie, D.D., Dean of Exeter; *Music*, Henry Wyld, Mus.D. The divinity lectureship is vacant by the death of the late Dean Burdon.

Grévy, Jules, ex-President of the French Republic, b. 1807, at Mont-sous-Vaudrez, in the Department of the Jura. Educated at the college at Poligny, he studied law in Paris and began his career as an advocate. He gained distinction as counsel in his defence of the revolutionists of 1830. After the Revolution of 1848, he was Commissary of the Provisional Government in the Jura, and was returned by that department to the Constituent Assembly, in which he was a member of the Committee of Justice and a vice-president. During the

Presidency of Louis Napoleon, M. Grévy opposed the policy of the future Emperor. After the Franco-German war, M. Grévy came again to the front, and from 1871 to 1873 was President of the National Assembly, to which in 1876 he was again returned, and elected President of the Chamber of Deputies. This office he held till 1879, having been re-elected twice. On the retirement of Marshal MacMahon from the Septennial Presidency of the Republic, M. Grévy was elected his successor, Jan. 29th, 1879. Re-elected Dec. 28th, 1885. Resigned Dec. 2nd, 1887. The unexpected fall of M. G. was indirectly due to what are known as the Limousin or decoration scandals, in which, rightly or wrongly, M. Wilson, the President's son-in-law; was said to be seriously implicated (see FRANCE). M. G. chose to stand by his son-in-law, but the successive statesmen he called upon to form a ministry refused to take office, on the ground that the crisis was a presidential and not a political one. As the President was unable to form a government, he finally resigned on Dec. 2nd, '87, **M. Sadi Carnot** (*q.v.*) succeeding him. It was stated in '88 that M. Grévy was busily engaged on his *Memoirs*, which will comprise the events happening since '48.

Griffiths' Valuation. See ed. '88.

Griqualand East. A district of the Trans-

keian Territories (*q.v.*).

Griqualand West. A province or district of Cape Colony; area 17,491 sq. m.; pop. 17,000 whites, 32,000 coloured; capital **Kimberley** (pop. 25,000). It has Bechuanaaland on the N., Orange Free State on the E., and the Orange river divides it from the rest of Cape Colony on the S. It was settled after 1833 by the Griquas or "Baastards," a tribe of Dutch-Hottentot half-breeds. In 1867 diamonds were discovered in Griqualand West, and a rush from all sides into it ensued. In 1871 the Griqua chief, Waterboer, was induced to cede his authority, and the province was annexed to Cape Colony, but with independent jurisdiction. In 1881 it became an integral part of Cape Colony. Griqualand West, occupying the centre of a great plateau, and lying at an elevation of 3,000 feet above the sea, is bare and uninviting, except along the banks of the Orange and the Vaal, which are wooded and picturesque. The climate is fine and healthy. The diamond fields are some of the most productive in the world. See CAPE COLONY and DIAMOND FIELDS.

Grossmith, George, actor, a son of the late Mr. Grossmith, a well-known public lecturer. Having attracted the notice of Sir Arthur Sullivan, he was given the part of **John Wellington Wells** in the comic opera of "The Sorcerer," written and composed by Gilbert and Sullivan. In all those gentlemen's subsequent productions Mr. Grossmith has taken a leading character, and played **Ko Ko** in the "Mikado," and the **Jester** in the "Yeomen of the Guard," brought out at the Savoy Oct. '88.

Grosvenor Gallery, New Bond Street. The founder is Sir **Coutts Lindsay**, and under his guidance certain schools of art which have not been regarded with much affection elsewhere have been largely developed. There is a spring and a winter exhibition, very much after the style of the Royal Academy, with which, indeed, the G. G. has become a strong competitor during the last few years. During '88 there was some discussion in the public press in reference to the management of the G. G., with the result that one or two well-known artists

who had previously been associated with Sir Coutts Lindsay severed their connection from him. As a result of the split, Mr. Comyns Carr and Mr. Halle formed a new **Art Gallery** in the Metropolis. See NEW GALLERY.

Grove, Sir George, was b. 1820. Educated as a civil engineer. In 1850 became Secretary to the Society of Arts. Appointed Secretary of Crystal Palace Company on its formation in 1854, and afterwards served on the Board of Direction. His analyses of classical orchestral music for Crystal Palace Saturday Concerts are well known, as also his zeal in propagating good music. Edited *Macmillan's Magazine* for many years, and is also the editor of the "Dictionary of Music." In 1875 the University of Durham conferred on him the honorary degree of D.C.L. Appointed Director of the Royal College of Music at Kensington by the Prince of Wales in 1882. Knighted in 1884.

Grove, Sir William Robert, was b. in 1811, and devoted his earlier years to the study of science. He occupied the distinguished position of **President of the British Association** in 1866, and is the author of "Correlation of Physical Forces," and many papers published in the "Transactions of the Royal Society," of which he is a Fellow. Called to the bar (1835); Q.C. (1853), and such was his knowledge that there was hardly a scientific case that did not pass through his hands. Elevated to the bench (1871). Mr. Justice G. has since maintained his reputation, not only as a hard-working, business-like judge, but as a sound lawyer. He retired from the bench in '87.

Guadeloupe. (Span. "River of the Wolf.") Consists of two islands, Basse-terre and Grande-terre, separated by a narrow salt water river. Situated in the Leeward group of the Lesser Antilles. One of the principal French colonies in the West Indies. Area (including dependencies) 720 sq. m., pop. 181,038. Capital **Basse-terre**; second town (in the other island) Pointe-à-Pitre. Basse-terre Island is of volcanic origin, and very fertile. Grande-terre is of coral formation, with a less productive soil. Climate hot and unhealthy; hurricanes frequent and destructive. Products are sugar, rum, coffee, cotton, cacao, tobacco, &c. It is governed as a French Department, and is one of the few French possessions that ally pay; exports and imports approaching £1,000,000. Dependent on Guadeloupe are the neighbouring islands of **Desirade**, **Mariegalante**, **Les Saintes**, **St. Bartholomew** and **St. Martin** (q.v.). First colonised by the French in 1635, it was afterwards several times captured by England, but confirmed to France in 1814. See COLONIES OF EUROPEAN POWERS.

Guardianship of Infants' Act, '85. See ed. '87.

Guatemala. See CENTRAL AMERICA.

Guernsey. One of the Channel Islands (q.v.).

Guiana, or **Guayana** (pron. Gwi-ah'-nah, and Ghe-ah'-nah). A region of South America comprised between the Orinoco and Amazon rivers. May be regarded as a great forest-clad peninsula. Chief sections appertain to Brazil and Venezuela. Name now usually confined to European provinces, **British Guiana**, **Cayenne** or **French Guiana**, **Surinam** or **Dutch Guiana** (q.v.). Coasts are low and flat, faced by mud-shallows. Country rises gradually, forming plateaux of different elevations, back to high mountains of far interior, whence large rivers descend. Climate tropical and humid. Euro-

peans few, but many negroes; tribes of Indians sparsely people the interior. Guiana was the "El Dorado" of Sir Walter Raleigh, and formerly supposed to be rich in gold. Gold is still found in the interior, in the Sierra Parime, but the true wealth of Guiana lies in its fertile soil and its boundless capabilities in regard to tropical produce. Much of the interior still unexplored. The **Kaitetur Falls**, on the Potaro, a western tributary of the Essequibo, were discovered 1865. They are 822 ft. high and 1370 ft. broad, and are one of the greatest wonders of the kind in the whole world. **Mount Roraima**, a singular table-mountain on the borders of British, Venezuelan and Brazilian territories, has been the chief object of recent travellers. Consult "Proceedings of Royal Geographical Society," 1885-87.

Guildford, Rt. Rev. Dr. Sumner, Suffragan Bishop of; son of the "Prince Bishop," the late Bishop of Winchester. Educated at Balliol Coll., where he graduated fourth class, in 1845 and was ordained '47. After holding a curacy at Crawley, Dr. S. became rector of Old Alresford, continuing there for 35 years. He has been a proctor in the Lower House of Convocation since '66, and in '86 was elected **Prolocutor**, in both of which offices he laboured with much success. Was rural dean of Alresford '57-85, and Canon of Winchester since '85, becoming Archdeacon in '84. Dr. S. edited "**Principles at Stake**" ('69) and "**Our Holiday in the East**" ('81). Is also the author of the "**Life of Bishop Sumner, Bishop of Winchester**" ('70).

Gull, Sir William Withey, M.D., F.R.S., b. at Thorpe-le-Soken, Essex, 1816. Educated at Guy's Hospital, and graduated M.B. '41, M.D. '46, at the Univ. of London, of which he is a Senator. He has held many offices of distinction, and was for many years connected with Guy's Hospital as a lecturer and physician. He is one of the most eminent living authorities and practitioners in **olinal medicine**. He attended the **Prince of Wales** through his severe illness in '71, and in recognition of his services on that occasion he was created a baronet and appointed one of **Her Majesty's Physicians extraordinary**.

Gunpowder Storage, Law Case on, in '88. An important prosecution instituted by the Crown was heard in the Queen's Bench Division in May '88, the object being to compel the defendants, the **Chilworth Gunpowder Co., Ltd.**, to cease storing gunpowder or other explosives at their magazines at Barking Creek. It appeared that during the periods covered by the indictment the defendants had stored in their magazines at Barking, on an average, some 116 tons of gunpowder, and that some labourers' houses were within 100 yards of the defendants' works, while the gas works were 1,000 yards, Barking village a mile and a half, and North Woolwich under two miles distant. It was also said that the banks of the Thames were only 200 yards off, and that if they were blown away by an explosion, serious inundations would follow. It was argued that life and property was endangered, and a nuisance created at common law. The jury, however, found the defendants not guilty, and a similar indictment against another firm of gunpowder manufacturers was not proceeded with.

Guns, Various Classes of. See ARTILLERY.

H

Habeas Corpus, Writ of. A writ directed to a person who has another person in custody requiring him to produce his prisoner in court upon a day specified therein. From the time of Magna Charta imprisonment at the discretion of any person, even the sovereign, has been unlawful in England. But down to the seventeenth century the royal prerogative was so indefinite, and the royal power so great, that persons were frequently detained in custody at the discretion of the Crown. See ed. '88.

Habitual Criminals Act Amendment Bill '84. See ed. '88.

Habitual Drunkards Bill. See SESSION '88, sect. 18, and DIPSONIA.

Haeckel, Ernst. The best known of the popularisers of Darwin in Germany. Was b. Feb. 16th, '34, at Potsdam. Pupil of Johannes Müller and Virchow, at Berlin and Würzburg. Afterwards worked at Vienna. Extraordinary Professor of Comparative Anatomy at Jena University, then Ordinary Professor (1865)—a position he still holds. Visited England (1866), where he met Darwin.—Amongst his many works are "Generelle Morphologie der Organismen" (based on Darwin's views); "Anthropogenie" (history of man's development); "Arabische Korallen"; "Protistenreich" (account of Protista, or first living beings, neither distinctively animals nor plants); "Naturliche Schöpfungsgeschichte" (translated as the "Natural History of Creation"); monograph on Medusae, and on Radiolaria collected in the voyage of the *Challenger*; "Popular Lectures on Evolution," etc.

Haggard, Henry Rider, was b. at Bradenham Hall, Norfolk, 1856. At the age of nineteen he accompanied Sir Henry Bulwer to Natal as his private secretary, and subsequently served in a similar capacity under Sir Theophilus Shepstone, H.M. Commissioner to the Transvaal, and took part in the temporary annexation of that territory to the British Crown in '77, and was afterwards appointed **Master of the High Court of the Transvaal.** At the commencement of the Zulu war he was adjutant-tenant of the Pretoria Horse. He began his career as an author with the publication of "Cetywayo and his White Neighbours" in '82, and subsequently wrote "Dawn," and "The Witch's Head," in which he gave promise of his success as a romance writer, which was fully realised in "**King Solomon's Mines.**" This won for him immense popularity, which was further increased by his wildly romantic and idealistic story "**She**" which was originally published in the *Graphic*, and created a great sensation on its appearance, in book form, in '87. "**Allan Quatermain**," "**Jess**," "**Mr. Meek's Will**," and "**Maiwa's Revenge**" are also among the most successful of Mr. H.'s recent writings. His latest work is entitled "**Colonel Quaritch, V.C.**" (Dec. '88).

Halleybury College, Herts. Founded 1862, received Royal Charter '84. Exhibitions to Oxford and Cambridge five annually (£60, £50, £50, £40, and £20) for three years. Pupils 500. **Head Master,** Rev. J. Robertson, M.A.

Halifax. Capital of Nova Scotia (*q.v.*), pop. 40,000. It is a fine city, and stands on one of the finest harbours in the world. It is the chief naval station of British North America, and has a large royal dockyard, covering 14 acres.

Harbour and city are protected by 11 different fortifications, garrisoned by British troops. As the eastern seaport of the Dominion, and the terminal point of the Inter-colonial system of railways, as well as the centre of the vast coal and mineral resources of Nova Scotia, Halifax cannot fail to have a great future before it.

Hall, Rev. Newman, b. at Maidstone, 1816. Educated at Totteridge and Highbury Coll., LL.B. Lond., '55 (law scholarship). Ordained Pastor of the Albion Congregational Ch., Hull, '42. In '54 was chosen minister of Rowland Hill's Chapel, Blackfriars Road, London. Subsequently removed with his congregation to the handsome new church in the Westminster Bridge Road, the tower of which, called "Lincoln Tower," was erected by English and American subscribers in memory of Abraham Lincoln. During the American war Mr. H. raised his voice on behalf of the North, and subsequently visited the United States with a view to promoting international goodwill. Mr. H. has long been associated with the temperance cause, and was one of the first to inaugurate a movement for providing pleasant evenings for the people. He is the author of various evangelical books and tracts, of which the best known is "**Come to Jesus**," of which several millions have been circulated. In '88 Mr. H. issued a pamphlet on the Whitechapel Murders.

Hallé, Sir Charles, esteemed pianist, musical editor, and conductor of the day, b. 1819, the son of a local bandmaster near Elberfeld. He studied chiefly at Paris, and in 1846 gave concerts there. Driven to England in 1848 by the Revolution, he took up his residence here. For many years he has been at the head of classical pianists; and since about 1857 has gained fame as conductor. In addition, Hallé has edited the finest classical composers, and has done much for the culture of the highest description of music. He was knighted last year, which was the fortieth anniversary of his settlement in England. In July '88 he married Madame Norman-Néruda, the celebrated violinist.

Halsbury, Hardinge Stanley Giffard, P.C., 1st Baron (creat. 1885); b. 1825: **Lord Chancellor** and President of the Supreme Court of Judicature. He attained to his late high position by his personal acquirements and talents. He belongs to an old family, the Giffards of Devon. Mr. Giffard, after graduating at Oxford, was called to the bar at the Inner Temple '50, becoming Q.C. (1855). Under the administration of Lord Beaconsfield he was appointed Solicitor-General (75-80), and knighted (75). On the accession to office of the Salisbury government ('85) he was made Lord Chancellor, and holds that appointment in the present Conservative administration. His attainment to high judicial office is a remarkable exception to the general axiom of the English bar, that no criminal practitioner ever reaches the wool-sack. M.P. for Launceston (1877-85). In '88 Mr. L. J. Jennings, M.P., in the House of Commons, attacked, in a debate on Supply, the disposal of the official patronage by Lord H. His lordship replied to the charge in the Upper House, Nov. 20th.

Hamilton. Capital of the Bermuda Isles (*q.v.*). **Hamilton, The Rt. Hon. Lord George Francis, P.C., M.P.,** third son of the late Duke

of Abercorn, was b. at Brighton, 1845, and educated at Harrow. Married Lady Maud Caroline, youngest daughter of the third Earl of Harewood (1871). Entered the Rifle Brigade (1866); was ensign and lieutenant Coldstream Guards (1868). Lord George contested Middlesex at the election of 1868, and won the seat by a majority of more than a thousand over Viscount Enfield, who was second. Again, at the general election of 1874, Lord George defeated Lord Enfield by over 5,000 votes. After this election, when he was under thirty years of age, he was appointed Under-Secretary for India, and four years later succeeded Lord Sandown as Vice-President of the Committee of Council on Education. Lord George attained cabinet rank in 1885, Lord Salisbury nominating him for the high post of First Lord of the Admiralty. In Lord Salisbury's present administration he holds the same office. Lord George was again elected member for Middlesex in 1880, when he defeated Mr. Herbert Gladstone by a large majority, and for the Ealing Division in 1885 and 1886. With the assistance of Mr. Forwood, secretary to the Admiralty, Lord G. has instituted some important reforms in the Department. With a view to testing the capacity of the fleet to meet a sudden emergency, he in '88 originated the Naval Manœuvres (*q.v.*). Visited Glasgow (Oct.), and delivered an address on the Navy to the members of the Chamber of Commerce.

"Hammering." See STOCK EXCHANGE TERMS.

Hannen. The Rt. Hon. Sir James, b. 1821. Called to the bar at the Middle Temple (1848). Going the old Home Circuit, he soon acquired a reputation for ability and industry, which led to his appointment as junior counsel to the Treasury, which is said to carry with it the reversion of a pulsive judgeship. An advanced Liberal, Sir James Hannen unsuccessfully contested Shoreham (1865). Appointed a judge of the Queen's Bench Division (1868), president of the Probate, Divorce, and Admiralty Division (1872), in which capacity he has tried many *causes célèbres*. Sir James is both capable and careful as a judge, and his decisions are very seldom overruled. His appointment as President of the Farnell Inquiry Commission last year met with general approval.

Hanoi. Capital of Tonquin, a French colony in Indo-China.

Hapsburg, House of. See AUSTRIA-HUNGARY.

Harcourt, Sir Wm. Geo. Granville Venables Vernon, Knt. (1873), M.P., P.C., LL.D., Q.C., son of the late Rev. V. V. Harcourt, of Nuneham Park, Oxford, and grandson of a former Archbishop of York, was b. 1827. Educated at Trin. Coll., Cambridge, where he graduated with first-class honours in the Classical Tripos, and Senior Optime (1851). Called to the bar at the Inner Temple (1854), Q.C. (1866). Appointed Whewell Professor of International Law, Cambridge (1869). Sir W. Harcourt entered parliament as Liberal for Oxford (1868-80). On seeking re-election after his acceptance of office in Mr. Gladstone's administration he was defeated by Mr. Hall, who was subsequently unseated on petition. Meantime a seat was found for Sir W. H. at Derby, by the voluntary retirement of Mr. Plimsoll, for which constituency he has continued to sit up to the present time. He has held the following offices:

Solicitor-General (1873-74); Secretary of State for the Home Department (1880-85); Chancellor of the Exchequer (1880). He married (1876, his second wife) Mrs. Ives, daughter of the late Mr. J. L. Motley, the historian. Under the *nom de plume* of "Historicus" he is the author of the well-known letters on International Law. He was one of the members of the Round Table Conference, which was held at his town residence '87. In recent Parliamentary debates he has distinguished himself by his vigorous onslaughts upon Mr. Goschen and Mr. Balfour. The great speech he delivered on the law relating to the right of public meetings on the occasion of the *Mitchellstown* debate was subsequently published by the Cobden Club. Sir William Harcourt may be regarded as the deputy-leader of the Opposition. He is one of the most brilliant of Parliamentary debaters and platform speakers, and is regarded as a probable future leader of his party. He has recently allied himself with the advocates of temperance, and at the meeting of the United Kingdom Alliance at Manchester in October, '88, defended the position he has taken up on this question. He accompanied Mr. Gladstone to the great meeting in *Bingley Hall*, Birmingham, on Nov. 7th last, and spoke on that occasion. Sir W. H. has spoken recently (Dec.) in the debate raised in Supply on the treatment of Mr. Mandeville.

Hardwicke Stakes. See TURF.

Harlem River Tunnel. For the purpose of connecting Seventh Avenue, New York City, with Jerome Avenue, in the newer portion of the said city, but lying north of the Harlem river, a commission of engineers was appointed to consider the best scheme, and the substance of their report became known in July '88. They suggested the construction of a tunnel about 450 feet long between the shore shafts, with approaches 1,800 ft. long on a grade of 3 per cent. The tunnel was to be in three sections, two driveways 30 ft. wide and 15 ft. high, and in the middle a smaller section 15 ft. wide by 10 ft. high, at a higher elevation, the whole being in good solid rock, and lighted by electricity. The cost was estimated at 2,000,000 dollars.

Harmonium. See ed. '86.

"**Harper's Magazine.**" Originally started in America, but now published simultaneously in England by Sampson, Low & Co. (monthly, 1s.). It has an immense circulation in both countries—mainly owing, no doubt, to the high-class nature of its literary matter, as well as the beauty of its illustrations, and which, combined with those of the *Century*, have greatly tended to improve the production of English magazines of a similar nature.

Harris, Augustus, actor, dramatist, and manager (b. 1852) is a son of the late Augustus Harris, at one time so well known in the theatrical world. After his father's death Mr. Harris made his first appearance on the stage (1873). He is renowned as a most enterprising, energetic, and successful manager. In his capacity as lessee of *Drury Lane* he has achieved what scarcely one of his numerous predecessors was able to accomplish—viz., to make the management of this historical old theatre a financial success. His spectacular melodramas, though replete with highly spiced sensationalism, have invariably hit the public taste. Since 1879, when he first took over the theatre, he has produced, besides several popular

phantomies, "The World" (written by himself in collaboration with Messrs. Merritt and Pettitt), "Youth" (Harris and Merritt), "Human Nature" (Harris and Pettitt), "A Run of Luck" (Harris and Pettitt), "Pleasure" (Merritt and Harris), and "The Armada" (Harris and Hamilton), '88.

Harrison, Benjamin, President of the United States, was b. Aug. 20th, 1833, at North Bend, near Cincinnati. He claims descent from Commissioner Harrison, who signed the death warrant of Charles I. He is a great-grandson of Benjamin Harrison, one of the signers of the declaration of American Independence, and a grandson of General W. H. Harrison, who was elected President of the United States in '40, and died a month after his installation. The new President, who was elected by a large majority in succession to Mr. Cleveland in November '88, was educated at the Miami University at Oxford, Ohio. He subsequently studied law in Cincinnati, in '54 removed to Indiana, and in '60 was elected reporter of the Supreme Court of that State. After the outbreak of the civil war, he entered the 70th Indiana regiment, and during the Atlanta campaign greatly distinguished himself. At the conclusion of the war he returned for a short time to his post in Indiana. He subsequently became partner in a law firm. In '80 he was elected Governor of Indiana, and in the following year was returned by that State to the United States Senate. As a Senator he commanded great respect by his force of intellect, unobtrusiveness, and debating power. He is an ardent Republican, and the large majority by which he defeated Mr. Cleveland, the nominee of the Democrats, created much surprise. President Harrison married in '53, before attaining his majority, Miss Carrie L. Scott, daughter of Rev. W. J. Scott, of Oxford, Ohio.

Harrison, Frederic, M.A. Born in London 1831; educated at King's Coll., London, and Wadham Coll., Oxford; scholar, '48; fellow and tutor, '54; first class in classics, '53. Called to the bar, Lincoln's Inn, '58; practised in the Equity Courts; examiner in jurisprudence for Inns of Court '69-76; for London University, '75-9; professor of jurisprudence, Inns of Court, since '78; member of Royal Commission on Trades Unions '67-69; secretary to the Royal Commission for the Digest of the Law '69-70. Is President of the London Positivist Committee, Newton Hall, and has published numerous essays and addresses on Positivism. Author of very many articles in the *Fortnightly*, *Contemporary*, and *Nineteenth Century* Reviews from their commencement; of "The Meaning of History," '62; of "Order and Progress," '75; "Social Statism," the second volume of Comte's "Positive Polity" (a translation), '75; the "Choice of Books," '86; "Oliver Cromwell," '88; and a great number of lectures, printed privately, on historical, social, and religious questions. In the December number ('88) of the *Contemporary Review*, Mr. H. wrote an article entitled "An Appeal to Liberal Unionists."

Harrow School. Founded 1571, by John Lyon, a yeoman, b. at Preston, near Harrow. Age of admission from 12 to 15. Among the scholarships to either University are Isabella Gregory's of £100 a year for four years, Earl Spencer's £30 a year for three years, Botfield's £60 a year for three years; to Hertford College,

Oxford, Baring's three of £100 a year for five years; to Caius College, Cambridge, Sayer's two of £52 10s. for four years; and to any College, Oxford, Neild's two of £30 for three years. Pupils—557. **Head Master**, Rev. J. E. C. Welldon, M.A. Motto—*Siet fortuna domus*. Some distinguished alumni—Butler, afterwards head master, Sir Robert Peel, Cardinal Manning, Byron, Archbishop Trench, Trollope the novelist, Sir George Trevelyan, Lord Shaftesbury, Dr. Parr, Palmerston, Theodore Hook. There will be an examination, on the Tuesday before Easter '89, for six or seven scholarships, open to all boys, not members of the school, who were born in or after the year 1875. Further particulars can be obtained from the head-master's secretary.

Harte, Bret, was born at Albany, New York, 1839. At the age of fifteen he settled in California, and went through a variety of experiences. He worked for a time in the mines, and subsequently served a short apprenticeship to a printer, and also acted as teacher in a school, and express messenger to a newspaper editor, and secretary to the Mint at San Francisco. He became the first editor of the *Atlantic Monthly*, in '68. He established his reputation as a humorist by his well-known poem "The Heathen Chinee," which appeared in that journal in '69. Was appointed United States Consul at Creefield and at Glasgow in '80. In '82 he published a collected edition of his works, the most famous of which besides that already mentioned include "The Luck of Roaring Camp," and other tales.

Hartington, Rt. Hon. Spencer Compton Cavendish, Marquis of M.P., P.C., is the eldest son of the Duke of Devonshire, and was b. July 23rd, 1833. Educated at Trinity College, Cambridge, where he graduated B.A. (1854). He was returned for North Lancashire as a Liberal in 1857, and in 1859 moved the vote of non-confidence which resulted in the defeat of Lord Derby. In March 1863 he was appointed a Lord of the Admiralty, and in April of the same year Under-Secretary of State for War in Lord Russell's administration. In February 1866 he obtained cabinet rank as Secretary for War. At the general election of 1868 he was defeated in North Lancashire by Mr. (now Lord) Stanley, but shortly afterwards was returned for the Radnor Boroughs. He was appointed Postmaster-General in Mr. Gladstone's first administration, and retained that office till 1871, when he succeeded Mr. Chichester Fortescue as Chief Secretary for Ireland. On the retirement of Mr. Gladstone after his defeat in 1874, Lord Hartington was unanimously chosen as leader of the Liberal party at a meeting held at the Reform Club under the presidency of Mr. John Bright. In 1879 he was elected Lord Rector of the University of Edinburgh (q.v.). At the general election of 1880 he was elected M.P. for North-East Lancashire, and was sent for by the Queen on the defeat and resignation of Lord Beaconsfield. He declined, however, to form an administration, being content to serve again under Mr. Gladstone. He became Secretary for India, but on the appointment of Mr. Childers as Chancellor of the Exchequer in 1882, his lordship returned to the War Office. At the general election in 1885 he was returned by an enormous majority for the Rossendale Division of Lancashire. When Mr. Gladstone formulated his policy of Home Rule for Ireland, Lord Hartington was

unable to follow him, and moved the amendment to Mr. Gladstone's motion for the second reading of that measure. During the electioneering campaign which followed the defeat of the Government on the bill, Lord Hartington frequently declared himself in favour of a substantial reform of Irish local government, but protested against such a reform being based upon a principle which he conceived to be inapplicable to England, Scotland and Wales, and destructive of the integrity of the United Kingdom. His lordship became the recognised leader of the **Liberal Unionist party**, to whose action in dividing the Liberal vote the Conservative triumph at the polls was largely due. Recognising the commanding influence of Lord Hartington with the Unionists of both parties, Lord Salisbury offered to serve under him if he would accept the premiership. Lord Hartington, however, declined Lord Salisbury's overtures, but undertook to give his support to the new ministry in the House of Commons. After the secession of Lord Randolph Churchill, Lord Salisbury again endeavoured to induce Lord Hartington to join his cabinet. On the ground that he could best serve the Unionist cause without taking office, he again declined. It was, however, with his full approval that Mr. Goschen entered the cabinet as Chancellor of the Exchequer. Events which have taken place since then have emphasized Lord Hartington's antagonism to Mr. Gladstone's Home Rule policy; and in his speeches delivered last autumn, at Nairn and elsewhere, during his tour in the North of Scotland, at Carlisle (March) and Belfast (Oct.), he has assumed an attitude of closer alliance with Lord Salisbury. In April '88 Lord II. received the freedom of the City of London.

HAUSSA, or **HAUSSA**. An African people of the Fulah or Fellatah race, distinct from the Negroes proper. Their country lies on the lower middle course of the Niger, and between that river and the Benue. Here are various States loosely confederated into the empires of **Sokoto** and **Gando**. The Hausa people are distinguished above all West African nations for intelligence, vivacity, industry, and commercial address, good faith, and friendliness. The Hausa language is said to be the noblest, richest, and most harmonious in Nigritia. Hausas are recruited for service in Gold Coast Colony, where an armed constabulary of 1,000 of them is maintained, and the British Royal Niger Co. has entered into a treaty with the ruler of Sokoto.

HAVANNA. Capital of Cuba (*q.v.*), pop. 239,000.

HAWAIIAN ISLANDS. A group of eight inhabited and four uninhabited islands in the North Pacific. Area, 6,677 sq. m., pop. 80,576. Capital, Honolulu, on the south-west coast of the island of Oahu, pop. 20,487. Imports in '86, £975,547; exports, £2,068,275; estimated revenue for biennial period, '86-88, £567,985; expenditure, £910,495; debt, £42,000, exclusive of the loan which has been sanctioned of £400,000. The Hawaiian Islands were discovered by Captain Cook in 1778, and by him named Sandwich Islands, in honour of the Earl of Sandwich, then first lord of the Admiralty; but the natives have adopted the name Hawaiian, from the largest island Hawaii. This island, like the others, is occupied with volcanic mountains. Mauna Vea, in the north, rises to a height of 13,805 feet, and Kilauea, a hill 16 miles south-

east of Mauna Loa, has the largest active crater in the world. The soil is highly fertile and productive. Sugar and rice are the staple industries, and coffee, hides, wool, whale oil and bone are also exported. The bulk of the trade is with the United States. Under Kamehameha I. the Hawaiian Islands were united into one kingdom. Kamehameha II. succeeded him in 19, and one of his first acts was to abolish idolatry. Thenceforward the commercial development of the islands and the civilisation of the people proceeded rapidly. The whole population has embraced Christianity. Education is greatly encouraged, and nearly every native can read and write. English is superseding the native language in the legislature and the higher-grade schools. An efficient postal system has been established, and railways and telegraphs have been constructed. The form of government is a limited monarchy. A new constitution was granted in July '87. There are two Houses—the House of Nobles and the House of Representatives—both consisting of 24 members, and both popularly elected, the nobles for six years, the representatives for two. The two Houses sit together, and form the Legislative Assembly. The members of the Privy Council are appointed by the king. The reigning sovereign is Kala-Kana I. The heir to the throne is his sister, the Princess Lydia Kamakaha Liliu-Kalani, married to an American. The native population is dying out, and is threatened with extinction in the course of a few years, while the foreign element is rapidly increasing. Steamers connect the islands with America, Australasia, and China. For Ministry, etc., see DIPLOMACY.

Haweis, **Rev. H. R.**, b. 1840; educated at Trinity College, Dublin, where he graduated (1861), M.A. (1864). In 1866 he was appointed to the perpetual curacy of St. James's, Marylebone, the gift of the Crown, which he still holds. He is well known as an able preacher and speaker; and also for the æsthetic character of the services held at his church. He is an author of repute, his principal works being "**Musio and Morals**," and "**New Pet, or Pastimes and Penalties**," besides several pamphlets and articles on social subjects, etc. Mr. Haweis' name was, in the autumn of 1886, prominently before the public in connection with the refusal of the Bishop of London to permit him to preach in Dr. Parker's church (the City Temple).

Hawkins, **Sir H.**, was b. 1817, called to the bar 1843, Q.C. 1858, and made a judge in 1866. He was leader in the prosecution of the Tichborne claimant. Sir Henry retains many of his youthful tastes for athletics, and is an hon. member of the Jockey Club.

Hawks, **Master of the**. In an appendix to the report of the Committee of the House of Commons on **Perpetual Pensions** (*q.v.*), it is stated that by letters patent dated July 5th, 1684, James II. granted this office to the ancestor of the Duke of St. Albans and his heirs for ever, charging the salary and expenses upon revenues at the disposal of the Crown. The right of the Duke of St. Albans to the annuity was referred by the Treasury to the law officers in 1831; and they reported that the heirs of the first grantee of the office have such an interest in the salary granted as to render it imperative upon the Lords of the Treasury to make provision for continuing the annual payment.

The sums granted by the original patent were as follows: Master of Hawks, salary £391 1s. 5d.; four falconers at £50 per annum each, £200; provision of hawks, £600; provision of pigeons, hens, and other meats, £182 10s. Total, £1,373 11s. 5d. This amount has been reduced by office fees and other deductions to £995 a year. It was charged on the land revenues under the Act 3 & 4 Will. IV., c. 86, and Treasury warrants of '33 and '34. It was subsequently transferred to the Consolidated Fund under the authority of the Act 29 & 30 Vict., c. 62, and a Treasury warrant of June 30th, '68, was issued in committee that the pension is still paid; and in answer to Mr. Jennings and Mr. Mundella, Sir R. Welby said he presumed the Duke of St. Albans does not keep hawks, and he did not think his Grace has any duties of attendance on the Court, or any Court duties devolving on him in consequence of the office that he holds. The Treasury had no reason to know that there are any hawks kept. Asked whether any expenditure was at present made under the second, third, and fourth heads, Sir R. Welby said he was not aware, the Treasury had no reason to know that there were any hawks. One part of the question he should not be able to give an answer to: the Duke might perhaps give something to nominal falconers, but the Treasury had no information before them to show that there was any establishment of hawks kept. He believed the Treasury had been advised that the Duke was legally entitled to these sums.

Hayti (Indian "High Land")—called Hispaniola by Columbus, and afterwards San Domingo. The second largest island of the Antilles, lying between Cuba and Puerto Rico. Area 28,249 sq. m., pop. 1,200,000.—The interior is mountainous, rising to 8,600 feet. Between the ranges lie lovely plains, exuberantly fertile, watered by rivers navigable for small craft. There are sundry good harbours on the rocky coast—Puerto Plata, Jacmel, Samana, etc., besides the capitals. Most of the island is covered with dense forests of mahogany and other valuable timbers. All the most valuable productions of the West Indies abound. It is the most fertile of the Antilles, and was formerly called the "Garden of the West Indies." But the people are idle and ignorant, and constantly in a state of political disturbance. They are almost all negroes or mulattos, and present a curious mixture of savagery and civilisation.

—There are two states. The largest, the **Dominican Republic** (the mulatto republic) occupies the eastern end of the island. Area, 18,045 sq. m.; estimated pop. in '87, 504,000. Is divided into five states or provinces, and four maritime districts. Has a President and National Congress. Capital, **San Domingo**, founded in 1494, the first European settlement in America, pop. 116,000. **Revenue** ('87) £320,000; **expenditure** £290,000; **foreign debt** in '87 (not reckoning unpaid interest), £714,300. There is also an internal debt and an international debt. There is said to be now some progress, and the country is being opened up by railways. Exports are valuable timbers, coffee, tobacco, cacao, and sugar, to amount of £530,084 in '86. Imports £438,410. Sugar growing in importance: large plantations and factories in south and west. The Dominican Republic was a Spanish possession till '22, when it was annexed by Hayti, and achieved independence in '44.

Country now quiet.—The **Republic of Hayti** (the negro republic) occupies the western portion of the island. Area, 10,204 sq. m.; pop. estimated at from 572,000 to 800,000. The capital is **Port-au-Prince**, pop. 40,000. It has a President, Senate, and House of Representatives. The government, nominally republican, is in reality military, the powers of the elective President greatly outweighing those of the legislature. There is an army of about 7,000 men, commanded by numerous generals; and a navy of five small gunboats. **Estimated revenue and expenditure** for '86-7, £1,064,257, including over £200,000 for interest. There is an immense debt, more or less repudiated—officially stated in '87 as £13,500,000. The currency is chiefly paper, and most of that forged. Exports of coffee, mahogany, logwood, and cotton (1886) £1,511,199; imports £993,050. Valuable mines of gold, silver, copper, and iron, are said to exist, but are not worked. Previous to 1791 this part of the island was a thriving French colony. Then the negro slaves rose, murdered their white masters, and set up an independent black state. Toussaint l'Ouverture and Souloque (1849-59) were negro emperors of Hayti. Since '59 Hayti has been a republic, subject to revolution. Latest revolutions in '83 and '88. Some diplomatic contention arose in '87 relative to the island of Tortuga, off the Haytian coast. It is claimed by England; but Hayti, backed by France and the United States, resists the claim. In June '88 it was announced that much of the trouble previously existing had subsided. **Incendiary fires** occurred in July, said to have originated from a desire to oust the president, which resulted (Aug.) in **President Salomon** making an undignified escape from the insurgents, and was followed by his resignation and the election of **General Legitime** as president. In October, however, a conflict took place between the forces of Generals Legitime and Thélémaque, in which the latter was killed, as well as three hundred others. The Haytian Government troops occupied Jacmel (Nov.), which is once more open for commerce. The ex-President Salomon, who was a Grand Officer of the Legion of Honour, died in Paris at the end of October. Despatches reached England to the effect that during the blockade in Hayti a German steamer was much damaged, (December 5th). **Consult** St. John's "Hayti," and Hazard's "Santo Domingo."

Healy, Timothy Michael, b. in Bantry, 1855. Secretary to Mr. Parnell in 1880, when he was summoned to America. Took an active part in the Land League agitation (1880), and was arrested in the autumn on a charge of intimidation, and committed for trial, but was acquitted. Stood for Wexford borough meantime, on the death of Mr. W. A. Redmond, and was elected without opposition. Took a very active part in the discussions of the Land Bill of 1881, and obtained the insertion of words excluding the improvements of tenants from rent; and the clause has since come to be known as the "**Healy clause**." Went to America after the suppression of the Land League (1881), and was present at the great Irish-American convention in Chicago in that year. Charged with the use of intimidating language in a speech in 1882, and was sentenced to find bail for good behaviour, or be imprisoned for six months. Refusing bail, he was imprisoned, and was released after he had served four months of his

sentence. Stood for county Monaghan in 1883, and after an exciting contest was elected by a majority of votes over both the Tory and Liberal candidates. At the general election of 1885 was elected for North Monaghan and South Derry; elected to sit for the latter. Failed to secure his return in 1886, but (Feb. 7th, 1887) was returned unopposed for N. Longford. Mr. H. was called to the Irish bar 1884. He conducted the defence of Mr. T. D. Sullivan of '88, and was one of the counsel for the scheduled members before the Parnell Commission (p. 6.) last year.

Heart's Content. A harbour on the south-east of Newfoundland, where the Atlantic telegraph cables from Valentia, Ireland, land.

Heat is the cause of a peculiar effect on our nerves, and of various peculiar alterations produced in the condition of matter. The chief causes (sources) of heat are chemical energy (as in combustion), the energy of moving bodies, friction, etc. The sun's heat is supposed to be due mainly to the second of these causes—gravitation towards its centre producing a continual supply of heat. See ed. '87, and consult Prof. Taft, "Heat"; Prof. Tyndall's "Heat as a Mode of Motion"; J. A. Orme's "Introduction to the Science of Heat"; J. Hamblin Smith's "Introduction to the Study of Heat," etc.

Heckling. A word used during parliamentary candidature to express the close and merciless questioning of a candidate. It is derived from Scotch "heckle," the name of a strong instrument with sharp iron teeth set in a board, used for combing and cleaning hemp, leaving only the fibre. Hence it conveys the idea of a searching examination.

Hegira. The See MOHAMMEDAN ERA.

Hellgoland (Hoyland). A British island 36 miles N. of the Elbe mouth. Area, with Sand's Island, $\frac{1}{2}$ sq. m.; pop. 2,000. Under a Governor as a Crown colony. Consists of a rock 200 ft. high, on which are a village and a lighthouse. Is resorted to by bathers from Hamburg, etc. Oysters and lobsters are the chief productions. [For latest statistics see BRITISH EMPIRE, etc. (table).] The people are of Frisian race, and speak a peculiar dialect. They are fishers, pilots, and lodging-letters. The island was captured from Denmark in 1807, and was formerly of importance as a naval station. For Governor see DIPLOMATIC.

Heliograph. An instrument for communicating with distant places by means of flashes of sunlight reflected from a mirror or system of mirrors. See ed. '87.

Henley Regatta. See AQUATICS.

Henry Maurice, Prince of Battenberg, son of Prince Alexander of Battenberg (Hesse) and the Countess Von Lauck, daughter of a former Polish Minister of War, who was raised to the rank of Princess on hermorganatic marriage with the ruler of Hesse, b. Oct. 5th, '58, married (July 23rd, '85) Princess Beatrice Mary Victoria Feodora, the ninth and youngest child of Her Majesty Queen Victoria, and has issue, a son, Alexander, b. Nov. 23rd, '86, and a daughter, Victoria Eugenia Julia Ena, b. Oct. '87. **Herbert, John Rogers, R.A.,** b. 1810, devoted his attention at an early age to portrait painting, and before he was twenty-four had received sittings from many remarkable persons, including Her Majesty, then Princess Victoria. Elected an A.R.A. in 1841, he next year ex-

hibited "The First Introduction of Christianity into Britain," which initiated a series of pictures from religious subjects which have made him famous. R.A. (1846). His "Illustration of Justice on the Earth, and its Development of Law and Judgment," for the Peers' Robing Room at Westminster, was completed in 1864. He and Mr. Maclise were long engaged on this work, in which the "water-glass" method was adopted. Mr. Herbert's "*Moses Descending from the Mount with the Tables of the Law*" is in the principal committee room of the House of Lords.

Heredity. The tendency to recurrence in descendants of certain living beings of structural and functional [anatomical and physiological] conditions similar to those that have obtained in the ancestral forms. See ed. '87, and consult Darwin's "Origin of Species," chap. i. sect. 2, chap. iv., sect. 1, j "Animals and Plants under Domestication," chaps. xii., xiii., xiv. Haeckel's "Pedigree of Man," lecture on "Perigenesis of the Plasmidule"; Weissmann's "Die Kontinuität des Keimplasmas als Grundlage einer Theorie der Vererbung."

Hereford, Rt. Rev. James Atlay, Lord. Bishop of the see was founded 676. His lordship is the 95th bishop, was b. 1817. Educated at St. John's Coll., Cambridge; Bell's Univ. Scholar 1837; graduated B.A., Sen. opt. 1st cl. Class. Tripos, 1840; M.A. 1843, B.D. 1850, D.D. 1859. Was ordained deacon 1842 by the Bishop of Ely, and priest in the following year by the Bishop of Lincoln. Consecrated Lord Bishop of Hereford in Westminster Abbey 1868. Income of the see £4,200. His lordship was formerly Fellow of St. John's Coll., Cambridge, 1842-59, and Tutor, 1846-59; vicar of Warsop, Notts, 1842; vicar of Madingley, Cambs., 1847-52; Ruzichall Preacher 1856-58; vicar of Leeds and Ruzichall, 1859-68; Canon Residentiary of Ripon Cathedral 1861-68. As an author his lordship is known by his charges delivered to the clergy.

Herlots were the right of the lord of the manor to seize a certain number of a deceased tenant's horses and arms. It originated in the lord lending his vassal a horse and armour for life, which again reverted to him on his death. For the three kinds of H. see ed. '88.

Herkomer, Hubert, A.R.A., b. 1849 at Waal, in Bavaria. At an early age he settled in England with his parents, and occupied himself successfully with water-colour painting and designing for wood engraving. Joined the Institute of Painters in Water Colours (1871), and to the gallery of this Society, and to the Grosvenor and Academy exhibitions, he contributed many drawings, chiefly of Bavarian subjects. His oil picture, "After the Toil of Day," in the Academy exhibition of '73, extended his reputation, and prepared the way for his "*Last Muster*," the memorable picture of the Chelsea pensioners (1875). He subsequently turned his attention to etching, and other branches. He was (1879) elected an A.R.A., and is one of the most esteemed contributors to its annual exhibition. In '88 Mr. H. painted a portrait of Mrs. Gladstone presented to her on the occasion of her golden wedding. His work is characterised by simplicity combined with power. He personally directs the well known *Art School at Bushey* of which he is the founder, and in connection with which a new theatre was opened last year with the performance of a romantic fragment entitled

"The Sorceress," composed by Professor H. himself.

Hervey Archipelago, or Cook's Islands.

In the South Pacific, between the Friendly Islands and the Society Islands. Area, 300 sq. m., pop. about 7,000, of Malay race. Almost destitute of drinking water, but abound in cocoa-nut palms, bread-fruit trees, and plantains. Discovered by Captain Cook in 1777, and in 1821 became the scene of the missionary labour of John Williams (of Rarotonga). Advances received Nov. 20th ('88) state that the British flag has been hoisted on these islands.

Hesse. See DIPLOMATIC.

Hessian Fly. See ed. '88, and more fully, ed. '87; and consult Mr. Whitehead's report (Oct. '86), published for the Government by Messrs. Hansard and Son, 13, Great Queen Street, Westminster: price 2d.

Hicks-Beach, Right Hon. Sir Michael

Edward, P.C., M.P., D.C.L., b. 1837. Educated at Eton and Christ Church, Oxford (B.A., 1st class Law and Mod. Hist., 1858; M.A. 1861; Hon. D.C.L. 1878). Is a J.P. and D.L. for Gloucestershire. Sat as Conservative M.P. for E. Gloucestershire (1864-85); W. Bristol (1885).

Has held the following official appointments: Parliamentary Secretary to Poor Law Board (March to Aug. 1868); Under-Secretary for Home Office (Aug. to Dec. 1868); Chief Secretary for Ireland (1874-78 and 1886); Secretary of State for Colonies (1878-80); Chancellor of the Exchequer and Leader of the House of Commons in the first Salisbury administration. On his lordship's return to power in 1886 Sir M. resumed the Chief Secretaryship for Ireland, but after a few weeks resigned, owing to failing eyesight. After travelling for some time on the Continent he returned to his Parliamentary duties and re-entered the cabinet as President of the Board of Trade in Feb. '88. Delivered an important speech at Plymouth (Oct.), when an address was presented to him.

High Church. See CHURCH OF ENGLAND.

Hire-Purchase System. See ed. '88.

Historical Manuscripts Commission. A Royal Commission was appointed in '69 to examine and report upon the collections of manuscripts in the possession of private families and municipal authorities, who have rendered the commissioners every assistance in the investigation and classification of manuscripts illustrative of history, constitutional law, and general literature. The original members of the Commission were the late Baron Romilly (chairman), Lord Salisbury, Lord Airlie, the late Lord Stanhope, Lord Edmund Fitzmaurice, the late Sir W. Stirling Maxwell, the late Rev. Dr. Russell (Maynooth), Dr. (now Sir) D. W. Dasent, and the late Sir T. Duffus Hardy, with the late Mr. W. G. Brett as secretary. The Commission was reconstituted in '83 as follows: Sir W. Balliol Brett (chairman), Lord Carlingford, Marquis of Lothian, Marquis of Salisbury, Marquis of Bath, Earl of Rosebery, Earl of Carnarvon, Lord Edmund Fitzmaurice, Bishop of Limerick, the late Lord Houghton, Lord Acton, and Mr. W. Hardy, with Mr. John Romilly as secretary and Mr. J. J. Cartwright, assist.-sec. The Commission has published twelve reports and appendices of great interest. The Commissioners issued ('88), in addition to the Manuscripts in the possession of the Earl of Dartmouth and Earl Cowper, Part II. of the very important Calendar of the Manuscripts of

the Marquis of Salisbury, at Hatfield House. (Eyre & Spottiswoode, 3s. 5d.)

"Historical Review, English" (published first Jan. 1886), is devoted to the treatment of history and historical research from a critical and philosophical standpoint, and to the publication of historical documents. A list of the newest works, English and foreign, bearing upon historical subjects is given, together with a summary of the contents of the leading historical periodicals of various countries. Amongst its contributors to the first number were Lord Acton, Professors Seeley and Freeman, and the Provost of Oriel Coll., Oxford. Editor: Rev. Professor Creighton, LL.D. Office: 39, Paternoster Row, E.C.

History. For concise summary see ed. '88, and consult:—Professor Sayce's "Ancient Empires of the East" (an indispensable handbook); Professor Rawlinson's "Five Oriental Monarchies," also his translation of Herodotus (with introduction and notes); Professor Wellhausen's "Prolegomena to the History of Israel," also art. "Israel," ninth edition *Encyclopædia Britannica*; Duncker's "History of Antiquity." In classical history Grote's "Greece" still holds the field, though it may be supplemented by Curtius. For Roman history, Mommsen is the standard authority. In Church history, Bauer's "Three First Centuries of Christianity" gives a good general view, and Canon Robertson's "History of the Christian Church" (Murray). For English history Elton's "Origins" and the works of Green and Freeman are indispensable. Bryce's "Holy Roman Empire" should also be read by every student for the general history of mediæval Europe.

Hittites, The. With regard to the inscriptions which have recently been discovered, it is maintained that the characters have, in the main, not syllabic or alphabetical values, as some previous investigators had alleged, but that they are pictorial or ideographic. In some cases the meaning was clear; in others the representation of the objects had become so far changed, by a process of conventionalisation, that it was extremely difficult to determine the signification. Much importance was attached to a circular seal which, not long previously, the British Museum had acquired from Yuzgât, in Asia Minor. The figures on this seal were divided by a line into two portions—the one central, the other round the circumference. The latter were at present of by far the greater interest. These figures manifestly formed three groups. One of these groups consisted of the winged solar disc, with figures emblematic of the moon in the act of adoration. The remaining space, two-thirds of the circumference, was divided by the figure of a king on his throne. In front were figures bringing tribute or presents. All this was obviously pictorial, and was to be taken into account in explaining the symbols behind the king, to which, as regarded the Hittite inscriptions, the chief importance belonged. There was a tree, then two spears or javelins, then a sort of heavy trident, then a basket, next a fine stag's head, with two hands beneath it pointing towards the king. Looked at as a mode of picture-writing, like that of the North American Indians, this representation was easily intelligible. The tree denoted a forest where a hunt had been taking place, the javelins were such as were used in the chase, while the heavy trident was employed, perhaps,

in striking the death blow. The basket denoted the carrying away the result of the hunt, while the stag's head, with the hands beneath it pointing towards the king, showed for whom the memorial of success was intended. As the king's back was turned towards these symbols, a stag's head was again depicted in front of the king and just above his arm, which was outstretched to receive it. A portion of the **doorway inscription** in the Museum, from Jerablûs on the Euphrates, was considered as remarkably analogous. Here was depicted the presentation of the spoils of war to a king. A very fine **quad-rangular seal** engraved on five faces, which had been found at Tarsus, was also discussed. On this seal there occurred repeatedly a very curious symbol closely associated with the equilateral triangle. That the equilateral triangle had in the East a sacred character had been long well known; and from a wide induction it was held that the curious symbol associated with, or surmounted by, the equilateral triangle was a symbol of life, like the hieroglyphic *crux ansata* on the Egyptian monuments, with which, indeed, it might possibly be connected. A number of other symbols on the larger monuments in the Museum were also identified and explained, including the symbol of deity, on the Jerablûs monuments, consisting of a straight stroke, accompanied by a crescent, and also that of the city of Carchemish, formed by an eagle surmounted by a lozenge-shaped figure, with an oval above, the latter being the usual sign for "city." Consult *Nature* (March 31st—April 26th); and *Times*, Jan. 10th and 21st, '88, report of lectures at British Museum by Mr. Thomas Tyler, M.A.

Hobart. Capital of Tasmania (*q.v.*); pop. 29,000; on the Derwent. Formerly called **Hobart Town**.

Hole. Very Rev. S. Reynolds, Dean of Rochester, is a native of Causton, Notts. Educated at Newark Grammar School and Brasenose College, Oxford. He was ordained curate of his native parish 1844, and became vicar in '50. In '74 he was nominated Rural Dean of Southwell, in '75 Canon of Lincoln, and in '87 was appointed to the deanery of Rochester in succession to the late Dr. Scott. He for some time acted as chaplain to the present Archbishop of Canterbury. Dean H. is distinguished by his efforts in promoting the influence of the Church of England as the Church of the poor, and has been an eloquent advocate of the principles of the **Free and Open Church Association**. Dean H. is one of the most popular platform speakers, and has a fund of good humour and good stories, upon which he draws largely. He has been a contributor to *Punch*, and was an intimate friend of the late John Leech. He is one of the highest living authorities on the cultivation of roses, his "**Book about Roses**" having run through many editions and been translated into several languages. Dean H.'s speech advocating temperance rather than total abstinence, in November, attracted attention.

Holland. See NETHERLANDS.

Holl, Frank, R.A., son of the late Francis Holl, the engraver; was b. 1845, and died in August, '88. He gave promise of his future eminence while student of the Royal Academy, his two pictures entitled "**A Convalescent**" and "**Faces in the Fire**," at the exhibition of 1867, being most highly spoken of. The picture which gained him in the following year the

two-years' travelling studentship for painting was one entitled "The Lord gave and the Lord hath taken away: blessed be the name of the Lord." In 1871 he painted "Winter" and "No Tidings from the Sea" for the Queen, and subsequently exhibited many other charming pictures at Burlington House. As a portrait painter he also won a great reputation, and committed to canvas the likenesses of many eminent men. Elected R.A. (1883). Shortly before his death he completed a fine portrait of Mr. Gladstone, which was exhibited at the R.A. exhibition last year.

Holophotometer. This new instrument, designed by Mr. Vernon Harcourt, especially for lighthouse work, is for the purpose of measuring the intensity of a light all round, or that emitted in every direction by a given light. It does away with two important defects in certain other methods—viz., the assumption that the zero point for measurements is represented by the flame, whereas in reality the principal focus made by the reflector should be taken as zero; and the movement of the standard lamp, or the light it is desired to measure. Experiments have been made with the instrument which prove its great practical value. See also PHOTOMETRY.

Holloway College, The Royal. Founded in 1883 by the practical benevolence of the late Mr. Thomas Holloway. Is a handsome building situated at Mount Lee, Egham, Surrey, built in the style of the French Renaissance. Its object is to supply the best and most suitable education for women of the middle and upper-middle classes. See ed. '87. Principal, Miss Bishop. Sec. J. L. Clifford-Smith.

Holmes, Oliver Wendell, M.D., LL.D., b. at Cambridge, Mass., August 29th, 1809, and graduated at Harvard University. Originally intended for the law, he ultimately attached himself to the medical profession, of which he was a distinguished ornament, being successively appointed Professor of Anatomy both at Dartmouth College and the Massachusetts Medical School. From an early age, however, he evinced a taste for poetry and general literature, and it is in his capacity as an author that he is best known in England. His most popular works are "**The Autocrat of the Breakfast Table**," "**The Professor at the Breakfast Table**," and "**The Poet at the Breakfast Table**," though he is a voluminous writer both in prose and verse, a poet of no mean order, and an able elocutionist, many of his best and happiest efforts having been delivered at public dinners. His visit to England in '86 created much enthusiasm, he being everywhere received with the greatest cordiality; whilst the University of Cambridge took the opportunity of conferring upon him the honorary degree of LL.D.

Holmgren's Coloured Wools. See COLOUR. BLINDNESS, ed. '87.

Holy Alliance. The. See ed. '88.

Holyhead Harbour Improvements. In Dec. '87, it was stated that, in consequence of the floating of the Manchester Ship Canal scheme, the London and North-Western Railway directors were seriously discussing the advisability of considerably improving their accommodation at the Holyhead harbour. By amply providing for the in-and-out Atlantic mail and other traffic at this point in North Wales, it is said that a saving in time of the four or five hours it would take for a vessel to pass from Holyhead to the Mersey would be effected, to say nothing of the

subsequent journey to Manchester by the new canal. The whole time occupied by the mail run direct from Holyhead to London is only between six and seven hours, and it is locally considered that the harbour has never yet received proper attention as an ocean port.

Holy Thursday (otherwise called Ascension Day). The fortieth day after Christ's resurrection.

Home Arts Association. established about the beginning of '85, having been previously at work in a small way under the title of "**The Cottage Arts Association**," founded and promoted by Mrs. Jebb. Its office and studios, which were originally at the Langham Chambers, were moved in '88 to the **Royal Albert Hall**. It has now over 300 classes in England, Scotland, and Ireland, with more than 4,000 pupils. **President**, Earl Brownlow; **Treasurer**, Mr. Walter Besant; **Secretaries**, Miss Dymes and Miss M. H. C. Legh. Its immediate objects are to arouse the intelligence, educate the eye and train the hand, and at the same time to raise the standard of everyday life and ennoble the idea of home, by means of teaching to the poorer classes such arts and handicrafts as must be elevating and may be remunerative, from joinery and wood-carving to tile-painting, pottery, and *repoussé* work in brass and copper.

Home Office. This is a many sided department, and makes great demands upon the time and judgment of its parliamentary chief. He grants certificates for the **naturalisation of aliens** (*q.v.*). **Addresses to the Sovereign** and the gracious replies thereto pass through his office; **reports of Royal Commissions** are forwarded to him to be laid before the Sovereign, by whose command they are subsequently presented to Parliament; he nominates the principal officers of the **Isle of Man** and the **Channel Islands**, and most civil **knighthoods** are conferred upon his recommendation. Heavy fees are paid to the Department by those upon whom **peerages** and other dignities are bestowed. The Home Secretary may grant provisional orders for the improvement of unhealthy areas in the Metropolis, and the functions of licensing and inspection in regard to the practice of **vivisection**, **schools of anatomy**, and retreats for **habitual drunkards** are vested in him. One staff of inspectors from the Department is charged with the supervision of coal and metalliferous **mines** (see **MINING**, and **COAL MINES** **REGULATION ACT**); another sees that the **Acts** relative to the manufacture and storing of **explosives** are properly carried out; and a third visit **factories**, printing works, bleaching works, brick yards, white lead works, and workshops (see **FACTORIES AND WORKSHOPS ACTS**). The Home Secretary is also charged with powers of inspection under the **Burial Acts**, and may permit in certain special cases interments in closed burial grounds, or the exhumation of bodies where there is suspicion of foul play. The **maintenance of peace and order** within the kingdom, and the **administration of justice**, so far as the royal prerogative is involved in it, are, however, his leading responsibilities. His duties in connection with the **police** include the appointment of the **Chief Commissioner of the Metropolitan Force**, and the approval of rules made for the service by that officer (see **METROPOLITAN AND CITY POLICE**), and in any part of the kingdom he may authorise the **employment of the military forces** of the Crown to suppress riot and dis-

order. He appoints and frequently puts in motion the **Director of Public Prosecutions** (*q.v.*). The control of the **prisons** (*q.v.*) and convict establishments, and the inspection of **reformatory and industrial schools** (*q.v.*) are exercised by his Department, and he has the charge of **criminal lunatics** and insane prisoners. See **LUNACY**. He may recommend to the Crown the **remission of punishment** passed upon offenders, either by justices of the peace or by the judges, his most anxious and responsible function in this connection being in regard to petitions for **commutation of the death sentence**; but before deciding in such grave matters he usually takes such judicial, legal, and, in cases where insanity is suggested, medical opinion as he may think necessary, to enable him to arrive at a just conclusion. See **MINISTRY, SECRETARY OF STATE**.

Home Rule. The term applied to the movement for the restoration of self-government in Ireland, which was started by Mr. Isaac Butt, in Dublin, in 1870. The new movement, which in most respects had the same objects as the agitation of O'Connell for repeal of the Union, obtained at the general election of 1874, sixty members. The party was afterwards divided on policy, Mr. Parnell (*q.v.*) and Mr. Biggar advocating a more active course than Mr. Butt approved. Mr. Butt died in 1879, and Mr. Shaw was elected leader of the Home Rule party in his stead. After the general election of 1880, at which the party was largely augmented, Mr. Parnell was elected in place of Mr. Shaw. The election of 1885 still further strengthened the party, which was yet again increased at the election of 1886, the Home Rule party now numbering eighty-six. Home Rule has various meanings—different proposals being made at different periods and by different leaders. The plan of Mr. Butt was to allow a parliament in Dublin, and at the same time to have the Irish members summoned to the Imperial Parliament at Westminster whenever questions arose affecting the relations of Ireland with the Empire. Since then the members of Mr. Parnell's party have signified a preference for the model of the Colonies—viz., a parliament in Dublin and no representation in the Imperial Parliament and no share in Imperial taxation. Some members of the Home Rule party now declare in favour of absolute independence. The arguments for and against Home Rule are as follow:—(1) That the only practical method of governing Ireland peaceably is to allow her to manage her own affairs; (2) That self-government has answered in the Colonies, and would answer in Ireland; (3) That Home Rule in Ireland would leave the English Parliament free for English business; (4) That the relaxation of the legal union would draw closer the bonds of sentimental union; (5) That the restrictions and safeguards of Mr. Gladstone's Bill could be maintained. On the other side it is argued: (1) That the method of ruling Ireland by steady and just administration has never yet been fairly tried; that there are now few Irish grievances to remedy; that the promised peace of Ireland left to herself is negatived by every indication of mutual class, religious, and race hatreds, and that the very mention of Home Rule made Ulster prepare for civil war. (2) That Home Rule is demanded merely that the weaker may be handed over to the stronger, and that the necessary inter-

ference of England at a later stage would involve the reconquest of Ireland. (3) That the self-governing Colonies were well affected towards England when granted Home Rule, whereas Ireland is disaffected. (4) That the English Parliament can find other ways of freeing itself from obstruction than the granting of Home Rule; and (5) That the restrictions and safeguards of Mr. Gladstone's scheme would either be so much waste paper or be made the subject of fresh agitations. Besides, it is pointed out that Ireland's place in the empire is one of diminishing significance. When Grattan's parliament was granted, the population of Ireland was about half as large as that of England and Wales, and the proportion was not much less than 1 to 10 of the rest of the United Kingdom in 1801. In 1841 it was still more than 8 to 10; but now it is barely 2 to 11, or less than 1 to 6. It is also urged that Irish disaffection is not of home growth, but is fostered and paid for by the American Irish. Since the great Irish famine, emigration has made these a potent factor in the world's politics; but emigration is lessening, the United States are growing, and in less than a generation the Irish Americans will be merged in the great body of American citizens. These are the Unionist reasons for patience and firmness. For schedule of Mr. Gladstone's Home Rule Bill, introduced April 8th, '86, see cd. '87.

Homoeopathy. A method of prescribing medicines in the treatment of disease. The principles which distinguish this method, as set forth by Dr. Clifton, the President of the Congress of Homoeopathic Practitioners at Liverpool in '87, are as follows: (1) The proving of drugs on the healthy human organism in order to ascertain their physiological action; (2) the administration of the said drugs on the principle *Similia similibus curentur* (Let likes be treated by likes); (3) the single remedy; (4) the minimum dose. Its founder was **Hahnemann**, a celebrated German physician and scientific chemist, whose first essay upon it was published in the leading medical journal of Europe in 1796. He subsequently taught his method in the University of Leipsic. Thence it spread throughout Germany and the chief cities of France. In Paris, Hahnemann, during the last seven years of his life, had an enormous practice. He died in 1843. In the United States it has taken firm root. There are there 20 medical colleges, having 1,215 students, and in '88 300 received the degree of M.D. from them. There are also 46 hospitals, with 4,766 beds, and over 11,000 qualified practitioners. In England its progress has been slow, there being only about 250 practitioners, owing to the opposition the movement has encountered from the supporters of the allopathic treatment. There are, however, hospitals in London, Birmingham, Liverpool, Bath, Bournemouth, Plymouth, St. Leonards, and Southport, at which it is practiced. Of dispensaries there are about 150. The first annual Congress of homoeopathic physicians was held at Cheltenham in 1850. The last took place at Birmingham, in the hall of the Medical Institute, on the 20th Sept. '88, when Dr. Dyce Brown was the president. Though still opposed by large numbers of medical men, the character of the opposition is much less bitter than it was thirty years ago; and the practice of medicine generally has been largely influenced by the investigations of homoeopaths into

the action of drugs, and the diseases for which they are individually useful.

Honduras. See CENTRAL AMERICA; and for Ministry, etc., see DIPLOMATIC.

Hong Kong. An island and British Crown colony, situated close to the mouth of the Canton river, and divided from the southern coast of China by a narrow strait—the Lyce-moon pass. The peninsula of **Kowloon**, opposite the island, and a small adjacent group, the **Lema Islands**, appertain to the colony. Total area 32 sq. m., pop. 180,000. Capital **Victoria** (commonly called Hong Kong), a handsome city overlooking a magnificent harbour, formerly a very unhealthy place, but now, by a proper system of drainage, a sanitarium for the English residents in China. Strong fortifications are now to be constructed. Hong Kong is mountainous and picturesque. It was naturally unproductive, but considerable cultivation now gives it a rich appearance. During the season of the monsoon the climate is unhealthy. Government is in the hands of a Governor, with Executive and Legislative Councils. Religion and education are most abundantly provided for. The island is our "Eastern Gibraltar," and is both a military and naval station. There is a mixed European, Sikh, and Chinese police, numbering 700. It is also the great emporium for European trade with China, and is a free port. For latest financial statistics see BRITISH EMPIRE, etc. (table). The imports consist in chief of goods for China, cottons, and other manufactured articles. The exports are principally tea, silk, and other Chinese produce. Hong Kong was formerly a resort for Chinese pirates. In 1841 it came into British hands by enforced cession from the Chinese Government. It was then an unprosperous place, and occupied only by a few Chinese. At first the attempt to make it a market failed, but of late years its prosperity has advanced to a marvellous degree, and it is now one of the great marts of Eastern trade, with magnificent quays, dockyards, and arsenals. For Executive Council see DIPLOMATIC. Consult "Her Majesty's Colonies," Dennys' and Mayer's "China and Japan," etc.

Hooker. Sir Joseph Dalton, son and successor of the late Sir William Jackson Hooker, director of the Royal Gardens at Kew, was b. at Halesworth, Suffolk, 1817. Graduated M.D. Glasgow Univ. '39. Assistant-surgeon to the Government Antarctic expedition conducted by Sir James Clark Ross, '38, and on his return published a series of richly illustrated volumes on the *Flora of New Zealand, Tasmania, and the Auckland Islands*. He was appointed botanist to the Geological Survey of Great Britain in '46, till 1851, having been kept prisoner for some time by the Rajah of Sikkim. On his return he published his *Himalaya Journals*. In '55 he was appointed assistant-director of Kew Gardens, and became Director in '65. Made a tour in Syria for botanical purposes '70. President of the British Association at Norwich, '68, and in his address defended the Darwinian doctrine of Evolution. Accompanied by Mr. John Ball and Mr. Maw, Dr. Hooker made a journey into Morocco '71, to study its flora. He and his companions, during their explorations, climbed to the summit of the great Atlas mountain. Elected President of the Royal Society ('73), and '77 created K.C.S.I. In the same year he visited the United States, where

he met with an enthusiastic welcome from all classes of scientists. Sir J. H. resigned the presidency of the Royal Society '78, and the directorship of Kew Gardens '85.

Hornby, Admiral Sir G. T. P., K.C.B., b. 1825. Entered the Royal Navy (1837). Commander-in-Chief in the Mediterranean during the crisis of the Russo-Turkish war (1877-78). Made a K.C.B. for the services rendered by the fleet at Constantinople. President of the Royal Naval College (1881-82), and was afterwards Commander-in-Chief at Portsmouth. Is the principal naval aide-de-camp to her Majesty.

Horological Institute, The British, has for its main object the encouragement of the English watch trade. Technical classes are held by the Institute at its headquarters, Northampton Square, E.C., and certificates are granted. It is in union with the City and Guilds Institute, and publishes monthly the "**Horological Journal**," which circulates among watchmakers, jewellers, and silversmiths. Sec., J. I. Britten.

Horse, Master of the. See ed. '88.

Horsley, John Calcott, R.A., b. 1817, painted a picture in his youth which excited the admiration of Wilkie, and subsequently exhibited at the British Institution and the Academy. In 1843 his cartoon of "St. Augustine Preaching" gained at Westminster Hall one of the three prizes in the second rank of £200. Other frescoes of his in the Palace of Westminster are entitled "Religion" and "Satan surprised at the Ear of Eve." Since then he has painted many admirable pictures and portraits, as well as an altar-piece with figures of colossal size, entitled, "**The Healing Miracles of Christ**." The latter is in the chapel of St. Thomas's Hospital. Mr. Horsley was elected treasurer of the Royal Academy (1882).

Horse Racing. See TURF.

Hospital Sunday Fund. For a long period it has been customary on the Continent to make a special collection on one Sunday in the year in the churches for the hospitals in the district. The practice is now pretty general in this country. The **Metropolitan Hospital Home Fund** was started in 1873, by the late Dr. James Wakley, editor of the *Lancet*. The total sum collected on behalf of the Hospital Sunday Fund during '88 was £40,379. Report of the Council is published in the third week of December. Sec., H. N. Cunstace; Office, Mansion House, E.C. There is also a day set apart for collection in aid of Hospitals and Dispensaries under the auspices of the **Saturday Hospital Fund**, whose offices are at 41, Fleet Street, E.C. Sec., R. Frewer, Consult, in reference to hospitals generally, the *Hospital* (weekly).

House of Lords, Constitution of. See SESSION '88, secs. 4 and 19.

Housing of the Working Classes Act, '85. See ed. '88.

Hova. The ruling race of Madagascar (*q.v.*).
Howells, William Dean, the eminent American novelist, was b. in Ohio, 1837. After serving his time with his father as a printer, he adopted journalism as his profession, and in '71 was appointed editor of the *Atlantic Monthly*,

from which he retired in '80. His poems, sketches, and stories, which are characterised by a lightness of artistic touch which marks the individuality of their author, have had a wide circulation on both sides of the Atlantic. Mr. H. was American consul at Vienna, '61-65.

Huddleston, Sir John Walter, was b. in 1817, and married Lady Diana Beauchamp, daughter of the Duke of St. Albans. Called to the bar at Gray's Inn (1839), Q.C. (1857), but he failed repeatedly in his attempts to get into Parliament. Probably no man at the bar, in his time, except Mr. Hawkins, had so large a practice at Nisi Prius. Mr. Huddleston was created a justice of the Common Pleas (1875), then a baron of the Exchequer, and, finally, a judge of the High Court. He is, however, still known in legal circles as "Baron" Huddleston.

Hudson Bay. An inland sea of the Dominion of Canada, nearly as large as the Mediterranean (and styled "the Mediterranean of America"), communicating with the Atlantic by Hudson Strait. Closed by ice seven months of the year. A project is on foot to connect Port Nelson, on the western shore, with Winnipeg and elsewhere by rail, and a small portion of this line has been built. (See HUDSON BAY RAILWAY.) Communication at present open in summer by canoe to Lake Winnipeg.

Hudson Bay Railway. This scheme, or more properly speaking, the Hudson Bay and Winnipeg Railway, is, to some extent, an adaptation of the old trade route of the Hudson Bay Company to modern requirements, and is of peculiar interest to those interested in the development of the Colonies, especially in regard to the great Canadian Pacific Railway scheme. The project is to connect Regina, the centre of the fertile belt on the west, and Winnipeg, the capital of Manitoba, on the east, with Port Nelson on Hudson Bay, from which point to Liverpool the distance is not more than 2,966 geographical miles. Both the places named are on the existing Canadian Pacific line, and this fact alone is of importance in connection with a scheme for opening up the shortest possible route to England. (For further details see ed. '88.) During '87 the permanent way was laid for about 40 miles, the line having been surveyed further north, while the country was explored for 100 miles. To the south of Winnipeg a connection was partly constructed with the Red River Valley Railway, where (see CANADIAN PACIFIC) political considerations interfered with certain railway developments. It was reported from America on Feb. 3rd, '88, that the railway was languishing owing to an action at law; but on Feb. 17th it was stated that the Company had won their case, and the work would be pushed forward to Fort Churchill.

Hudson River Bridge. On Jan. 4th, '89, a paper was read by Mr. Lindenthal, before the American Society of Civil Engineers on this ("North River") proposed bridge, described as the most important feature in a scheme to bring all the railroads terminating on the west shore of the Hudson River across it to New York. River piers being inadmissible, the author designed a bridge having a river span of 2,850 feet, a shore span on each side of 1,500 feet, and anchorage piers 300 feet long. It was on the suspension principle with wire cables, the height above high water mark 150 feet, and iron towers 450 feet high. There were to be six railway tracks, the bridge being 86 feet

wide, with suitable approaches, the traffic allowed for being 50,000 passengers per hour in one direction, this being calculated to meet all demands for 50 years. The estimated cost for the bridge alone was put at 15,000,000 dollars, and of the whole project about 50,000,000 dollars. Mr. Lindenthal's scheme seemed to make a good impression from the first. News came over early in August that the project had taken definite shape, a company having been organised and bills introduced into both Houses. Mr. Lindenthal's plans and designs having been adopted. The work was to be commenced within a year of the approval of the plans by the Secretary of State, and to be finished in ten. It was then estimated that the total cost, including every appurtenance, yards, approaches, etc., would be 60,000,000 dollars.

Hudson River Tunnel. In June '87 it was reported that, after a lapse of 4½ years, the works at this tunnel had been reopened. It was understood that, although four headings were being worked simultaneously, the chief endeavour was to complete and open the north tunnel, which was then about one-third finished. Compressed air was being used to keep the heading free from water, the heading being excavated as fast as the sheathing and masonry could be put in. It was added that all the financial stumbling-blocks had been removed. According to the *Railroad and Engineering Journal* (U.S.) of March '88 the tunnel "continued in a state of suspended animation," the lack of funds apparently being the only reason for this.

Hue. Capital of Annam (*q.v.*).

Huggins, William, F.R.S., D.C.L. (Oxon), LL.D. (Camb. and Edin.), Ph.D. (Leyden), b. in London 1824. Educated at the City of London School (*q.v.*). In 1855 Dr. Huggins erected an observatory at his residence, at Upper Tulce Hill, and occupied himself for some time with observation of double stars and with careful drawings of the planets Mars, Jupiter, and Saturn, his object being to bring to bear upon the science of astronomy the practical knowledge he had obtained of general physics. In conjunction with Dr. W. A. Miller he made some important discoveries with regard to the heavenly bodies, and for these researches Dr. Huggins received (Nov. 1866) one of the Royal Medals placed at the disposal of the Royal Society, and in the following year the Gold Medal of the Royal Astronomical Society was awarded Dr. Huggins and Dr. Miller for their conjoint researches. Dr. Huggins continued his prismatic researches with a more powerful spectroscope with most important results, and in 1880 he again received a medal from the Royal Society. His labours have also received recognition from foreign societies. Dr. Huggins was President of the Royal Astronomical Society (1876-78).

Hughes, Rev. Hugh Price, M.A., a leading and popular Methodist divine, b. 1847. Educated at Richmond Theological Coll., and graduated M.A. at London Univ. Has held appointments at Dover, Brighton, Tottenham, Dulwich, Oxford, and Brixton, where he was recently stationed. Has been secretary to the Temperance Committee of the Wesleyan Conference; is a member of the Legal Conference; vice-president of the United Kingdom Alliance; editor of the *Methodist Times* (1885); is the superintendent of the new mission to the West End, and is an earnest advocate of the proposed

reunion of the various branches of the Methodist Church. During '88 Mr. H. joined in the Education controversy relating to the majority report of the Commission.

Hughes, Thomas, b. 1823. Educated at Rugby and Oxford. Called to the bar (1848). Radical M.P. for Lambeth '65-68, and for Frome '68-74, Q.C. (1866). In 1870 he made a tour in the United States. He is the author of "**Tom Brown's School Days**" (1857), "**The Scouring of the White Horse**," "**Tom Brown at Oxford**," and many other books and pamphlets. Appointed a County Court Judge (1882).

Hulsean Lectures. The founder was the Rev. John Hulse, B.A., of St. John's Coll., Camb., who, after his graduation in 1723, was ordained to a small curacy, and subsequently succeeded to his paternal estate in Cheshire, where, owing to his delicate state of health, he lived in retirement until his death, 1789. Mr. Hulse, to check the prevalent scepticism of his day, bequeathed to the University of Cambridge certain estates for the advancement of religious learning, and directed, *inter alia*, "in his Will, that out of the rents and profits an annual premium should be given to any member of the University, under the degree or standing of M.A., who should compose the best Dissertation in the English Language on the Evidences in general, or on the Prophecies or Miracles in particular, or on any other particular argument, whether the same be direct or collateral proofs of the Christian Religion, in order to evince its truth and excellence." The premium so described is currently known as the **Hulsean Prize**. Mr. H.'s benefaction was further charged, to the extent of eight-tenths of its net annual income, with the foundation and support of the office of **Christian Advocate**; for which, by a statute confirmed by the Queen in Council, August 1st, 1860, was substituted, with a corresponding change of name, the existing **Hulsean Professorship of Divinity**. Still another object of Mr. Hulse's benefaction, the annual income from which is at present estimated at £1,000, was the foundation and support of the office of **Christian Preacher**, or **Hulsean Lecturer**; the incumbent of which, according to the directions of Mr. H.'s will (1777), was to be a "clergyman in the University of Cambridge, of the degree of Master of Arts, and under the age of forty years." The lecturer was to be elected annually on Christmas Day, or within seven days after, by the Vice-Chancellor for the time being, and by the Master of Trinity College and the Master of St. John's College, or any two of them. As the result of several successive modifications of the directions formulated by Mr. H. with regard to his foundation, it happens that, according to existing custom, the election to the office of Hulsean Lecturer now "takes place on some day in February, not later than the twentieth. Candidates must be thirty years of age and upwards, in Holy Orders, and Masters of Arts, or of some higher degree, in the University of Cambridge. The office is annual. The time of delivery is to be prescribed by the University; and if the duties be not discharged by the person appointed, his salary is to be divided amongst the six senior Fellows of St. John's College. The electors are the Vice-Chancellor, the Master of Trinity, the Master of St. John's, and the four Divinity Professors, the Vice-Chancellor having a casting vote; and, if either the Master of Trinity or the Master of St. John's

be Vice-Chancellor, his place is to be supplied by the Regius Professor of Greek." This last stipulation is an exact perpetuation of the provision originally made by Mr. Hulse himself in view of the same contingency. The duty of the Lecturer, as defined by Mr. H., was "to preach twenty sermons in the whole year." The subject of the Lectures, which were to be preached at "St. Mary's Great Church in Cambridge, either on Friday morning or else on Sunday afternoon," was to be "the evidence for revealed religion; the truth and excellence of Christianity; prophecies and miracles; direct or collateral proofs of the Christian religion, especially the collateral arguments; the most difficult texts or obscure parts of Holy Scripture," or any one or more of these topics, at the discretion of the preacher. The said twenty sermons are to be every year printed "at the preacher's expense." From the very earliest institution of the Hulsean Lectures, the great number of them which the foundation demanded was felt to be a burden and a grievance, and it was not long before it was "found impracticable to induce qualified persons to comply with the onerous conditions imposed by Mr. Hulse's will." This discontent found expression in a petition of the Chancellor, Masters, and Scholars of the University of Cambridge to the Court of Chancery, which, by an order dated December 21st, 30, directed that the number of lectures to be delivered and printed should be reduced to eight, the number exacted from the Boyle Lecturer. The new statutes, which came into operation in pursuance of the Order in Council of August 1st, 60, included the reduction from eight to four in the number of discourses exacted from the Hulsean Lecturer. In 20 the first series of discourses was delivered by the Rev. Christopher Benson, A.M., afterwards Canon of Worcester, and a sometime Master of the Temple, who officiated a second time in the same capacity in '22. The present annual stipend of the Hulsean Lecturer is one-tenth of the net income from Mr. Hulse's benefaction, was succeeded in 1821, and again in '23, by the Rev. James Clarke Franks, M.A., Chaplain of Trinity College; but in the years 24-25 there was no appointment. The Rev. Temple Chevallier, M.A., formerly Fellow and Tutor of Catherine Hall, was the Hulsean Lecturer for 1826-27. A very practical light upon the non-attractiveness of the Lecture-ship, to which allusion has been made, is thrown by the circumstance that for the space of three years—1828 to 1830, both inclusive—no appointment was made; and the same thing was repeated, even after a principal objection had been removed, in 1834. The first Lecturer under the new regime, which demanded eight sermons only, was the Rev. John James Blunt, B.D., Fellow of St. John's College, who, in 1831 and '32, delivered courses of lectures. Among the distinguished Lecturers who have followed Mr. Benson have been the Rev. Richard Chenevix Trench (45-46), afterwards Dean of Westminster and Archbishop of Dublin; to whom succeeded Dr. Christopher Wordsworth (47-48), afterwards Canon of Westminster and Bishop of Lincoln, who lectured on the subject of "The Canon of the Scriptures of the Old and New Testament." The lecture for '55 was delivered by Dr. Goodwin, the present Bishop of Carlisle. The present Bishop of Gloucester and Bristol, Dr. J. Elliott, chose as the subject for his lecture in '63, "The Life of our Lord Jesus Christ."

Other incumbents of this Lectureship have been Dean Howson ('62), of Chester; Dr. James Moorhouse ('65), now Bishop of Manchester; Dr. Perowne ('68), Dean of Peterborough; Archdeacon Farrar ('70); Dr. Abbott ('76); Dr. Boyd-Carpenter ('78), now Bishop of Ripon; Professor Bonney ('84); Rev. James Hirst Lupton, M.A. ('87), Head-master of St. Paul's School; and the Rev. H. Major Stephenson, M.A. ('88), vicar of Bourne, an late Fellow of Christ's Coll., Camb.

Humbert IV., King of Italy; b. 1844; succeeded his father Victor Emmanuel '78. While Crown Prince he distinguished himself by the active part he took in the movement for promoting Italian Unity. He shared with Garibaldi the triumph of the reorganisation of the kingdom of the two Sicilies. In the outbreak of the war between Prussia and Austria in '66, the Italians saw their opportunity of wresting Venetia from Austrian control. An active alliance between Prussia and Italy was formed, and an Italian army took the field. In the division of this army, commanded by General Cialdini, Prince Humbert served with distinction, his personal gallantry appearing most conspicuously in the moment of disaster at the battle of Custoza, in which the Italians were defeated. Prince Humbert took up his residence in Rome after the occupation of that city by the Italian troops in '70. He married in '68 his cousin, Princess Marguerite, daughter of the late Duke of Genoa. Their son, the crown prince Victor Emanuel, Prince of Naples, was born Nov. 17th, 69. During his Majesty's visit to Naples, Nov. 17th, '78, a would-be assassin named Giovanni Passanant made an attempt upon his life with a poniard. Signor Carotoli, the prime minister, was wounded badly, and the king slightly. Made a tour through Northern Italy in August '88, and was enthusiastically welcomed. He received a visit from the Emperor William II. of Germany in October.

Hungarian Political Parties. The legislative power of Hungary is vested in the Emperor of Austria, as King of Hungary, and a national Diet, the latter consisting of a House of Magnates and a House of Representatives. The former comprises all hereditary peers paying a stipulated land tax, who number nearly 300, of some 50 high ecclesiastical dignitaries of the Roman Catholic, Greek, and Protestant Churches, of 50 life-peers, appointed by the king, of all the archdukes who have attained the majority, and of some 20 high-state dignitaries. The House of Representatives contains 153 members elected by open voting and limited suffrage for periods of five years. The present House, which was elected in June '87, contains some 200 supporters of the ministry of M. Tisza (72-7), which has, with occasional changes, been in office since Nov. '75, of 150 members of the regular Opposition, and of 40 Croatian deputies, who in most matters vote with the government. But while M. Tisza's following almost invariably supports the government in unbroken strength, the Opposition is divided into Moderates, Anti-Senators, and Nationalists, of whom the Independents number about one-half, and the Moderates one-fourth. As a result of this cleavage, the Opposition can hardly be said to have a definite programme, save that the object of the Independents is to effect, at all costs, the complete separation of Hungary from Austria. The desire for separation, however, is not limited to the Independents or

indeed to the Opposition generally, many members of the ministerial party sharing the same view, although they may differ with the Opposition on the question of opportunity.

Hungary. See AUSTRIA-HUNGARY.

Hunt, William Holman, the well-known painter of religious and mystical subjects, was born 1827. The occult meaning of his "Light of the World" and "The Awakening Conscience," of 1854, founded the subject of a series of letters by Mr. Ruskin to the *Times*. Mr. Hunt subsequently painted "The Scapegoat" and "The Finding of the Saviour in the Temple," the latter of which attracted great notice when exhibited (1860). The largest of his works, "The Shadow of Death," occupied the artist during a four years' residence in Palestine, and was finished in 1873. "The Triumph of the Innocents," by some considered his masterpiece, was last year reproduced in photogravure and published by the Fine Art Society. Mr. Holman Hunt is an ardent advocate for the reform of the Royal Academy. He was recently elected a member of the Royal Society of Painters in Water Colours.

Hunter, Sir William Wilson, K.C.S.I., C.I.E., was b. 1840, and educated at the Universities of Glasgow, Paris and Bonn. He passed first on the list of candidates for the Indian Civil Service, in '62, and has held the following appointments: Superintendent of Public Instruction in Orissa, special commissioner to the Secretariat of Bengal; acting under-secretary to the Government of India; and Director-General of statistics of India. He is the author of the following works: "The Annals of Rural Bengal," Orissa, or an Indian Province under Native and British Rule, "A System of Famines," "A Life of Lord Mayo," "A Dictionary of the Non-Aryan languages of India and High Asia," "The Imperial Gazetteer of India," and "The Indian Empire."

Hunting. Stag-hunting, at one period so common in England, is now confined to 13 packs, with the addition of two in Ireland, and the present Master of the Queen's Buckhounds is the Earl of Coventry. Fox-hunting, however, grows in popularity year by year; and as every hunt now has a fund to reimburse farmers for any losses they may experience through the depredations of Reynard, much of the hostility formerly evinced towards the sport is dying out. In England there are 155 packs of foxhounds, in Ireland 15, and in Scotland 7; England also boasts of 56 packs of harriers and 19 packs of beagles; Ireland possesses 23 packs of harriers, whilst Scotland is content with 5.

Huxley, Thomas Henry, M.D., LL.D., D.C.L., F.R.S.; b. May 4th, 1825, at Ealing. Educated at Ealing School (of which his father was one of the masters) and at Charing Cross Hospital. He served as assistant-surgeon on H.M.S. *Victory* and *Rattlesnake*, during the cruise of which latter vessel he made important observations on oceanic hydrozoa. Elected a Fellow of the Royal Society 1852; 1855, Professor of Natural History at the Royal School of Mines, and also Fullerian Professor of Physiology at the Royal Institution; 1858, Croonian Lecturer (*q.v.*) at the Royal Society; 1862, President of the Biological Section of the

British Association; 1870, President of the Association itself for the year, and member of the London School Board; 1872, Lord Rector of Aberdeen University; 1873, Secretary of the Royal Society; 1878, LL.D. Dublin and Edinburgh; 1879, LL.D. Cambridge; 1883, Rede Lecturer at Cambridge, and President of the Royal Society. In October 1884 he left England on account of ill health. In 1885 he resigned his official duties, which included the Inspectorship of Fisheries and the presidency of the Royal Society. Prof. H. has been a most prolific writer on scientific subjects.

Hyderabad. For Resident, etc., see DIPLOMATIC.

Hyderabad Deccan Scandal. Shortly after Parliament met in '88, questions were asked by Mr. Labouchere and others concerning the affairs of the **Hyderabad Deccan Company**, which had acquired unenviable notoriety on the Stock Exchange. Accordingly a **Select Committee of the House of Commons** was appointed (with Sir Henry James as chairman) to inquire into the matter. From the report of this Committee, the facts appear to be as follows:—In January '86 a concession of all mining rights in the territories of the Nizam was granted by the Government of Hyderabad to two financial gentlemen in London. The agent of the Nizam in granting this concession was one **Abdul Huk**, and the concession received the sanction of the English Government both in India and at home. In August '86 a limited company was floated, in order to acquire and work this concession. The capital consisted of £1,000,000, of which £150,000 was issued in £10 shares on which £5 was paid, and the remaining £850,000 was allotted to the concessionaires in fully paid-up shares. One-fourth of both classes of shares were received by Abdul Huk. The shares of the Company now began to be bought and sold on the Stock Exchange, though no settlement was applied for, nor could it have been granted in accordance with the rules. In June '87, when Abdul Huk was again in London, the Nizam's Government instructed him to purchase 10,000 shares at a price not exceeding £12 a share. The shares were bought through a broker; but, as a matter of fact, they were all shares belonging to Abdul Huk, who received the £131,250 paid for them. This purchase naturally had the effect of improving the position of the Company in the market; and on the strength of it Lord Lawrence (among others) bought shares, and was appointed a director to represent the Nizam. When the truth leaked out, the shares fell in value, and the scandal attracted public attention. Abdul Huk, in India, refunded to the Nizam the money he had received for the purchased shares; and the Nizam's Government have publicly announced that they will uphold the concession. The Committee of the House of Commons contented themselves with reporting the facts they had ascertained, and with drawing the conclusion that "so long as the Government of India interferes with the proceedings of a native state in business matters, great care should be taken to fulfil the responsibility thus assumed."

Hypnotism (synon. Bruidism). See ed. '88.

Iceland. A large island, 130 m. east of Greenland, and 850 m. west of Norway, belonging to Denmark. Area 39,756 sq. m., pop. 72,445. Capital **Reykjavik**. It is wholly volcanic, with active craters, steam-holes, boiling-springs, etc. Hecla, the noted volcano, is 5,119 feet high; in the Great Geyser, the water at a depth of 72 ft. is 30° above boiling point. Lying just outside the Arctic Circle, climate is severe. Glaciers cover the mountains, icebergs often blockade the northern coasts, but south and west influenced by Gulf Stream. Forests formerly abounded, but the island is now destitute of trees. Potatoes and garden vegetables can be cultivated, but corn cannot be grown. But the pasturage is excellent, and ponies, cattle, and sheep thrive. Exports are sulphur, Iceland moss, wool, dried fish, seal-skins and oil, whale-oil and baleen, eider-down, bird-skins, and ponies. Manufactures domestic. In '74, the thousandth anniversary of Iceland's history, the island received its autonomy, but it still remains subject to the King of Denmark, who appoints its governor. Commerce restricted and in Danish hands. People very poor: a kindly, simple, cheerful race, but lacking energy, and sometimes incurring distress through improvidence. They are remarkable for good education, and there is a college at Reykjavik. Iceland was colonised by Norsemen in 874, and for three centuries was a flourishing republic. In the thirteenth century it became subject to Norway, and through it, in 1380, to Denmark. Its literature is famous. Consult Baring Gould's "Iceland," Lock's "Home of the Eddas," etc.

"**Ich Dien.**" See ed. '88.

Idiots Act. '86. See ed. '87.

Ignatieff, General Nicholas Paulovitch. Russian general and diplomatist, b. in 1812. His father, Count Paul Ignatieff, took a prominent part in facilitating the accession of the Emperor Nicholas to the throne. Paulovitch Ignatieff studied in the Corps des Pages, and became an officer in the Imperial Guard. When the Crimean war was declared, he belonged first to the staff of Count Berg at Revel, and afterwards at Finland. When the war concluded, he became military attaché in the Russian Embassy to the Court of St. James. In 1858 Ignatieff was made an aide-de-camp to the Emperor Alexander II., and obtained the rank of colonel. He was sent on a mission to Khiva and Bokhara, and afterwards despatched to Peking as a minister plenipotentiary. He obtained from the Chinese Government the cession of the Province of Ussuri. He came back to St. Petersburg, and was placed at the head of the Asiatic Department in the Ministry of Foreign Affairs. He filled the office of Representative of the Russian Court at Constantinople (1864-78). From 1878 to 1882 General Ignatieff was the Russian Minister of the Interior, and subsequently Governor-General of Irkutsk and Commander-in-chief of the troops of the Government, which post he now holds. He is also a Senator, a President of the Academy, and a Member of the Council of the Empire.

"**Ilbert Bill.**" See ed. '87.

Illegitimacy. A decision of Mr. Justice North (Chancery Division, July '88) lays down that where illegitimate children are born before the date of a will a bequest to them may be valid.

Where, however, an illegitimate child is born after the date of a will, a codicil is required directing that it shall share in the benefits of the will. Practically the same rule was laid down in the House of Lords some fifteen years ago in a case where the marriage was invalid by reason of its being entered into with a deceased wife's sister.

Illuminants. See ed. '86; also **LIGHTING** and **ELECTRICITY ON SHIPBOARD**.

"**Illustrated London News**," established 1842, published weekly (6d.), contains illustrations of a high order, bearing upon subjects of current events and interest, with explanatory letterpress. Mr. G. A. Sala (*q.v.*), under the well-known *nom de plume* of "G. A. S.," was a contributor for some years. A list of wills of persons deceased, and an obituary, form interesting features of the paper, which has a large circulation.

Impeachments and Trial of Peers. See ed. '88.

Imperial Defence Act. See **ARMY**, and **Session** '88, sect. 20.

Imperial Federation. The question of how best to consolidate or federate the British Empire had been studied by a few Englishmen for some years previously, but it was not until '84 that a private committee consulted public men of both the great political parties, and upon their advice called together a conference of all who were known to accept the principle of Imperial Federation. This conference was held at the Westminster Palace Hotel on July 29th in that year, under the presidency of the late Mr. W. E. Forster, supported by eminent colonial and other officials and influential supporters of the scheme. Many others wrote approving the objects of the gathering. Resolutions were adopted affirming that some form of federation was essential; and at the adjourned conference, held in the following November, it was resolved to form the **Imperial Federation League**, whose object should be to secure by federation the permanent unity of the Empire; that no scheme of federation should interfere with the existing rights of local parliaments as regards local affairs; and that any scheme of Imperial Federation should combine on an equitable basis the resources of the Empire for the maintenance of common interests, and adequately provide for an organised defence of common rights. The League was duly constituted, Mr. Forster being appointed chairman of a strong executive committee, which office he held until his death. The League has made rapid progress, branches having been formed in a number of provincial towns, and also in several of the colonies. The movement so far has been supported by men who differ greatly on other questions; it has been approved by a very large section of the English press. (For concise history of the progress of the League and Imperial Federation to January '88, see ed. '88.) Early in '88 a movement for a commercial union between the Dominion of Canada and the United States, which has been in progress for some time, reached its crisis by the introduction into the Dominion Parliament of a motion by Sir R. Cartwright in favour of what was called "**unrestricted reciprocity**." This was rejected in a house of 181 by a majority of 57, the House

of Commons singing "God save the Queen" on the announcement of the figures. The agitation of this question stimulated the desire in the dominion for closer connection with the mother country, which took the form of improved trade relations. Meetings were held throughout the dominion in favour of this policy, and influential deputations approached Lord Lansdowne, the Governor-General, requesting that a conference of the Australasian and other colonies might be called to consider this matter. In May last, in pursuance of this action on the part of Canada, a return of the treaties between the United Kingdom and foreign countries, which "preclude a preferential fiscal treatment of British goods in the colonies and dependencies of the British crown," was moved for in the House of Commons by Mr. Howard Vincent, a member of the Imperial Federation League. That return (Commercial No. 8) showed that by two treaties the right of any colony to favour in its tariff the goods of any other part of the empire over those of Germany or Belgium was expressly given up, and that under the most favoured nation clause this provision was extended to a large number of treaties with other countries. The publication of these facts, hitherto unrecognised, has created a strong feeling in Canada and Australasia, and it is understood that the abrogation of those treaties will be sought by their representatives at an early date. The association of a Canadian statesman, Sir Charles Tupper, with Mr. Chamberlain during the negotiations for the settlement of the Fishery dispute (*q.v.*) with the United States, was an important precedent; and the subsequent rejection of that treaty by the United States, and their hostile attitude towards Canada, has tended to draw closer relations between the dominion and the mother country. The Imperial Federation League in Canada, which is now a powerful body, has made good use of the advantages thus offered. In October '88 strong representations were made by this body to the Dominion Parliament concerning the necessity for inviting the other self-governing colonies to consider with them the improvement of the trade relations between different parts of the empire. These representations have been acceded to, and the Dominion Government has announced its intention of issuing the necessary invitations. In March '88 a work entitled "Tariffs and Trade of the British Empire," prepared by Sir Rawson Rawson, chairman of its commercial committee, was published by the Imperial Federation League in the United Kingdom. For the first time the forty-four tariffs of the empire were placed side by side, and their effects compared in every possible way. Hong Kong and the Straits Settlements were found to be the only places in the empire where trade was wholly free. The distribution of the trade of the empire with the whole world was similarly dealt with. The total trade of the United Kingdom in '85 was found to be divided as follows:—

With British possessions . . .	26.4 per cent.
" foreign countries . . .	73.6 " "
The total trade of British possessions was:—	
With United Kingdom . . .	48.5 per cent.
Other British possessions . . .	23.5 " "
Foreign countries . . .	28.0 " "
the total trade of the empire being £1,046,340,000.	
The book was discussed in the press through-	

out the empire, and has thrown a valuable light upon the trade relations of the empire. Sir Henry Parkes, Premier of New South Wales, addressing his constituents, October 8th, '88, maintained that the imperial constitution must be re-cast to be permanent, and concluded as follows: "In uniting the outlying colonies to the mother country, England must present an object for love and loyalty and for the young passion for national authority in Australia, which would be more attractive than any elsewhere to be found within the wide circle of the family of nations." The Hon. James Service, late Premier of Victoria, speaking to the electors of the province of Melbourne on May 16th, '88: "Let us strive, whilst there are no interests calling upon us to separate, to cultivate that strong feeling of attachment which originates in the oneness of the blood between the two countries, and which, I think, may develop itself in the time to come into some practical shape which will enable us, without the people in this country or the people of England sacrificing their equality, to develop into an empire such as the world has never seen, with its one foot, we may say, on the south pole and another on the north, ruling the destinies of the whole world. We know that such a rule, judging of the future by the past, and of the tendencies of things in recent years, would be a beneficent rule, and for the good of the whole world." The Right Hon. W. H. Smith, First Lord of the Treasury, speaking at Gloucester on Oct. 8th, '88, referred to the Imperial Defence Act, agreed upon at the Imperial Conference '87 (see c. 88), as follows: "Four or five different colonies said to the Government of this country, 'If you will supply the ships, if you will find the crews, we will pay the cost of maintaining those ships and those crews, as an increased means of defence for the commerce of Australia.' They have gone into partnership with the Government of this country in order that their lives, their property, their trade, and their commerce and yours, shall be more secure against an invader and against an enemy. Talk about federation: this is the spirit of federation." On April 30th a motion was made in the Dominion House of Commons in favour of preferential trade relations between Canada and the United Kingdom. After an animated discussion, in which the proposal was influentially supported, its further consideration was adjourned. The difficulties which arose in the Australasian colonies with reference to the immigration of the Chinese have been of value in bringing home to the minds of their inhabitants the necessity for some form of representation of the self-governing colonies in the body which deals with the foreign policy of the empire, and in impressing upon statesmen at home the inconvenience of carrying on the affairs of the empire without reference to the wishes of large bodies of its citizens. The Australian Naval Defence Bill has been ratified by the Parliament of the United Kingdom, and by all the Australian Parliaments except that of Queensland, from which it was withdrawn in view of its probable rejection. The London offices of the Imperial Federation League are at 30, Charles Street, Berkeley Square, W., where its numerous publications can be obtained. Secretary, A. H. Loring. Organ, *Imperial Federation* (monthly).

Imperialists, German. See GERMAN POLITICAL PARTIES.

Imperial Institute of the United Kingdom, the Colonies, and India. This Institute, which is to stand for all time as a record of Her Majesty's Jubilee, has been taking shape since January, '87. (For history of the origin of the Institute see ed. '87, and for detailed statement of its special objects see ed. '88.) The Government of the Institute is at present carried on by a chartered body called the "**Organising Committee**," in which the British Empire will be fairly represented, the members of which were originally nominated by H.R.H. the Prince of Wales, who is president; Lord Herschell is the chairman. The **Organising Committee** must, before the 12th of May, 1891, have devised a permanent form of constitution for the administration of the Institute. This form of constitution will have to be approved by a Royal warrant, and when this occurs the present governing body will cease to exist. After some considerable negotiations it was determined that the site of the Institute should be the southern portion of the now vacant land on which the recent exhibitions were held; and there appears a special fitness in the site when we bear in mind that this property belongs to the Commissioners for the Exhibition of '51, and was originally acquired out of the profits of that first great display in which the Prince Consort took so deep an interest. Throughout the whole of '87 the **Organising Committee** were inviting and receiving subscriptions, and both the Queen and the Prince of Wales specially marked their interest in the Institute by subscribing. For some time the Colonies held aloof; but first the **Indian Princes** subscribed handsomely, then the **Canadian Dominion** voted £20,000, and more recently the **Australasian** and other Colonies have come forward with official and private subscriptions representing nearly £100,000. Altogether about £450,000 have now been contributed, the share of the **United Kingdom** being about £250,000, **India** over £100,000, and the Colonies nearly a similar amount. On July 4th, '87, Her Majesty laid the foundation stone of the building in person. The occasion was taken advantage of for a very imposing ceremony. The spot selected for the stone, which is of Colonial granite, is where the Central Avenue of the late Exhibitions was placed, near the entrance to what was Old London; and the building faces southward upon a new roadway, which runs through from Exhibition Road to Queen's Gate, near where the main Indian Court was situated in '86. The design selected is that by Mr. I. E. Colcutt, who is the architect. A great quadrangular tower with a domed roof rises from the centre of the building, there being smaller towers of similar design at each end, and graceful turrets break the outline of the roof. The style is Renaissance, and the main front will be 650 ft., with an elevation of 80 ft. The entrance hall, and the two halls at either end, stand prominently forward from the main building, and the entrance is approached by a handsome and broad flight of steps, flanked by pedestals, on which four lions are at rest. Groups of figures and friezes adorn the entire front, where, too, balustraded balconies add to the architectural effect. The figure of Britannia stands forward in strong relief, and the whole ornamentation is elaborate. The front is to be constructed of stone, and other portions of brickwork. The

interior is divided into four floors. On the ground floor are arranged three great exhibition galleries surrounding four quadrangles, which could be covered in with glass if desired; and ascending to the principal floor by the grand staircase, 58 ft. wide, we reach the **Reception Hall**, 128 ft. by 60 ft., to be surrounded in panels by appropriate paintings and friezes. On this floor are the secretary, librarian, reading rooms, and intelligence offices, where mercantile matters can be arranged. The **Conference Hall** is situated in the left wing, while the upper floors are assigned to various institutions and societies, to emigration offices, refreshment, sample rooms, laboratories, committee rooms, and so on. The estimated cost of erection is £250,000. The contract for the buildings has already been let to Messrs. John Mowlem and Co. During '88 a Commercial Intelligence Department and a School of Modern Oriental Languages were announced as being in active formation. **Organising Sec.**, S. R. Frederick Abel, C.B., D.C.L., F.R.S.; **Assistant Sec.**, Sir T. R. Somers Vine, F.S.S.; **Offices**, 1, Adam St., Adelphi Terrace, W.C.

Income Tax (Overpaid). Law cases in '88. The contention of the Commissioners of Inland Revenue that excess payments of income tax, extending over a period of more than one year, cannot be recovered, was not sustained by the Court of Appeal in the case of the **Cape Copper Mining Co.** The Company had overpaid their income tax for three consecutive years, and the order for repayment was upheld, on the ground that over-payment could not in every case be found out at once. It has also been laid down that where interest on the investments of a life insurance society had not been taxed at its source but paid in full, the Crown was entitled to charge income tax upon it, although the taxed interest paid at the source exceeded the sum which would be payable on trade profits.

Income Tax, Rate of, 1842-89. £109 bat under £150: 5s. 57-8, *id.* in the £; 54, 1 1/4; 55-6, 11 1/2d.; 59, 6 1/2d.; 61-2, 6d. £150 and upwards: 4s. 5d.; 57, 7d.; 54, 1s. 2d.; 55-6, 1s. 4d.; 58, 5d.; 59, 61-2, 9d.; 60, 10d. Uniform duties on Incomes of £100 a year and upwards, with abatement of £60 on Incomes under £200: 6s. 7d.; 64, 68, 71, 6d.; 65-6, 70, 4d.; 67, *id.* Abatement extended to £80 on Incomes under £300: 7s. 4d.; 73, 5d.; 74-5, 2d. Exemptions extended to Incomes under £400: 70-7, 3d.; 78-8, 81, 83-4, *id.*; 80, 84, 6d.; 82, 6 1/2d.; 85-6, 8d.; 87-8, 7d.; 88-9, *id.* According to a statement of the Chancellor of the Exchequer, a man whose income is under £150 a year cannot claim exemption from income tax if income derived from his wife's separate estate brings the amount above £150.

Incorporated Law Society, The. Before the year 1825 solicitors were without any sort of professional organisation beyond a few local societies. In that year certain leading solicitors issued a prospectus advocating the establishment of a "Law Institution." A committee was formed to give effect to the prospectus, and raised in the form of shares the capital necessary to provide a building and everything else necessary for the Institution. The deed of settlement was completed in February 1827, and a royal charter was obtained in December 1831. In 1845 the Society, which had been originally constituted as a joint-stock company, was remodelled upon the principle of other learned

and professional bodies, and received a new charter. This charter was amended by a supplemental one in 1872. Any solicitor practising in England or Ireland, and any writer practising in Scotland, as well as any solicitor or writer who has ceased to practise, is eligible for election as a member of the Society. The administration of business is in the hands of an elective council of forty ordinary members, of whom ten vacate their seats every year, and ten extraordinary members chosen by the council from among those members of the Society who are presidents of provincial law societies. The President and Vice-President are annually elected by the members of the Society from the members of the council. The members of the Society at present exceed 3,200. Its buildings are situated in Chancery Lane, and comprise a handsome hall and a library of nearly 30,000 volumes. The general function of the Society resembles that which the Inns of Court are supposed to discharge. It takes care of the professional training, character, and interests of the profession. When it was founded no test was required from any person wishing to become a solicitor beyond evidence of character and of having served in articles for the prescribed time. The Society instituted lectures on law in 1833, and in 1836 obtained from the judges authority to examine students on the completion of their articles. Since then Preliminary and Intermediate Examinations have been added, and the entire control of all the examinations has been transferred to the Society. It also investigates cases of alleged malpractice by solicitors, and, where necessary, takes measures for the punishment of offenders. It exerts itself to promote what it considers the legitimate interest of the profession in such matters as scales of payment, right of audience, &c. It has also assisted in promoting reforms beneficial to the whole community, such as the concentration in one building of the various Courts, or the Conveyancing Act of 1881. The improved standing of solicitors is in part due to the exertions of the Society. Sec., E. W. Williamson. Office, Chancery Lane. Consult the Calendar of the Incorporated Law Society.

Incorporated Society of Authors, established in 1884, by Sir F. Pollock, Cardinal Manning, and other eminent literary men, under the presidency of Lord Tennyson. Its object is to defend the interests of literary property, to maintain authors' rights, to advise them as to questions of copyright, and in other ways to render them assistance in their agreements and the publication of their works. Also to further the establishment of an International Copyright Union, and to procure in England the passing of an Act which shall amend and consolidate the law of Domestic Copyright. In '88 Mr. J. Russell Lowell (q.v.) delivered an interesting speech on the subject of international copyright at the annual dinner of the society. In Dec. '87 the *Société des Gens de Lettres*—a society with similar objects in Paris, founded by Louis Desnoyers—attained its jubilee. Office, 4, Portugal Street, Lincoln's Inn Fields, W.C.

Independents. See CONGREGATIONALISM.

Independents, German. See GERMAN POLITICAL PARTIES.

India. A dependency of Great Britain, consisting partly of territory under the direct administration of British officials, and partly of native states, which are all subordinate, in

varying degrees of relationship, to the suzerain power. The British territory was acquired by the East India Company, by conquest or treaty, in the course of one hundred years, dating from the battle of Plassey (1757). As a result of the mutiny of the Sepoy army (1857-58), the East India Company ceased to exist; and the direct sovereignty was vested by Act of Parliament in the Crown. The more powerful native chiefs continue to exercise every function of government within their own dominions, but their external relations are subject to the control of a British Resident. In other words, they have no international independence. In accordance with an Act of Parliament passed in 1876, Queen Victoria assumed the title of "Empress of India." *Kaisar-i-Hind*. The Parliament of the United Kingdom is, of course, supreme over India; but this supremacy is enforced rather by means of ministerial responsibility than by direct legislation. Practically, all the statutes relating to India are in the nature of either constitutional enactments or financial provisions. The Act of Parliament that abolished the Company also created a Secretary of State for India, together with a Council (selected from among Indian officials for the most part), in whom is vested the authority of the Crown. In England, every measure concerning India runs in the name of the Secretary of State, and he alone is responsible to Parliament. In practice, he is always a cabinet minister of the first rank. In India, the supreme authority, both executive and legislative, is vested in the Governor-General in Council. The Governor-General, or Viceroy, who is usually a peer of political distinction, has power to overrule his Council in cases of emergency. For ordinary purposes, the council is composed of some six members, all appointed, like the Governor-General himself, by the Crown. One of these is the Commander-in-chief; another must have legal qualifications; another has charge of finance; another may be appointed with special reference to public works; the rest are usually experienced members of the civil service. For purposes of legislation, this Council is augmented by about twelve additional members, nominated by the Governor-General, of whom one-half must be non-official persons, and of whom some are always natives. The seat of the supreme government is Calcutta, with an annual migration to the hill station of Simla for the hot season. As regards the work of administration, India is divided into eight or more provinces. Two of these, Madras and Bombay, which boast an historic existence for two centuries, are styled *Presidencies*, and enjoy a certain precedence. They are each ruled by a Governor, appointed by the Crown, with councils modelled on that of the Governor-General. They each possess an army and a civil service of their own. Three of the other provinces (Lower Bengal, the North-Western Provinces, and the Punjab) are under a Lieutenant-Governor; and Bengal and the North-Western Provinces each have legislative councils. Three more, of less importance (the Central Provinces, Burma, and Assam) are under a Chief Commissioner. In addition, there are some smaller tracts under the direct administration of the Governor-General. Within the provinces, the actual unit of administration is the *District*, which forms the charge of an officer, usually styled Collector. His principal duties are

executive, magisterial, and fiscal; but he also exercises supervision over police, jails, schools, public works, forests, etc. Judicial functions are, as a rule, vested in other hands, subordinate to the High Courts, with an ultimate appeal to the Privy Council in England. The staff of administration consists of: (1) the covenanted civil service, appointed after competitive examination in England; (2) the statutory civil service, selected from among natives; (3) military officers of the staff corps in civil employ; (4) a miscellaneous class of uncovenanted civil servants of different grades, who may be either Europeans or natives. The total area of India, including the outlying province of Lower Burmah (but not the recent acquisition of Upper Burmah), and the settlement of Aden in Arabia (which is subordinate to Bombay), amounts to 1,378,044 square miles; and the total population, according to the census of 1881, numbers 253,982,595 persons, showing an average of 184 persons per square mile. The area of British territory alone (excluding native states) is 868,114 square miles, with a population of 198,799,853 persons. Of the larger total, 187,937,438 are Hindus by religion, 50,121,595 Mohammedans, 3,418,895 Buddhists (almost all in Burma), 1,862,625 Christians (of whom less than 100,000 are Europeans), and 85,397 are Parsis (almost all in Bombay). Adding 1,500,000 for Cashmir, 3,000,000 for Upper Burmah, 2,000,000 for the Burmese Shan States, and an annual increase of 1 per cent. for India generally, the total population in 1887 is officially estimated at 268,137,044 persons. In the official year ending March 1887, the total revenue of India amounted to £77,337,134, of which £23,055,724 was derived from the land (being in the nature of rent); £6,657,644 from the salt tax, £8,943,976 from opium (really paid by the Chinese consumer of the drug), while £16,134,404 represents gross receipts from public works—railways and canals. The total expenditure was £77,158,707, showing a surplus of £178,427. The chief items were: army, £19,525,042; civil departments, £12,698,516; interest on debt, £4,310,401; public works (including working expenses and interest on all capital not borrowed), £23,687,551. The total amount of debt bearing interest was £176,881,813, of which £84,228,177 bears interest in gold payable in England, and £92,653,636 bears interest in silver payable in India, while £102,934,376 represents capital expended on remunerative public works. The railways of India have been constructed by private companies to which the State guarantees interest, or directly by the State. In the calendar year 1887, the total number of miles open was 14,383, and the total net receipts £9,364,821, being a return of about 5 per cent. on the total capital expended. In the year ending March 1887 the total value of the merchandise imported into India amounted to £58,661,462, and of the merchandise exported to £88,428,660, showing an excess of £29,767,198 in the exports. The net importation of treasure was £10,368,808, thus reducing the true excess of exports to £19,398,390, which may be taken roughly to represent the tribute of India to England for cost of administration and interest on capital invested. The chief items among the imports were: cotton goods, £29,164,985; metals, £4,689,098; machinery, £1,371,459; railway plant, £1,435,124. Among the exports: raw cotton, £13,475,962; opium, £11,077,669; oil seeds, £9,222,870; rice, £8,836,827; wheat,

£8,625,986; hides, £5,149,357; raw jute, £4,869,815; cotton manufactures, £5,854,352; tea, £4,883,143; indigo, £3,691,677. In 1886-87, the established strength of the army was 73,582 Europeans and 134,492 natives; total, 208,074 officers and men. The total number of schools and colleges was 127,381, attended by 3,358,042 pupils, of whom only 224,358 were girls; the total expenditure on education was £2,550,640, of which £862,872 was defrayed by the State. Since Lord Dufferin succeeded Lord Ripon as Viceroy, in 1884, the external affairs of India have attracted more attention than its domestic administration. Amicable relations have been maintained uninterruptedly with the Amir of Afghanistan, Abdurrahman Khan (*q.v.*). Early in '88 his old rival, Ayub Khan, escaped from Teheran, in Persia, and threatened to enter Herat. But he finally surrendered to a British official, and has been removed to India, as a prisoner at large. Shortly afterwards it was announced that Mr. Durand, the foreign secretary to the Indian Government, would proceed to Cabul to consult with the Amir on matters of general policy. But this mission was postponed owing to the rebellion of Ishak Khan, cousin of the Amir, and governor of Afghan Turkestan. This rebellion, however, was quickly suppressed; and Ishak Khan took refuge in Russian territory. In June a tribe of independent Afghans from what is called the Black Mountain, on the Punjab frontier—who have often before given trouble—attacked a small British detachment and killed two officers. To avenge this outrage, it has been necessary to organise a punitive expedition of some 6,000 men, who encountered a brave resistance. A harassing mountain warfare continued throughout the month of October, but at last the more important tribes submitted, and the troops were withdrawn. On the north-eastern frontier there has also been fighting. The Tibetans, despite the advice of China, whom they acknowledge as their suzerain, had occupied a mountain pass in Sikkim, a petty state which has long been under British protection. A British force of some 2,000 men utterly routed them; and it seems probable that peaceable relations will be restored through the intervention of the Chinese envoy. In Burmah matters have been gradually quieting down, though the military occupation of that country is still a heavy drain upon the finances of India. To meet the deficiency in the budget—which is in large measure due to the continued fall in the exchange-value of the rupee—it has been found requisite to increase the salt tax, and also to levy an import duty on petroleum. In domestic affairs the chief interest has arisen from the opposition of an influential class of Mohammedans to the success of the Indian National Congress (*q.v.*). Early in '88 the Earl of Dufferin announced his intention of resigning the office of Viceroy before the usual term of five years. He has received, on his retirement, a step in the peerage, with the title of Marquis of Dufferin and Ava. The Marquis of Lansdowne has been chosen as his successor, but the actual transfer of power did not take place until December, upon his arrival, when he embraced the opportunity of contrasting the difference in circumstances between Canada, which he had recently left, and India.

India and Ceylon Ship Canal. In Feb. '87 it was stated that a long-talked-of scheme of cutting a ship canal through the Island of Rami-

saram had received the sanction and support of the Indian Government. The island in question lies between Ceylon and the Indian mainland, and the idea is to clear a channel through rock and reef which will allow of the passage of ocean-going ships, which have now to make a détour of 300 or 400 miles. On April 29th what was described as the "South India Ship Canal, Port and Coal Station Co., Limited," was registered, with a capital of £1,000,000. See ed. '88.

India, Imperial Order of the Crown of, was instituted January 1st, 1878, and consists of the Sovereign and such as the Sovereign may think fit to appoint of the Princesses of Her Majesty's Royal and Imperial House; the wives and female relatives of Indian Princes; and the wives and other female relatives of any of the persons who have held, now hold, or will hereafter hold the office of Viceroy and Governor-General of India, Governors of Madras and Bombay, or Principal Secretary of State for India. The ladies of this order, as at present appointed, include the daughters and daughters-in-law of the Queen, numerous native Indian Princesses, and the wives or other female relatives of the above-mentioned officials—the latest additions being the Countess of Dufferin, Lady Reay, Lady Randolph Churchill, Viscountess Cross, and H.H. Maharanees Suniti Deves, of Kuch Behar. The Registrar of the Order is Sir Albert W. Woods.

India, The Most Exalted Order of the Star of. Established by letters patent in 1861, and enlarged in 1866 and 1878. Its badge is a light-blue ribbon with white stripes (edgewise), and with motto, "Heaven's Light on Guide." It consists of the Sovereign, a Grand Master, who is the Viceroy of India for the time being, and three classes of members:—

- G.C.S.I. . . Knight Grand Commander.
- K.C.S.I. . . Knight Commander.
- C.S.I. . . . Companions.

Members of the first two classes, being Knights, are entitled to the prefix "Sir." Of the first class there may be by the statutes of the Order be 30, of the second class 72, and of the third (or Companions) 144; but extra and honorary members may, and have been, from time to time appointed (see Knighthoods, conferred during '88). The Registrar of the Order is Sir Albert W. Woods, and the Secretary is the Foreign Sec. to the Government of India.

Indian Association (National). Established in 1870 for the purpose of promoting social progress and education in India, and extending friendly intercourse between the English people and the people of India. The Association attempts to carry out these objects by the diffusion of information; by grants in encouragement of education, especially of female education, in India; promoting the employment of medical women in India; selecting English teachers for Indian families and schools; and helping Indian teachers and students visiting England. The Princess of Wales is Patroness of the Association, and Lord Lubbock, K.C.S.I., the President. The Vice-Presidents include a large number of influential natives of India, Anglo-Indians, and other ladies and gentlemen interested in the welfare of the Empire. *Organ of the I. A., The Indian Magazine* (monthly). There are several branches of the Association in India.

Hon. Sec. in England, Miss E. A. Manning, 35, Blomfield Road, Maida Hill, London, W.

Indian Civil Service embraces a much wider field of employment than does the Home Civil Service. Besides the ordinary departmental posts of civil administration, it includes judicial posts, the medical service, the forest department, and officers of the staff corps in civil employ. Appointments in the Indian Civil Service are highly prized, and can only be obtained at the expense of much labour and energy. Situations in the **Covenanted Civil Service** are gained by passing a competitive examination in England—which examinations are as a rule held once a year in London. The candidates who have successfully completed are required to undergo two years' probation, and to pass periodical examinations in special subjects of study before proceeding to India. The limit of age for candidates is from 17 to 19 on the 1st of January of the year in which the examination is held, applications for admission to which must be made before the 1st of April. Candidates are encouraged, though it is not imperative, to obtain a **university training**; and to this end the Government makes an allowance of £150 per annum to all who pass their two years' probation in residence at a university; and as a further incentive, an additional bonus of £150 is granted to any student who, after remaining a third year at the university, obtains a degree in honours at Oxford or Cambridge. Having arrived in India, the candidate must within a specified period elect to serve either in the **executive** or the **judicial branch** of the service. In the former branch the lieutenant-governorship of a province is the highest post to which a civil servant can attain, and in the latter branch a judgeship of the High Court. A covenanted civil servant in India commences with a salary of 4,800 rupees a year, and the number of such civil servants is about a thousand at the present time. The members of the **Statutory Civil Service** of India are selected purely from among the natives. Many appointments are in the gift of the local governments; but no one who is not a native, a covenanted civilian or an officer of the staff corps, can be appointed to a post with a salary exceeding 400 rupees a month without the approval of the Indian Government, from which rule a few departments are excepted. The **Public Works Department** is recruited from the Royal Indian Engineering College (q.v.) at Coopers Hill, from the corps of Royal Engineers, and, as regards natives, from the Civil Engineering Colleges in India. The commencing salary of appointments in this department is 4,200 rupees a year; in the **Telegraph Department**, recruited much in the same manner, it is 3,000 rupees a year, which is also the commencing salary in the **Forest Department**. Examinations for the **Medical Service** are also held in this country, and successful candidates are required to attend a four months' course at the Army Medical School at Netley, during which period they receive an allowance to cover the cost of living. An important and voluminous report of the Commission appointed by the Government of India in Oct. '86 was laid on the table of both Houses of Parliament (March '88).

Indian Delegates. See ed. '86.

Indian Empire, The Most Eminent Order of. Instituted in '78 to commemorate the proclamation of Her Majesty as Empress of India, and enlarged in '86, and in the jubilee

year, as a means of rewarding those whose services to the Indian Empire have merited the Imperial favour. This order consists of the **Sovereign, a Grand Master**, who is the Viceroy of India for the time being, and of **three classes of members**, viz., **Knights Grand Commanders (G.C.I.E.)**, **Knights Commanders (K.C.I.E.)**, and **Companions (C.I.E.)**. Only the two first of these, being knights, are entitled to the prefix "Sir." The motto of the order is "*Imperatrici Auspiciis*" (Under the favour of the Empress). See **KNIGHTHOODS CONFERRED DURING '88**.

Indian National Congress. Within the last few years a movement has taken definite shape among the **educated classes** of India of all races, religions, and provinces—to meet together and discuss their **political wants**. Hitherto, the people of India have been widely separated from one another by differences of language, creed, and caste; and these differences have been intensified by distance. It is the English Government that has for the first time united them in a common object. The original stimulus came from the **education in English**, which is given in all the colleges and higher schools; but the scheme could never have been realised if it had not been for the development of the railway system. The **first National Indian Congress** was held at **Bombay** in Dec. '85. The number of persons who attended was less than 100, and their deliberations were held in private, though the resolutions passed were afterwards published. The **president** was Mr. W. C. Bonnerjee, a Bengali Brahmin, and standing counsel to the Government of India. The **second congress** was held at **Calcutta** in Dec. '86, and was attended by about 430 delegates, most of whom represented local associations. The **president** was the Hon. Dadabhai Naoroji, a Bombay Parsi, not unknown in this country as a candidate for Parliament. The meetings were held in public; and the **viceroy** (Lord Dufferin) invited the members—in their private capacity, as "gentlemen of more or less distinction and culture"—to a garden party. At the **third congress**, held at **Madras** in Dec. '87, the number of delegates rose to 607; and a temporary hall was erected for the meetings, which were often attended by as many as 2,000 spectators. The **president** was Mr. Bhadrudin Tyabji, the leading Mussulman barrister of Bombay. The **fourth congress** is to be held in Dec. '88, at **Allahabad**, the capital of the North-Western Provinces. The resolutions adopted at all the congresses have been of a very similar character. Questions of social reform—such as child marriage—have been altogether avoided, as affecting only special religions and castes. Loyalty to the British crown has been unhesitatingly avowed, both in the resolutions and in the speeches; but certain **political changes in the administrative system** have been as unhesitatingly demanded. First is placed the **introduction of a representative system** into the councils of the Viceroy and the governors of provinces, so that the **members of the country** may have some voice both in the making of laws and in the levying of taxation. Second, perhaps, in importance comes the demand that the natives should be treated with greater confidence in the matter of **self-defence**—(1) By being admitted to the higher ranks of the army; (2) by being allowed to form volunteer corps; and (3) by being no longer prohibited to possess and wear arms. Other resolutions call for the **appointment of a**

Royal Commission to inquire into the working of the Indian administration, for the entire separation of judicial and executive functions, for the extension of trial by jury, and for the introduction of a system of technical education. The **proceedings** at the congress have always been marked by absolute unanimity; but it would seem that this appearance is to some extent deceitful. It has, unfortunately, been found impossible to reconcile all classes of Mohammedans to the inevitable predominance of the Hindu element. The Mohammedans of Northern India, led by Sir Syud Amir Ali of Aligarh, profess that they prefer English rule as it is to Hindu rule as it might be. They do not oppose the resolutions of the congress, so much as decline to act with the Hindus in pressing for their realisation. A few of the great Rajput landholders have also taken up a similar attitude of opposition. Under these circumstances, the **meeting of the next congress at Allahabad**, in the centre of a large Mussulman population, will be watched with much interest, especially as several English M.P.'s have announced their intention to be present as spectators. True friends of India will have much cause for disappointment if a movement that promised so well, if only kept within sober limits, should be deprived of its national character through the recrudescence of religious bigotry. On Nov. 30th (St. Andrew's Day) **Lord Dufferin (q.v.)** delivered a speech at a public dinner, which was in the nature of a manifesto against the dangerous tendencies of some of the opinions associated with the movement. The **official report of the Madras Congress** may be obtained (price 2s.) from Talbot Bros., 81, Carter Lane, E.C. Consult an article by Sir W. W. Hunter in the *Contemporary Review* for Sept. '88.

Inebriates Act. See SESSION '88, sect. 18.

Infancy, Law on in '88. An infant may now enter into a contract for hire and service which is beneficial to himself, and such contract can be enforced against him. In a case heard in the Brompton County Court, the defendant, an infant, had refused to pay his fare; but judgment was given against him on the ground that the law does not recognise minors in railway matters. The question whether a minor nun was entitled to a **separate maintenance** from her step mother, who was under an obligation to maintain her husband's daughters until they attained their majority or married, was raised in the Court of Session. It was held that the widow was only bound to alimnt those children who remained in her house.

Infectious Diseases, Notification of. See SESSION '88, sect. 62.

Infusoria. A class of the lowest sub-kingdom (*Protozoa*) of the animal kingdom. First discovered, in 1677, by Anthony van Leeuwenhoek. The Infusoria comprise all the one-celled Protozoa with a distinct cell-wall, and within that a contractile cortical region, inclosing protoplasm (*q.v.*), in which there is a nucleus and nucleolus. See ed. '86, and consult W. S. Kent's "Manual of Infusoria," Batschelli's "Protozoa," in Brehm's "Classen und Ordnungen des Thierreichs."

Inglis, Rt. Hon. John, son of the late Rev. Dr. Inglis, of the old Greyfriars Church, Edinburgh, was b. 1810. Educated at Glasgow Univ. and Balliol Coll., Oxford (B.A. '34, hon. D.C.L. '49). Was Lord-Advocate for Scotland in Lord Derby's first and second Administrations. Sat for Stamford in '58. Appointed Lord Justice Clerk of Scotland in the same year, and in the following year was sworn of the Privy Council. In '67 he was elevated to the highest legal position in Scotland—viz., that of **Lord Justice General**. Lord I., while at the bar, was one of the most powerful of Scotch advocates, and consummated his reputation as a successful pleader by his defence of the prisoner in the celebrated **Madeline Smith Case**. His Lordship is **Chancellor of the University of Edinburgh**.

Inhabited House Duty. It appears, from a statement made by the Chancellor of the Exchequer (June '88), that though two parts of a house are separately let, and constitute separate tenements, this is not sufficient to entitle the business portion of the premises to exemption from inhabited house duty. In order to obtain exemption, business premises must not only be separately let, but must be structurally separate.

Inhambane. A port and town of the Portuguese territory of **Mozambique**, in East Africa, between Delagoa and Sofala, pop. 6,500. During '86 some native tribes in the neighbourhood, incensed by the imposition of heavy taxes upon them, took up arms, defeated the Portuguese native levies, and marched on Inhambane in great strength, but were at length induced to retire and disperse.

Inner and Middle Temple. The name of these two Inns arises from the fact that the property they hold belonged at one time to the Knights Templar. This religious military order moved from its home in Holborn (Southampton Street) to the land now held by the Temples, situated between Fleet Street and the river. This took place in the twelfth century, the round portion of the Temple Church being dedicated in 1185. The Order of Knights Templar was suppressed in 1310, and the property was seized by Edward I., who bestowed it on Thomas Earl of Lancaster. After passing into the hands of the Earl of Pembroke and Hugh le Despenser it reverted to the Crown, and was granted by Edward III. to the Knights Hospitallers of St. John of Jerusalem, which order demised it to certain students from Thavies Inn, Holborn, for £10 a year. In the reign of Richard II., owing to the great number of students, the members divided into two bodies—Inner and Middle—and both remained tenants of the Knights Hospitallers till the suppression of that order by Henry VIII. They then held by lease from the Crown till James I. granted a charter to them. The Inner Temple adopted the arms of the Knights Templar, modifying the horse with two riders (emblematic of the poverty of the knights) into a Pegasus. The Middle Temple adopted the arms of the Knights of St. John of Jerusalem (the lamb and the flag). The existing records of the Middle and Inner Temple date back to 1501 and 1506 respectively. The **Treasurers for 1889** are—Middle Temple, Rt. Hon. Sir Henry James, Q.C., M.P.; Inner Temple, Sir Patrick Colquhoun, Q.C., LL.D.

Inns of Court. For origin see '88.

Inoculation. A term usually applied to the mode of transmission of disease whereby

the "*materies morbi*" enters the body through the channel of a wound in the skin or mucous membrane. It may be accidental, as from the bite of a dog; or intentional, as a prophylactic against a severe form of disease, from which it is intended to act as a protective—*e.g.*, vaccination against small-pox. See ed. '86.

Insanity. Disorder of brain causing disorder of mind; most frequent between the ages of 25 and 40 years, during which period the brain develops most. The principal predisposing causes are poverty, drink, consanguinity, unusual excess, hereditary predispositions, etc. Insanity is also produced by exciting causes, as religious or political excitement, domestic troubles, etc. See ed. '86.

Instinct. See ORIGIN OF SPECIES, ed. '88.

Institute of Actuaries. See INSURANCE, FIRE AND LIFE.

Institute of Painters in Oil Colours. Founded in 1883. The Exhibitions, which are held annually, commencing in November, are open to all artists, and the principle of selection is the same as at the Royal Academy (*q.v.*). Pres., Sir James D. Linton, P.R.I.; Vice-Pres., Frank Walton, R.I.; Sec., W. T. Blackmore.

Insurance.—ACCIDENT. The business of this branch is carried on by twenty-five Companies, who for certain premiums insure the payment of periodical sums for total and partial temporary disablement, and other fixed amounts on death, or on total or partial permanent disablement. "The Railway Passengers' Co." was the first established, which was in 1849. The aggregate premiums in 1887 of the Companies were £730,000, and the amount of claims they paid was about £395,000. This part of insurance business is greatly increasing. Three other Companies have been formed, to insure live stock in case of total loss or accidental injury, and also to provide compensation in the event of loss or partial injury to carriages and other road vehicles.

The greater number of Accident Insurance Companies also transact employers' liability insurance and the insurance of workmen by collective policies against accidents for which the employers are not liable. A case of some importance to persons who insure against accidental death was heard at the last summer assizes at Liverpool, before Mr. Justice Grantham. A Mr. Woolright had taken out a policy in the **Accident Death Insurance Company** for £1,000, and had paid the premiums for twenty-six years, when, while out shooting, he scratched his ear with a thorn in getting through a hedge. Blood-poisoning ensued, and eleven days after the occurrence Mr. Woolright died. The company resisted the claim of his executors, mainly on the ground that the accident was not the direct cause of death, which was stated in the medical certificate to be erysipelas. But the erysipelas was unquestionably caused by the accident, and judgment was given in favour of the executors' claim.—**Health insurance** was only commenced in 1885, and is effected by two Companies—viz., the "Health Insurance Corporation, Limited," and the "Sickness and Accident Association." They were established to answer a great requirement of the middle classes—which is, after the manner of the ordinary Benefit Societies, to pay weekly sums to those who are wholly or partially disabled from following their vocations on account of illness not resulting from accidents. These Companies also combine accident with health insurance. The former company insure also against specific
